# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 4, 1859.

NUMBER 1.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.  
Terms.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.  
Advertisements and Subscriptions must be paid for in advance.

#### The Propriety of a Due Attention to the Promotion of Agriculture by the State.

[Most admirably appropriate and truly acceptable comes the following excellent communication at this time, from our highly esteemed friend and worthy advocate and pleader for true Scientific Agriculture. We feel it but an act of justice to our valued correspondent to say of him, that his writings, his laborious efforts in the cause of Agriculture, has made the State a large debtor to him; and we know of no man who can come with a better grace before our Legislature and ask a boon, or plead in behalf of others, than our highly esteemed and truly scientific correspondent Agricola; and we most sincerely trust that this clear, explicit, and truthful appeal may receive at once the reward it merits, by being taken in hand by some of those real friends of the State, of whom we are glad in believing we have in the present session a goodly number.]

ERRATA FARMER: There are, as must be apparent to every one, reasons why Agriculture should receive the special attention and fostering care of the State. It is not only one of the mainstays on which the prosperity of every country depends; but there are circumstances connected with it, which render it of the greatest importance for the legislators of every country never to lose sight of the manner in which it is conducted. Merchants and manufacturers, in their respective businesses, are necessarily brought into frequent contact with others who follow the same calling, in consequence of their being chiefly conducted in crowded cities. But the farmer is as necessarily drawn away from intercourse with others, and left to rely on previously acquired knowledge and the resources of his own ingenuity, in meeting those obstacles with which he has to contend. Hence appears the advantage of making such previously acquired knowledge as complete as possible, so that his ingenuity may not be taxed beyond what it may reasonably be expected to furnish.

In Great Britain, where the land is owned by one class and farmed by another, the proprietors of the soil have availed themselves of the assistance of scientific men, to provide them with rules according to which their lands may be cultivated on the most approved principles; and they are careful in letting them to bind their tenants under stringent conditions to farm in a particular way. The farmer may not in every instance be aware of the propriety of the course prescribed; but he cannot help himself. He must abide by the regulations of the landlord, or his lease would be forfeited. Will he, will he, he is thus constrained to be a good farmer, by a species of compulsion. Again, the landlords are themselves farmers. The owner of an estate yielding a yearly rent of \$5000, has almost invariably a home farm of three or four hundred acres, which he cultivates himself, on the same principles which he makes compulsory to be followed by his tenants; and thus shows them by example the propriety of a system which might otherwise be looked upon as an evidence of mere tyranny.

The example afforded by three or four such highly cultivated farms in every parish, where the attention of the owner is not so much directed to immediate profit as to having everything done in the most proper manner, forms a constant school, from which merely practical farmers receive much valuable information. Taken conjointly, the two become the means of having the whole country cultivated on scientific and correct principles, although the common farmer should not be acquainted with the alphabet.

Here, where the farmer owns his own land, the Government, which considerably puts it within his power to obtain it with so much ease, would do well to consider that its beautiful designs are incomplete, except it in some measure place a similar amount of knowledge within the immediate reach of the cultivator of the soil, as is secured to his brother farmer in Great Britain. We feel disposed to ask more; and instead of soliciting from the State to stand in the shoes of the British landlord, and convert the cultivators of our soils into mere mechanical agents, working by rules which they do not comprehend, to put them on a par, as regards knowledge, with their brother landowners in Britain. Even there, the common farmers are not now content to learn their business by rote and imitation, but are themselves becoming the preceptors instead of the taught, and successfully contest with their landlords for the various premiums at their agricultural exhibitions.

Science is the magic spell, at whose "Open sesame" an entrance is to be gained to that respectability of position, without which our farmers ought not to be content. His broad acres convert the owner of land in Great Britain into a millionaire. Our soils are as good, and our minds are as

good—why should not both be cultivated to the same extent by our landowners as by theirs? The answer is obvious. They have facilities of acquiring knowledge which are not within our reach.

Whose fault is this? I am willing to suppose that it is nobody's. We are a growing country; and if we have not attained in every respect our full maturity, our sun has not yet reached his zenith. The day is yet before us. But let us not waste our precious time. Already has California made such progress as the world can afford no parallel to. Why do not our farmers bestir themselves now, and urge with louder demands the importance of immediately having an Agricultural College established in this State?

The Agricultural Society, almost our only institution which undertakes to promote Agriculture, has labored strenuously and with increasing success in attracting the public attention to its importance, and has, as we are assured by the Governor, succeeded in producing a spirit of emulation among farmers. But there is some danger of the Society allowing itself to be used by designing parties for other purposes than the promotion of the Agricultural interest; and besides there are several objects deserving of immediate attention which the Society has not yet found itself in a position to undertake. It appears to me that the State has a duty to discharge, in taking a more extended interest in our Agriculture, which it ought not to neglect; and that farmers ought to urge upon our legislators, not to delay in using means to have it performed.

AGRICOLA.  
MILLENBURY, January 24, 1859.

#### Exposing the Roots of Trees and Plants.

We would call the attention of every purchaser of a tree, shrub, or plant, to the fact, that more than half the trees that are hawked about the country in wagons, or lying in the auction rooms, or exposed at the corners of our streets, or any where else, with their delicate fibrous roots open to sun and wind, knocked about, the roots broken and bruised, must die. Such exposure, such neglect and abuse is certain death. And we would add further, a moiety of the balance can never become quick-growing, healthy, and fruitful trees or vines. They receive a check by such an exposure which they never outgrow.

Every injury to root or branch that is not removed by pruning beyond the injured part, becomes to the tree a gangrene, and affects all its future life. We wonder every grower is not more careful, more tender of nature's beautiful handiwork. The roots of a tree are the arteries; they send life up to the branch, that it may put forth leaves. The leaves are the lungs, and they continue perfecting their work until the bud, blossom, and fruit give evidence of health; and thus they reward all the care bestowed by the hand of the skillful gardener. We only hope every purchaser of trees and plants will think of these things.

PRUNE YOUR GARDEN ROSES.—All who desire to have healthy garden roses, large full buds, should remember to head them down closely, pruning in to a good form. As with roses, so with nearly all plants.

STANFORD BROTHERS' PACIFIC OIL AND CAMPHENE MANUFACTORY, SAN FRANCISCO.

#### The Pacific Oil and Camphene Works.

We present, in this our opening number, a true and faithful engraving of the manufactory named above, connected as it is with one of the most important interests of the Pacific coast, the Whale Fishery, of which we have spoken elsewhere.

We have often spoken of the great enterprise of the Brothers Stanford, for they are worthy citizens; gentlemen who have been not only long here, early pioneers, but have identified themselves with many of the industrial interests over our State, as well as being largely and widely known to the mercantile community as men of high integrity, sterling worth, and liberal to all the claims of humanity, education, and all the varied institutions of the State, besides the true friend of the working man. We knew the Brothers Stanford at Mormon Island in 1849; the time that tried the pioneer's soul; we knew them as merchants in Sacramento; when the flames swept that city, their large warehouse, full of goods, stood a monument, fire-proof, and they escaped that terrible devastation. Messrs. Stanford have indeed been prosperous merchants, prosperous men. They now have large interests in Sacramento (the house of Stanford, Brothers & Meeker), they have large property elsewhere; and it can be truly said of them they are the men to whom the free talents have been extended, and it will also be found that when they are called to account they will say, "behold we have gained five talents more." These gentlemen have not hid their talent in a napkin, but have kept the wealth with which they have been blessed constantly employed in those channels that have been most truly advantageous to our State.

We have recently visited the manufactory of these gentlemen, and can speak but briefly, now, of all we saw. We shall give some of the material facts connected with these works, and hope our citizens will go and visit them. They are most interesting, and well worthy a visit. The Manufactory, as shown in our engraving, covers a fifty vara lot, and is finely located near the beach, where the music of the breaking waves is in harmony with the works of man, who is preparing the oil to pour on the troubled waters, and to scatter light to the nations around. The main building is two-story, brick, one hundred feet by forty-five. The Camphene works attached, forming an L, are forty-five by thirty-six feet. All the buildings, and all the machinery, have been thoroughly built, and constructed with reference to completeness and excellence, and we are satisfied that this Manufactory can and does turn out the most perfect manufactured goods, of this kind, on the Pacific coast. Messrs. Stanford have spared no pains or cost to strive for excellence in their Oils and Camphene. In each and every article they determine to give satisfaction: oil for light and camphene for light; pure oil, of the purest character, for mechanical purposes; it is here that our manufacturers in all departments, and our farmers, can find oil for their machinery that will not injure or corrode. This is all-important to such, as machinery will last far longer with such care.

Upon entering the Oil Manufactory we note the first process: The Sperm Oil is brought from the ship, poured into the kettles, to be passed through the graining process, at a high temperature. Here lies the secret of success in the manufacture of pure Sperm Oil; here science must be displayed in ascertaining the true heat necessary. After the oil has attained the proper heat it is drawn off into casks, and rolled under the shed to cool—there to remain forty-five days; the casks are then rolled into the press-room, the body oil put in strainers, the head matter (a thick, heavy matter), is put into heavy canvas bags, put under a press of great power, and from this the Sperm Oil is extracted, and drawn into casks, ready for market. The bags, containing what is called "slack-pressed spermaceeti," are then emptied into casks, and the cake sent to New York, to be manufactured into sperm candles. This stock, on arrival in New York, is passed through a powerful hydraulic press, then refined, and moulded into candles. Query—Where are these candles sent? Answer—Back to California?

The next thing we examined was the Whale and Polar Oil department. The Whale and Polar Oil, like the Sperm, is brought into the Factory, and placed in enormous kettles of from 900 to 1500 gallons capacity, and then bleached down by powerful alkali. This process is for the purpose of subtracting the gluten and making the Oil of light and transparent color. It is then drawn off into casks, and rolled under the shed, for graining; there to lay fifteen and twenty days. When cooled and grained, it is again brought back to the Factory, and passed through the strainers. The Oil passes off into large coolers, and from thence dipped into packages as wanted for market. The residuum left in the strainers is termed "whale foots." This article is again put into the kettle, again heated up, and put into the shed for cooling, after which it is put into the screw press, like the spermaceeti. This last remains of the foots is put into bags and sold to soap manufacturers, for a low price. The difference in value between this article and the spermaceeti is as only one-fifth. Oil-soap is made from the several residuums of oils made in the bleaching process by the alkalies. This is shipped east, for the woolen manufacturers to wash the oil from woolen goods. It is a singular fact that these residuums, the very sediments of oil, should be used to extract oil itself from woolen goods, and that no other article will do this but the oil-soap thus made. We are glad to know that soon a large Woolen Manufactory will be in operation in our own State, which will consume this valuable article. The amount of the residuum thus shipped is large and valuable.

The amount of spermaceeti, shipped by this house the last year, was 13,000 pounds, on the Flyaway; 14,000 pounds on the Rattler, and about 10,000 pounds now ready to go, from the cargo of the whaleship Massachusetts, which made this port in November last.

We next visited the Camphene Factory. The manufacture of this article is begun by introduc-

ing the turpentine (imported from abroad) into the Factory. [Have we no pitch pines on our coast? Who will find them?] The turpentine is then taken from the five-gallon cases in which it is imported, and emptied into a large tank, then let down into a large copper still, of 900 gallons capacity, boiled up and turned into vapor by the steam pipe leading from the boiler; in this state the vapor passes through the strikers into two large condensers, thence through the long worms of the still. These worms and condensers lie in large tanks of water, holding 5000 gallons, supplied from the roof tanks. The Camphene, being condensed, comes from the worm mixed with water in equal proportions. The Camphene being the lighter body floats on the surface in the receiving-tank, from whence it is drawn off into a large camphene-tank, and from thence put into the same cases in which the turpentine was brought. It is now ready for market.

The new still for this Factory has just been put into operation, and can turn out 150 gallons Camphene an hour. Camphene is a simple article, being pure turpentine, merely. The distillation separates the resin from the turpentine, which gives to the Camphene its bright, burning quality.

As we have said, this is the largest Factory on our coast, and the best. The capital employed is about \$50,000. Ten men are employed in the Factory and Store, besides the Superintendent, S. Dietz, Esq. (who kindly showed us over these interesting works), and Mr. Brown, the Cashier and Bookkeeper, in this city. Thus this pioneer establishment gives support and employment to this number of workmen, several of whom having families, and the amount of cash distributed every week among laborers in every department, amounts to thousands of dollars; but this is not all the capital these gentlemen use for the good of our State; more than \$100,000 are invested in the city of Sacramento, and more in our city—not a dollar dead property. They keep it moving, doing good, and encouraging industry. It is such men who build up our State, and we can only say in closing, that we hope our Senators and Representatives will take the omnibus and ride out to these works and see them for themselves, for the day is coming, if our Legislators are but true, when the three hundred whaleships that now fit out at the Sandwich Islands, and other ports in the Pacific, shall find their home in San Francisco Bay.

[For the California Farmer.]

#### To Rena.

Angels bright come flitting by,  
With sweetest songs from memory.

It was evening! the sun had just passed over the hills of this great city, and gone down into the waters far away beyond our Golden Gate. Clouds, dressed in regal robes of gold and purple, hovered over the place where the god of day went down into the deep; the waves rolled in upon the shore, scattering a wreath of foam gleaming with diamond drops, and uttering their farewell to Day, as each receding wave passed away to mingle in the great ocean of waters.

The song of the waves had not hushed, when quickly from out the twilight sky, from its pale blue curtain above, a brilliant star burst forth, and, there suspended, that Star, in its diamond effulgence, reigned supreme in the firmament of Heaven.

In a quiet and beautiful spot, "to memory dear," the light of this star fell on "Two Roses," twined from their infancy, ever blooming together: twilight dew rested upon their first leaflets, beneath which the embryo buds were coming forth in all their beauty and fragrance: the guardian of these lovely roses was standing near; the earth had been newly lifted with his own hand, and the early breath of the genial sun had awakened a new life into these Twin Roses.

'Twas twilight hour again! the guardian of these Roses stood near them; that Star again came out from its blue home in the Heavens, and its now brilliant ray rested on the Roses. A voice came, like softest music on the air, echoing in song

Watch o'er these Roses! soon shall they live!  
Rich the reward for the labor you give!  
Guard them! for these, this bright star doth shine;  
For leaflet, and bud, and blossom are thine.  
Hast thou not wisdom? Never despair!  
Thou shalt have aid! in this thy fond care:  
Guard well these Roses! to thee they are given,  
Types of the beautiful, of Love, and of Heaven.

JULIUS.

#### Special Attention to Planting.

Now is a good time to plant forest-tree seed, and all kinds of fruit and ornamental-tree seed.

Prepare now your land for your alfalfa. This clover is to be the principal grass and hay for California.

Prune your roses and garden plants, plant your ornamental shrubs, make your flower-borders anew and enrich them.

Plant your bulbous roots in the borders. Don't forget to plant tuberoses; their fragrant breath, when in bloom, will richly repay the cost and care.

To our Advertisers.—We must ask the indulgence of our advertising patrons, for being obliged to omit many new advertisements, in this number, for want of space, and for omitting to notice several of an especial character, for the same reason; but the matters we this day present are all so important, we know our kind patrons will excuse us till the next issue. Our new Business Directory will speak for them.

AN ESSAY ON THE PACIFIC RAILWAY, is the title of a pamphlet by Henry S. Fitch, embracing a new plan and suggestions, and the good influences resulting, presented in a masterly manner. As the sale of the work is for a benevolent purpose, we hope all will assist it, and thus spread information to urge the great project.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, FEBRUARY 4, 1859.

OUR PRESENT NUMBER has been delayed several days in consequence of our engraver finding it necessary to devote more time and labor to the new head, and the engraving of the Pacific Oil Works, than he at first anticipated. The illustrations reflect great credit upon the artists, whom we shall further notice.

CROWDED OCT.—Notwithstanding our new type, being smaller than the old, enables us to publish more matter, we have been obliged to omit: the valuable Essay Number 4, on the United States Coast Survey; "What California should do, and what she will do," by B.; "The Solar System—the Plurality of Worlds," as well as a summary of State news, and other articles, all of which will appear in our next.

FREE COPIES OF THE FARMER.—We shall mail marked copies of our journal to many friends over the State and elsewhere, and we ask their kind and generous interest in behalf of the FARMER. We wish to place it in every family in the land, and we believe each and all our large number of subscribers can send us one or two more. Read the number we send you, and hand it to your neighbor.

SEND THE FARMER ABOARD.—Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

## Our New Volume.

"Press on! for it is God-like to unloose  
The spirit, and forget yourself in thought;  
Bending a pinion from the deeper sky,  
And in the very feters of your flesh,  
Mating with the rare essence of heaven.  
Press on! for in the grave there is no work,  
And no device. Press on! while yet ye may."

As the eagle sends forth its young eaglet from its lofty eyrie among the rugged rocks and sharp crags of the mountain high in some barren wilderness, so did we send forth our young fledgling, the FARMER, five years since, in this then almost new and barren country; barren of that scientific and practical agriculture which now beams from every valley, hill-side, and mountain, in this God-blessed land. In that early day it was like the dangerous trial of skill of the young eaglet, for all around were sharp rocks, and keen thorns, and dangerous defiles, upon which the young bird of hope might fall and be crushed, or the thorns pierce it, or its way be lost in those dark passages that have closed upon many a hopeful bird, that sprang bounding from its young nest like ourselves. But our cause was a noble one, and our trust was in God. Our cause was the cause of the whole earth, and God's promises were: "The desert shall rejoice and blossom as the rose."

Five years since, like a young bird, did we spring forth upon the breeze of public favor, well knowing the wide field over which we were to roam; well knowing, too, the food on which we were to live, though scattered here and there at vast distances, so great that it would test our strength and endurance often. But though we knew we should be required to hunger and fast often, the "well-springs of faith" were gushing up full and bright with their sparkling waters, and taking one good, full drink, we threw to the breeze our banner, on which is inscribed "excelsior," and leaped forth in hope and joy. From the issue of our first number to the present moment, our hope and trust have never failed us. Though "tried so as by fire" often, we could ever cry:

"Let fortune empty all her quivers on me,  
I have a soul that, like an ample shield,  
Can take in all, and verge enough for more."

In the retrospect of the past we have much to be grateful for. To the giver of all good, for our continuance in life, health, and strength; and though often sorely tried, "He has put no more upon us than we were able to bear." To Him in grateful reverence first we bow. To the Press of this State and everywhere, we have often been much indebted. The words of cheer given to the early fledgling and to the growing bird, will never be forgotten. Our gratitude we tender to them all. If duty required of them to criticize, and words of sharp wit have been hurled at us, we take it in no unkindness; it did us good; we give the same liberty we take. The freedom of the Press is the bulwark of our liberties. May every journal that fights valiantly for truth, liberty, science, industry, and the good of man, be abundantly prosperous.

To our patrons, many of whose names stand recorded on our first number, what shall we say? We have but one word that can speak all our mind—its GRATITUDE; take that, kind patrons, and may God bless you in basket and in store. To woman, as the "better half" of man, we have spoken as we ought, in a special editorial. To farmers and to mechanics: we ask them with us to look around them and see this "goodly heritage," the fertile valleys and flower-crowned mountains. We ask them to read the prophecies of sacred writers and apply them to this land, and it will be found the best practical essay for the happiness of man. We believe no man can read the books of Isaiah and Jeremiah, without being struck with the applicability of those remarkable writings to our land and our times. To the manufacturer and the merchant: we ask them to read and reflect upon these truths, and apply them to the present work needed of them. To all our friends and fellow citizens, to professional men, politicians, laborers, all, we extend a kindly greeting. Take us into your family, and let our now full-grown bird sing to you the sweet song of home, glorious, happy home. Our journal shall never utter discordant notes on themes unfitted for the sacred sanctuary of home.

Our journal now wings its way upon its sixth year, prosperously we can say, even beyond our most sanguine expectations; and we repeat, our gratitude is due to those who have so kindly sustained us, and hope they will ever be with us, and link their friends also, to us and them.

But we have not done; there is one chord of

our harp of gratitude we must touch: if we have been successful so completely, we would testify in a proper manner from whence great aid has come to us, and we would speak in the truthfulness of our heart of the gratitude due the printers of our journal, for their faithfulness to our interests during our long connection of five years. To J. K. Phillips, Esq., our foreman, who has been with us from the first issue of the FARMER, much of our success is owing. His works have spoken in the typographical neatness and beauty which have marked our paper. And there was one who commenced with us also, who, the past year, has finished his labor on earth, and gone to his reward. And there are others, whose fidelity to us demand our just praise; for no employer could have had, for so many years as we have had, men more faithful or more true; and it becomes us as a man to speak of this as one of the main causes of our success. To the printer justice should ever be given. Friends all, we wish you peace, prosperity and happiness; our own is best promoted while we labor for yours.

## The Old and the New.

How many interesting thoughts have come crowding upon our memory, during the past week, as we have witnessed our typos performing that most interesting labor, in a publishing office, the tying up the old type. As we gazed upon the now dark forms we called to mind our first acquaintance with them five years since; they then seemed beautiful to us, with their bright, silvery faces, as they nestled down smilingly in their newly made cases; but now they will rest, tied up, laid away, their work for us finished—they have worked well and faithfully in their day. These once bright and beautiful types have, we trust, not lost by their years of labor; their brightness has been scattered world-wide, in words of truth and usefulness, words, too, of kindness and love, which have reached many a heart, and been welcomed as kindly messengers. Could we follow the labors of these silent but potent messengers, what would they say to us? and where tell us they have been? There is no theme connected with human happiness of which they have not spoken, no science calling forth man's genius and skill in which they have not been interested. They have visited the capital of every State in our own glorious Union, conversed in every reading-room in every city, and found a heart-welcome with thousands of those true spirits in our home circles who move the springs of this progressive age, but their influence stops not there. Across to the Old World they have gone, carrying with them the breath of liberty, and love, and human brotherhood: To Britain's fairy isles; to the land of sweet Erin; on Scotia's heather hill and mountain; to sunny France; beneath Italia's skies; to the mountains of Switzerland; to Germany, Holland, and wherever the Stars and Stripes may have floated on land or sea, there have these winged messengers of thought sent their breathing, to plead for that industry which makes man a true, progressive, independent soul; and now these darkened and faithful laborers rest, rest from their labors in our cause, and we say to them, "well done, good and faithful servants;" we take them up kindly, tie them up carefully, and lay them away to rest awhile, until they shall be called into a new field of action, which we hope may be soon, for they have done worthily and well with us.

And now a new scene gladdens our vision:  
A silvery beam, like a lightning gleam,  
Is shed from each case, as new type we place.

It is the laying the new type that now most deeply interests our present thoughts. At the moment we write, pure as the virgin snow from its fount, the cloud, come these bright, silvery types from their font, where they were born. As yet, they have formed no thought or word of themselves; in innocence and purity they lie, just like a sleeping infant; but now, as they are taken in hand, and placed in their cradle cases, they will soon grow restless, and, ere another week, they must speak; with us, we feel, rests the responsibility of what they shall say. Heaven is our witness, in the prayer we make, that these now pure and spotless messengers of thought may ever, hereafter, be the heralds of truth and usefulness only; that in all their power and potency they may speak only for good, for the highest advancement of mankind; ever placing in the foremost rank the Honor and Glory that ever attends Human Industry. Could our most earnest wish be fulfilled, we would say, "Go forth, ye little messengers, and carry to all the world, peace and good will to man; teach mankind to prepare for the speedy approach of that 'good time coming,' when Education shall show man in his great triune character of a well trained physical, intellectual, and moral being; and woman, alike well trained, qualified in her appropriate sphere of wife and mother, to educate and train the sons and daughters of our race for the duties and responsibilities that await them in this the greatest age of world.

These fonts of type, the old and the new, awaken a train of meditation, singular, curious, and interesting. How many times have these little apparently insignificant bits of type metal been handled by the typos of the FARMER in the five years past! The number of single types contained in our journal amounts to about five hundred thousand. The setting up and distributing the same would be one million types a week. Thus, then, these types that we now meditate upon, have been handled by our typos, in these five years, the extraordinary number of more than a hundred million times, and were we to estimate the distance traveled by the human hands that have set these types, in passing over the cases, it would be still more extraordinary. But our meditations verge to the result of all this labor. These types, the typos, and the press—far too little esteemed, yet mighty weapons for good or evil. We are happy in the belief that in our case the good shall greatly preponderate, and the grand result of our labor with the type

"Their printed word, though very large, is less  
Than that which, yet unprinted, waits the press."  
And while the past we carefully review,  
We hope there's much recorded, good and true;  
This hope shall guide us in our future plan,  
Which is to elevate the working man.

## The Whale Fisheries of the Pacific.

This vast and most important subject is now about to receive that attention which its widely extended and extraordinary interests demand. A very few, even of our commercial men, have a just idea of the great wealth invested in this trade. From the first publication of this journal to the present day, we have again and again urged the attention of those who are engaged in mercantile matters to this subject; and to every Legislature that has convened we have often presented the importance of their giving heed to this interest. As early as the first issue of the FARMER this great interest was urged, and the attention of Congress was called to the vast interest that would open up on these shores between California, the Islands, China, Japan, and every other portion of the world; and during that year and the following, we published important facts connected with the importance of the Pacific; and in a memorial to Congress, which was presented by Hon. J. B. Weller, and referred to a Committee, asking for other interests was presented. Valuable statistics and important facts have been published in this journal for years, urging the merchants of this city, and our legislators, to look to this great subject, and aid, by wise laws, in every way, in bringing the trade of the whale-ships to our harbor.

We truly rejoice to know that a just attention is being now awakened to this subject. It is time, for millions of trade would thus be secured to this port, greatly adding to the prosperity of all classes of our citizens. The following extract we take from the excellent Message of our Governor, to show he has eyes and heart now at work for California interests: it speaks volumes:

## COMMERCE—WHALE FISHERIES.

For more than half a century our whaling fleets have been accustomed to raft at the Sandwich Islands—although, during that period, the harbors of California were known to be the best in the world. The reason for this may be found in the fact, that during that time the people of this coast had but very limited commercial relations with our Atlantic possessions. Distant from the center of Government, its advantages scarcely known, California was commercially regarded as a terra incognita.

But its acquisition and settlement by our people soon attracted the attention of the commercial world to the importance of our harbors. Immediately after, following the discovery of gold, an immense fleet visited our shores, the crews of which, excited by the richness of our mines, soon left them unmanned. The frequency of desertion at that time prevented whalers from visiting our ports, as it was a matter of uncertainty whether they could obtain sufficient crew to take them out again. This fact, united with the then high cost of supplies, port-charges, the want of facilities for repairs, and exposure to vexatious law-suits, induced this immense interest to rendezvous at the Sandwich Islands. Some of the difficulties which existed a few years ago have been removed, to a great extent, by time and legislation, and at the present moment our ports offer greater inducements, as the depot of the whaling fleets, than the Island ports of the Pacific. The pilotage has been reduced to a mere nominal sum—one dollar per foot on draught of water. Our coast is studded with lighthouses, and the dry-dock at Mare Island presents, at a price but little higher than in the Atlantic States, the best facilities for repairs; while seamen can always be found to ship at rates differing but little from those obtaining elsewhere. In San Francisco, supplies of every description necessary for a whaling voyage, can be obtained at rates far lower than in the Sandwich Islands. The apprehension that sailors may desert is now more imaginary than real. It is a notorious fact, that in the port of San Francisco sufficient numbers of seamen can be obtained for any voyage. Within the past few years, no vessel has experienced serious difficulty in leaving that harbor, for want of a sufficient crew. It is quite probable that heretofore difficulties have been thrown in the way of ship-masters, and temptation presented to seamen to desert, but these causes have been partially removed, and, by the creation of a tribunal similar to that existing in New York, may be wholly obviated. This may be accomplished by devolving the duties of Marine Judge upon some Justice of the Peace, in conformity with the Act of Congress of twelfth July, 1850. To effect this object, an Act should be passed, authorizing the people of San Francisco to vote for one Justice of the Peace, who would be styled Judge of the Marine Court, and for the service he would be required to perform in this capacity, he should receive a reasonable compensation from the State.

Inasmuch as the whaler is not entitled to the privilege of entering the United States Marine Hospital, the City of San Francisco might permit the sick or disabled seamen admission into the County Hospital, at a tariff so low as merely to cover the cost of his maintenance. It can scarcely be believed that, looking to the interest of the city, they would be unwilling to do this.

We intend to keep this subject before the people. We have only room now, after thus introducing this subject, to take from that excellent paper, the Commercial Advertiser, published at Honolulu, Sandwich Islands, the following facts, of the date 9th December last.

The North Pacific Whaleman's List, as reported in the Advertiser, shows the number of whale-ships cruising in the North and South Pacific to be two hundred and thirty-nine vessels. The sperm Whaleman's List numbers sixty-seven vessels. Here is an aggregate number of three hundred and six whaleships, that enter principally the Island ports to land their cargoes, repair their vessels, get their stores, and do their trading; and yet we know that it is an admitted fact that the port of San Francisco is not only a far better port, but all the varied interests and conveniences here now seem to point out that it is designed by Providence to be the great entrepot of the whale fleets of the Pacific.

Why should not this trade be given to this, the better port? We no of no reason in the world, only our laws have placed obstacles in the way of all this good to our State. We rejoice to know that many former obstacles of a serious nature, such as heavy pilotage, facilities for repairs, desertion of seamen, want of proper supplies and necessary outfits, as well as trouble in our Courts, and want of attention in our Hospitals, are all, or nearly all, now removed; and it only needs that just attention to this subject (which has been so wisely called by the Chief Magistrate) on the part of our legislators, to secure to California a trade that will not only amount to millions of dollars annually, but which will set in motion the wheels of a new and vastly increasing trade. Every branch of commerce and manufactures will be at

once affected. The farmer is deeply interested. A vast amount of the produce of the farm, orchard and garden will find a new and ready market—vegetables in masses, butter, cheese, poultry, hogs, beef, pork, mutton, fruit, &c. The wool of our flocks will be converted into our sailors' flannels, and into coarse woollen and blankets. A thousand of Wheeler & Wilson's and Brigham's sewing machines will be set in motion by our industrious women, to make up the shirts and drawers of the hardy sons of the ocean.

These are but a part of the advantages and blessings that will accrue to San Francisco and California, if this question shall be taken up and met in the right spirit. Shall the whale fleet of the Pacific center at San Francisco? We could pile up facts of importance, were it needed. We shall often speak on this theme. We ask attention to the fact, that already those interested at the Islands in this great trade are beginning to feel alarmed at the prospect of losing it. Read their papers—straws show which way the wind blows. One great fact, that the exchange upon whaler's draft's are from ten to twenty per cent in favor of this port, speaks volumes. If our citizens, of every interest, will look to this subject in all its bearings, they will act; and if they will only act, in a little time we shall see the Pacific whale fleet center in San Francisco, as sure as we shall see Cuba and a portion if not all Mexico under the glorious stars and stripes. Fate? Not that great and good Providence that has ever watched over our nation, to build up and increase it for the good of the world, has decreed this work, and man cannot hinder it; they that now aid will enjoy the benefit.

We now ask the attention of our readers to the beautiful cut on our first page. Here is the proof of what we say. *Ecce signum!* Here is the evidence of the "good times coming."

## County Agricultural Societies.

The following are the main sections of a bill for the incorporation of County Agricultural and Mechanical Societies, as introduced into our Legislature by Mr. Redman, of Santa Clara, and published in the Sacramento Union. We are truly glad to notice this interest in behalf of Agriculture thus early in the session; it betokens well. We notice in the twelfth section, that the supervisors of each county are empowered, if they see fit, to grant \$500 annually to such society. We would most respectfully suggest to the Hon. Chairman the importance of making it obligatory on each county to do so; and then we would hope that the State would add \$500 annually to each county, thus giving them \$1000 each year. We feel fully confident that it would be a good investment for County and State, and pay a better interest than any other expenditure made. We trust the Agricultural Committee will give a thorough overhauling to the famous Report of the Recording Secretary of the State Agricultural Society. We notice a discrepancy of some \$500 between his Report, which he says is from the Treasurer's book, and the one recently published by us, which was direct from the Treasurer. There is a singularly equal and uniform expenditure in each of the two Secretaries' offices (some \$1954 each), together making about \$4000, or one-seventh of the whole income of the Society. The Committee, however, will ascertain how matters stand. But in the mean time we hope every county will be aided in establishing a good society of its own:

SECTION 1. Authorizes any seven or more white persons to form an Agricultural Society, with the usual powers delegated to organized bodies.

Sec. 2. In addition to these they shall have authority to purchase and hold lands not to exceed in the aggregate 160 acres, with suitable buildings, etc., and to make such improvements as are necessary "to foster and encourage agriculture, horticulture, domestic manufactures, mechanics, household economy, rural taste and practice, and general domestic industry, stock raising in the various branches thereof, and for the trial of the speed of horses."

Sec. 3. The officers are to be a President, two Vice Presidents, a Secretary, a Treasurer and two Directors, all of whom shall be members of the Society, and who shall form a Board of Managers. They shall be elected annually, and perform such duties as are usually imposed upon similar officers.

Sec. 4. The meetings to be semi-annual; the first is to be held in January, at which officers shall be elected for the year. The second meeting shall be held at such time as may be fixed at the first. The semi-annual meetings may be adjourned from time to time, as a majority of the members may deem proper.

Sec. 5. The Board of Managers to declare what amounts, articles or objects may be exhibited at any annual Fair, the value and kind of premiums, and make other rules regulating the exhibition.

Sec. 6. Prohibits the contracting of any debts exceeding the amount of money in the treasury, except from the purchase or lease of place of meetings, and for holding its annual Fairs; and for these purposes the debt contracted shall not exceed \$1000. In case of any excess, those members of the Board of Managers who may have caused the same "shall, in their individual and private capacities, be jointly liable to such Society for the full amount of such excess."

Sec. 7. It shall not be lawful for any person to sue the Society for the failure to award any premium, or for the failure to pay any premium when awarded.

Sec. 8. Within three months after the organization of the Society, the Board of Managers shall file, in the County Clerk's office, in the county in which the Society shall be organized, a certificate, stating its name, object, date of organization, names of officers thereof, etc., any copy of which shall be received in all Courts and places as presumptive evidence of the matters therein stated.

Sec. 9. The Board of Supervisors of any county in which such Society may be formed are authorized and empowered, if they deem it expedient, to appropriate annually any sum not exceeding \$500, to be used by Society exclusively for payment of premiums.

Sec. 10. Such Society and members thereof shall be subject to the conditions and liabilities herein imposed, and none others.

The remaining two sections provide the manner in which vacancies may be caused, and elections for officers conducted.

VALUABLE DOCUMENTS.—We have been favored, by our able legislator Banks, with copies of the Annual Reports, of the Treasurer of the State, of Public Instruction, and of the State Registrar, with other valuable documents. We have also received Congressional copy of a splendid Address on the Northwest, delivered by a splendid Address on the Northwest, delivered by Hon. Isaac J. Stevens, from which we shall make notes in future. To all these gentlemen we tender our thanks.

## Woman's Influence.

"And if a trouble dimmed their golden joy,  
'Twas outward dross and not infused alloy;  
Then how knew but affection's look and speech,  
A little Heaven above dimension's reach."

As the Sun is the center of the solar system, giving light and life to all that revolve around it, so Woman is the center and soul of Home, around which all lesser planets, in that sphere, will ever revolve, and from which all must draw light, life, love, hope—Heaven.

We sit not down now to write a fulsome panegyric upon Woman, but to give utterance to earnest, honest, heartfelt truths, that were planted in us at our conception, strengthened in us till our birth; then nourished, and fed to us, as we drew our life-food from our blessed mother's warm breast. These truths have grown with our growth, strengthened with our strength. They are a part of our being. In all our boyish sports—in youth, in the flush of manhood, and in our riper years—we have seen, heard known and felt that Woman—"Last at the Cross and first at the Grave"—ever has been, and ever will be, the great, mighty, potent, all-pervading influence and power that controls man's physical, intellectual and moral destiny, both in Time and for Eternity.

Who can, or who dares, deny this? The general work of creation was not perfect till Woman was made, and we have the Word of the Almighty for this assertion; in all his other works, the record says, and "He saw that it was good." Lastly, He made man in his own image, after his own likeness and similitude, and He breathed into him the breath of life, and "Man became a living soul." And all things that God had made he pronounced good; and, although the Earth then was complete, and Adam stood a perfect man, made in the "image of God," yet there even, in the perfect Garden of Eden—"everything good, everything perfect—it was not good for 'Man to be alone,' and 'Woman was created: created too from Man—taken from his very side—a part of himself. From that moment her influence has been the most potent. It was Woman that caused Man to sin, which drove him from Paradise, and it will be Woman that will restore and save him and bring him back to Paradise again."

It was from Mary, the mother of Jesus, that a Savior was born to the world; and, from that hour, the Marys and the Marthas have led, influenced and controlled the world. And their control is of a two-fold nature: the one is *within* the sphere of Home, the other *without* it: the one is from the Divine, springing from Bethlehem, and is full of love, peace and joy; the other is tainted with the Fall, and tends to the ruin of Man: the one is marked by ignorance and selfishness, and is controlled by fashion and worldly passions; the other is known as the well trained, physical, intellectual and moral type of perfect Woman: the one is Man's slave and play-thing, mistress; the other Man's equal and companion, the wife and mother. And yet, both characters wield a power that has, thus far, controlled the world—the one for evil, the other for good.

A bright day, we believe, is now dawning upon the Earth; and Woman, redeemed, appreciated, elevated to her true place in the temple of Home, will become the sun-light of that Home—the guide, guardian and educator of the sons and daughters of the Earth. It is thus believing in the mighty influence of Woman, in redeeming our race from error and sin, that we desire to have the full power of her influence in our journal. We already owe a debt of gratitude to Woman, for the character and influence she has already shed on our pathway for good; and we rejoice to know that the "LADIES' DEPARTMENT" of THE FARMER is known and appreciated in Europe and America—abroad as well as here, in our own Golden Land. And it is here, in an especial manner, we desire to have its influence felt and its circle widened. And it is to Woman we must look, and on her rely, for aid in extending the voice of THE FARMER, until her voice and her influence shall, by means of our columns, reach every family altar in our land. Our aim is to spread the great truths of Woman's wants, until conviction is followed by conversion, and Woman is freed from the chains that bind her—those of ignorance of her own physical, intellectual and moral nature—then will come the day of Redemption; and Man, through her restored power, will himself be restored to Paradise, and will in his heart say:

"When sorrow rends the heart, when feverish pain  
Wrings the hot drops of anguish from the brow,  
To soothe the soul, to cool the burning brain,  
Oh! who so welcome and so powerful as thou?"

TO OUR CORRESPONDENTS.—Fortune seems to smile on us most propitiously, by sending to us rich and appropriate gifts from our correspondents, by the last steamer, the J. L. Stephens. We have a very liberal and most acceptable bevy of good things, besides our private letters, all speaking harmony and kindness. We have a beautiful song of Spring from our kind friend Leonore; it will appear in our next. We have, too, the "Mountain Bud," a reply to the goose-quill of our mountain correspondent Alice, on the subject of "Old Maids." Alice must expect a sharp shot soon. She had better look up a new goose-quill to reply. The "Sketch of the Pictures," from our friend Northana, will soon appear.

We regret to hear of the feeble health of our highly gifted correspondent, Grace Greenwood, which has so long detained her in Michigan. Heaven grant she may soon be restored to her wonted health, and to the sanctum of the Little Pilgrim, which she has so long and so honorably graced. Florence Percy, we trust, will soon fill her place in our columns, where she has done so much honor to herself, and given so much pleasure to our readers. We have two valuable communications from N. B. H., two from Bertha Bay, one from Alice, one from Edith, one from Emma; each and all full of truth, beauty, and harmony. These all will have our earliest attention, and will duly appear.

Our highly esteemed friend B., of the sterner sex sends us a valuable communication, "More about the Steamships;" also, other valuable matter, all most acceptable, and will appear. Several valuable letters of inquiry, and also, several from different sources touching matters of the State Agricultural Society, we defer till the Report of the Legislative Committee upon the subject. We ask indulgence of our correspondents, for this reason, although they request immediate publication.

## BUSINESS DIRECTORY.

**BANKERS.**  
 Atlantic Monthly, Phil. & Co., Boston, Mass.  
 American Stock Journal, D. C. Linsley, New York City.  
 Blood stock, J. D. Patterson, Westfield, Chautauque Co., N. Y.  
 Parsons & Co., trees, shrubs, etc., Flushing near New York.  
 Wistar's Balsam Wild Cherry, F. W. Fowle & Co., Boston, Mass.

**BLACKSMITHS.**  
 Hurst, Wm. B., blades, skins, wool and tallow, Second near M.

 Shrubbery and Raspberries, plants, D. E. Hough, Oakland  
 Santa Clara Nursery, L. A. Gould, fruit trees, etc., Santa Clara

**HOTEL INTERNATIONAL.**—The best proof of the approbation of one's patrons, is their continued and increased patronage. We judge others by ourselves, their success by our own; the change that is constantly going on in every community brings new faces and forms to us in place of those that must pass away; but when we see old friends remain, even the good friends until we call them all patrons, and when new faces come and gather thickly round us until they are off-familiar and pleasant words we hail them as old friends, we know they are permanent friends—and such we take to be the case with the patrons of the Hotel International. Hundreds of old and familiar faces are ever seen at this most excellent house. Mr. and Mrs. Haley deserve very great credit for the high rank to which they have raised this house as a First-class Family Hotel.

We speak from personal knowledge when we say, it is not surpassed on this coast, for elegance, comfort and luxurious living. Parlor and chambers are furnished in the best style; beds and bedding such as to insure health, comfort and pleasant dreams. The table is bountifully supplied with every luxury of the season. The vegetable department being from the garden of the proprietor, fresh every day; the butter, eggs and poultry also from the dairy and farm of the Hotel. In short, the Hotel International is just what is needed in our city, and strangers from abroad can be assured of comfort, luxury and a home. Mr. and Mrs. Haley are constant attendants to the welfare of their guests, and Mr. Robinson, the gentlemanly cashier, will always be found at his post to receive all who call. Strangers from abroad should remember this Hotel.

Our New Type.—The beautiful type, on which our paper is printed this week, is from the celebrated Type Foundry of L. Johnson & Co., Philadelphia, established in 1786. For the splendid specimen book presented us by Messrs. O'Meara & Painter, the Agents for L. Johnson & Co., for this State, we return thanks.

**SEEDS! SEEDS!!**  
 Crop of 1888.  
 Just Received by Express, on the steamer John L. Stephens,  
 A FULL ASSORTMENT OF SEEDS,  
 Selected by Hon. Marshall P. Wilder, President of the Massachusetts State Horticultural Society, from reliable Growers, and warranted to be the CROP OF 1888.

**TAKE NOTICE,**  
 The undersigned being desirous of establishing a reputation, and being aware of the importance that has been placed on Farmers, thinks proper to state, that he has not a OLD Seed in the Store. All Seeds sold guaranteed true to name. Planters and Traders will find it to their interest to secure GOOD, RELIABLE SEEDS, at as low a price as they would have to pay for worthless trash.

Have also on hand and for sale, a very desirable assortment of  
**Foreign and Fancy Grape Roots,**  
 Peach and Cherry Trees,  
 Together with a full and complete assortment of  
**AGRICULTURAL IMPLEMENTS.**  
 For sale by  
**J. L. PANGBURN,**  
 85 Washington street,  
 1-2m Between Front and Battery streets, San Francisco.

**Thorough-bred DEVON CATTLE.**  
 HAVING JUST COMPLETED AN ARRANGEMENT with Mr. HENRY WILLIAMSON, of San Pablo, Contra Costa county, to bring from his place in Ohio, my entire herd of Devon Cattle, I am able to announce that they will be here for sale and for service during the present year. They are all THOROUGH-BRED, and number at the present time about fifty head, comprising about a dozen young bulls, as many heifers, and a remainder aged animals, including the celebrated Bull of Devon, bred by Mr. "Victoria" and "Jenny Lind," which have been winners of First Prizes at Agricultural Fairs in Canada West, New York, Ohio, Michigan, Pennsylvania, and at the National Fair held at Louisville, Kentucky, in 1877, as have also the younger animals which will accompany them. I am desirous of securing their arrival, due notice will be given, and Catalogue forwarded to those who send in their applications.  
 SAN FRANCISCO, January 31, 1889.

**RICH QUARTZ DISCOVERIES IN MARIPOSA.**—The Gazette says, last week Messrs. Sanders & Diagon, while prospecting for quartz, near Horse Shoe Bend, struck a vein the richness of which is unprecedented, and seems almost fabulous—24 pounds of the first rock taken out, pounded up in a hand mortar, yielded \$928. Some pieces of the ore are so solid with gold that they will flatten out when struck with a hammer. The vein is of considerable thickness. Also, Joshua George, and W. N. Johnson, struck a quartz vein near the above, that appears equally rich. Up to Saturday night, 100 ounces had been pounded out in a hand mortar. The vein appears to be extensive. Thus, in a day, the fortunate discoverers, in both the instances mentioned, are raised from poverty to comparative affluence. The foregoing statement may be relied upon as strictly the truth without exaggeration.

**SEEDS FROM HON. M. P. WILDER.**—We call the attention of all to the collection of Seeds sent to this country, selected expressly by this distinguished friend of Agriculture.

**MCGLAUFLIN & DAKIN,**  
 Purchasing and Forwarding  
**COMMISSION AGENTS,**  
 FOR

**Purchasing and Forwarding Goods and Merchandise,**  
**OF EVERY DESCRIPTION,**  
**TO ALL PARTIES RESIDING IN THE**  
**INTERIOR OF CALIFORNIA,**  
**AND OREGON AND WASHINGTON TERRITORIES.**

**HAVING LIVED AND CARRIED ON BUSINESS** in the Mountains of California for the last seven years, and learning the necessity of every business man having an Agent in San Francisco, through whom, in one order, he may readily procure any articles he might want, at less expense and trouble than the present facilities afford; therefore, we have now established a Commission Agency, and hold ourselves in readiness to attend to and fill all orders that may be sent to us with promptness and great care, and at as low rates as the times and the market will allow.

We propose purchasing and forwarding all kinds of Merchandise: To Blacksmiths: Coal, Iron, Steel, etc. To Wheelwrights: Hardwood Plank, Spokes, Hubs, Fellows, and all their different kinds of Stock. To Farmers: Tools, Seeds, Trees, Provisions, etc. To the Miner: Machinery, Tools, and to the Trader: All the different kinds of Goods he may require.

Mechanics and others may forward their orders, and have any kind of Machine-work done at short notice, and at reasonable prices.

**COMMISSIONS.** For all sums less than \$500, five per cent. For all sums over \$500, at one time, three and a half per cent. Please send your orders, with cash, through Wells, Fargo & Co., or otherwise, stating plainly what marks to put upon them, in whose care you wish the money, and how to send them by steamer, express, or otherwise.

We shall send the bills with the goods, at all times, that parties may understand all about them, keeping our accounts so that all parties may see at a glance how we stand.

Having a general understanding of our business, being mechanics ourselves, and applying our capacities to your wants, we hope to secure a liberal patronage.

For business capacity and honesty of purpose, we refer you to the following persons:

Thos. H. Selby, A. N. Fisher & Co.,  
 Hayward & Harmon, G. S. Ladd & Bro.,  
 Hon. G. W. Deek, Sacramento, Stockton.  
 C. Cooper, Downsville, Dr. E. G. Mack, Nevada.  
 Geo. B. Taylor, Columbia, Wm. Rufous, Sonoma.  
 D. M. Locke, Knight's Ferry, James McGowan, Murphy's.  
 E. Bannister, Fatsima, Robert McCulloch, Chinese.

**LEWIS MCGLAUFLIN,**  
 m Davis street, near California.

**SAMUEL PILLSBURY,**  
 DEALER IN  
**BUTTER, CHEESE, EGGS,**  
**Hams, Bacon, Lard,**  
**APPLES, CRANBERRIES,**  
 And all other kinds of FRUITS in their season.

**No. 48 Washington Market,**  
 SAN FRANCISCO.

**TO DAIRYMEN AND FRUIT GROWERS.**  
 Consignments respectfully solicited.

Refers by permission, to—  
 Messrs. Flint, Peabody & Co., Mr. H. G. Bladell,  
 Beechey & Co., Mr. T. Ogg Shaw.

Hotels, Restaurants and Families supplied at lowest market rates. Articles delivered free of charge.

**PAINTS, OILS, WINDOW GLASS,**  
 &c., &c., &c.  
**OLIVER & BUCKLEY,**  
 HAVE NOW LANDING AND IN STORE, AND FOR SALE AT LOW RATES:

2,000 kegs White Lead,  
 2,000 kegs pure white Zinc,  
 20,000 gallons Linseed Oil (boiled and raw),  
 10,000 gallons Spirits Turpentine,  
 2,500 gallons Alcohol (95 per cent) in tin,  
 2,000 gallons Varnish (English and American),  
 5,000 boxes Window Glass (assorted sizes),  
 700 dozen Paint and White Wash Brushes (best do),  
 6,700 pounds Glue (assorted qualities).

Together with a large stock of all articles in our line, which we are receiving regularly from the best Manufacturers.

**WE ALSO HAVE ON HAND,**  
 Camphene, Spirit Oil, Polar Oil, Tanners' Oil,  
 Lard Oil, and Solar Oil.

**In lots to suit,**  
**At 86 and 88 Washington Street,**  
**And 87 and 89 Oregon street. 1-3m**

**Pianofortes, Melodions.**  
 MESSRS. MILLAR & COURTAZ,  
 Manufacturers of PIANOFORTES and MELODIONS, Boston, have established an Agency for the Sale of their Instruments, AT

**MOORE'S PACIFIC FURNITURE WAREHOUSE,**  
 No. 186 Montgomery Street, San Francisco.

Mr. COURTAZ will superintend the Fitting up and Tuning of the same. The above Instruments have been awarded the First Premium at the Fair of the Mechanics' Institute, held at Richmond, Va., 1877, and are not surpassed for tone or finish, by any instruments of the kind in the United States; and will be offered at lower prices than ever before sold on the Pacific Coast.

All persons wishing to purchase Pianofortes or Melodions, are particularly invited to examine those of Millar & Courtaz, which are kept in store at the above place, and are being received by nearly every ship from Boston, during the coming year.

No one will go away dissatisfied with the Instruments or price.

**CALL AND SEE THEM.**

**CALIFORNIA**  
 General Intelligence and Emigration Office,  
 No. 323 Greenwich street, corner of Duane,  
 NEW YORK.

**THE SUBSCRIBER** is prepared to give information to those wishing to go to California, as to the best route, and what may be necessary for an outfit for single persons or those with families. Much expense might be avoided by those going, if they knew where to leave home just what would be necessary for their comfort.

Tickets will also be procured for those wishing them, thus securing passengers against the gross impositions and swindles often practiced upon them, particularly unprotected families going to meet friends and visitors in California. Any assistance in securing a desirable berth, or any advice sought, will be cheerfully given—rates of fare, time of sailing, etc.

The subscriber has spent four years in that State, and made six trips between New York and San Francisco, and passed over both routes.

Letters addressed as above, enclosing Three Dollars (\$3.00), will be promptly attended to. When a ticket is procured, an additional sum of Two Dollars (\$2.00) will be required.

I am permitted to refer to the following well-known gentlemen, who have long known me:

The Rev. Drs. S. J. Prime, and E. D. G. Prime, Editors of New York Observer; Hon. A. Wakeman, 37 Fulton street; Cornelius Mathers, Editor of the New Yorker; Dinmore & Co., of Dinmore's Railroad Guide; Capt. Henry Randall, of the California, New York and European Steamship Company; New York—and Col. Warren, of the California Farmer.

These living in California, sending for friends and families in the East, will find it to their advantage to communicate with the subscriber, as above.

**JOSHUA BUTTS,**  
 1 323 Greenwich street—(corner Duane), New York.

## SPECIAL NOTICES.

**WE are ahead of the world in Ambrotypes;** we are ahead of the world in Photographs; we are ahead of the world in Daguerrotypes. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "vera."

My Ambrotypes were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

**R. H. VANCE,**  
 Corner Montgomery and Sacramento streets.

**SLEEP! SLEEP! SLEEP!**  
 "To each and all, a fair good night,  
 And rosy dreams and slumbers light."

Sleep! Sleep! Sleep!  
 Rest! Rest! Rest!  
 Who is the man who doth keep  
 A mattress the finest and best?

Sleep! Sleep! Sleep!  
 Rest that refreshes most true!  
 The rest that, while sleeping, our health doth renew,  
 Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!  
 Rest! Rest! Rest!  
 Economy tells us to buy and to keep  
 The mattress that is cheapest and best.

Sleep! Sleep! Sleep!  
 On the mattress from JACOB SCHRIEBER!  
 If he be the single, then life will not jingle  
 Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go where, where,  
 Those famous mattresses made out of PULU!

**J. SCHRIEBER,**  
 23 Jackson street, near Hotel International.

**THE HOME OF BEAUTY.**  
 "Creative Genius! from thy hand  
 What shapes of order, beauty, rise,  
 When waves thy potent, mystic wand  
 To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius! Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
 And here our gods;  
 But they are mortal.  
 Around these fated ones  
 The good, the great, the living and the dead;  
 And yet they speak—speak all:  
 "We cannot meet the speaking eye,  
 But we are known, and, knowing,  
 Fain would hold sweet converse."

But as we gaze upon their clored life,  
 We know that they are silent  
 While they speak, and gaze on us.

Creative Genius! raise thy wand  
 And gather round us where we stand  
 Within these halls, a living throng:  
 That we may raise a glorious song  
 To all who set the noble part;  
 And tribute give to every art.

Creative Genius! here's thy home!  
 And here shall wondrous thousands come;  
 Here send a season free from care,  
 To worship the beautiful, good, and fair,  
 For it is not a freeman's duty,  
 To worship at the shrine of Beauty!

Behold these flowers that grow the land,  
 These little children in groups they stand,  
 While here and there, like angels, seek  
 They're smiling on their mother's knee.  
 Men, in their prime, each like a brother,  
 Joined hand in hand they're linked together;  
 Here, too, the aged, the noblest show,  
 They, hand in hand, together go.  
 Young men and maidens, free from care,  
 Single or plighted, like jewels rare,  
 Are gathered round this gorgeous Hall,  
 This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
 We now would ask, O let him stand  
 Before us; him who all this beauty planned.  
 Behold, cries Genius, quickly glance!  
 Enough! the artist, R. H. VANCE!

**Ornamental and Fruit-tree Seed.**—A small invoice of valuable Ornamental and Fruit-tree Seeds, for sale at the Office of the FARMER.

**The Oxygenated Bitters.**—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Colic, neuralgia, loss of Appetite, Fever and Ague, Heart Burn, Water Break, Acid Stomach, Sick Headache, Nausea, Headache, Excessive General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the only safe, certain and sovereign specific for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and to their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drug; in their nature tonic, not stimulating; retaining their virtue in any climate; they are a "cure-bination" and a form of "blood" of Medicine which knows no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character, the disease may be; no matter that it has baffled the skill of the physician, and resisted the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is made to the written certificates from distinguished individuals known all over the land.

## Ladies' Department.

## AN ORIGINAL POEM BY SERENA

We need an inspired pen, to express in fitting words,  
The full force of our admiration of the beautiful Poem  
which we have had presented for our columns, from one  
of the most gifted writers in this golden land. We  
know our readers will feel that the writer was inspired  
with the gift of true poetry, for from her soul she has  
indeed breathed a song that will be like a beacon light  
on our hill tops, awakening every true spirit to the glo-  
rious dawn of better days near at hand. The strain of  
just and truthful enthusiasm will start the life-blood  
of every heart, the same fire that awakened Pol-  
lock in his "Course of Time," pervades these lines:

"He touched his harp, and nation's heard, entranced,  
As some vast river of unending source,  
Rapid, exhaustless, deep, his numbers flowed,  
And opened new feelings in the human heart."

So will this Poem awaken new and glorious antici-  
pations of the speedy and permanent evidences of this  
promised good.

The following beautiful tribute, paid by Sherburne to  
Byron, is applicable in this case:

"Immortal bard! thy name shall be enrolled  
Among the first to claim the poet's crown;  
Thy fame the archives of the world unfold,  
And future times shall tell of thy renown."

## IS IT COME! AYE, IT IS COME!

AYE, it is come! the world's long promised day:  
It dawned, O, Syria! on the night of years  
When tyrants ruled thee with despotic sway,  
And earth was maledicted with thy mother's tears.  
The "wise men" saw the gleaming of thy star,  
The star of love, the herald of the dawn,  
And Westward turned to follow it afar,  
And watch the breaking light of the transcendent morn.

The "Sun of Righteousness" arose on earth  
To warn the cowering millions into life,  
Oppressed by Kings and Priests; 'er from their birth  
Condemned to live-long toil and bloody strife.  
Then was the Christ, the anointed oil,  
On our humanity poured from above,  
And we were crowned (daughters and sons of toil),  
All, Kings and priests of God— heirs of the Father's love.

But clouds of error dimmed its early light,  
And superstition cast a deeper shade,  
Emerging from the dread chaotic night  
That ignorance and human we had made.  
Yet higher it arose, and brighter beamed,  
Revealing light immortal to the world;  
Far 'er Intercession's waves sublimely streamed,  
And in Italia's sky the bannered cross unfurled.

And warrior Kings paid homage to the Cross,  
But in the name of heaven their armies led  
To spoil, and bloody strife, and reckless loss  
Of heaven's despairing millions, meanly fed.  
And hireling Priests, with bold and impious thought,  
Attempted to monopolize the light  
That beamed for all their heritage unbought,  
And in sepulchral cells to hide it from the sight.

Cells where the lamp of knowledge feebly glowed  
For the sleeping few—and, there to dole,  
For gold and penance, wrung with many a groan,  
Just light enough to save the ruined soul!  
They proudly boasted, then, 'ere earth and heaven,  
All light and truth were captives of the hour,  
And to their regal head alone, was given,  
As God's anointed one, illimitable power.

The "Sun of Righteousness" ascended still—  
Barred 'neath fretted vaults, in forms and creeds  
They saw it not; nor could they stay at will  
The light divine, bedimmed by their deeds.  
Westward its steady course the Christ-light kept,  
And 'er Britannia's Isles in glory broke!  
Immortal genius, that for ages slept,  
Unfolded her bright wings—once more on earth awoke.

And, where her shadow glanced upon the sod,  
Embryo Art and Science sprang to birth;  
And great Philosophy, serene like God,  
Familiar converse held with sons of earth.  
The covering millions heard, with deep heart-throbs,  
The truth that made them free—sublimely, then,  
Inspired with hope, forgetful of their woes, [men]  
They shook their trammels off, and walked erect like

Thy monuments of deathless fame arose  
Prouder than Egypt's in her Pharo's days,  
Or Grecia's temples in sublime repose,  
Above the marring crowds that thronged her ways;  
O, Europe, then, vast monuments of thought,  
Immortal aspirations rose to heaven,  
Whose spirit columns richly were wrought  
With priceless gems of mind thy God had freely given.

And when the Kings and Priests, in evil hour,  
Their fetters forged for freedom mind again,  
They roused a spirit mightier than their power  
To check their pride, their tyranny restrain.  
Thy "Pilgrim" launched their bark upon the sea,  
Foraking "Father-land," dear kindred ties,  
And Westward turned, America, to thee,  
"Inalienable rights" to seek 'neath freer skies.

Then from its center shook the moral world!  
Rent was the tie 'twixt rulers and the ruled—  
When to the brave the brave their flag unfurled  
In "higher law" of human rights well schooled,  
Then Despotism hoary bowed his head  
Upon his ancient throne—and on that morn  
Intolerance cried out with fear and dread—  
In that auspicious hour Democracy was born!

Westward the Christ-light kept its glorious way!  
Westward fair Liberty her altars reared!  
Westward Equality tore gentle away!  
The many there the few no longer feared;  
Accepted was the brotherhood of man:  
The School-house and the Church rose side by side  
Open to all, upon the heavenly plain,  
With knowledge to enlighten, truth divine to guide.

Aye, it is come! "the world's long promised day!"  
It signs be held, O, faint and doubting heart—  
The people from the loins they will obey,  
And wield the wealth of the great public mart.  
And from the people spring the chosen few  
To execute the people's sovereign will:  
"Old things have passed away, and all are new,"  
The humble, and the poor, the seats of honor fill.

Millions in ignorant poverty and shame  
No longer toil, from youth to helpless years,  
To crown a despot with immortal fame  
Whose reign was a sad reign of human tears.  
But millions, for the millions, work and thrive—  
For them the Farmer reaps the golden grain—  
For them the Sculptor hews the marble life,  
And bold Discoverer tracks the distant, pathless main;

For them the Inventor tasks his giant powers—  
For them the Student burns the midnight oil—  
For them the Artist spends his youthful hours,

And weaves bright garlands for the sons of toil;  
For them the Poet plumes his eagle wings  
To catch the anthem of Angelic spheres,  
And soaring heavenward, "ever soaring, sings"  
"Lanon is wondrous" meet, through the eternal years.

Aye, it is come!—the world's long promised day—  
And Westward still the path of empire leads  
To the Pacific's rock-bound shores away,  
Far, far away 'er mountains and 'er meads,  
Where the "Lone Star" of the Pacific shines  
To lure the traveler to that land of gold,  
Where earth looks up within her secret mines,  
For future generations, her vast wealth untold!

Where every flower of every hue and clime,  
In regal beauty its liars rears,  
And primal trees aspire to heights sublime  
In green old age of 'er a thousand years;  
Where lavish nature to the laborer yields,  
Of vegetation, marvelous in growth,  
Supplies exhaustless from her fruitful fields,  
Where summer's lingering sun rivals the genial South.

O, California! young each passing year,  
And yet, a giant in thy youthful might,  
Pause, for a moment, in thy swift career,  
And dedicate thy strength to God and Right.  
I see, 'er now, thy guardian Genies stand  
Sublimely forth in all her maiden pride,  
The empress of the sea and of the land;  
While thro' the conquered air her winged coursers ride.

Sublime and calm, as Deity, her mien—  
Toward the South she turns an earnest eye—  
Her robe is brightly flecked with ocean sheen,  
And on her brow, the glory of the sky.  
One hand, upraised, a magic trident grasps,  
Insignia of her power and triple sway—  
The book of fate the other firmly clasps—  
Her will omnipotent earth, sea, and air obey.

The sister Arts are grouped in beauty near,  
With thoughtful Science who their work commands—  
Labor with sinewy arms, the pioneer  
Of mighty nations, in the fore-ground stands  
With great invention busy with his plan  
To lighten toil, control the resisting earth,  
And elements to will of lordly man—  
As Providence decreed at the Creation's birth.

Thy genius points her scepter, toward the waste  
Of hill and vale, and far extending plain—  
And the down-trodden of the nation's waste,  
And gardens bloom, and fields of waving grain.  
She turns it Westward toward the open sea,  
And all its thousand Isles are winged with fleets  
That skim the crested waves, as light and free,  
And lay their richest treasures proudly at her feet!

Fill up the valleys! bring the mountains low!  
Ye hardy toilers for the golden ore!  
Make straight the highway of the nation—lo!  
The eagle's flock from every distant shore!  
The anointed sons of genius swiftly come  
To the MEXICAN of "the promised day"—  
Our God hath given another Eden home!  
Sons of the "Pilgrims brave," prepare the nation's way.

SERENA.

## A Letter from Alice to the Correspondents of the Farmer.

Most welcome, at this time, are the following  
heart wishes and communions of our long known  
and highly esteemed correspondent Alice, and we  
know that each and all to whom Alice sends her  
thoughts will most kindly receive her glad message  
and respond early. The beautiful tribute to flowers  
expressed for our humble self and our journal our  
heart's gratitude is tendered. We must say, how-  
ever, that, laborious as our duties have been, se-  
verals have been our trials for the past seven  
years, these have never bowed our head or crushed  
our spirit, nor can such events do so, so long as  
we have continually coming, from every source, by  
every mail, words of generous cheer, earnest  
prayers and wishes for our success, and the cordial  
approval of the wise and good of all classes.  
For the especial wish tendered to us of a social  
and domestic nature we send to Heaven, for Alice,  
a prayer that her prayer may be granted; so that  
we could make a suitable return to those dear  
friends who have so long and so often made our  
duties pleasant amid the clouds that will some-  
times come across the brightest and sunniest  
pathway. Alice and her letter come now at the  
propitious moment—the dawn of our new volume.  
We send it forth with our own added best wishes  
to all that it greets, and if we have merited a  
title of the good wishes so generously tendered us  
we are then richly repaid, and we here renew our  
pledge to be still more worthy of the golden words  
found in the closing paragraph of the following  
tributary missive:

## The Heart's Offering, or Wildwood Inklings.

Oh! let my friendship in the wreath,  
Though but a bud among the flowers,  
Its sweetest fragrance round thee breathe;  
Twill serve to soothe thy weary hours.

[MRS. WELLS.]

Bessie, I've been thinking, thinking of you all,  
this New Year's evening; I have pondered, I have  
ruminated, and kept my lonely vigil so long, that  
the large pine logs in the fireplace have burned  
down to a few coals and wasting embers; ever and  
anon a faint streak of fire flashes up nervously,  
and lights up the little cabin walls with a sickly  
glare; while I have been trying to read my future,  
read my fortune, on the sides of the blushing  
coals, where the gray ashes fall, one by one, and  
the coals grow smaller and smaller, till I lose sight  
of the bright images I see mirrored there. What a  
sombre study this castle mirrored among the em-  
bers is! I can look further on, and see lonely  
streets of deserted houses, and the silence is  
enough to startle one, for the leprosy or the pesti-  
lence hath been there, and upon every door-knob  
and window-sill are banners of crype, sluggishly  
floating in the sickly atmosphere, and all looks  
black as the Plutonian shore of darkness; empty  
heavens stand about in deserted streets and by-  
places, and tell the mournful tale that the destroy-  
ing angel hath been there; now and then, the  
dense and melancholy air becomes thicker and  
thicker with tears, sighs, and groans of those who  
have departed to that undiscovered land, whence  
no traveler hath yet returned to tell us whether  
the soul is immortal, and shall live for eternal  
ages yet to come. Still, I look farther on into this  
moving panorama of wasting coals: I behold a  
bridal train, where young girls are bearing upon

dimpled arms fresh garlands of dewy flowers, to  
deck the timid bride, who stands arrayed in virtue,  
youth, and innocent beauty, with gems and dia-  
monds flashing their brightness amid the shining  
wealth of curls, as brown as a chestnut bud. I  
look again; what a transformation! the timid  
bride has changed into an aged woman, an old  
wrinkled crone, with disheveled locks, tattered  
garments, hollow cheeks, and shrunken form; for  
the bridegroom, the beautiful of manly beauty, has  
bartered, has given, his soul for rum, and the hy-  
dra-headed serpent that lay coiled within the wine  
cup has stung the father, the husband, to the core  
of the heart, and the husband, of a few months,  
has been changed to an incarnate rum-fiend.  
Bessie, I dare not trace these images on the coals  
of the hearthstone any further, for I hear, through  
the thick blackness of the night, voices, well  
known, familiar voices, calling me back, way be-  
yond the treacherous deep. On every wave of  
darkness is borne a Happy New Year to the wan-  
derer in the golden land, far from friends and  
home; these voices are ever ringing in my ear, and  
singing in my soul, up through the dim arches of  
the past; I behold my dear old mother, just as I  
saw her ten years ago this night. There was a  
wedding in the old farm-house; there was merry  
making around the old hearthstone, where my  
small feet had pattered in helpless infancy: then  
there were stifling sobs, and hot tears, and "God  
bless and protect my child!" from tender, doting  
parents \* \* \* and I went out into  
the cold world, led forth to be a helpmate to one  
who yet lives to bless and protect me in the rough  
journey of life.

Oh Bessie! isn't ten years a great chasm in time?  
I begin to see the penning of this monster who  
is leisurely writing his wrinkles upon my forehead.  
How we all hate the old thief who is ever robbing  
us of blooming youth, of girlhood, and leaving  
naught in his wake but wrecked hopes, shattered  
nerves, faded joys, and an old withered heart,  
where the twilight and dews of sorrow have gather-  
ed thickly with the mildew of time! This old,  
hoary-headed venerable is ever busy pilfering away  
our jewels, our gems, and in what home is he a  
welcome guest? My dear Bessie, have you quite  
forgotten where the homely Alice was two years  
ago, this New Year's night? Don't you remember,  
after the gray crowd had been shut out into the  
noisy, jostling streets, how you and I, and Katie  
King, stole way up stairs to your quiet sanctum,  
and closed the door against the prying eyes of the  
world, and shut our hearts all in, that we might  
enjoy the quintessence of life, and how Katie kept  
on laughing and talking like a magpie, and how  
her black eyes flashed and sparkled like the jewels  
of night? Ah! think you we were not a happy  
trio? Bessie, dear Bessie, that visit makes one of  
the brightest pages in my lengthened existence,  
and every New Year's night, while God spares my  
life, will Alice, though widely separated, drop a  
tender tear on the altar of affection, and breathe  
softly the cherished names of sister Bessie, Katie  
King, and days of auld lang syne. I will ever pre-  
serve untarnished by the corroding tooth of time,  
two miniatures, daguerreotypes in the sacred cor-  
ner of my heart (which is fenced off expressly for  
those I love), and, Bessie, may these few lines  
which I now indite, revive our old love, and may  
the good God of another realm watch over and  
guide you safely through this new year, which is  
full of hope and brightness to us all. This is only  
one of the many good wishes I would shower upon  
my best and earliest California friend.

Edith, bless me! do you think I am forgetting to  
say a Merry Christmas and a Happy New Year to  
you? Sooner would I forget my birthright and  
memory, become a bankrupt, than to forget one  
(whom my eyes never gazed upon), but there is  
that nameless something which makes the fibers of  
my soul twine about your heart, that I know you  
to be as beautiful as Byron's Haidée, with a soul  
as big and as lofty as the Andes. And where are  
you to-night? mixing up in the noisy crowd, try-  
ing to forget yourself in the whirl and maelstrom  
of gayety, or, like myself, are you seated alone in  
front of your own fireside, holding soul communion  
with yourself? Edith, it is now mid-winter with  
us, and Jack Frost is doing his best to bite our  
toes, fingers, and proboscis extremity, and he is  
cutting up all sorts of antics on the outside win-  
dow-pane, covering it with a fretwork of frosty  
crystals, and breathes upon the springs and lakes,  
and with his refrigerators turns everything into  
ice and snow that is not able, in autumn, to hobble  
out of his dominion. By and by the old bluster-  
ing storm-god will have retired to his Arctic snow  
caverns, and the green Flora will breathe her  
sweet-scented fragrance on the cold Sierras, way  
up so high that one can almost stand and pluck  
the stars from the brow of Night; and then the  
little Johnny-jump-ups will peep out again with a  
host of other floral beauties, to bless the human  
family. Edith, don't you really think flowers are  
the language of angels? The words of love and  
purity are plainly written in the soft cheek of the  
blushing rose, and the little forget-me-nots, and  
the white, modest lily, have been painted by the  
benignant hand of the Creator. Edith, love flowers!  
The associations of birds and flowers purify the  
human soul; there is that simple loveliness among  
them that fascinates and lures one from the gilded,  
ostentatious display of this fault-finding world.  
Edith, did you ever take a beautiful flower, and  
gaze way down into its sweet upturned face, and  
think it had a living soul; and if it could only  
speak what pure and tender thoughts it would  
breathe? Who knows what a depth of pure feel-  
ing those silent little beauties might have? They  
speak right to the inner soul, and are emblematical  
of God, the angels, and the celestial kingdom  
above. How the shy violet, upstarting from a  
moist stone, will laugh at the going spring morn-  
ing, and permit the busy humming-bee to kiss her  
purple cheek all day, and laughingly linger in the  
warm honest sunlight till night draws her darkest  
curtains around the cold brow of the towering  
mountain; then, when the blessed morning star  
goes down, she shakes the pure distillations of  
night from her drooping eyelids, and laughs and  
smiles on till her season of beauty has past and  
gone. For a person who loves birds and flowers

you need entertain no fears; his heart is beating  
in the right place, for filth and sin cannot throne  
where there is so much purity and godliness, and,  
Edith, when I die and am laid away in the dank,  
loathsome tomb, who will care and bring God's  
flowers to deck my lowly resting-place? the echo  
answers, who?

And Sallie, a Happy New Year to you, and how  
I wish you were sitting beside me. I should like  
to look up into your sunny face, and tell you how  
many bitter lessons there are in life's experience;  
and, Sallie, if my pen don't like "Old Maids,"  
Alice is quite friendly disposed to all mankind and  
the women in particular. I know I should envy a  
chat with Sallie, and talk over things that lie  
nearest the heart.

There is "Old Block," too, where is he, this  
precious moment? More than likely sending a  
Happy New Year to all of the Colonel's correspond-  
ents, from the land of Nod. "Agricola," "Ben-  
bolt," "Mary Glen," "H. E. S.," "N. B. H.," and  
a host of others whom I have never seen; may the  
evening zephyr waft my blessings and Happy New  
Year to you all, and hope there is yet many a  
happy new year in Time's storehouse waiting to  
make you blest and joyous. And, in my heart's  
offering, can I forget the Colonel, the worthy editor  
of the FARMER, he who toils early and late, up in  
a crowded sanctum, picking out of musty half-  
written manuscripts something for hungry book-  
worms to devour? Who that has known his in-  
domitable will struggling through misfortune, fire,  
and flood, will not, in their heart, wish him, the  
benefactor of mankind, many, many a Happy New  
Year? My wish is that one who could enjoy do-  
mestic life as he could, would bury his old love and  
take to his fireside one who could cheer him in the  
arduous duties of life. Who that knows and  
loves him, would not invoke the rich blessing of  
Heaven to rest upon his head? How glorious, at  
the evening of life, will be his retrospect! How  
many, very many, homes has he made prosperous  
and happy in this land of gold and avarice, and,  
beyond the blue ocean, the Colonel and the FARMER  
have a host of warm friends and admirers, and  
when the light of this terrestrial sphere grows  
dimmer and dimmer to that faithful heart, his  
freed spirit will ascend to paradise amid the tears,  
blessings, and prayers of those who have loved  
and blessed his labors on earth; and none among  
the many will miss your glad presence more than  
Alice. A Happy New Year and good night to you,  
Colonel, and your large family of contributors.

ORDELL C. HOWE.

## A True Woman's Opinion of Dr. Cole's Report.

We feel most happy in laying before our readers,  
especially the wives, mothers, and daughters of  
California, the following most valuable letter, upon  
the subject of Dr. Cole's Report, its meaning, and  
the effect of it. We feel glad to know that the  
opinions we had advanced upon the subject in our  
remarks published in our number 24, of January  
14th, have now been approved and endorsed by  
one who occupies the high position of wife and  
mother; and one, too, whose influence has been  
felt, known, and acknowledged in a wide circle of  
relations and friends. The aim of our journal will  
ever be to make our Ladies' Department the herald  
of those great progressive truths which are now  
dawning upon the world, which, when received,  
appreciated and acted on, will assuredly elevate  
woman, and by her influence in that new and proper  
place, as the equal of man in the sphere of home,  
the homes of the Pacific will send forth to the  
world a race of men and women of physical, in-  
tellectual, and moral beauty and perfection. We  
are fully aware there are many minds not yet ready  
to give to woman her proper influence and power;  
but when female education is properly understood,  
when daughters are educated to know the duties  
which nature and progress demand of them, when  
they are educated to become worthy wives and de-  
voted mothers, then may we hope for a race of  
men who shall, by their lives and actions, honor  
the father and mother that gave them being; but  
never till woman is properly educated and elevated  
can we hope for an improvement of our race.  
Woman, the earliest educator of man, must be  
first acknowledged his equal in her Heaven-designed  
sphere; this is the will of God, for he hath said,  
"They twain shall be one flesh." We most heartily  
commend the following valuable letter of our most  
excellent correspondent, as worthy their highest  
and most considerate attention:

## Woman Mentally and Physically Considered.

How my heart thanks Heaven for the privilege of  
writing; how thankful I am for having devoted a  
part of my precious time in the study of the phy-  
siology of woman, physical and mental. O ye sons  
of Æsculapius, have you indeed given a report of  
your transaction in your Medical Convention,  
which has been served up in such style as to be of  
a double meaning, one all fair and truthful in re-  
lation to woman, the other susceptible of the vilest  
construction. Ah! ye learned men, let a woman  
of California, one who has been here since 1850,  
beg of you to be so clever as to render your re-  
port of the women of this fair land in such terms  
as to be understood by one single construction,  
truth in the premises, and then we can know what  
we are defending ourselves against. Is that Re-  
port in veiled language or terms, relative to the  
women of California; are technicalities used, not  
comprehended by any save the few who have made  
use of them; or are most people so ignorant as not  
to understand sentences written or printed in the  
English language; or has all been properly under-  
stood, and as properly resented. Nay, some one  
must be mistaken as to the true import of that Re-  
port. Who is it? The man that made the Report  
and gave it to the swift-winged messenger, the  
press, to go forth to the world; or we, the dear  
public, some of whom, alas, are most interested in  
a correct version of the whole affair. Certainly  
what it said; doubtless it was all plain enough to  
those who made it, but it does not seem to be so  
in the public mind, or the ear of Dr. Cole is worth-  
less. Friend FARMER, I am going to tell you and  
your readers just what I think about this Report.  
It is a subject on which every woman who chooses

should be allowed to speak. I accidentally read  
the extract from the Report of the Society, and the  
remarks made in the Alta California a few days  
ago, and pronounced it one of the foulest slanders  
against woman that has fallen under my notice in  
California; but a ray of light just then seemed to  
light up my mind, when I reflected upon the man-  
ner and style used in the commencement of the ex-  
tract. I read it with care and satisfied myself I  
was not mistaken in the terms used. They cer-  
tainly are plain in the commencement; the further  
we go the more complex, unless, indeed, we were  
willing to attach to it just the construction that  
has been attached, which the card of Dr. Cole  
denies having been the construction intended by  
the Society. Is it not enough that woman in Cali-  
fornia must suffer in a thousand untold ways by  
the unsettled state of society here? Are there not  
social miseries here to feed a morbid appetite, with-  
out such a sweeping assertion as that Report would  
be if understood just according to the language,  
under a common interpretation thereof? Ye learned  
ones, please say what you did mean in relation to  
the mothers, wives, and daughters of California?  
If your report only had reference to diseases of a  
uterine character, I see not as many sufferers here  
in our cities as in other cities where I have resided;  
and why need they be considered so frail because  
they are the subjects of diseases peculiar to women?  
If you wished to convey an idea that novel reading  
induced a train of diseases, by inflaming the im-  
agination of young girls, until they were unable  
to procure sleep without resorting to laudanum or  
ether, why not make a plain statement that would  
be calculated to enlighten the mind on this subject?  
If dissipation and fashionable life is a fruitful  
source, weakening and prostrating the physical  
economy of woman, why not be a friend to the  
human family, by teaching them the effect of  
fashionable folly, and also fashionable reading,  
too, upon the mind, to corrupt it, and on the body  
to weaken and destroy? But to give a Report,  
couched in such terms as to be liable to any con-  
struction other than the one intended, was, I must  
say, culpable in the extreme.

But, gentlemen, little by little, human beings  
are being led up higher and higher to a knowledge  
of themselves, and soon, I trust, the young wo-  
men of California will be so instructed in relation  
to the laws of life and happiness, as to be far re-  
moved from the power of such insinuations being  
applied to them in any sense whatever, by obedi-  
ence to the natural laws regulating all the diseases  
which are peculiar to them. Let woman seek to  
know herself and her peculiar organization; seek  
to learn that manner of life that will insure her  
health, and the power to burl such imputations  
upon her will be shorn of the ability to reach her.

That Report, as it now reads, is a falsehood an-  
timinated against every virtuous, suffering woman,  
married or single, in California. Will those gentle-  
manly characters who gave it, make it plainer to  
the comprehension of every mind, or else acknowl-  
edge and maintain the ground, abiding the conse-  
quence? I can read the extract, by leaving out  
expressions applied to the female herself, and see  
the truth in speaking of disease, and some causes  
mentioned as producing a train of disease to which  
woman is liable; but when I read it all together,  
it is a cruel, wicked thing to hurl at woman. O,  
how cruel the construction that may and has been  
put upon it; and it was cruel to send it forth  
without taking more pains to make it plain. When  
a physician talks to me of a woman indulging in  
dissipation, I understand him to have reference to  
that manner of life that is injurious to health, and  
contrary to the laws of life; I do not understand  
him that such are licentious. If he talks about  
the ruinous effects of reading trashy novels until  
her mind is so excited that she must take an anody-  
ne to sleep; that this, if persisted in, will de-  
stroy her life, and that this dissipation in fashion-  
able living and trashy reading is the employment  
of the married as well as the unmarried, and leads  
to immorality, I do not understand him to mean  
that they are debased, in the commonest accepta-  
tion of the term. What is immorality? What is  
dissipation, in the medical understanding? Let us  
who do not know set ourselves to work to learn.  
And I will tell you, dear loved ones of my sex,  
how young girls are removed from the proper  
guardianship of their mothers, at the particular  
period specified by the medical men, by seeking  
pleasure among young people outside of home  
influence, and by getting married often before ma-  
turity. These, I think, are some of the things,  
and the effects of these upon the mind and consti-  
tution, in that immature age, is the evil resulting  
therefrom, engendering female weakness not easily  
removed.

Had these medical men taken time, and on this  
head been more elaborate, showing what was meant  
by them in the terms they used, such as dissipa-  
tion; shown what it was; what immorality, or  
every species of immorality, which they had on  
their minds in connection with uterine disease,  
they might not now be the subjects of so much in-  
dignation as they are. Medical men speak of things  
as immoral, and of living as dissipated, which is  
followed by many as fashionable and genteel.  
One of these is not to work; another is to dress  
fashionable, though the body is pained by being  
dressed in an uncomfortable manner, and one which  
has the effect on the system to induce diseased  
action of some of the organs of life. Ask your-  
selves is this immoral? It is suicide; is want of  
proper balance in the system, lost by a routine  
of fashionable follies called pleasure (but which a  
medical man calls dissipation), and is succeeded  
by aches, pains, depressions, and exhaustion, and  
also suppressions, in the female at war with health,  
and liable to destroy life. Is this also immoral?  
Is it suicide? Let us read this extract, attaching  
this kind of meaning to it, and it appears different.  
Let them, in the mean time, refute the foul im-  
port which can be drawn from that article. There  
are women in California who have suffered enough  
by evil being spoken of them without cause, save a  
giddy life. O, that all would arouse themselves  
to healthy action, to moral, elevating pursuits, and  
all that can be said will not prevent their occupy-  
ing an exalted position in point of moral purity.  
California is destined to produce a host of

women who will be hailed on earth as those who will, in spite of all calumny, live in accordance with the laws of their being, instead of sacrificing life, health, and domestic happiness at the shrine of folly or fashion. Some are laboring now in the decline of life to promote the better education of all; and especially that females be taught the responsible duties of maternity, in order that a race of better developed beings may bless the world; one of fewer excesses; one of more harmoniously developed natures; one of better and more healthy progenitive or hereditary influence. O, then ye women of this fair land, heed it not if the Reports of Medical Societies do occasionally startle us to a perception of the great work of redemption to be done by woman. What if they should, in their veiled manner, give to the world such statements as startle every true man and woman in the land; it will only tend to awaken a deeper interest in the welfare of the coming generations: good will come after all.

It is now almost midnight, but I know that I too cannot sleep until my mind is free from this subject; and I now wish to make a suggestion to those medical men, if they are really interested in the welfare of women in general, if it would not be a blessed deed in them to come right out and tell just precisely what they did mean in relation to poor, frail, desponding creatures, in connection with their aches and pains, and their disagreeable sensations; tell them what is meant by dissipation and every species of immorality, and they will be better understood. If they wish to benefit woman, let them say plainly to man and woman too, that a violation of the moral laws of their being, no matter how trifling, is immorality; that any departure from the organic law, affecting health, is dissipation, and may possibly destroy life by disease; and tell them in plain terms, that both married and unmarried women, who are leading what is called in general fashionable life, are wasting the powers of life in folly, to the destruction of moral purity, however much they may abhor and detest a life of licentiousness, however far they may consider themselves above such a degraded state. Teach them just enough of metaphysics to know how reading trashy, unwholesome productions will affect the mind, and how, through the nervous sympathies, the body is affected, thereby producing a train of weakening, destroying diseases, all connected, more or less with the uterus, inducing a state of misery intolerable to every female to endure, and all from an excited, then an inflamed and perverted action of mind; all calculated to produce untold debility and suffering in the peculiar organization of woman, and to corrupt the fountain of life in her; and then will suffering woman know and feel in her heart that these physicians are her friends. If they do point out what is dissipated and immoral in such a veiled manner as to be misconstrued and misapplied, it will end in more light among mankind on these delicate subjects. Then let not any virtuous woman shrink from the truth, no matter if it does appear clothed in fith and rags.

The whole truth is briefly told (all that is necessary for mankind to know), and that is, that girls are allowed to marry before maturity of mind or body; that this is prejudicial to health and life; that leading a fashionable life and indulging in the excesses of its foolish requirements, wastes the vital powers and produces a train of diseases called uterine; and that in this suffering condition physicians estimate two-thirds of females in California are now placed; and they esteem them poor, frail, desponding, dissipated, immoral beings, because they are so weak-minded as to conform to follies in their employment of time, to customs not increasing but destroying a healthy action of the organic system of woman.

If we look at the general terms used by medical men on these subjects, we can then see the true import of such a Report as that made in Convention by them. They all understood it in few words; the public requires to have it different and more elaborate, and will continue to require it while there is a disposition to attach only one meaning to general terms, dissipation and immorality.

I have written enough. Let those doctors be more explicit, to satisfy all concerned, and then let observation determine if indeed it is true that uterine diseases are hurrying their many victims to an early grave, and seek out the causes operating and producing them. These will startle us from our position of indifference, so long occupied, to a determination to know ourselves and all that has an influence to detract from the true character of woman.

January 16, 1859.

## TO THE PUBLIC!

MRS. A. E. IRWIN,

No. 290.....Stockton Street,

HAVING greatly enlarged her Establishment, and stocked it with a varied and elegant assortment of the  
**RICHEST AND MOST DESIRABLE GOODS,**

Respectfully invites the public to call and examine the same. Her stock comprises, in part—

ROBES, DRESSES, CAPS, VAILS, RIBBONS, UNDER LINEN, HATS, AND EMBROIDERIES.

ALSO, INFANTS' AND BOYS' WARDROBES, And every article required to complete a Lady's outfit.

Mrs. I. particularly desires to inform persons from the interior, that she is prepared to execute orders for the making of Ladies' and Children's Garments in a prompt, handsome and desirable manner, and at the lowest cash prices. As evidence of the appreciation of the merit of her work, it may be stated, that at the late State Fair Embroidery, Dressmaking, Ladies' and Infants' Caps, and Boys' Clothing.

Mrs. I. guarantees that all work executed or goods sold at her establishment shall give perfect satisfaction, or the money will be refunded. A continuance of the patronage heretofore so liberally bestowed upon her is respectfully solicited.

## POLAR OIL.

30,000 GALLONS

REFINED POLAR OIL,

In Barrels and Cases,

FOR SALE AT LOWER PRICES

Than ever before offered in California.

Purchasers of Oils would do well to visit our establishment, before laying in their winter stock.

We will guarantee to suit ALL as to quality and price.

**LARD OIL.** Is also offered at greatly reduced rates.

**WINTER SPERM OIL.** Warranted to stand the test of the coldest weather.

**BINNACLE OIL.** Warranted to burn a lamp dry without trimming.

**CAMPBELL.** Distilled fresh every day.

**ALCOHOL.** In Barrels and Cases, 95 per cent.

**BURNING FLUID.** Of superior quality.

STANFORD BROTHERS,  
 PACIFIC OIL AND CAMPBELL WORKS,  
 93rd

LAWRENCE & HOUSEWORTH,  
 OPTICIANS  
 177 Clay street,

Wholesale and Retail Dealers in and Importers of  
 Optical, Mathematical, and Philosophical  
 INSTRUMENTS.

The wants of the FIVE particularly attended to, and the finest  
 GLASSES, PEBBLES, and improved Periscopic Glasses  
 in every style of frames.

**PRESERVING GLASSES.** For those who have not  
 used Spectacles, but feel their sight beginning to fail when  
 reading or writing in the evening.

**Ladies and Gentlemen** at a distance requiring SPEC-  
 TACLES, by stating their age, and how far from their eyes  
 they hold a paper when reading small print, or by sending a  
 glass from their old spectacles in a letter, may procure from  
 us a pair to suit them, at the same price, as if they were here  
 in person to select them.

**Marine Optics,** Magic Lanterns, Drawing Instruments, Magnetic Spectacles, Galvanic Batteries, Stereoscopes, Goniometers, Spectacles Cases.

**MAGNIFYING GLASSES for Examining QUARTZ.**

Direct Importers of Joseph Rodgers & Sons

**CUTLERY.**

For sale by LAWRENCE & HOUSEWORTH,  
 OPTICIANS, 177 Clay street.

## JOSEPH GENELLA!

..AT THE..

**PIONEER CROCKERY STORE,**  
 180 and 182 Montgomery street.

Near Jackson street. SAN FRANCISCO.

HAVING JUST RECEIVED A

NEW AND WELL SELECTED STOCK OF

GOODS,

Invites his Old Friends and Customers to call and

examine.

The Goods have been Bought at Low Prices.

They have been selected by himself, who has twenty

years' experience in the Crockery and Glass business.

## GREAT REDUCTION IN THE PRICE

..OF..

DR. F. G. JOHNSON'S

PATENT SELF-REGULATING

WINDMILL.

MANUFACTURED BY  
 D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF  
 ALL; and being constructed all of Iron, is without  
 doubt the most perfect and durable, as well as the most  
 economical Windmill in the world.

The undersigned having purchased the Exclusive  
 Right for the MANUFACTURE of these Mills in  
 this State, will manufacture and keep on hand the  
 following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00.

No. 2—One to one and a quarter Horse-power.....130 00.

No. 3—One and a third to one and two-thirds Horse-  
 power.....162 00.

No. 4—Two to two and a half Horse-power.....200 00.

No. 5—Two and two-thirds to three and a half Horse-  
 power.....230 00.

(This power is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

DEPOT OF MANUFACTURE,  
 Nos. 90 and 92 Bush Street,  
 SAN FRANCISCO.

When any greater power is required, the prices will be  
 pro rata as the power is increased. They are susceptible of  
 being increased to 30 horse-power or more; and applied  
 for any purpose where stationary power is needed and as  
 manageable as a Steam Engine, with no risk or ex-  
 pense. Those anticipating using this cheap power (the  
 Windmill), should not fail to examine THIS MILL;  
 such examination will satisfy them of its adaptation, and  
 ability to serve their purpose efficiently and fully. It is  
 unlike other Windmills that are called self-regulating;  
 they have stationary Fans and small revolving Fans,  
 which are depended upon to graduate the speed of the  
 mill; whereas, by Dr. F. G. Johnson's Patent the Fans  
 revolve upon the arms and turn their edge to the wind  
 when a gale or sudden gust strikes it; and again, a child  
 can stop it at once by turning the fan's edge to the wind,  
 by the use of a lever pressed upon the stop-wheel, which  
 is upon the shaft. These Mills can be used for any pur-  
 pose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH  
 STREET, San Francisco; where the Manufacturer will  
 take pleasure in showing and explaining the mechanical  
 principle upon which reliance is had for their superiority  
 over all other Mills known, or of which we have knowl-  
 edge.

D. VAN PELT.

C. M'KECHNIE & CO.,

MANUFACTURER

OF ORNAMENTAL STAINED

WINDOW AND PLATE

GLASS,

OAKLAND CITY, ALAMEDA COUNTY,

CALIFORNIA.

## Cahoon's Seedling Pie-plant.

THIS SPLENDID VEGET-  
 ABLE is now offered in its  
 highest perfection by the un-  
 dersigned, who procured his  
 stock direct from the origi-  
 nal Nursery and brought  
 it to this State, and is  
 now ready to offer  
 it to the Trade on the  
 best terms.

The subscriber  
 resided near Mr.  
 Cahoon 15 years,  
 and knows the val-  
 ue of this RHU-  
 BARD well; it is  
 the finest in the  
 world, and has  
 won its title to this  
 fame.

The subscriber  
 will offer the pre-  
 sent autumn stock of  
 this most valu-  
 able Esulent, and  
 he feels confident  
 it will be appre-  
 ciated. The de-  
 scription upon the cut is literally  
 true, both in size and weight. Its  
 character has been fully proved,  
 by the exhibition of the samples  
 grown by the undersigned here  
 it has received Premiums at  
 every Exhibition, both for its size  
 and quality.

PLANTS will be on sale at the  
 Garden of the undersigned at  
 CLINTON, and by Col. Warren,  
 sole agent for the same in San  
 Francisco, where they can be  
 seen.

Patent—Large Roots \$3 single,  
 or \$5 for two; small and cut Plants \$12 per dozen,  
 JAMES BAILEY & NATHAN COOK,  
 CLINTON, Alameda county.

## From the Atlantic Side.

Editor Farmer: While tendering to you all kinds of good and pleasant wishes yesterday, I "fetched up in a tremendous snow storm," good, strong, and well laid on, thick, cold, white, deep, wide-spread, slippery, slushy, wet, uncomfortable, outrageously disagreeable, and good for nothing but for sleigh-riding purposes, etc. The boys, however, have had a good time, and the little girls, God bless them, have had a ride on the sleigh of brother or playmate. Fancy turn-outs have attracted much attention. The Gothamites look at them for a moment, and then plod along in the old way, or jump into an omnibus sleigh, pay their sixpence and are independent, having no horses to shoe, no hay to buy, and precious little money to take care of, anyhow, and they had a happy New Year's, good roast turkey, morning papers, and other fixings. They can ride five miles for five cents, or walk for nothing, wear good clothes, feel comfortable, and rejoice generally in all miscellaneous matters pertaining to politics, finance, pleasure and horse sleighs, fast horses, etc. The New Yorkers are a great people, and James Buchanan is about seventy years of age—so they say.

## THE SNOW STORM

Has been severe and extensive. In this city it is about fourteen inches deep on an average; in the country, some thirty miles off, it is nearly three feet, and plenty room for more. This is only the fifth or sixth snowstorm of the season, all really true and genuine. This is surely a great country, and its snow-storms are hard to beat, even in California, except in the mountains, and those should be regarded as the real pure unsophisticated Yankee storms, common to all true Americans. Well, all the city really enjoyed the storm, particularly the boys and girls, who anticipated fun in visions of sleighs and bells, and then again it is said that about thirty thousand dollars have been paid to street sweepers and snow shovelers in the city during the storm, thereby verifying the old adage, that "it is an ill wind that blows no one any small change, I believe. If I am not right in the quotation, I am wrong. I presume; and so let it go. The papers are full of incidents of the storm, which has so blocked up all the avenues of travel that several choice parcels of news on the way thereby became quite venerable.

## CONGRESS

Has re-assembled and commenced their labors again, for the good of the country and all parties. It is to be hoped that they will work a little for the good of the country, and not for the individual or party. They have now less than two months to work, and there is much to be done for the whole country. There are delegates from four different unorganized territories wishing to have the necessary steps taken to organize a territorial government.

## THE PACIFIC RAILROAD BILL

Is attracting the attention of all parties, and all are in hopes that the right and efficient action in the premises will be taken. Senator Gwin is taking hold of the matter in earnest; others, also, are leading off. I am pretty sure it will pass through both Houses with a large majority, provided they will have the road pass through the farm and have a depot in or near the garden of each and all of the members of the aforesaid houses. For you would understand that there are wise and patriotic men there; besides, they are now in the new halls, and will doubtless try and signalize their advent by some extra patriotic measure, such as voting each member thereof a new hat, that all may appear before the people in a comely manner. Mr. Gwin has also brought in a bill to have the mail carried to California by four routes, the Panama, Nicaragua, Tehuantepec, and the overland routes, so that you will have a weekly mail, if the bill passes, which it is hoped it will do without any formidable difficulty.

## FROM EUROPE.

We have nothing of an important or exciting character. The general tone of the European press is pacific, though many believe breakers are ahead and that there may be a bombshell fall somewhere pretty soon, and make bad work for some of the great men of the age. Very likely.

## FRANCE

Is as quiet as she can well be, as it is not in French "nature" to be still long at a time anywhere. The Emperor keeps all moving in some direction. He is compelled to hold the reins of government with a firm grasp, to curb in the leaders, and whip the other spirited "varmints" into the traces, and make them all pull in the right way, and to go ahead anyhow and never take the back track. For him to waver, would be ruin; to turn back the reverse movement of the mighty machinery of his own power, would crush him in a day, and scatter all his fond hopes for a prolonged dynasty, never to be gathered again.

## IN ENGLAND

All is quiet. The money market is easy; and the general health and prosperity of the country are the subjects of gratulation in all quarters. The Government has recalled Lord Napier from our country, and appointed Lord Lyons as his successor. Many here regret the recall of Lord Napier, as he has secured the esteem of all parties with whom he has come in contact.

## IN IRELAND

They have had quite a hubbub about many little matters pertaining to the "Ribbon Men," as they are called, who are connected with a secret society, the intention of which is thought to be, in some way, to subvert the Government, and throw off the yoke of Merry England and set up on their own hook. Many arrests have been made, and it is believed that the hydra-headed monster, Rebellion, has been overthrown for the present.

## AUSTRIA

Is preparing for war, or peace, no one knows which, but is evidently very uneasy about the affairs of

## ITALY.

Which is in a feverish state of excitement, and another Revolution is daily expected. France wishes to have her say about matters there, and Austria makes wry faces at the Emperor and the pretty Empress, and Frenchmen cannot, and will not, stand that at all; and each nation is "raising the back" and bristling up a little—just for fun, you know.

## FROM INDIA AND CHINA

We have nothing of very late date; you are probably ahead of us in the news from your neighbors. The Emperor of Japan is dead.

You will see by the papers the doings of New Year's; of the sleigh-rides; the Douglas fairs; the Oratorio; the Houston dinners, that he would not eat; of the Presidential speculations that are to come off; of the various State Legislatures and Governors' Messages; the new Steamship Company and the old Monopoly; the news, the sayings, the doings, and the short-comings, of all kinds of people; and the price of turkeys, pork and all kinds of hardware, generally.

## The Glorious Rain.

"The clouds consign their treasures to the fields, And, softly shaking on the dimpled pool, Prolusive drops, let all their moisture flow, In large effusion o'er the freshened earth."

Why thus cast down? Why all this sad complaining, this fear, this want of faith in nature? Is it not written, there shall be the early and the latter rain; there shall be seed-time and harvest? The recent singular and severe weather, the severe cold, the biting frosts, the unusual gales of wind, the sweeping northerly, that seemed to dry up the moisture of the earth, these, together with accumulated ice and snow of the mountains, sent over our sky so cold and biting a blast, so searching and drying a wind, as to cause the very grass, the food of beast, to wither and die; and even the cattle of the field felt its severity, and fell before its power. For many weeks the weather has been very severe, causing, in many places, the husbandman to suspend his labors; and even then, with all his past experience, he almost forgot these promises, and began to murmur loudly at the absence of earth's accustomed refreshing. But the rain comes pattering down in big drops, the sky is darkened with a sable curtain, for a generous refreshing of the earth is near. How quickly man's hopes revive with the rain. Like as the withered leaflet, that has dropped in the sun's hot rays, is lifted by the refreshing dews of evening, so man's hopes of harvest are restored by these copious showers from heaven.

The rain of the last two days has indeed been a blessing to the earth. It will abate the earth and the vegetation upon it of the poisoning influence of the late bitter frost, restoring the face of nature and of man to their wonted cheerfulness and health. We hope that the rains have extended widely over the State, and carrying, as they must, a reviving influence upon all things, we shall soon see and feel good and grateful influences resulting from it.

**THE WINTER IN THE MOUNTAINS AND MINING.**—The Sierra Citizen says:—All are complaining of this winter, and they say it is more severe and regularly cold and stormy than the ones they have passed in these mountains. We have had about two weeks of pleasant weather since the middle of November; all the rest of the time has been freezing cold, or snowy, windy and rainy. This week opened gloomily; brief and brisk snow-storms have followed, creating the appearance of winter just commencing. We have never had so little to import relative to the mines of this region as at present. The miners are nowhere entirely idle, but are picking slowly, anxious for the winter to pass, and hoping to do well the following season. The large quantity of snow will be advantageous; the more snow the more mining, when freezing weather is gone.

**J. M. FREEMAN, Esq.**—This old pioneer expressman, and head of the Express office of Freeman & Co., arrived on the J. L. Stephens, after an absence of several months. Mr. F. arrived in excellent health and spirits, and the amount of good and business which the House with which he is connected is doing, is a strong evidence of its increasing prosperity. Hints are abroad, that a widely increased plan of business is on the carpet for the future.

**HOLLOWAY'S PILLS AND OINTMENT.**—For nearly a quarter of a century the press of the civilized world has teemed with proofs of the efficacy of these remedies in bilious disorders, complaints of the stomach and bowels, salt rheum, and skin disorders. Their wonderful properties are unchallenged.

Sold at the manufactory, No. 89 Maiden Lane, New York, and by all druggists, at 25c., 50c., and \$1 per box or pot.

## Wholesale Produce Report.

NURSERY BUSINESS.	
200,000 FRUIT TREES TO BE SOLD THIS SEASON.	
THE UNDERSIGNED, PROPRIETOR OF THE PIONEER NURSERY AT ALAMEDA, being determined to close out his entire stock of FRUIT TREES, this season, takes this method to make known to his patrons and friends, everywhere, that he will offer this large stock at such prices as to make it an object for all to buy large lots.	
This stock embraces all the most desirable kinds of fruit now grown, of the following kinds:	
APPLE, PEAR, PEACH, CHERRY, PLUM, APRICOT, NECTARINE, FIG, and QUINCE Trees, from one to three years old.	
Also, GRAPE-VINES, STRAWBERRY and RASPBERRY Plants, CURRANT, and GOOSEBERRY Bushes.	
Ornamental Plants and Shrubs, ROSE BUSHES, and GARDEN PLANTS.	
The prices, in all cases, will be very low, as I intend to close out my business. The Garden and Nursery are located at Alameda. The Oakland Ferry-boat stops at the Landing, from whence the omnibus takes passengers to the grounds. Stages from San Antonio come directly to the garden gate.	
Messrs. GRAVES & WILLIAMS, on Merchant street, will act as my Agents, where Trees can be seen, and orders can be left, and where I shall often be found.	
A. H. MYERS.	

HOPE NURSERY, Between William and San Carlos streets, In the Eastern part of the CITY OF SAN JOSE. D. T. ADAMS, RESPECTFULLY INFORMS HIS FRIENDS AND the public that he has for sale a choice stock of APPLE AND PEAR TREES, that are hardy, and have been grown with much care as to selection of sorts, extent of variety, size and vigorous growth, to give entire satisfaction. <th data-kind="ghost"></th>	
A SPECIAL PREMIUM was awarded to the proprietor by the California State Agricultural Society, at their Annual Fair, 1858, for the BEST APPLE NURSERY.	
Parties desiring to purchase large lots are especially solicited to call and examine for themselves.	
10,000 Apple Trees, 3 years old, 100 varieties.	
5,000 do do 1 year old, 100 varieties.	
2,000 Pear Trees, 1 year old, 100 varieties.	
1,000 do do on the trunk Broad-leaved Angers Quince, 100 varieties.	
Also—A good assortment of CURRANTS and GOOSEBERRIES; California GRAPE-VINES.	
Sold at as low prices as Trees of the same size and quality can be purchased at any responsible Nursery in the State.	
The larger portion of this stock has been propagated from Trees that have borne Fruit in California.	
All orders for Trees must be accompanied with the Cash, and persons ordering Trees will please state explicitly by what conveyance they are to be sent.	
Trees packed in the most thorough manner, enabling them to endure any probable exposure, delay, or handling; for which a moderate charge will be made, barely sufficient to pay the cost of material and labor. All packages delivered at the landing, Alviso, for the steamer, free of charge.	
21 3m D. T. ADAMS, San Jose.	

SANTA CLARA NURSERY, Half mile west of Santa Clara, On the San Francisco road.

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 11, 1859.

NUMBER 2.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (opposite the City Hall), San Francisco.  
Terms.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.

Advertisements and Subscriptions must be paid for in advance.

#### What California should do and what she will do.

CALIFORNIA embraces within its borders a great variety of soil, adapted to the production of all the necessities and luxuries of life. No country is richer in Agricultural products, and none can compete with it in Horticultural variety. At one point, the year begins, continues and ends amid sunny smiles and fragrant flowers; at another, the Sierra Nevadas rear their frigid crests, and there the frozen snows hold their eternal vigils. Within these two extremes, Nature has scattered with a lavish hand all that is really necessary for the comfort and well being of man.

This country has been in the possession of the United States a little over ten years; yet, in that short period, it has been satisfactorily demonstrated to the world that no single country on the face of the globe possesses so many of the substantial and indispensable elements of wealth and greatness. It was at first supposed that California could not become a grain-growing State, in consequence of the dry season. It is now demonstrated that the summer months are Nature's holidays instead of the winter. In the winter season the soil produces most abundantly. In the summer it is only laying off, keeping cool during the dog-days and resting, so as to begin its work again when it gets a sip or two of rain-water.

At first it was thought that only a few of the common vegetables, and scarcely none of the cereals could be produced. But now, we know that the products of every climate grow in great profusion within our borders. When farmers found that they could produce most, or all, of the grains or fruits known in the East and elsewhere, they began to turn their attention to this branch of productive industry. At first there were difficulties in their way. The climate was widely different from any that had ever come within the range of their experience. Several years necessarily elapsed before they could arrive at any satisfactory solution of the great questions as to the best method of tillage and of peculiar adaptation of different soils to the production of certain crops. The farmers were scattered over a great extent of country, could communicate with each other but seldom, that they could might profit by the experience of the others. To get any considerable portion of them together was very difficult indeed.

After great and long continued efforts, a State Agricultural Society was formed. The first meeting, for exhibiting the products of the soil and the skill of the mechanic, astonished the producers themselves. This meeting foreshadowed the high and commanding position California was destined to occupy among the States of the world. Its geographical position, on the border of the great American continent; a near neighbor to Asia, glittering with gems and pearls, studded with its spicy groves and palmy plains, renders her an object of interest and attraction to the denizens of both the Eastern and Western world. That she possesses some of the wildest and grandest scenery on the globe, no one can deny. And that she possesses vast mineral wealth is certain. That her vegetable productions are the most wonderful known to man, has been demonstrated again and again. That her population, as a class, have more energy, more determined perseverance, more practical intelligence; and that they would bear up under troubles, trials and disappointments that would crush almost any other people, has long since become a proverb.

It is our full belief, that California is yet to act a more important part in the history of the world than any other nation. From the midst of her wild and rugged scenery will spring up the master-spirits that will control the destiny of earth's proudest nations. There seems to be concentrated here all the elements of greatness and all the appliances of wisdom. How are her resources to be developed? By what process is she to be placed firmly upon the radiant path that will lead her to complete and successful triumph? It must be by combining the immense wealth of the country; by concentrating the wisdom, the talent and the energy now found in her borders, in such a form that it will attract, appropriate and render efficacious any and all similar qualities of mind that may be allured to our shores. Agricultural knowledge, science and skill, brought from every land, must be assimilated and combined, before it can in reality be rendered available. Let the amount of agricultural knowledge now in this State be widely diffused, duly appreciated and rendered available in the great farming interest of the State, and California would stand as high as any State in the whole Union in a single year.

In five years, the knowledge now in possession of her people, applied judiciously in all the various

departments of human skill and industry, would render California the first State in any country in its agricultural products, in the skill, and in the energy and perseverance of its population. The older States have, by a long and slow process, obtained the knowledge now in our possession. With them it has sprung up after many years of truly laborious toil, uninterrupted perseverance, and continued exertions. Standing here, on this side of the Continent, widely separated from our Atlantic and European neighbors, on the most prolific soil yet known to man, with the great store-house of agricultural knowledge thrown widely open before us, with practical men, skilled in all the departments of farm, garden and pomological science, and trained in the habits of industry, patient investigation and research, of our Eastern friends, what may we not expect from such abundant materials. Practical men, from every State of the Union, are here. All the great agricultural States have sent many of their sons here; the cotton and rice growing States are largely represented. Many of those skilled in the culture of the vine, from France and Italy, have made their home in our midst. Those acquainted with the rearing and feeding cattle, in all the great stock regions of our country, are also with us. The mechanics of California, in all the departments of human ingenuity and skill, are not surpassed by those of any other country. Our merchants, in their business habits, in their commercial enterprise, in their thrift, in their unwavering integrity, and their perseverance and energy, in the midst of almost overwhelming disasters, most deservedly stand high in every part of the commercial world. The general thrift, intelligence, industry and enterprise of our traders and miners are proverbial in every land. Our country and city papers will compare favorably with those of the most polished and oldest sections of the Union. Our professional men rank high in the learned professions of the world. In short, there is probably no nation on the globe, containing the same number of inhabitants, where a wider range of practical experience, a greater diversity of knowledge pertaining to the great industrial pursuits of men, can be found.

It is right to suppose then, that California must ultimately take a high stand, and even the front rank, among the States of the world. All that seems necessary to produce this result is, that the knowledge and experience we have be classified and applied in the various departments for which it is best adapted. That this may be properly done, there should be inducements held out to all to bring the sum of their knowledge, to engage directly in the production of some great benefit to the people. It is not the farmer and mechanic alone that should be interested. The merchant, the trader, the miner, the banker, the members of the learned professions—from the occupant of the gubernatorial chair to the lowest subordinate office—all should unite their efforts upon some plan to build up the great industrial interests of our State. Every one, by effort, by means, by counsel and earnest co-operation, may, and should, add something to the common stock of the State's wealth and glory. No one should, for a moment, suppose that his calling, position, or comparative independence, can excuse him from helping in this great work. From time immemorial the greatest kings and potentates of earth have been interested parties in, and promoters of, agriculture and the mechanic arts, knowing they were not only the strongest bulwarks reared around their thrones, but the mightiest pillars on which they might lay their permanent foundations. Even now, His Royal Highness, Prince Albert, is a practical farmer, and an active and efficient member of the Royal Agricultural Society of England. The King of Prussia spends much of his time on a farm, encourages agriculture and mechanic skill, and bestows princely rewards upon those who excel in either. The heir-apparent to England's throne, as also his royal brother, has been taught the trade of the carpenter. Most of the proudest nobles of England, and all the other European States, are great patrons and promoters of industrial pursuits. They vie with each other in honoring the most ancient, the most healthy and most important pursuits of our race. If Europe's haughtiest kings and emperors, and her most aristocratic citizens, engage with all their hearts in these great interests, and feel a very commendable pride in establishing for their country a glorious name and high standing among the nations, should not our own citizens be actuated with equally pure and disinterested aspirations? Let the wisdom, the learning, science and skill of our entire population be enlisted in the building up of the great interests of this Golden State.

We do not hesitate to say, that the gold of our mines is only an incidental, and not a primary or paramount, source of the wealth of the State. If another dollar should never be dug from our mines, we should continue, if all other things remained as they now are, to be a growing and prosperous State. But, if the earth should cease to yield her increase here and elsewhere, all the gold and gems of the world could not feed the hungry, clothe the naked, or enrich or save a starving nation.

Every one wishing the permanent prosperity of the State, should take such a deep interest in this subject, as to call forth his most earnest and effi-

cient action to promote and extend those interests far and wide around him. There should be no party, no clique, no one-sided interests permitted to interfere in this great work. Every true and good man should be found in the ranks of the party urging on this vital interest, doing his utmost to extend its benefits. The magnitude of this subject overshadows all others, and must eventually crush out all petty jealousies, narrow views, and selfish motives, of all those who seek to advance personal interest, instead of public good. No matter who may be leaders, all should be diligent workers in the great cause. No matter who may hold the scepter of power, unless it sway the hearts and receive the hearty concurrence of the masses, but little good can be effected.

The Legislature should be petitioned to establish, upon a wise, liberal and permanent basis, an Agricultural and Industrial Society; most liberal appropriations should be made for premiums, that every branch of productive industry may be stimulated, if it need such stimulus; for they all, in their inception and progressive development, need the fostering care of Government, and should most assuredly receive it. The talent, the intellect and the energy we have in our midst, ought to receive the interest and confidence of the great mass of our people. Do this: a moral power will be wielded by this Society that will operate most favorably upon the expanding interests of the entire country. Ample provision and encouragement should be afforded for the establishment of County Societies. It would seem proper that there should be one Vice President of the State Society in every county, who should be *ex officio* the President of the County Society.

These thoughts very naturally suggest themselves to the mind of any one who reflects upon the subject, in its important relations to the future of this State. We would most earnestly urge upon all our fellow-citizens the importance of acting in such a manner on this subject; that their own and their country's good may be promoted. In our isolated condition, the hearts of the whole people should be united, and ever act in concert. We have no material to spare; no good heart to lose. We need every heart and hand, that we may move onward and grasp the elements of our greatness, and together reach the magnificent destiny that awaits our glorious State. When we can produce our own bread-stuffs, manufacture our own wares, we shall be comparatively independent. Most of the luxuries we need can be produced here by proper industry, skill and patient perseverance. Let this be done, and we shall then have fairly entered upon our career of greatness, and will be justly entitled to the first rank among the States of the Union.

#### Rain! Rain!! Rain!!!

Down comes the pouring rain;  
The waters come gushing in rills,  
Refreshed are our valleys and grain,  
And bright gleam our flower-crowned hills.

A few days since amid the frost and chills of a hard season there went up many murmurs from as many faithless souls, who watch the clouds, feel every nipping frost, and lose all faith in God and his promises, unless it rains just when they want it to, so that they can have their work done according to their own convenience. But the Deity has laws, not for individual cases, separate localities, or peculiar times; his providence watches over Nations, States, countries, localities, and individuals, and his laws, though ever unchangeable, are perfectly adapted for times and seasons, localities, and persons. The early and latter rain, seed-time and harvest, summer and winter, all come and go in perfect order with him, without variability or shadow of change. It is man who is changeable, and if man would study God's laws, and their operation in the different parts of the earth, and conform to them, we should not hear so many complaints, for man would obey these laws, work by them, and prosper better. The recent most copious rains that have extended widely, are proofs of his goodness. Let man improve the blessing, *murmur less*, and work more. His heart would be better, his granaries better filled, and his pockets heavier.

#### How to Grow Tobacco.

Mr. BERRON: Will you have the kindness, through the Farmer, to give the proper directions for raising a crop of Tobacco in this State; and, by so doing, oblige  
A SUBSCRIBER.

SAN LORENZO, February 2, 1859.

[A deep, sandy, alluvial soil; made fine and porous, and, if not naturally rich, well manured with old rotted manure, well plowed in. Plants raised in a hot-bed, immediately, so as to be ready for transplanting in March; plant in hills, four feet apart, two or three plants, and in rows four feet apart; hoe and cultivate to keep all weeds down in the field. We will give further details in future numbers.]

BOUNTY PAYMENTS.—A requisition has been made by the Collector of this District for the sum of \$47,600, for the payment of bounties to vessels engaged in the cod fisheries the past year. A large number of vessels have been engaged in the mackerel fisheries during the season, and about \$40,000 less bounty will be paid in this District than for the fishing season of 1857.—[Barnstable Patriot.]

[For the California Farmer.]

#### The United States Coast Survey.

NUMBER FOUR.

Now for the results that are partly of practical, but more especially of scientific interest!

The most prominent one is a series of exact observations about the Gulf Stream; its temperature, depth, velocity, limits, and configuration. This great sea current, heretofore the subject of so many vague theories and speculations, has never before been examined with sufficient thoroughness; and though modern investigations are beginning to throw some light upon it, such authorities as Maury say that all is not clear yet. Hakluyt tells us that the first explorer of the Gulf Stream has been the Spaniard Alaminos; Benjamin Franklin, however, was the first who more closely observed the effects of this powerful stream, and suggested to navigators to make use of it as a means of giving them their longitude, and of warning them of their approach to the shores of this continent. Jonathan William's observations have been much thought of; also Major Rennell's explanation of this remarkable phenomenon. But the discovery of the cold wall, of the hot and cold bands, of the law that the temperature changes with the depth, and that configuration of the stream depends upon the bottom-shape, is of the latest date, and a fruit of the closest examinations of the Superintendent of the Coast Survey, Professor Bache, and his assistants. The fact, established by Lieut. Craven, that the Straits of Florida, between Cape Florida and Bemini, are but 370 fathoms (about four-tenths of a mile) in their deepest part, overturns much of the speculation which has in former times been rife upon this matter. The existence of the waters of the polar current below those of the Gulf Stream, even as far south as Cape Florida, established by the same observer, is a fact of great interest, the highest surface-temperature being 80° Fahrenheit, and the water at the greatest depth just named 34° F., or within two degrees of the freezing-point of fresh water. The following up of the range of hills beyond the Gulf Stream, first discovered in 1853, and extending in the same general direction with the curve of the stream, from the Florida channel nearly to Cape Lookout, is a happy result of combined perseverance, skill, and intelligence.

The observations of tide and tidal currents along the coasts, are still being continued. The object is to obtain reliable data for the determination of the laws of the tides. Progress is being made in preparing prediction tables for the tides of the United States coast. As soon as tidal observations had accumulated in sufficient numbers, the Superintendent caused them to be treated by the methods in most general acceptance. The tide tables for the use of navigators have been revised; they will enable mariners to ascertain the time and height of high and low water at some of the principal ports of the United States. The results are approximate, the observations being still in progress; but, as the Report says, they may safely be used for practical purposes. The number of places of observation, and the time during which many of them have been made, are steadily on the increase as the Coast Survey advances.

Natural history, too, will be advanced, especially by the study of *infusoria* that have occasionally been brought up from the bottom of the sea, and of the coral reefs of Florida, which have been examined by Professor Agassiz, under the auspices of the Coast Survey.

The methods for determining longitudes and latitudes have been greatly improved, the latter by introducing Wurmman's new zenith telescope, the former by the application of telegraphy. The telegraph progresses for longitudes have been extended as far as Montgomery, Alabama, and will soon reach New Orleans. The programme of the longitude operations gives an excellent idea of the method of applying the telegraph to this purpose. The Report contains, also, memoranda in regard to the instruments employed.

During the progress of the Coast Survey, observations of the magnetic elements have been made at most of the astronomical stations, and near many capes and harbors, where a knowledge of the variation of the compass was requisite for the use of navigation. The number of magnetic stations at the close of 1856 amounted to about 160, distributed along the entire sea coast of the United States.

An improvement in the art of *electrotyping* has been made by the fertile invention of Assistant Mathiot. The saving in time and expense, by this process, and the economy of space and weight, and in preserving the plates, are great. It has passed into one of the regular applications of the electrotype process.

There are, in the archives of the Coast Survey, deposited, great numbers of original topographic and hydrographic maps, engraved plates of maps, and engraved plates electrotyped; the total number of printed sheets is 190,120, the extent of shore-line already surveyed about 15,000 miles.

The electrotype process permits, without waste, to begin a sea-coast-chart as soon as one season's work is done, and to add to it, year by year, as the work comes in. Thus it is no longer necessary to wait for the full results desirable for a complete chart before beginning to publish.

In short, the Coast Survey of the United States

is an enterprise of grand proportions, that does, in point of magnitude, not even yield to the immense trigonometric survey of Russia, which is being conducted by the celebrated Struve, and is now drawing to a close; nor to the meridian mensuration of Norway. But a complete survey of the whole work we cannot take before the labors of the institution have been brought to a close.

COLLEGIATE INSTITUTE, Benicia.

L. R.

#### A Letter from an old Pioneer.

ALAMEDA COUNTY.

DEAR COLONEL: You will recollect when I went home after my family, and the time I got back (Jan. 20th, 1858), myself, wife, and ten children, besides three other families, and some single individuals, who came with us, in all amounting to about thirty, big and little. You will remember I told you that it cost all I was worth, to get my family here, and that I would have to begin the world anew. Well, I commenced with good pluck, bought my team, seed, and provisions on credit; I also bought my land of P. C. & Co., on credit, in the full faith and belief that I could pay for all in two years, with the help of my boys. But after getting in my first crop, and just as the heads were filling finely, out pops the gopher (one to about every square foot) with bag on each shoulder, and offered to harvest my crop, and appropriate it to his own benefit. Offer him any remonstrance, and he gets up on his hind feet, shows some mighty pugilistic evolutions, as though he was in for a prize fight, and with one paw (or thumb) at the point of his nose, he disappears in his hole, as much as to say, "We have got you, old man, and will help harvest your crop, in spite of you, and will take our pay as we go along." Well, after contending with the rascals for three years in succession I concluded to give up and look up some other location. About three months since, one of my sons, Colonel Watkins, two other gentlemen, and myself, took an excursion, to see if we could find land belonging to Uncle Sam. We thought, at any rate, it would do our eyes good to see some such land in California. We started well equipped for camping out, crossed at Benicia, went through Napa valley to the head of it, crossed over some mountains, and struck the Russian river about ten miles above Healdsburg; kept on up the river, and passed through Cloverdale. We are now eighty miles from Benicia. The valley land we passed through is splendid for wheat, corn, and stock, and held at nearly as high a figure as it is in Alameda county, and it all looked very Spanish. From Cloverdale we crossed a high range of mountains, with now and then a small valley, till we came into Ukiah Valley, on the river (all good land, but Spanish), and keeping up the valley and river to Capella (thirty miles from Cloverdale, and probably the future county seat of Mendocino county) at the head waters of Russian river, we began to hear of government land. From Capella we crossed another range of mountains, and fifteen miles brought us into Little Lake Valley. Here we found Uncle Sam's land. This valley contains about 10,000 acres of choice land, with groves of oak trees in the valley, and the hillsides well timbered with oak, large pines, and splendid redwood, sufficient to fence the valley in five acre lots, and do all the building. There are now about fifteen families settled in the valley, and a Mr. James is now building a grist-mill, which will be supplied with twenty feet head of water from a mountain spring. This valley is about thirty miles from the ocean, at the head waters of El River, which runs west, through Humboldt county, to the ocean.

From here, Col. Watkins and I went, horseback, thirty-five miles over to Round Valley (Clinton Valley on the map). We crossed two branches of El River, noble streams, said to be full of salmon and eels, in the spring. These two branches are about eighteen miles apart. On this trail, and betwixt the two, Eden Valley, of about 2000 or 3000 acres in extent, is located. One solitary man by the name of Hall is settled here. He has a herd of some 1200 head of horses. He keeps no other stock, except Indians—there is plenty of them about.

We passed on to Round Valley, and our first view of it was from the top of a lofty mountain, and was truly magnificent. This valley contains about 20,000 acres of the richest land, fine groves of timber, but no redwood. The Indian Reservation, Norma Cult, is here established, and here I saw as fine corn and wheat as I ever saw grown in any country, and cultivated by the Indians. We were well treated and cared for by Col. Henly, Mr. Storm, and others connected with the Reserve.

There were some 2000 acres of school land warrants located in this valley the week before we got there. My son and I located each a claim in Little Lake Valley, and then came home. We have not moved there yet, and I don't know at present that we will. We may find a location a little nearer market. What say you, Colonel?

Speaking of Cloverdale, we there found Mr. Miller, commission merchant from Clay street wharf, San Francisco. He has a splendid location, and keeps as good a hotel (temperance) as can be found outside of San Francisco. That old-fashioned, brick fireplace, with plenty of wood, and the well-furnished rooms, make one feel comfortable on a cold, rainy night, and then Mrs. Miller knows how to do up the table and bedroom fixings to perfection.

Yours,

A CLARE.

## CHATSWORTH.

AS DESCRIBED BY DOWNING, AUGUST, 1850.

CHATSWORTH, the magnificent seat of the Duke of Devonshire, has the unquestionable reputation of being the finest private country residence in the world. You will pardon me, then, if I bestow a few more words on it, than the passing tourist is accustomed to do.

I ought to preface my account of it by telling you that the present Duke, now about sixty, with an income equal to what passes for a very large fortune in America, has all his lifetime been remarkable for his fine taste, especially in gardening; and that this residence has an immense advantage over most other English places, in being set down in the midst of picturesque Derbyshire, instead of an ordinary park level. In consequence of the latter circumstance, the highest art is contrasted and heightened by the fine setting of a higher nature.

If you enter Chatsworth, as most visitors do, by the Edensor gate, you will be arrested by a little village—Edensor itself; a lovely lane, bordered by cottages, just within the gate, that has been wholly built by the present Duke. It is quite a study, and is precisely what everybody imagines the possibility of doing, and what no one but a king or a subject with princely fortune, and a taste not always born with princes, could do. In short, it is such a village as a poet-architect would design, if it were as easy to make houses of solid materials as it is to draw them on paper. There may be thirty or forty cottages in all, and every one most tasteful in form and proportions, most admirably built, and set in its appropriate framework of trees and shrubbery, making an ensemble such as I saw nowhere else in England. There are dwellings in the Italian, Gothic, Norman, Swiss, and two or three more styles; each as capital a study as you will find in any of the architectural works, with the advantage which the reality always has over its counterpart.

From this little village to Chatsworth House, or palace, is about two miles, through a park, which is a broad valley, say a couple of miles wide by half a dozen long. It is indeed just one of those valleys which our own Durand loves to paint in his ideal landscapes, backed by wooded hills and sylvan slopes, some three hundred or four hundred feet high, with a lovely English river (the Derwent) running like a silver cord through the emerald park, and grouped with noble drooping lindes, oaks, and elms, that are scattered over its broad surface. After driving about a mile, the palace bursts upon your view—the broad valley park spread out below and before it—the richly-wooded hill rising behind it—the superb Italian gardens lying around it—the whole, a palace in Arcadia. On the crest of the hill, from the top of a picturesque tower, floats the flag which appies you that the owner of all that you see on every side—the park of twelve miles circuit (filled with herds of the largest and most beautiful deer I have yet seen), valley, hills, and the little world which the horizon shuts in—is at home in his castle.

The palace is a superb pile, extending in all some eight hundred feet. It is designed in the classical style, and is built of the finest material, a stone of a rich golden brown tint, which harmonizes well with the rich setting of foliage, out of which it rises.

Cavendish is the family name of the Duke of Devonshire, and this estate became the property of Sir W. Cavendish, in the time of Elizabeth. The main building was erected by the first Duke in 1702, and the stately wings, containing the picture and sculpture galleries, by the present Duke. Every portion, however, is in the finest possible order and preservation; and it would be difficult for the stranger to point out which part of the palace belongs to the eighteenth, and which to the nineteenth centuries.

You enter the gilded gates at the fine portal at one end of the range, and drive along a court some distance, till you are set down at the main entrance door of the palace. The middle of the court is occupied by a marble statue of Orion, seated on the back of a dolphin, about which the waters of a fountain are constantly playing. From the chaste and beautiful entrance hall rises a broad flight of stairs, which leads to the suite of state rooms, sculpture gallery, collection of pictures, etc.

The state rooms—a magnificent suite of apartments, with windows composed each of one single plate of glass, and commanding the most exquisite views—are hung with tapestry, or the walls are covered with stamped leather, enriched with gilding. In these rooms are the matchless carvings in wood, by Gibbons, of which I had heard much, but which fairly beggar all praise. No one can conceive carving so wonderfully beautiful and true as this. The groups of dead game hang from the walls with the death rattle in the wings of the birds, and the bit of lace ribbon, which ties one of the feathers, is—more delicate than lace itself. The finest pictures of Raphael could not have astonished me so much as these matchless artistic carvings in wood.

A very noble library, a fine collection of pictures, and the choicest sculpture gallery in England (over one hundred feet long, especially rich in the works of Canova, Thorwaldsen, and Chantrey), a long corridor, completely lined with original sketches by the great masters, and a very richly decorated private chapel, are among the show apartments of Chatsworth.

So much of the palace as I have enumerated, along with all the out-of-door treasures of the domain is generally thrown open to the public by the Duke; and you may believe that the opportunity of gratifying their curiosity is not thrown away, when I tell you that upwards of 80,000 persons visited Chatsworth last year. Having heard this before I went there, I fancied the annoyance which all this publicity must give to the possessor and his guests. But when I saw the vast size of the house, and how completely distinct the rooms of the guests and the private apartments of the Duke are, from the portion seen by the public, I became aware how little inconvenience the proper inmates of the palace suffered by the relinquishment of the show rooms. The private suite of drawing-rooms, appropriated to the guests at Chatsworth, is decorated and furnished in a far more chaste and simple style than the state rooms, though with the greatest refinement and elegance. Among these adornings, I observed a superb clock, and some very large vases of green malachite, presented by the Emperor of Russia; Landseer's original picture of Bolton Abbey, and that touching story of Belshazzar—old, blind, and naked alms—told upon canvass by Murillo, so powerfully as to send a thrill through the dustiest observer.

In the ground floor, opening on a level with the Italian gardens, is the charming suite of apartments, occupied chiefly by the Duke when his guests are not numerous. Nothing can well be imagined more tasteful than these rooms—a complete suite, beginning with a breakfast-room, and ending with the most select and beautiful of small libraries, and including cabinets of minerals, gems, pictures, etc. The whole had all that sangness and cosiness which is so exactly opposite to what one expects to find in a palace, and which gave me the index to a mind capable of seizing and enjoying the delights of both extremes of refined life. The completeness of Chatsworth House, as you will gather from what I have said, is that it contains under one roof suites of apartments for living in three different styles—that of the palace, the great country house, and the cottage orneé. With such

a prodigality of space, you can easily see that the Duke can afford, for the greater part of the year, to throw the palace proper, i. e., the state rooms, open to the enjoyment of the public.

The next morning after my arrival at Chatsworth, was one of unusual brilliancy. The air was soft, but the sunshine was that of our side of the Atlantic, rather than the mild and tempered gray of England. After breakfast, and before making our exploration of the gardens and pleasure-grounds, the Duke had the kindness to direct the whole wealth of fountains and *grandes eaux* to be put in full play for the day—a spectacle not usually seen; as indeed the Emperor fountain is so powerful and so high that it is dangerous to play it, except when the atmosphere is calm.

We enter the Italian gardens. And what are the Italian gardens? you are ready to inquire. I will tell you. They are the series of broad terraces, on two or three levels, which surround the palace, and which, combining half a dozen acres or more of highly dressed garden scenery, separate the pleasure-grounds and the house from the more sylvan and rural park. As the house is on a higher level than most of the valley, you lean over the massive Italian balustrade of the terrace (all of that rich golden stone), and catch fine vistas of the park scenery below and beyond you. Of course, the Italian gardens are laid out in that symmetrical style which best accords with a grand mass of architecture, and are decorated with fine vases, statues, and fountains. A pretty effect is produced by avenues of Portugal laurels, grown with single stems and round heads, like the orange-trees that always border the walks of the gardens of the continent; and the Duke mentioned, in passing, that the Prince and Princess Borghese, who had been guests at Chatsworth but a few days before, had really mistaken them for orange-trees. But one point where the Italian gardens of Chatsworth must always be finer than any in Italy, is in the carpet of turf which forms their groundwork. The "velvet turf" of England is world-wide in its reputation; but no one, till he sees it as it is here (short, tufted, elastic to the tread), can realize that the phrase is not a metaphor. A surface of real dark green velvet of a dozen acres, would scarcely soothe the eye more, by its look of softness and smoothness, than the turf in the Italian gardens at Chatsworth.

But the crowning glory in Chatsworth, is its fountains. In a country where water is always scarce, a situation that affords a pretty stream, or a small artificial lake, is a rarity. But the whole of the hill, or mountain, that rises behind the house and pleasure-grounds, is full of springs, and has been made a vast reservoir, which is perfectly under command, and fulfills its purposes of beauty as if it were under the spell of some enchanter. If you will suppose yourself standing with me on the upper terrace of the Italian gardens that morning, behind you rises up the palace, stately and magnificent; all along its front of eight hundred feet, those gardens extend—a carpet of velvet, divided by broad alleys, enriched by masses of the richest flowers, and enlivened by fountains of various form, sparkling in the sunshine like silver. Before you, also, stretches part of these gardens—a part in which the principal feature is a mirror-like lake, set in turf and overhung by a noble avenue of drooping lime trees—beyond which you catch a vista of the distant hills.

Out of this limpid sheet springs up a fountain, so high that, as you look upward and fairly hold your breath with astonishment, you almost expect it, with its next leap, to reach the sky; and yet, with all this vast power and volume, it is so light, and airy, and beautiful, and it bursts at the top, and falls in such a superb storm of diamonds, that you will not be convinced that it is not a production of nature, like Niagara. This is the Emperor Fountain—the highest in the world; and about the height, I should say, of Trinity Church spire.\* It is only suffered to play on calm days, as the weight of the falling water, if blown aside by a high wind, would seriously damage the pleasure-grounds.

As the eye turns to the left, the wooded hill, which forms the rich forest background to this scene, seems to have run mad with cataracts. Far off among the precipices, near its top, you see waterfalls bursting out among the rocks—now disappearing amid the thick foliage of the wood, and then reappearing lower down, foaming with velocity, and plunging again into the dark woods. Towards the base of the hill stands a circular water-temple, out of which the water rises. It gushes out as if from the hydrant of the water-gods, and, running down a slope, falls at the back of the gardens down a long flight of very broad marble steps, that lead from the water-temple to the edge of the pleasure-grounds, so as to give the effect of a waterfall of a hundred or more feet high. This wealth of water, as if some river at the back of the mountain had broke loose, and, after wild pranks in the hills, had been forced into order and symmetry in the pleasure-grounds, gives almost the tumult and excitement of a freshet in the wilderness to this most exquisite combination of garden and natural scenery.

Leaving the point—where you take in, without moving, all this magical landscape—you wander through flower gardens, and amid pleasure-grounds, till you reach a more wooded and natural looking *passage*. The fountains, the carefully polished Italian gardens, are no longer in view. The path becomes wild, and, after a turn, you enter upon a scene, the very opposite to all that I have been describing. You take it for a rocky wilderness. The rocks are of vast size, and indeed of all sizes; with thickets of laurel, rhododendrons and azaleas growing among them, ivy and other vines climbing over them, and foot-paths winding through them. From the top of a rocky precipice, some thirty feet, dashes down a waterfall, which loses itself in a pretty meandering stream that steals away from the foot of the rock. Nothing can well look wilder or more natural than this spot; and yet this spot, the "rock garden," of six acres, has been created. Every one of these rocks has been brought here—some of them from two or three miles away. It is just as wild a scene as one finds on the skirts of some wooded limestone ridge in America. Though it was all made a few years ago, yet now that the trees and shrubs have had time to take forms of wild luxuriance, all traces of art are obliterated. The eye of the botanist only detects that the masses of laurels are rare rhododendrons, and that beautiful azaleas of the Alps make the underwood to the forest that surrounds it.

You wish to go onward. We will leave the rock garden by this path, on the side opposite to that which we entered. No, that you see is impossible; a huge rock, weighing fifty or sixty tons, exactly stops up the path and lies across it. Your companion smiles at your perplexity, and with a single touch of his hand the rock slowly turns on its center, and the path is unobstructed! There is no noise, and nothing visible to explain the mystery; and when the rock has been as quietly turned back to its place, it looks so firm and solid upon its base, that you feel almost certain that either your muscles or the rocks themselves obey the spell of some unseen and supernatural wood-spirit.

One of the greatest beauties at Chatsworth lies in the diversity of surface—the succession of hill and dale, which, especially in the pleasure-grounds, continually occurs. This variation offers excellent opportunities for the production of a succession of scenes, now highly ornate and artistic, like the

\*The height of the Emperor Fountain is 297 feet. The next highest fountain in the world, are, one at House Caen, 190 feet; one at St. Cloud, 160 feet; and the great jet at Versailles, 90 feet.

\*Azalea, or rather, *Rhododendron brevifolium* and *forficatum*—two beautiful sorts, perfectly hardy.

flower gardens, now romantic and picturesque, like the rocky valley. And as we continue our ramble, after entirely losing sight of the wild scene I have just described, we enter upon another scene I have just described—a wide glade or opening, like an amphitheater, in the midst of a fine grove of trees. An immense palace of glass rises before us. Its curved roof, springing seventy feet high, gleams in the morning sun; and you would be at a loss to the morning sun; and you would be at a loss to conceive for what purpose this vast structure was intended, did you not see as you approached, by the indistinct forms of the foliage, that it incloses another garden. This is the great conservatory, which is three hundred feet long, and covers rather more than an acre of ground. Through its midst runs a broad road, over which the Duke and his guests occasionally drive in a carriage and four. All the riches of the tropics are grown here, planted in the soil, as if in their native climate; and a series of hot-water pipes maintain, perpetually, the temperature of Cuba in the heart of Derbyshire. The surface is not entirely level, but there are rocky hills and steep walks winding over them; and lofty as the roof is, some of the palms of South America have already reached the glass. From the branches and trunks of many of the largest, hang curious air plants, brilliant, and apparently as little fixed to one spot as summer butterflies.

But I shall never bring this letter to a close, if I dwell even slightly upon any interesting scene in detail. I must mention, however, in passing, the *arborescent*—perhaps a mile long—planted with the rarest trees, and every day becoming richer and more interesting to the botanist and the landscape gardener. The trees are neither set in formal lines, nor grouped in a single scene, but are scattered along a picturesque drive, with space enough for each to develop its natural habit of growth. There are some very graceful *Deodar* cedars here, and a great many *araucarias*. But the two most striking and superb trees, which I nowhere else saw half so large and in such perfection, were Douglas' fir (*Abies Douglasii*) and the noble fir (*Abies nobilis*). They are two of the magnificent evergreens of California and Oregon, discovered by Douglas, and brought to England about eighteen years ago. These two specimens are now about thirty-five feet high, extremely elegant in their proportions, as well as beautiful in shape and color. I cannot describe them, briefly, so well as by comparing the first to a gigantic and superb balsam fir, with far larger leaves, a luxuriance and freedom always wanting in the balsam, together with the richest dark bronze-green foliage; and the latter to the finest drooping Norway spruce, equally multiplied in the scale of luxuriance and grace. They grow upon a rocky bank, overhanging a pool of clear water, and look as if thoroughly at home on the slope of a hill-side in Oregon.

The arboretum walk forms a complete collection of all the hardy trees that will grow out of doors at Chatsworth, with space for planting every new species as it may be introduced into Great Britain. A fine effect is produced by grafting the weeping ash into the top of a common ash tree with a tall trunk thirty feet high, whence it falls on all sides more gracefully and prettily than when grafted low; a hint that I laid up for easy practice at home.

A mile further on and you reach the tower, on the hill top, where the eye commands the whole of Chatsworth valley: such a picture of palace and pleasure-ground, park and forest scenery as can be found, perhaps, nowhere else in the circle of the planet. After a long exploration—after exhausting all the well-bred expressions of enthusiasm in my vocabulary, and imagining that it was impossible that landscape gardening, and embellishment, and park scenery, and pleasure-ground decoration, could further go—the Duke reminded me that I had neither seen the kitchen gardens, the great peach tree, nor the famous new water lily—the *Victoria Regia*; and that Mr. Paxton, his able *chef*, would never forgive a neglect of so important a feature in a place. As the gardens where all these new wonders lay, were quite on the opposite side of the park, we gladly took to the carriage after our industrious morning's ramble.

I shall not attempt to describe these large and complete fruit and forcing gardens. But the peach tree of Chatsworth has not, to my recollection, been described, though it deserves to be as famous as the grape vine of Hampton Court. It is the more wonderful, because, as you know, peach trees do not grow in England in orchards of five hundred acres, like those of the *Reyholds*, in Delaware; but are only seen upon walls, or under glass. Yet I assure you, our friend R.'s eyes, accustomed as they are to peach blossoms by the mile, would have dilated at the sight of this monster tree, occupying a glass house by itself, and extending over a trellis—I should say a hundred feet long. I inquired about the product of this tree, and when the number was mentioned, I imagined His Grace detected a slight smile of incredulity; for he begged Mr. Paxton to copy for me, and subscribe his name to, the accurate statistics of the present crop. I send it to you in a note,\* with the addition, that the fruit was of the variety known as the Royal George, very large, and finer flavored than I had before tasted from trees grown under glass. The whole trellis, from one end to the other, was most admirably clothed—not a vacant place to be found.

Of the superb water lily, lately discovered in Brazil, and named *Victoria Regia*, in honor of the Queen, you have already published an account. It has grown and bloomed here more perfectly than elsewhere; though there are, also, good specimens at the Duke of Northumberland's, and at Kew. The finest plant here occupies a house built specially for it, sixty by forty-five feet, inclosing a small pond, thirty-three feet in diameter, for it to grow in. The plant is, unquestionably, the most magnificent aquatic known. The huge circular leaves, four to five feet across, are like great umbrellas in size; and the blossoms, as large as a man's hat—pure white, tipped with crimson—float upon the surface with a very queenly dignity, as if ready to command admiration. A small frame or board was placed on one of the leaves, merely to divide the weight equally as it floated, and it upheld the weight of a man readily. Some seeds were presented to me of this beautiful floral amazon before I left Chatsworth; but, as it requires the tank to be heated to a temperature of 85°, and the water kept constantly in motion by a small wheel, I fear I shall not readily find an amateur in the United States who will be inclined to indulge a taste for so expensive a floral fancy.

The kitchen and forcing grounds are on an immense scale, and some handsome fruit was being packed to go as a present to the Queen. The pines were usually large and fine; and the Duke remarked that Mr. Paxton has reduced the cost of producing them two-thirds, since he has had charge of that department—some ten or twelve years.

If, after this lengthy description, I have almost wholly failed to give you an idea of Chatsworth, it is not wholly because my pen is not equal to the task. Something must be allowed for the difficulty of presenting to you any adequate notion of the variety, richness and completeness of the estate, where you may spend many days with new objects of interest and beauty constantly before you; objects which, only to enumerate, would be presenting you with dry catalogues, instead of living pictures, brilliant and varying as those of the kaleidoscope.

And, I think I hear you say, this is all for the pride and pleasure of a single individual! All this is done to minister to his happiness! Not entirely. The Duke of Devonshire has the reputation, very

\*A Memorandum of Paxton, borne by the Great Peach Tree at Chatsworth, in 1850.—Fruit thinned out at various times, before maturity, 7,601; do. left to ripen, 925; total crop, 8,527. Jos. Paxton.

deservedly I should think, of being second to no man in England for his benevolence, kind-heartedness and liberality. Certainly, I think I may safely say, that Chatsworth shows more refined taste, joined to magnificence, both externally and internally, than any place I have ever seen. When one sees how many persons are constantly employed in the various works of improvement on this single estate, and how cheerfully the whole is thrown open to the study and enjoyment of thousands and tens of thousands annually, one cannot but concede a liberal share of admiration and thanks to a nobleman who might follow the example of many others, and make his home his closed castle; but who prefers, on the other hand, to open, like a national picture gallery, this magnificent specimen of landscape gardening and architecture, on which his fine taste and ample fortune have been lavished for half a century. One has only to visit Windsor and Buckingham Palace after Chatsworth to see the difference between a noble and pure taste, and a royal want of it. The one may serve to educate and reform the world. The utmost that the other can do, is to dazzle and astonish those who cannot recognize real beauty or excellence in art.

## LIVE STOCK.

HENRY COLMAN'S LETTERS FROM ENGLAND.

## Neat Cattle.

DEVONS.

The Devons, taking their name from the beautiful county of Devonshire, where they are principally found, are of two kinds, the North and the South Devons. The North Devons are a comparatively small race of animals, with long and beautifully-turned horns, of a deep red color, short-legged, and compactly built, exhibiting, to my eye, the perfection of symmetry, with soft, silky coats, and with hair in curled and waving lines, in appearance like the most beautiful varied mahogany that ever came from under the plane of the cabinet-maker. They do not attain a large size, but they are so compact, that they weigh heavily for their size, and there is no waste in them. The South Devons are animals of a much larger frame, often coarse-boned, attaining to a considerable size, not remarkable for thrift, coming late to maturity, and, in truth, identical with the great mass of cattle to be found in New England. It is but just to say, in respect to the South Devons, that, as far as I could learn, no particular pains have been taken to improve their breed, and to see what could be made of them, as in the case of the shorthorns, the Herefords, and the North Devons.

The North Devons are, as a breed, most highly and deservedly esteemed. They have the preference of all other breeds for the yoke, being strong, active, and of great endurance; add to this, a remarkable docility, and good temper. It is generally thought that they do not arrive at maturity as early as the shorthorns or the Herefords—I do not know that the same pains have been taken to force their progress. An eminent breeder of North Devons contradicts this. He is one of the most experienced farmers in Great Britain; he has been long accustomed to rear them, and insists that more money can be made from them than from any other breed. Of course, this opinion would not meet with universal assent, and would be rejected by the advocates of some of the other breeds; but the long experience of this farmer, and his admirable and successful husbandry in every department, entitle his opinions to great consideration; and my confidence in him is such, that, in parliamentary language, in a division of the house, I should be strongly inclined to go into the same lobby with him. They are highly esteemed in the Smithfield market for the excellence of their meat, and because its size is more agreeable, on most tables, than the huge joints of some other breeds. In weight, they are much excelled; but the opinion of their advocates is, that more meat can be made from them with the same amount of feed. Of their dairy properties I shall speak presently.

## AYRESHIRE.

The Ayrshire stock prevails, principally, in Ayrshire, Scotland, and is certainly a beautiful race of animals. It is maintained by some that they are of the same breed, with some slight variations, as the improved Durham shorthorns. However they may approximate each other in crossing, as races, I believe them to be as distinct as the shorthorns and the Devons, and a practised eye will easily discern the difference. They are considerably smaller than the shorthorns; much lower on the leg; with larger bodies, in proportion to their size; not of such length as the shorthorns; in general, with finer limbs; their faces not quite so long, nor so tapering. Their color somewhat resembles that of the shorthorns, though there is less of white, and the white not so snowy and clear, and none of the roan color, which often makes the Durhams extremely beautiful. They are occasionally spotted with white, as if large flakes of snow, or feathers, had been scattered over them. They are of good thrift, but do not constantly show the same good condition as the best shorthorns, especially when in milk. When dry, however, they fatten well, and no animals can be more prized than they, in the highly improved and picturesque county of Ayr, where they are principally found. They are chiefly valued for the dairy, and are considered by many persons as, in this respect, excelling all others—a conclusion to which I demur, for reasons which I shall presently give. I am not about to depreciate them, for a fine Ayrshire cow, with her full udder, is greatly to be admired for her beauty and her product. It is said that they always do much better in their own locality than when they are removed, for example, into England. I know other animals which do not thrive so well from home as at home. It is said of the Scotch themselves, such is their native acuteness and enterprise, that they will thrive in whatever country they may be thrown. This does not appear to apply to their cows. There may, however, be another reason. I recollect a man's having purchased a cow, represented as remarkable for her extraordinary yield of milk, from one of the richest pastures that could be found; and upon taking her home to shorter commons, he complained to the former owner that he had imposed on him. "Sir," said he in reply, "I sold you my cow, but I did not sell you my pasture."

The Ayrshire cows are extremely thrifty when dry. When fattened, the four quarters weigh from twenty to thirty iron stone, of twenty-four pounds each, that is, from four hundred and eighty to seven hundred and twenty pounds. An Ayrshire farmer informed me that he had had cows weigh fifty-one stone, or one thousand two hundred and twenty-four pounds, each. He says, there are no better feeders, and that, when fattened, the beef is as good as that of the West Highland cattle.

## WEST HIGHLAND CATTLE, OR KYLOS.

This is a small breed of black cattle, bred in the remote Highlands, and on the northern islands of Great Britain, and brought in immense numbers to the south to be fed. They are short, hardy, thick-set, always in good condition, and exceedingly thrifty, when brought from the short feed of the north into the rich pastures and to the abundant

mangers of the south. Their size is small, but their weight very great in proportion, as they are extremely compact and solid. Their meat is esteemed of the best quality in the market, and commands, usually, a halfpenny a pound more than any other. They are brought in, at times, quite young, and kept until three years old, when they are sent to market. They are thought, when well purchased, to pay a better profit than any other; and on this account, as well as their symmetrical shape—for, taking off the head, and neck, and the legs, they would appear to form a perfect parallelogram—they are universal favorites. No advantage has come, in any way, from crossing these cattle with any other breed. There is a small kind of black cattle, without doubt allied to the West Highlanders, which are brought to Smithfield market, and there vulgarly known as *runt*. They cannot properly be called a distinct breed. They are extremely compact and heavy, and their meat excellent. No beef animals in the market sell so well.

## ABERDEENSHIRE POLLED CATTLE.

Near relatives of the Galloway and the Angus cattle, if my memory serves me as to the name, are likewise black in color, and admirable in appearance. They, also, are deemed highly profitable stock both for thrift and for the dairy; and a herd of cows, I believe of the latter breed, horned, entirely black, excepting their udders, exhibiting the strongest indications of being most abundant milkers, shown at the cattle show at Dundee, have, in my view, rarely been surpassed.

## The Solar System—The Plurality of Worlds.

The truly eloquent, as well as truly scientific dissertation, delivered by Col. E. D. Baker, before the Mercantile Library Association, on the evening of the 27th ult., as one of the regular lectures of this most excellent institution, was attended by one of the largest and most intelligent audiences that has yet filled Musical Hall. The Solar System, the science of Astronomy, or any theme connected with the starry world, or the bright blue dome above us, will ever awaken the attention of the thoughtful and intelligent mind; but when a theme as fruitful of discussion, one, too, so intimately connected with all that is intensely interesting to the human soul as is the conception of a plurality of worlds, inhabited by immortal beings, is to be presented, and by one so gifted with true eloquence, one so versed in science as the accomplished orator of that evening, we do not wonder that such an audience was present, or that they listened with almost breathless silence for more than one hour and a half, to an address, or lecture, or dissertation, or whatever one may please to call it, but which we know will be pronounced equal to many of the great master minds that have studied the subject a lifetime.

The orator most undoubtedly startled many minds with those truths which this science teaches, and which they had never before conceived; and it is these startling truths, these new developments in science, this progress, this march of mind that will distinguish the present age.

Most happy is it for the community that such minds as Col. Baker can be induced to draw out our citizens to subjects so ennobling and purifying as the contemplation of themes so glorious as the one so beautifully, truthfully, and religiously presented by the gifted speaker. How much better is it for our city, for California, the whole Pacific coast, and the world, that such themes should enlist the minds of men, in preference to those of a merey political, sectional, or theological character. We rejoice to know our city is to be blessed with many similar opportunities for mental and spiritual banqueting on this and other scientific and literary themes.

The beauty and eloquence of this lecture reminded us of the lecture of that master-spirit of eloquence, the Demosthenes of America, the Hon. Edward Everett, which was delivered at the opening of the Dudley Observatory, at Albany, N. Y., some year or two since. We have only room for an extract. Words more beautifully eloquent were never uttered by mortal man. Speaking of the glorious beauty of the heavens, and describing a night scene, he says:

I had occasion a few weeks since to take the early train from Boston, and for this purpose rose at 2 o'clock in the morning. Everything around was wrapped in silence, broken only by what seemed at that hour the unearthly clank and rush of the train. It was a mild, serene midsummer's night, the sky was without a cloud, the winds were hushed. The moon, then in the last quarter, had just risen, and the stars shone with a spectral lustre, but little affected by her presence. Jupiter, then two hours high, was the herald of the day; the Pleiades, just above the horizon, shed their sweet influences in the east; Lyra sparkled near the zenith; Andromeda veiled her newly discovered glories from the naked eye in the south; the steady pointers far, beneath the pole, looked meekly up from the depths of the north to their sovereign.

Such was the glorious spectacle as I entered the train. As we proceeded, the timid approach of twilight became more perceptible; the intense blue of the sky began to soften; the smaller stars like little children, went first to rest; the sister beams of the Pleiades soon melted together; but the bright constellations of the west and north remained unchanged. Steadily the wondrous transfiguration went on. Hands of angels hidden from mortal eyes shifted the scenery of heaven; the glories of night dissolving into the glories of the dawn. The blue sky now turned more softly gray; the great watch stars shone up their holy eyes; the east began to kindle. Faint streaks of purple soon blushed along the sky; the whole celestial concave was filled with the glowing tides of the morning light, which came pouring down from above in one great ocean of radiance, till at length we reached the Blue Hills, a flash of purple fire blazed out from above the horizon, and turned the dewy treads of flower and leaf into rubies and diamonds. In a few seconds the everlasting gates of morning were thrown wide open, and the lord of day, arrayed in glories too severe for the gaze of man, began his course.

EXAMPLE.—Does one person in one thousand think how he came by his habits, tastes, and aversions? We so naturally fall into the ways of those we associate with, so easily adopt their manners, dress, and, to a degree, their sentiments, that, before we are aware, we are quite different from what we were in other situations. Do we associate with the sordid and vile, we are inevitably dragged down to a lower plane. Imperceptibly, at first, the change proceeds; we lose the freshness of true life; then the accumulating darkness shows itself, increasing till gloominess and gloom quench the last glimmer of exulting purity. So, habitual communion with the noble and elevated, raise the aspirations, improve the ideas, and refine the soul, lifting the whole life to a loftier position. We cannot be too careful in choosing our friends.

## Miscellany.

## The Immortal Mind.

"Silence and Solitude—  
They speak through Mind."

Silence hath a voice, and so hath Solitude; some practice the one, and seek the other, for true enjoyment; while, to others, silence or solitude is misery. Such are the mysteries of mind.

Milton says:

Refring from the populous noise, I seek  
This unfrequented place to find some ease.

Pope says:

How happy is the lonely restful lot,  
The world forgetting, by the world forgot.

Young says:

O, sacred Solitude! divine retreat!  
Choice of the prudent! envy of the great!  
By thy pure stream, or in thy waving shade,  
We court fair Wisdom, that celestial maid.

But Cowper says:

For Solitude, however some may rave,  
Seeming a sanctuary, proves a grave—  
A sepulcher in which the living lie,  
Where all good qualities grow sick and die.

And Thompson says:

Unhappy he who from the first of joys,  
Society, cut off, is left alone  
Amid this world of death.

Strange contradictions, yet no more strange than  
true. Well hath Byron said:

Eternal spirit of the chainless mind.

While Watson says:

The mind of man is ne'er at rest,—  
Whether the body sleeps or wakes,  
To Heaven, Earth, Hell—north, south, east, west—  
The mind its ceaseless wandering takes.

Yet, for all these evidences of the deathlessness  
of mind, whither does it tend?

Again Byron asks:

When coldness wraps the suffering clay,  
Ah, whither strays the immortal mind?  
It cannot die, it cannot stay,  
But leaves its darkened dust behind.

And how graphically does Byron describe the  
operation of mind upon the mortal dust:

A moment, o'er her face,  
A tablet of unnumbered thoughts  
Was traced—and then it faded as it came.

## History of Printing.

Its Progress in the United States.

## THE FIRST PRINTER IN BOSTON.

It was about forty years after the first settlement of Boston before any printing was done in the place. All the printing hitherto in the colony, or in any of the colonies, had been done at Cambridge. The first printer in Boston was John Foster. He was born in Dorchester, and graduated at Cambridge in 1667. It does not appear that he was a practical printer, but having obtained permission from the government to carry on printing, he employed printers from the Cambridge press. On the establishment of a press in Boston, the General Court passed the following order: "Whereas there is now granted that there may be a printing press elsewhere than at Cambridge; for the better regulation of the press it is ordered and enacted that the Rev. Mr. Thomas Thatcher and Rev. Increase Mather of Boston, be added unto the former Licensees, and they are hereby empowered to act accordingly."

Mr. Foster for several years published almanacs, for which he made the calculations himself. To his almanac for 1681 he annexed an ingenious dissertation concerning comets which were seen at Boston in November and December, 1680. He died in 1681, at the early age of thirty-three years. He seems to have been a man of note, and died respected and lamented. His grave stone bore a Latin inscription, which is rendered in English as follows: "Thou, O, Foster, who on earth didst study the heavenly bodies, now ascend above the firmament and survey the highest heaven. I do survey and inhabit this divine region. To its possession I am admitted through the grace of Jesus; and to pay the debt of gratitude I hold the most sacred obligation." Poems also were written in honor of the astronomer-printer. One by Rev. Joseph Capen closed with the following lines:

"Thy body, which no activeness did lack,  
Now laid aside like an old almanack;  
But for the present only'st out of date;  
'Twill have at length a far more active state.  
Yes, though with dust thy body soiled be,  
Yet at the resurrection we shall see  
A fair edition, new in Heaven set forth;  
'Tis but a word from God, the great creator,  
It shall be done when he saith *Imprimatur*."

It is thought by some that the above lines gave Franklin the hint for his celebrated epitaph on himself. There was, however, so much originality in Franklin's intellectual powers, that it is hardly necessary to suppose that he borrowed the idea.

Samuel Sewall was the successor to Foster as public printer in Boston. He, like Foster, was not a printer by profession, but a magistrate, and a man much respected. It is amusing to see how strictly the government guarded the press in those early days of the colonies. Mr. Sewall's license was recorded as follows: "Samuel Sewall, at the instance of some friends, with respect to the accommodation of the public, being prevailed with to undertake the management of the printing press in Boston, late under the command of Mr. John Foster, deceased, liberty is accordingly granted to him for the same by this court, and none may presume to set up any other press without the like liberty first granted." In 1684, Samuel Sewall, "by the providence of God, being unable to attend the press, requested leave to be freed from his obligations," which request was granted.

The printers who succeeded to the Boston press after Mr. Sewall, were James Glen, Samuel Green, Jr., son of the early printer in Cambridge of that name, then Richard Pierce, Bartholomew Green, John Allen, Benjamin Harris, Timothy Green, son of Samuel Green, Jr., James Printer, Thomas Fleet, T. Crump, Samuel Kneeland, and then comes James Franklin, elder brother of Benjamin Franklin.

Bartholomew Green was also a son of the celebrated Samuel Green of Cambridge, and worked at Cambridge some time in connection with his father. He began business in Boston in 1690, immediately after the death of his brother, having the best printing apparatus in the country. He had the misfortune to lose his press and types by fire, upon which he returned to Cambridge and worked two years more with his father. Being furnished again with apparatus, he returned to Boston and resumed business. In April, 1704, he commenced the publication of the first newspaper printed in the British colonies of North America. It was called "The Boston News Letter: Published by authority." It was published weekly, on Mondays, for John Campbell, postmaster, who was the proprietor. He continued to publish the paper for Campbell for eighteen years, and afterwards published it on his own account. The News Letter was published fifteen years before any other paper was started in the country. It was published by Green and his successors till 1776, when the British evacuated Boston. After his father's death Bartholomew Green printed for the College at Cambridge, and for nearly forty years he was printer to the governor and council of Massachusetts. He was the most distinguished printer of his time.

He was a man of piety and benevolence, and was highly respected. For many years he was a deacon in the Old South Church in Boston. He died in December, 1783.

John Allen's name appears in the imprint of books as early as 1690. In 1707 it appears he increased his business and enlarged his stock of printing materials. In this year he commenced printing the Boston News Letter for Mr. Campbell, the proprietor. At this time the paper came out with the following advertisement: "These are to give notice that there lately came from London a Printing Press, with all sorts of good new Letter, which is now set up in Pudding Lane near the Post Office in Boston for public use; where all persons that have anything to print may be served on reasonable terms."

Mr. Allen printed the News Letter four years, when his office was destroyed by fire, and the paper was again issued from Green's office.

## JAMES PRINTER.

This name furnishes an interesting item in the early history of printing in the Massachusetts colony. James was an Indian, born in an Indian village on the site of the present town of Grafton, Massachusetts. His father was a deacon of a church of Indian Christians established there. James was sent, when a child, to the Indian charity school at Cambridge, where he was taught to read and write the English language, and there probably received the Christian name of James. In 1659, he was placed as an apprentice with Samuel Green, the printer of Cambridge, and there probably received the surname of Printer. He became a very good printer, and was employed by Green as a pressman in printing the first edition of the Indian Bible.

When the memorable Indian war broke out, which was terminated by the death of the celebrated warrior, King Phillip, James was fired with patriotism and love of his kindred, and secretly left his master printer and fled to join his brethren in arms. After a long and bloody war, the Indians being beaten, worn out, suffering greatly from sickness, the tribes separated and retired to their several places of residence.

The government issued a proclamation that all Indians, who would within fourteen days come in peaceably, might hope for mercy. Among those who came in and returned to their allegiance was James, the printer.

In 1680 James was engaged with Green at Cambridge in printing the second edition of the Indian Bible. The Rev. John Eliot, the "Indian Apostle," writing to Robert Boyle of London, in 1682, concerning this second edition, says: "I desire to see it done before I die, and I am so deep in years that I cannot expect to live long; besides, we have but one man, viz., the Indian Printer, that is able to compose the sheets and correct the press with understanding." James Printer, being acquainted with both the English and the Indian languages, must have been of great service in printing the books for the Indians.

In 1709 an edition of the Psalter was published in Boston in the Indian and English languages with the following imprint: "Boston, N.E., Printed by B. Green and J. Printer, for the Honorable Company for the propagation of the Gospel among the Indians in New England."

Some of the descendants of James were living in Grafton in the early part of the present century, bearing the surname of Printer.

## Editorial Quarrels.

We make the following extract from the Reading (Pennsylvania) Gazette upon the theme named above. We most heartily indorse every sentence. During the five years we have had the honor to occupy the Editorial Chair, we cannot recall to mind a single instance wherein we have permitted ourselves to use a harsh, unjust, or offensive word; nor have we permitted an article to appear in our columns that was injurious to good morals, or unfit for the family circle. We can also say, that although we may not have always pleased everybody and may have been unjustly judged and unkindly criticised, yet we never have, or ever will, be drawn into controversy that cannot be carried on with courtesy and dignity, or in pleasant rivalry, if need be. We will never disgrace our columns with personalities or discussions, the tendency of which will not benefit others. We have kept this faith five years, and we know we can keep it five or twenty-five more. We commend the following to the attention of our readers:

"It has become the custom, of late, among certain members of our fraternity, to indulge in personal abuse of each other through the columns of their respective sheets, which not only disgraces the patrons and disgraces the conductors of the print, but degrades the entire American Press. Personal quarrels provoked, perhaps, by disputes having no connection with the paper, are thrust before the eyes of the readers, and columns, which once were gladly received into the family circle, team with abusive language fit only to be repeated in the parlors of Billingsgate. As a general thing, the publication of details and discussions, the language of which is disgusting and fraught with evil instruction to our youth, should no longer be tolerated. It is true, that very often the preliminary movement towards one of these displays of personalities excites the attention of the community, but eventually it must and will destroy the circulation of any publication, and ruin the reputation of the publisher."

THE UNKNOWN DEAD.—In New York, it is stated, there are, in the course of a single year, at least three hundred persons picked up in the streets and rivers dead, who are unknown, and who are never identified by their friends. In this city (Boston) the number is much smaller, not over fifteen or twenty a year who, having no friends to care for them, are buried at the expense of the city. Some, perhaps, have relatives who would gladly perform the last offices did they know the fact of their death. It is a remarkable circumstance, that of the seven persons killed on the track of the Worcester Railroad, near the Brookline crossing, by the accident to a train of the Western Railroad, six or eight years ago, four were never identified. The only notice that their relatives had of their death was, probably, the fact that they never returned to their homes.

THE DEATH OF HENRY L. ELLSWORTH, Esq., at Fair Haven, has been announced. He was a son of Chief Justice Ellsworth, of Windsor, and twin-brother of the Hon. Wm. W. Ellsworth. He practiced law in this city until summoned by General Jackson to be Commissioner of the Patent Office.—(Hartford Courant, Jan. 1.)

A DISTRESSING COTTON causes the friends of the sufferer as much pain as the sufferer himself. Dr. Wistar's Balsam of Wild Cherry will certainly cure coughs, colds, asthma, consumption, and that speedily. When did it ever fail?

Buy none unless it has the written signature of "I. Batts" on the wrapper.

HOLLOWAY'S PILLS.—Epilepsy and fits of all descriptions, are in most cases referable to irregularities of the secretory organs. Restore these organs to a state of health, natural activity, and vigor, by the use of the pills, and the convulsive paroxysms will cease. Sold at the manufactory, No. 40 Maiden Lane, New York, and by all druggists, at 25c., 63c., and \$1 per box.

## SEED, PLANTS, &amp;c.

## SEEDS! SEEDS!!

## Fresh Arrivals

AT THE

## Agricultural and Horticultural SEED STORE,

NO. 108 CALIFORNIA STREET.

## New Crop of 1858:

7000 lbs. Alfalfa,  
3000 lbs. Red Clover,  
3000 lbs. White Dutch do.,  
3000 lbs. Timothy Seed,  
50 bushels Blue Grass,  
50 " Red Top Grass,  
20 " Ray Grass,  
20 bus Mixed Lawn do.,  
500 lbs Vetches,  
3000 lbs. Early Kent Peas,  
50,000 assorted Fruit Trees.

## DUTCH BULBOUS ROOTS.

Double Hyacinths,

## GRAVES &amp; WILLIAMS,

## AND

## GENERAL COMMISSION MERCHANTS,

Nos. 67, 69 and 71 Merchant street,

SAN FRANCISCO.

(Opposite Washington Market.)

WE, THE UNDERSIGNED, RESPECT- fully inform our friends and the public, that we are the Agents of A. H. Myers' Pioneer Nursery, Alameda county; L. Trevor, San Jose Nursery, Santa Clara; E. W. Case's Nursery, Santa Clara; and are prepared to fill orders, large or small, for Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Plants, &c., of every variety and description, at the shortest notice and on the most favorable terms.

We are also the sole Agents of Rumford and Bro., Contra Costa county, for the sale of their large crop of Sweet Potatoes, raised from genuine Carrolls Seed of the Red Variety. Messrs. Rumford & Bro. received the First Premium for their Potatoes at the late Mechanics' Fair held in this city, and at the Santa Clara County Fair, held in San Jose during the past autumn.

We are also the sole Agents of Daniel L. Perkins, of Alameda county, who is the Pioneer Seed Grower of California, and who is giving his undivided attention to the raising and preparing Garden Seeds for this market.

We are also Agents for the Nurseries of D. T. Adams and Joseph Lee, San Jose.

Farmers and Gardeners desiring fresh and genuine Garden Seeds, which can be warranted true to label, will do well to examine our stock before buying elsewhere.

GRAVES & WILLIAMS,

Nos. 67, 69, and 71, Merchant street,

James Graves. (21) H. F. Williams.

## RIVER BANK

## NURSERIES!

## SAN JOSE,

## CALIFORNIA.

THE SUBSCRIBERS INVITE ATTENTION TO

THEIR STOCK OF

FRUIT AND ORNAMENTAL

TREES!!

Which they offer for sale the present season, at reasonable prices, consisting in part as follows:

8,000 Pear Trees

(On Seedling Pear Stocks), one and two years old;

10,000 Apple Trees, one and two years old

3,000 Cherry Trees, one year old;

1,000 Plum Trees, one year old.

ALSO,

PEACHES, APRICOTS, GOOSEBERRIES, CURRANTS,

LAWTON BLACKBERRY (strong, well-rooted plants),

RASPBERRIES, ETC.

IN THE ORNAMENTAL DEPARTMENT,

WILL BE FOUND:

American Elms, 4 to 6 feet; Silver Maples, 5 to 7 feet;

Mountain Ash, 4 to 6 feet; English Walnuts, Chinese

Arbor Vite, California Redwood, Etc.

Also, a fine variety of

FLOWERING SHRUBS.

We would invite those who are about to plant out PEAR TREES, to examine our stock, as particular attention is paid to the cultivation of the Pear. They are budded on Pear Seedlings of our own raising, and have made a fine growth from 3 to 7 feet, according to the habit of the variety. We have all of the varieties that are worthy of cultivation, procured from one of the most reliable Pear Cultivators at the East, and no pains are spared to insure complete accuracy.

THE NURSERIES

Are situated at the Residence of GEORGE SANDER- SON, on the Road, leading from San Jose to Alviso; about three-quarters of a mile north of Beatty's Hotel.

Orders by mail, or by Wells, Fargo & Co., will receive prompt attention, and the Trees securely packed, so as to bear transportation to any part of the State—for which a reasonable charge will be made. Terms Cash.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, FEBRUARY 11, 1859.

**FREE COPIES OF THE FARMER.**—We shall mail marked copies of our journal to many friends over the State and elsewhere, and we ask their kind and generous interest in behalf of the FARMER. We wish to place it in every family in the land, and we believe each and all our large number of subscribers can send us one or two more. Read the number we send you, and hand it to your neighbor.

**SEND THE FARMER ABOARD.**—Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

## Home Again

"Home is where the heart is."

There is no chord in the human heart that, when touched, vibrates with sweeter music than that whose strings are bound to the spot where love and affection reign supreme: in the language of humanity, it is called "Home." Angels look down on such a place, and call it "heaven below." And yet, how many mortals that might possess a Home—a little heaven on earth—waste time, talent, opportunity, hope, love and happiness. All while pursuing the ignis fatuus of life, money.

Were each thousand mortals, over earth's vast surface—those who live in civilized and Christian lands—to be gathered in so many circles, and the names of each be called, how many could respond and say: "I have a Home, a happy Home?" Alas! how few. They may have a well sheltered house to live in, enough to eat and drink; but, for a real Home, a place where the heart finds rest and peace, how comparatively few. And this can never be otherwise, until education has done its work, and fitted those who are to reside there and to make our homes a Paradise, instead of only a place to eat, drink and sleep.

If there is one subject of more moment than another, in the education of mortals, it is the education for Home. The daughter who is, in all probability, to reign and rule in one of these holy places should be educated for it. The influence of one wife and mother, truly educated for this sphere, can accomplish more for human happiness; can do more to promote intellectual and moral perfection, than a thousand sermons from the pulpit, or ten thousand essays from the press. The influence of a devoted, loving wife and mother for good, is as boundless as the sea, broad as the whole earth, and high as the heavens; for it takes hold of the human heart and fills it with a divine love, casts out all fear, and brings the hopes and prospects of a future heaven into present possession.

Our Homes should be a sanctuary, where no rude intruder would dare come. From this sacred place all the ruder passions should be thrust out. Envy, hatred and uncharitableness, with their accompanying evils, should be banished from the dwelling. Fashion, with her attendant votaries, should never be permitted to rule and usurp that place in the heart, which belongs to Home and the happiness thereof. That meaningless cant and hypocrisy, ever joined with Fashion, which has broken so many hearts and overthrown so many Homes, should be forever barred entrance to Home; and, where there is a true guardian of the "holy of holies," none of these perverters and destroyers of man's happiness can find entrance.

We do believe the time is near at hand, when Woman will see that the happiness of her race; their very salvation depends upon being educated for Home. That place is not deserving the name of Home, when everybody can thrust themselves into it like a public hotel. There should be a law, issuing from those who guard that place, by which all would know whether they were welcome or not; and he, or they, who have the charge of such a sacred place, are not worthy its possession, or the enjoyments flowing from it, who have not the moral courage and firmness, and the truthfulness, to bar the entrance to any and all that would contaminate or destroy the peace, harmony and happiness of those who dwell therein.

The falsities of Fashion have destroyed many friendships and crushed much that was lovely and of good report; but the day, we hope, is not far distant when false Fashion will be done away with, and our Homes opened only to those who are made welcome with the heart.

This is a theme upon which much can and ought to be said, and hope those who preside over and now control the destinies of the Homes of the Pacific, will erect a code of laws for Home, that shall form an epoch that will mark all future time. Then shall a song of joy go out over our hills and mountains, saying:

"Home is the resort  
Of love, of joy, of peace and plenty, where  
Sustained and supported, placid friends,  
And dear relations, mingle into bliss."

**MORE DURHAM STOCK COMING TO CALIFORNIA.**—We had the pleasure of a call from a friend and subscriber, Isaac Stockton, Esq., who left by the last steamer for Illinois and Kansas Territory, to bring across the Plains a large drove of young Durhams and other fine stock, some nine hundred head. Mr. S. is connected with other citizens of Pealuma in this enterprise, which promises so much good to our State. Will our Legislature mark such efforts with some token of their approval? Why not exempt new stock from taxation for two or three years?

**VALUABLE SPECIMENS OF COAL.**—We were kindly presented with a very handsome specimen of coal formation, by Captain Fawcett, from the coal mines at Vancouver's Island. It consists of a portion of the trunk of a tree, showing the wood and bark perfectly.

We also received a handsome specimen from Mr. Eastman, of English canal coal, showing the knot of a tree very beautifully formed. Thanks, gentlemen, for your favors.

## One of the Evils of the Freedom of the Press.

"THE WORLD IS WIDE ENOUGH FOR ALL."

This is a glorious motto; and if mankind would unite as brethren, and aid each other in every laudable pursuit, and leave alone that which is unworthy; if each would strive to help his brother man up, in the rugged pathway of life, instead of pulling him down, how glorious would be the sunlight on the human face divine.

The freedom of the Press is a bulwark of liberty; but, this freedom of the Press is sometimes so abused as to become licentious, and in the hands of men of strong prejudices and passionate and vindictive temper, that engine of power becomes an instrument of evil instead of good; it becomes a "sapper and miner" to the fortress of our liberties, instead of a bulwark in their defence.

The cause of a great portion of this evil, which so often appears like rust upon this otherwise bright weapon of power, is the selfish littleness of men. They seem unwilling that prosperity should light upon any one but themselves. Envy, hatred, jealousy, and all uncharitableness, are passions so common to humanity, that, getting the better of their reason, they yield themselves up to these, and forget, that by so doing, they are weakening their own power for good and for usefulness; and, looking through their own darkened vision, they thus sap and mine beneath their own prosperity and become the authors of their own fall. Magnanimity, liberality and generosity to others, even to those weaker, lower, and even less worthy; a helping hand to lift them up, is so much better, so much nobler, than the unmanly neglect to aid the weaker brother in the hour of peril; or, which is too common among men, to "kick a man when he is down;" that we sometimes wonder, in this enlightened age, that men do not see that in the effort to injure another, or to fail in those great duties of kindness and kind words, or to "speak of a man as we find him," it ever recoils upon the heart and prospects of each and all who thus come short in this portion of the golden rule.

We believe every candid mind will readily admit, that there is no hindrance so great to the advancement of true liberty and happiness; no difficulty so great, in the way of education and true progress, as the disputings, wranglings and bitter words hurled forth from the Press, against those who differ from them in opinion, or against those who occupy the vantage ground in the battle for truth and human progress. How glorious would be the power and triumph of a united press, sworn to look only for the good and true, the bright and beautiful? Leave error alone, and it will die. It is this continually heralding forth a long array of crime; this sending forth these long lists of divorces, suicides, murders, frauds, woman whippings, which fan the flame and keep alive the passions that feed them. Let our readers look back, over the past, and they will find that the moment the Press heralded forth some new crime or human frailty, a torch is lighted and the world is in a blaze. The last shape this disease took before the public was "the doctors," and the Press caught the infection, and began to "Cooper" the M. D.'s and to brand them with black "Coles," and then to "Rowell" the community, until they cause festering sores upon the body politic; and thus, the liberty of the Press, as we have said, becomes licentiousness. Every "penny-a-liner" becomes an editor, and every scribbler becomes the "head of the press." Hirelings are paid for hunting up "startling events," casualties, crimes and shortcomings; the earth is darkened, and we hear of nothing but sorrow, lamentation and woe.

"Things ought not to be." The Press should strive to be the great lever of public opinion; it should elevate, not degrade; encourage all good efforts, not disparage the weak and faint. The Press should be the fulcrum upon which all should rest, and the source from which all truths, in morals and science, should spring. Blessed is that Press that uses its power only for the elevation of truth and humanity; and we rejoice to know and believe, that in this, our new State, there are springing up many such levers, which, resting upon a true fulcrum, will forever battle for the sunny-side of humanity, and exclude bitterness, selfish passion and unfitting themes from their columns. Such presses are as sure to take root and grow, to bud, blossom and bear fruit, as a tree planted in good soil and constantly watered by the showers and dews of Heaven, and favored by the warm light of the genial sun. Rank weeds may grow awhile, feeding upon decayed and decaying vegetable matter, and they poison all they touch like the nettle, thistle and briar; but soon these must give place to the rose, the fir tree, and the fruit-bearing vine and tree; for the mouth of the Lord hath spoken it, and so with the Press: it is like a tree planted in a garden, it will grow and bear fruit according to the soil in which it is planted, the care and attention bestowed upon it, and the skill and moral power and affections that sustain it.

**TRACHEARY.**—Who that has been engaged in the active duties and the business of life in California, has not often had cause to mourn over confidence misplaced and trust betrayed. Every year bears a witness to every heart, of some sad vacuum in the heart's confidence. But there are some things so strange in California life, that we look upon those singular events that often transpire as the marked providence sent for our instruction. Thus all that is dark and mysterious to us now, will be made plain to us hereafter.

"Oh! colder than the wind that freezes  
Founts, that but now in sunshine played,  
Is that congealing pang, which sties  
The trusting bosom when betrayed."

He, in whom  
"My heart had treasured all its boast and pride,  
Proves faithless."

"Heaven sit in mercy smiles, even when the blow  
severest is."

**HONEST JOHN.**—Hopes have been entertained that the injury sustained by this fine trotter was but temporary, but now it is feared Honest John has run his last race. We hope, however, for the sake of his past good qualities, he may be well cared for in the future; and that the remembrance of his fast time will induce his owners not to be slow in kindness to him.

## Good Prospects for California.

We are most happy in being able to announce, by the following letter, the pleasing fact that a distinguished breeder of Devon cattle, from the State of Ohio, a gentleman of high standing, who came to our late State Fair as a special delegate from the Ohio State Agricultural Society, having become so well pleased with the climate and productions of our glorious State, has concluded to make investments here for agricultural purposes; to carry out his plan he has also made arrangements to have his fine herd of Devon cattle, consisting of about forty head, of the very highest character, brought to this State.

This herd of Devons will be a great acquisition to California. In this collection are animals of the highest rank, of which undoubted records of pedigree can be furnished. We have been kindly favored with a brief description of the character of these Devons, their peculiar characteristics and value to this climate, and we would refer our readers and all interested to the card of the owner in our advertising columns. On their arrival in this country, particular catalogues will be prepared, with name and price of animal, of which we shall give due notice.

Mr. C. A. Ely, the owner of the herd, in a note to us of 26th ult., says: Having become convinced from my own observations that my Devons would be productive of more benefit, both to myself and others, here than at home, and urged by many of your leading agriculturists, I have taken the step referred to.

The improved Devon Cattle have come to be regarded in England as decidedly the best, and most profitable, although less showy than the Durham. They combine every useful quality: As workers they are sinewy, light limbed and tractable, while their uniform red color, which the strength of blood preserves even to the fourth or fifth cross, makes it always easy to match them together. As dairy cattle they are eminent for the richness of their milk, although inferior to the Ayrshires in quantity. But it is as beef cattle that they exhibit peculiar excellence; although their smaller size and compact form makes this quality less conspicuous in them than in the more showy Durhams. They fatten easily, and lay on most in the best pieces; and the quality of their beef causes it to be always quoted at a higher figure in Smithfield market, being fine-grained, juicy, and well marbled.

I believe that they are peculiarly adapted to the climate and style of farming in California; thriving on scanty food, and absence of water, they can bear the long droughts of summer; while their light muscular limbs enable them to roam for food, without running off their flesh.

I believe there are no thorough-bred Devons in the State, except two calves, imported by the last steamer. Mr. Williamson is well known as a breeder and importer of stock, though chiefly of horses, in which he has acquired a deservedly high reputation.

## Burning of the Homestead of an old Pioneer.

It is with more than the ordinary regret we feel in announcing a loss by fire, that we make record of one which recently occurred at the fine residence of E. L. Beard, Esq., at the Mission of San José.

Mr. Beard is not only one of our oldest pioneers, but he is one of the earliest pioneers of Agriculture in California; and has, in the earliest days of agriculture, raised the largest and most valuable crops ever raised in the State. In the year 1853, his crop of potatoes amounted to over eleven million pounds. It will be recollected by many, however, that in that year the crop of this article was so great as to result in a total loss. They would not pay for hauling away.

Mr. Beard, like the great majority of our early pioneers, has become inured to the usual reverses of a California life, and bears his crosses with the spirit of a martyr. A large circle of friends will deeply regret this misfortune at this time, and the loss to him and his family of their much loved home, endeared to them by many kindly associations. Hundreds of our citizens will recall that pleasant and beautiful spot, truly a mansion of refined hospitality and generous friendship. Heaven grant that this may be the last event on the dark side of fortune, and that the future may all be bright, and that from the ashes of that mission pile, a new mission may spring forth, more bright, more beautiful, and more lasting in the prosperity and happiness of himself and those dear to him.

**DOGS.**—Much has been said of dogs lately, in this and other cities. It is very certain that they are getting sufficiently numerous for all comfort. A good dog is beyond all price, but a poor cur is a bane; and in this city it would be an act of humanity to take some measure to rid the community of the nuisance. It is unsafe in many places. A person to run quickly in our streets is sure to be attacked; or let a person drive a buggy, or ride in the saddle beyond a walk, and twenty dogs will fly at him. It is a serious evil, and the rapid increase of miserable dogs will soon make it unsafe to pass along our streets. Already many children have been bitten and badly injured. The plan of impounding them may not be the best, yet if there could be prompt action now, bad dogs could not do much damage. We sincerely hope some law our Legislature could so frame a law that would apply over the entire State.

**THE CUT OF THE PACIFIC OIL WORKS.**—This splendid cut (which appeared last week), that illustrates so admirably one of the great interests of the Pacific, was designed by Nahl Brothers and engraved by H. Eastman, for the Messrs. Stanford Brothers: (the same artists that prepared our new particular attention to that piece of work. It is indeed most honorable to them as artists; and we hope and trust it will induce many citizens to encourage our own most worthy artists.

**QUEEN ESTHER, BY DR. SCOTT.**—We are glad to announce that the lectures upon Esther, which have been delivered in Calvary Church by this distinguished divine, are about to be published by Bancroft & Co., of this city, in handsome form—price \$1 25. It will be a work of much interest.

## Great Speed of our California Horses.

CALIFORNIA is destined to become famous for a fine race of horses, both for speed and bottom. We shall also become celebrated for excellent draft-horses. There is every indication that the climate of California is peculiarly favorable for perfecting the breeds of horses, and, in fact, for all kinds of stock. The last year, it will be recollected, that the greatest trials of the endurance of man, in running a set of horses 100 miles, in less than ten hours, was made, and, also, running one horse fifty miles. Recently there have been two trials of speed which have created a very great interest among the lovers of fine horses. The first was on Monday, January 10th, a pacing match between Young America and Fred Johnson. This was a most exciting race, and, quite contrary to general expectation, Young America bore off the palm, and won the two mile race in the remarkable time of 4:59 and 4:58—first and second heats: a pacing match in wagons.

The next race occurred on the 21st Jan., at the same course (the Pioneer); a trotting match, in harness, for \$1000 a side, between Honest John and Rattler. The race was handsomely won by Honest John. Time of the three heats, 5:11, 5:12, 4:19. A very spirited race took place on the same day, at this course, between Billy Shear and Billy Barlow. Time, 1:58, 1:59, 1:59½. Second and third heats won by Billy Shear; the first by Billy Barlow.

Young America bids fair to be the leading animal on the turf, and is exciting great attention, and with justice. Young America is owned by E. H. Parker, Esq., of Kentucky stock, sire, Wagner; dam, Woodpecker, foaled in '49; consequently, ten years old. This splendid animal was brought from New Orleans in 1854 by Mr. Eoff, and sold to Dr. Young, and by him sold to Mr. Parker, the present owner. This noble horse has made good time, previously, recording 4:56½ to harness, and 4:59 to wagon. At the splendid trial on the 10th January, the extraordinary time of 4:59 and 4:58½ was made in two successive heats—the best time recorded. Such trials of speed will soon place California in the front rank for fast horses. Mr. Parker may well be proud of his noble animal, and he knows well how to appreciate Young America.

## Cruel Murder of Animals.

ONE of those gross acts of personal revenge so very common among lawless and revengeful men, has recently transpired in Napa county, upon the Ranch claimed by Samuel Brannan, Esq., of this city. We have the following facts from reliable sources, but not knowing any of the guilty parties we give the facts, in hope that some law may be made during the present session of our Legislature whereby the bitter personal disputes of men may not be allowed to be vented upon the poor, unoffending dumb beasts. If he "who hears the ravens when they cry," and will not permit a sparrow to fall to the ground without His notice, so watches over the animal creation, in care and tenderness, we trust our Legislature will do something to punish those men who are guilty of cruelty to animals, and cause them to refrain. The recent wanton and cruel slaughter of some hundreds of valuable sheep, the property of Mr. Brannan, by a set of lawless and wicked men, should awaken a just sense of condemnation in the heart of every humane man. We have nothing to do with the quarrel, or cause of quarrel; whatever it may have been, it affords no excuse for murdering the poor, unoffending sheep.

The facts are as follows: some dispute occurring between Mr. Brannan and parties claiming land upon which his sheep were pastured, they undertook to destroy his sheep, by way of revenge. For this purpose they went to the corral in the night time and commenced shooting them with revolvers. The sheep in their fright broke over the corral, and leaping into a near ravine, which was deep and difficult of egress, they piled up one upon the other and suffocation and death ensued to a large number. Those shot and otherwise destroyed amount to several hundred. As we have said, we know not the guilty parties, nor do we wish to know them, nor the cause of the quarrel, for we could never find an excuse for destroying, in reckless cruelty and revenge, unoffending animals.

Already there has been recorded all over our State, the poisoning of valuable horses, mules, and cattle, and the destroying of wagons, harness, gardens, orchards, &c. These are acts of such a wanton and revengeful character, that we would advocate the most severe penalties. A penalty of money is not sufficient; make the offender first make good the pecuniary loss four-fold, then also punish him by imprisonment; and in addition publicly proclaim him an unsafe man to go abroad. Make the penalty for such crimes so severe that men will not dare to violate the law. When this is done, these crimes will cease, and not till then. While such offences are winked at, men will not risk valuable stock or make such valuable improvements as they would if more protection was given.

**OUR NEW HEAD.**—We call attention to the truly artistic and elaborately designed and finished head which now appears upon the Farmer. We think our patrons and friends will pronounce it beautiful. It was designed by ourselves, drawn by those admirable artists Nahl Brothers, and engraved by H. Eastman, Esq. It will itself speak its merits far better than we can. One thing certain, it will be seen at a glance that Agriculture is the basis of all our wealth, and the main-spring of all other great enterprises. We feel truly glad to present, so prominently, such a truly honorable specimen of our California artists' skill.

**LONG DRESSES GONE BY.**—The fashion of long dresses that swept the streets is superseded in and exercise. The present Parisian fashion is to have the robe looped up, forming festoons above the knee. This displays the present fashionable bright petticoat, made of scarlet flannel, striped with black, worn short so as to show the entire foot, even to above the ankle; high-heeled boots, with fringe, completes this understanding dress.

## DOMESTIC SUMMARY.

**NEW DIGGINGS** have been discovered in Oroville, of which a writer in the Call says, that they are extensive and very rich there is not a shadow of doubt. The parties named therein, several companies, are regularly washing from fourteen to sixteen cents to the pan. One company is realizing \$30 a day to the hand. At Carpenter's Flat, also, about a mile from the aforesaid diggings, has been found dirt paying from ten to twelve cents. He believes the gold fields of Oroville to be still in their infancy.

The Mariposa Gazette urges a proper observance of the Sabbath in that locality. At present, it says, the day there is like unto other days, business of all kinds goes on, buying, selling, laboring. The only Sabbath sound is that of the church-going bell calling to worship, which few observe. It adds, if improvement, moral, social, and religious, is to come, it is time that efforts were made to that end.

WELLS, FARGO & Co., are sending a guard regularly with their Express, from Stockton to Mariposa and back, says the Gazette. For further security, their box is made fast by a strong chain, to the stage. Frequency of robberies is the cause of this precaution.

The recently discovered rich quartz veins near Horsehoe Bend, Mariposa, the Gazette says, are yielding, at present, as well as when first struck.

The town of Columbia is soon to be lighted with gas. The Courier says, it was contemplated to use gas manufactured from pine wood, by a new invention; but this having been deemed a failure, they have adopted coal gas as something they can depend on.

**FARMING IN AMADOR.**—A correspondent of the Union, writing from Ione City, Feb. 8th, says the farmers in that vicinity have nearly finished sowing their grain, and that larger quantities of wheat had been sown this season than ever before in that vicinity. Also, that it had been raining all day and still continued.

**THE STATE MEDICAL CONVENTION,** in session at Sacramento, have elected the following officers of the Society: Dr. Ellis, President; Drs. McLean, Montgomery, Deal, Harvey, and Harkness, Vice Presidents; Dr. Logan, of Sacramento, Corresponding Secretary; Drs. Taylor and Titus, Recording Secretaries; Drs. Oatman, Mouser, Hatch, Brown, Hamm, Tilden, and Gibbons, were elected as the Board of Censors.

**NEW QUARTZ MACHINERY.**—A writer in the Alta, from Angels, mentions that Mr. Brodie of that place has just invented and put into successful operation a sulphuric furnace that will assist the quartz business more than any invention that has yet been brought before the public. It consists of a revolving cylinder, placed over or on a furnace in an inclined position of about two or three degrees; it is about one foot in diameter and about ten feet long, with grooves two or three inches apart. Both ends are open; above this is a hopper, into which the sand is placed, and from it descends through a small tube into the upper end of the cylinder; it being hot and in motion, the sulphur burns away and even helps to heat the cylinder, while what is left passes through. The gold is then collected in the antrax; three tons in twenty-four hours can be run through this machine by burning only a half cord of wood. A patent has been applied for.

**MOVEMENTS** for the expulsion of the Chinese are afoot, among the miners, as will be seen by the following from an exchange: A large meeting of miners was recently held at the house of John Brannan, on Middle Creek, Shasta county, at which resolutions were adopted to expel the Chinese from that mining district. The proceedings of the meeting are signed by a hundred and twenty-three names.

## FROM THE SOUTH.

The Los Angeles Star says the new town of San Pedro is rapidly filling up with buildings, having now all the essentials entitling it to be considered and styled a "city"—a grocery, hotel and blacksmithshop. It will soon, no doubt, have a bowling alley and a billiard saloon.

We were shown by Mr. Sexton, of San Gabriel, a block of silver ore weighing about fifteen pounds, a specimen of a mine, which he discovered lately, forty or fifty miles from the city. The specimen indicates a large percentage of silver.

Capt. Johnson, of the U. S. Coast Survey, says the Los Angeles Vineyard, arrived by the last trip of the steamer Senator. He will, in accordance with instructions from Washington, proceed to survey the harbor of San Pedro.

The Senator hereafter will make tri-monthly, instead of fortnightly trips, as heretofore.

The Los Angeles Mining Company commenced hydraulic washing last week. The amount of gold obtained, during the week, was twenty-one ounces. This week, with four days of hydraulic washing, they have taken out thirty-seven ounces. They have thirteen men employed, which is more than ten dollars a day to the hand.

Within a short distance of Santa Barbara, says the Gazette of the 3d inst., there are some fifteen thousand head of sheep from New Mexico, on their way north, and we learn that there are some twenty thousand more between this place and Los Angeles. The price that is asked, we learn, is four dollars per head. Sheep of a much finer variety can be purchased in this county; and we doubt if any superior can be found in the State, than those owned by Dr. Shaw, on the Island of Santa Cruz.

Judging from the number of persons who have purchased from the Doctor, for the purpose of raising sheep, this county bids fair, in a few years, to be one of the greatest sheep producers in the State.

Some rain, which was much needed, had fallen in Santa Barbara, but not sufficient for the wants of the country.

Lieut. Beale's Expedition was getting along as well as could be desired, having encountered no interruption from the Indians. It will be two months before he reaches California.

Pieces of wreck have been recently picked up on the east end of Santa Cruz Island, says the Vineyard of the 4th inst., and identified as having been part of the cabin of the Laura Bevan.

**WHALING AT SAN DIEGO.**—A company of whalemen in San Diego had killed a dozen whales outside of the harbor, within a few weeks, but succeeded in bringing only five into the harbor. These five yielded 150 barrels of oil, worth \$2,000. The San Diego Herald thinks, if some means could be devised to prevent the whales from sinking, three or four parties could do a good business, during the season, by catching whales, within ten miles of the entrance to the harbor. The whalemen use small open boats for the business, and kill the fish with a gun, invented for the purpose, which carries a sort of a conical-shaped bomb-shell, that explodes after being driven into the body. The gun is a small affair, and is discharged "from the shoulder."

**THE OPPOSITION LINE of steamers to New York,**  
by way of Panama, seems likely to be in operation  
at the time announced, the 5th of March. The  
agents in this city, G. K. Garrison & Co., are mak-  
ing active preparations for the event. A reduction  
in the price of passage may be expected, and we  
can only hope the Opposition will become a per-  
manent institution.

**Go On.**—J. C. White, Esq., of this city, lumber  
merchant, has planted one thousand trees in So-  
nomma county. He has purchased a fine ranch and  
been planting trees of the best kind. Go on! This  
is well. May a thousand of our rich men, who  
have the taste for it, go and do likewise.

**LABOR MELON.**—Isaac Stockton, Esq., raised near  
Petaluma, the past year, an Apple-Pie-Melon of  
fifty-eight pounds, and a Cabbage of fifty-seven  
pounds, and many other good things. These are  
evidences of the productiveness of our soil.

PIANOS, MELODEONS,  
Alexandre Organs, and Music!

**Prices Greatly Reduced!**  
**HORACE WATERS,**  
No. 333 Broadway, New York.

**AGENT FOR THE SALE of the best**  
Boston and New York Pianos and Melodeons.  
The largest assortment of Music Merchandise  
in the United States. Pianos from five differ-  
ent manufacturers, of every variety of style, from those in  
plain rosewood cases, for \$200, to those of the most elegant  
style for \$1000. No house in the Union can come in com-  
petition for the number, variety and quality of its instruments,  
nor the extremely low prices at which they are sold.

**HORACE WATERS' Modern Improved Pianos,** with  
or without iron frames, have in their new scale an improved  
action, in power and compass of tone equaling the grand with  
the beauty and durability of the square Piano. The Press and  
first Music-masters have justly pronounced them equal, if not  
superior, to any other make. They are guaranteed to stand  
the action of every climate.

**HORACE WATERS' Melodeons** (tune the equal tempera-  
ment superior in each feature in quality. Can also furnish  
Pianos, Carhans, and Smith's Melodeons. Prices from \$45  
to \$125; for two sets of reeds, \$150; two banks of keys, \$200;  
organ pedal bass Melodeons, \$250, \$275 and \$300, less a liberal  
discount. Each instrument warranted to give perfect satis-  
faction, or purchase money refunded.

**Alexandre Organs,** five stops, \$150; eight stops, \$180;  
eight stops, ten stops, \$225; ten stops, twelve stops, \$250;  
eleven stops, \$275; twelve stops with percussion, \$300; fifteen  
stops, etc., \$375.

**Second-hand Pianos, at great bargains, constantly in**  
stock. Prices from \$30 to \$150.

**Music.**—One of the largest and best catalogues of Music  
now published; all Music and Musical Works published in the  
United States for sale by this House. Also, Martin's celebrated  
Guitars; all kinds of Musical Instruments and Musical mer-  
chandise, at the lowest prices. Music sent wherever ordered,  
post paid. Catalogues sent by mail. A liberal discount  
made to dealers, teachers, seminaries and clergymen.

**TESTIMONIALS OF THE**  
**HORACE WATERS' Pianos and Melodeons.**  
"The Piano came to hand, and in first-rate order. It is a  
beautiful instrument and no mistake." *Low & Walker, Phila.*  
John Hewitt, of Carhans, N. Y., who has had one of the  
HORACE WATERS' Pianos, writes as follows: "I have a fine melo-  
deon which I purchased of you for \$150. It is becoming popular  
in this place, and I think I can introduce one or two more;  
they will be more popular than any other make."

"I have two of your Pianos in use in my Seminary,  
one of which has been severely tested for three years, and we  
can testify to their good quality and durability." *(Wood &  
Gregory, Mt. Carroll, N. Y.)*

"I have used one of your  
Pianos for two years past, and I have to say it is a very superior  
instrument." *(A. Gray, Principal Brooklyn Heights Seminary.)*  
Rev. Hiram Hayes, writes as follows: "Preston Hollow, N. Y.,  
July 22, '88. Mr. Waters:—Dear Sir: I received the Melodeon  
which you sent me, and I am very much pleased with its  
appearance, and the tone also. Hope I shall have occasion to  
order one or two more the present season."

**Books Received.**—We have been favored by Hon.  
Mr. Banks, with a copy of the Surveyor General's  
Report, and other documents.

We have also been favored by the Report upon  
the Condition and Requirements of the City Front  
of San Francisco, made to the Dock and Wharf  
Company—a valuable pamphlet, with maps and  
tabular statistic, admirably gotten up by J. P.  
Robinson, Esq.

**Insurance Almanac.**—Messrs. Alsop & Co. have  
sent us an admirable almanac of some 200 pages,  
full of valuable insurance statistics, and important  
information upon this and other subjects.

**THE SPIRIT OF THE TIMES.**—It is to be regretted  
that a journal devoted to the turf and other sports  
could not be prosperously maintained. The Times  
has been merged in the Fireman's Journal, but we  
hope correct records of the turf may appear. We  
shall be glad to publish all important items  
furnished us, for public good.

## SPECIAL NOTICES.

**We are ahead of the world in Ambrotypes;**  
we are ahead of the world in Photographs; we are ahead of  
the world in Daguerrotypes. We have documents to prove  
it, the whitewashing of an unprincipled competitor at Mary-  
ville, notwithstanding; the palms of whose hands, I presume,  
were peculiarly sensitive to the touch of "ars."

**My Ambrotypes** were not exhibited at the last Fair in  
this city.

Please call and see the celebrated Premium Ambrotypes  
that my neighbor brags so much about, and it will be seen  
that the committee at the State Fair reversed the order of  
things, awarding First Premiums to the poorest articles.

**R. H. VANCE,**  
Corner Montgomery and Sacramento streets.

## SLEEP! SLEEP! SLEEP!

"To catch and all, a fair good night,  
And rosy dreams and slumbers light."

**Sleep! Sleep! Sleep!**  
Rest! Rest! Rest!  
Who is the man who doth keep  
A mattress the finest and best?

**Sleep! Sleep! Sleep!**  
Rest! Rest! Rest!  
The rest that, while sleeping, our health doth renew,  
Is found on a mattress that's made of PULU!

**Sleep! Sleep! Sleep!**  
Rest! Rest! Rest!  
Economy tells us to buy and to keep  
The mattress that is cheapest and best.

**Sleep! Sleep! Sleep!**  
On the mattress from JACOB SCHRIEBER!  
If bachelors live single, then life will not jingle  
Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go where, where,  
Those famous mattresses made of PULU!

**J. SCHRIEBER,**  
Jackson street, near Hotel International.

## THE HOME OF BEAUTY.

"Creative Genius! from thy hand  
What shapes of order, beauty, rise,  
When waxes thy potent, mystic wand  
To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and  
worship at the shrine of Genius! Imagination can rear tem-  
ples, and people them with gods; but Genius is required to  
make them live—live to our vision, live before us models of  
themselves.

Here is our castle,  
And here our gods;  
But they are mortal.  
Around these festooned halls  
The good, the great, the living and the dead;

And yet they speak—speak all!  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."

But as we gaze upon their closed life,  
We know that they are silent  
While they speak, and gaze on us,  
Creative Genius! raises thy wand  
And gather round us where we stand  
Within these halls, a living throng:  
That we may raise a glorious song  
To all who set the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wondrous things come;  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For is not a freeman's duty,  
To worship at the shrine of Beauty?

Behold these flowers that gem the land,  
These little children in groups they stand,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;

Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all this beauty planned.  
Behold, eries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

**Daguerrean Gallery,**  
Corner Sacramento and Montgomery streets.

**Ornamental and Fruit-tree Seed.**—A small  
assortment of valuable Ornamental and Fruit-tree Seeds, for sale  
at the Office of the FARMER.

**Dr. Wistar's Balsam of Wild Cherry.**—Where  
the above preparation is known, it is so well estab-  
lished as an infallible remedy for the cure of Coughs, Colds,  
Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain  
in the Breast, Croup, Whooping Cough, and every form of  
PULMONARY COMPLAINT, that it were a work of supereroga-  
tion to speak of its merits.

Discovered by a well known physician more than twenty  
years since, it has, by the wonderful cures it has effected, been  
constantly appreciating in public favor, until its use and its  
reputation are alike universal; and it is now known and  
cherished by all (and their "name is legion") who have been  
restored to health by its use as the GREAT REMEDY for all the  
diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it  
as his opinion that

**CONSUMPTION CAN BE CURED!**  
The whole history of this Medicine fully confirms the opinion  
of that eminent man. Thousands can testify, and have testi-  
fied, that when all other remedies had failed, this has com-  
pletely cured; that when the sufferer had well-nigh despaired,  
this has afforded immediate relief; that when the physician  
had pronounced the disease incurable, this has removed it en-  
tirely.

The virtues of this Balsam are alike applicable to cure a  
slight Cold or a Confirmed Consumption, and its power as a  
safe, certain, speedy, pleasant and efficacious remedy cannot be  
exaggerated.

**CAUTION! Purchasers beware!** unless it has the WRITTEN  
signature of "J. B. Bette" on the wrapper, as well as the printed  
name of the proprietor.

**SETH W. FOWLE & Co., Proprietors,** 18 Tremont street  
(Museum Building), Boston, Mass.

For sale by—HARLES MORRILL, HENRY MORRILL & Co.,  
and Redington & Co., San Francisco; CHAS. MORRILL and  
H. McDonald & Co., Sacramento; Smith & Davis, Portland,  
Oregon; and by all good dealers in medicine everywhere.

**Building Knives.**—Those who desire a very  
superior Building Knife, can secure one by sending \$1.00 to  
our Office.

HOTEL  
INTERNATIONAL.

San Francisco, California.

**THE UNDERSIGNED INVITES**  
the attention of the Traveling Public  
and strangers in particular, to the merits  
of this House.

It was established under its present management on  
the 1st January, 1857, as a

**FIRST-CLASS HOTEL,**  
in every particular. The present  
Lessee and Managers,

**A. S. HALEY,**  
JNO. J. HALEY, and E. R. ROBINSON,

with a delicious and to emporch upon the merits  
of other houses, cannot but recall the marked favor with  
which their enterprise has been received by a discrimi-  
nating public, in a constantly increasing patronage of the  
FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which  
the Hotel is conducted.

It is contiguous to all of the most  
POPULAR PLACES OF AMUSEMENT,  
THE PRINCIPAL THROUGHFARES,  
THE FASHIONABLE PROMENADES,  
AND STEAMBOAT LANDINGS;

thus rendering it at all times the most  
**DESIRABLE STOPPING-PLACE**  
For Families or Single Gentlemen,  
during their sojourn in this city.

**THE "INTERNATIONAL-HOTEL"**  
"COACH," under the superintendence of  
P. B. SMITH, late Stage Agent at Sacramento City, is in  
attendance at all hours to convey passengers to and from  
the Hotel, for One Dollar each, including Baggage.

**A. S. HALEY, Lessee.**  
Assisted by: JOHN J. HALEY, and  
E. R. ROBINSON, formerly of the New York Hotel.

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 18, 1859.

NUMBER 8.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.  
TERMS.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.

Advertisements and Subscriptions must be paid for in advance.

#### HORTICULTURAL ESSAYS.

##### LETTER NUMBER ONE.

We are much pleased to be able to lay before our readers the first letter of a series, upon Horticulture; being the practical experience of a gentleman whose position (being a responsible officer in the largest fruit orchard and garden on our coast), and scientific and practical education and experience have been such as to enable him to give to our readers much that will be valuable to us all, in every department of Horticulture. We ask all our horticultural friends to carefully note the experience of our correspondent at these extensive gardens, for being as celebrated as Smith's Pomological Gardens are, and often quoted as authority in our practical culture of fruit trees, as well as the system of irrigation pursued there, we earnestly desire that all the remarks of the writer, in relation to the soil, its condition in the various seasons, and the course pursued and recommended, should be carefully and studiously examined. Our friend has conferred a great benefit upon the Horticulture of our State, by giving his time to prepare his valuable notes for our columns; and we know our readers will duly appreciate his efforts. We are also pleased to have this series of letters emanate from a garden so widely and favorably known as Smith's Pomological Gardens, of Sacramento. Readers of the FARMER will do well, especially our subscribers, to commence with number one of the new volume, and preserve their files for binding.

##### SMITH'S POMOLOGICAL GARDENS, Sacramento City.

EDITOR FARMER: At different times I have noticed articles and inquiries in your paper, upon which I would like to have said a few words; and in fact had often taken up my pen for that purpose, but as often have had my attention diverted from the matter, by reason of the numerous and never-ending demands upon my time, which my business here requires. To you, who know so well what little leisure time I have, I need make no apology; and if the following notes and observations are not as concise as they might be, you will, I know, attribute it to the haste in which they are thrown together. My remarks will be confined strictly to my experience with the topics to be discussed, and which I will confine to the cultivation of fruit and fruit trees, in the nursery and orchard, describing as briefly as the subject will permit me, the practice we pursue in this establishment; and during which I will endeavor to explain the views we here entertain upon the mooted question of irrigation, its advantages and disadvantages, and the conclusions we have derived after four years of daily observations in this establishment, where irrigation has been the great basis upon which, thus far, have rested all our operations and success. Before I am through, I will have something to say upon the "tap-root" question, about which there seems to be at present going on quite a war of words.

As your paper has many readers in the Atlantic States, and some I know of in Europe, and to whom our State and climate, as well as our way of doing some things, is a sort of enigma, we cannot be over-cautious how we convey our impressions to them; especially when differences of opinion exist amongst our own cultivators.

People out of California have but a faint idea of the peculiarities of our climate, or rather I would say, the climates of our State; for it is notorious, that within our limits we can find any climate to our taste, from the region of perpetual snow, to the land of the olive and the fig, separated only by a few hours' travel. But this subject I leave for a more competent pen, and merely make this digression here, to state the fact that non-residents of California (some of them ardent seekers after information) have been led to believe that but little can be done in our climate without irrigation.

In the first place then I will assert, that in the whole length and breadth of the State, there is not an acre of land (with the exception of the worst forms of our alkaline soils, with which I am not sufficiently well acquainted to speak positively) but upon which, with the assistance of water, orchards and gardens can be, and in many instances are, successfully cultivated.

I lay this down as a first broad principle to start upon, but will divide it thus: That there is in this State an extensive territory which has never been made to smile with the sweet productions of Flora, or the wealth of Ceres and Pomona; as, for instance, the hill-tops and their slopes, the sides of ravines, and a vast portion of our plains, off from the river bottoms. This description of soil is of a very light, porous, and dry substance, more especially the mountain soil; the plain sometimes being of the opposite description—a heavy clay soil. With the assistance of irrigation, all this territory is capable of being made into beautiful, at-

tractive, and wealthy homes; to produce grain, the orchard and the vineyard. There may be some favored spots, where, by deep and thorough cultivation, this may be, and is sometimes, accomplished, independently of water; but of this I will have more to say before I am through.

There is also a very extensive territory, easy of cultivation, and upon which are grown some of our finest and most extensive orchards, nurseries, and gardens, entirely without irrigation; and in so far as adaptability to the purposes of horticulture, is unequalled by any soil in the world; and in its productions also, varying according to the difference of climate and locality. Of such are the rich bottoms of the Sacramento and its tributaries, and some of the lower valleys, as Napa and San José, the bottoms of the San Joaquin, and numerous other places. In all this area of country, orchards and vineyards can be successfully grown, by strictly adhering to the principle of deep and thorough cultivation, and frequent working of the soil through the dry season.

That this is done, and that it can be done, in thousands of places in this State, which are now barren of such productions, is undeniable; and this brings us to the consideration of another branch of the subject, viz: is irrigation necessary, or rather an advantage on such soils? This now brings the subject directly home to us, and what I shall say upon this subject will be the result of careful observation from some years experience here, in the application of water to the cultivation of trees, orchards, and vineyards.

I have it also in my power to make comparisons with other and adjoining orchards and vineyards, in precisely similar soils, and treatment, the only difference being in the affirmative and negative application of water. I will also state here, that cultivators in this vicinity all acknowledge the advantage of irrigation in bringing forward rapidly young orchards to production; and if water was abundant, would all use it; but such not being the case, they of necessity are compelled to rely upon the slower process of good cultivation alone.

The soil upon which this establishment is located is very deep, some twenty feet or more—no perceptible difference all the way down, and is of a fine sandy alluvial, almost an impalpable powder, very easily filled, and never so wet but that immediately after our heaviest rains it can be plowed, with ease to the team, and without injury to the land. Every portion of the grounds is supplied with water, from hydrants, through earthen pipes of four inches in diameter, they being branch pipes from a main of eight inches diameter (all under ground), and supplied from a reservoir which is filled by a Worthington's steam pump of ten horsepower, from the American River.

At the time of the erection of this steam pump, there were large quantities of fresh vegetables grown for the market, and at all seasons of the year there were daily and weekly crops being put in the ground, to keep up a succession of young and fresh vegetables. This seed would never have vegetated in the summer time without moisture, hence the necessity of having an abundant supply of that great element; and as horsepowers and windmills were entirely inadequate to our wants, the proprietor concluded to start right from the first, and hence the importation of the steam-pump, which has, thus far, nobly vindicated, in a very tangible manner, the claims of both water and steam; but to come more directly to the point, the advantage of irrigation.

The Peach Orchard was the first planted here. It is now three and six years old. The trees are from eighteen to twenty-eight feet high, branching out two feet from the ground; and some of them are thirty-two inches in circumference at the base. The orchard planted six years ago, has produced four crops of fruit, the first one having been destroyed by the grasshoppers. I will here state a fact in favor of irrigation, aside from its other advantages: In '55, the grasshoppers, having first eat all the green fruit, commenced then to devour the leaves and buds that would have formed for fruit another year, thus completely destroying the prospect for the next year's crop; when, after doing all the damage they possibly could, they finally left us, in the end of July. We then commenced vigorously to irrigate the orchard and other trees, and the consequence was the orchard set a fine lot of fruit-buds, and produced a fine crop of fruit the following year ('56). Thus, by having that advantage, the whole expense of the costly irrigating facilities was more than paid for in a single season, and gave the proprietor a crop a year earlier, than he would have had one. A Pear Orchard, planted the same year, was, to all appearance, destroyed by them, but by water it was saved, and in the fall it could not be perceived that anything unusual had occurred to it.

Upon this soil trees can be grown, both in the nursery and in the orchard, with no other watering than what they would receive from the rains. And I would here like to impress it on the reader, that the grounds here are all above the influence of overflows from the river, a couple of small sloughs traversing a portion of the grounds being the only exception. The few trees growing in these sloughs receive little or no water in summer; in fact they require none; and these trees have

made a much larger growth than some of their neighbors.

Many persons labor under the erroneous impression that we irrigate a great deal, and continually; that the nature of our soil requires it; that without it our fruit would be small, insipid and otherwise inferior; hence we are compelled to water copiously to have fine fruit at all. And as many persons who possess facilities to water abundantly, are apt to go to the extreme, and positively injure their trees, by causing them to grow too late in the season, having them, by reason of the growing or green state of the wood, unfit to resist the first frost in the fall, and consequently they get badly frozen at the extremities of the shoots, as is the case with figs and grapes, which are often killed to the ground; first then, to correct the impression as regards the practice here, and then to proceed to give our ideas of how it should be done, and when, and under what circumstances it should be done.

In the first place, by deep subsoil plowing the soil can be made in first-rate order to plant trees or vines in it; and secondly, by frequent use of the horse cultivator between the trees, to stir the soil and keep it free from weeds, you can succeed in growing fine trees and good fruit, even upon as light and dry soil as in this vicinity, where we are not benefited as much by high waters as parties who are located upon lower spots on the Sacramento and other rivers. We are well satisfied that the trees in the Peach Orchard here, for their age, cannot be equaled in the State, either for size in growth, or the amount of fruit which they have produced, by any other trees, growing upon similar soil, without irrigation. Upon this point we can satisfy the most skeptical, by simply comparing the age and size of trees, the weight of fruit produced each season, and to test the quality of the fruit, exhibit an account of sales, and compare with others who were selling fruit, "grown without irrigation," in the same market, and at the same time.

We claim a great advantage for irrigation. In the first place, we obtain a full-grown tree in much shorter time; and in the second place, it will of course be just so many seasons the earlier in producing remunerating crops; and thirdly, we can produce a fruit of larger size, more juicy, and of increased fine flavor, over those grown upon the same soil, and that have been otherwise treated. I am now alluding more particularly to the Peach, and in turn will speak more particularly of each of the other fruits. Should we have passed through a dry winter, like any of the last three, when there did not fall sufficient rain to wet the soil deep enough down to meet the moisture below, created by the soaking back from the rivers during high water; in such seasons, of course, the orchard must suffer early from drought. In this case, after the peach has formed its stone, we give a good watering once to the early peaches. That will be quite sufficient; but it must be a good thorough watering; the tree must have a good drink, for, notwithstanding the trees have some long "tap"-roots, a good many of them are not growing where it is moist. One good watering is sufficient; and in ordinary seasons, after abundant rains, even this watering is not needed for the early varieties. As the other varieties come on in their season, they will need to be watched, for in a dry soil, if made to feel the effects of drought, they will hasten their natural time of ripening, and before fully grown and matured, will ripen simultaneously with the earlier kinds. Such of necessity they must do; and of course such fruit is not to be compared to the fruit, luscious and melting, produced by the tree which is never permitted to feel the effect of a want of moisture. But here again an erroneous impression prevails, and outsiders imagine the steam-pump under full head, and deluging the whole place with constant and never-ending streams of water—than which nothing can be more ridiculous.

Most of the watering is done to the late peaches; and as by that time the soil is getting very dry under the influence of our hot sun, and the rivers at the same time at low-water mark, most of the roots are in very dry earth; and, giving the opponents of irrigation the advantage of their "tap-root" argument, the extremities only of these roots can reach the moisture, all others of course being less-favorable. In another place I will speak of roots, their nature, and the style which it is desirable to cultivate on trees. To come back to watering: Our late peaches, when about two-thirds grown, are watered from two to four times, as may be convenient, or as we may have time, and the whole watering is about equivalent to one good thorough watering; the ground will not be more than moistened around all the roots. It will then be readily seen from this, that all we accomplish is simply, by artificial means, to prevent the tree, at a critical time, wanting a sufficient moisture to assist it in properly maturing its fruit, both as regards size and flavor, and without hastening its proper season of ripening. Such fruit is always good and healthy, and will average more fair fruit through the whole orchard than the same orchard would if depending solely upon good cultivation. This then is the total amount of watering we give the Peach Orchard.

Early fruits, such as the Apricot, the Cherry,

and Raspberry, require no such treatment, as they get through before the ground is affected by the dry season. Raspberries, however, will continue to bear through the whole season, till the first frost in fall, if they receive an occasional watering through the summer. Such has been the case here.

#### Report of the Dioscorea Batatas.

OAKLAND, Alameda County, Feb. 7, 1859.

EDITOR FARMER: Believing it the duty of all who receive new products, for the purpose of experiment, to report thereon, whether successful or not, so that those at least who have exerted themselves to procure and distribute the seed may know the result of their labor; therefore, the following is presented as the result of my experience with the Dioscorea Batatas:

Received a tuber about eight inches long and near one inch in diameter, on the 24th of March last; I cut it into pieces of different lengths, from one to three inches; splitting some and planting some unsplit, in good, rich, mellow soil, that had been trenched; also, planted one piece in a hot-bed, where it soon sent up a sprout, the top of which was pulled off by an employe, who mistook it for a weed, and it never would grow after that; so that, on the 4th of May, I transplanted it in the Nursery, where it died. Those planted out were very slow about coming up, and a black, dry rot destroyed some before they were ready to grow; one came up, the top of which being broken off, when about two inches high, it never grew any more, though it kept green, looked healthy, and was in a good, rich, moist soil, all the season, until the past Fall, when in digging it up I found a small tuber about half an inch in diameter, the shape of an egg; within two feet of it, one came up, about three weeks later, and grew very rapidly until the vine was fifteen inches long, then stopped; on digging it up last Fall, I found it had a tuber about eight inches long and one inch in diameter at the bottom, or thickest end, thence tapered off to a string. Only three or four others grew, each making a single tuber from two to three inches long. I have to-day cut them up in small pieces, and planted them in splendid soil, determined to give them another good trial, as I know some plants do not flourish well here until they are acclimated.

What do the many others who have planted have to say? Perhaps some have had better success.

I. B. R.

[We are much obliged to our correspondent for his experience with the Dioscorea Batatas, or Chinese Potato; for his idea is a good one and true. Very many articles that we feel confident will eventually do well in this country, are too apt to be cast aside after a single trial, when the fact is, they require to pass through an acclimating process, either by a new and regenerating process by seed, or by a second or third planting, to adapt them to our soil and climate. We hope to hear the result of this continued experiment of "I. B. R."]

[For the California Farmer.]

#### My Aunt's Receipt.

HAVING noticed in the FARMER that some of your readers complain of the depredations committed by those busy little workers, the red and black Ants, and having suffered the loss of several fine cherry trees, the roots of which they seem to be particularly fond of, I thought for the benefit of others I would give you my mode of getting rid of them; which consists, in taking a large piece of sponge and having wrung it out of the water, sprinkle the open pores with brown or white sugar and shake it well into the body of the sponge, then lay it near the ant's nest, and they will not be long in penetrating and filling it in quest of the hidden sweets. When you think you have enough to make a good haul, place the sponge and contents into a bucket, and on which pour boiling water. Two or three operations of this kind will be sufficient to destroy an ordinary Ant-hill. To make assurance doubly sure, the captured ants may be fed to the young chickens.

ALAMEDA.

The above remedy for Ants upon fruit trees, is worthy special attention, and those of our readers who have made inquiry upon this subject the past year, will do well to try the plan of our Alameda friend. He has much experience as a fruit grower.

[For the California Farmer.]

#### Lively Times Among the Farmers of Suisun.

COL. WARREN: The farmers, up this way, are busy now, putting in their grain, and the prospects are, that they will all have a first-rate crop, which I sincerely hope will be the case, for on the farmers depend all. If they fail, everybody will fail. A great many are going to sow Alfalfa, or Chile clover. I do not know how it will turn out. The merchants, up here, sell it very high—thirty cents a pound. Can you give us any light on the subject, Colonel?

Suisun City is at present very lively. I was there yesterday and the plaza was crowded with teams. It is an excellent place for business. Come up this way, ye mechanics; there is enough work for all.

There is no more news, Colonel; so adieu, x.

#### Woman's Rights.

Hold reader! Don't turn away from the few words we are about to say to you on this subject. We are no advocates of making women stump orators, politicians, pulpit preachers, lawyers and doctors; ah, there stop a bit—doctors? here's a question! But on the doctor question we will speak by and by. We abjure all other professions for Woman, but give her free scope to use the knowledge she should have on such subjects in her own circle of Home. But of the Woman's rights, of which we would speak now, are some very important considerations touching woman's right very appropriately presented in the letter of our good friend and correspondent from Alameda, whose watchful care for these truly Woman's rights, demands a kindly remembrance from Woman herself.

Yes, friend Clark, let us all speak out and raise a voice; aye, let woman send a memorial to our Legislature and insist upon "woman's rights" in this respect, and woe be to that sheriff or constable that would trouble the "hen-roost" or "pig-sty" of those that take care of the "little piggies" and "chickies" of California. We are truly glad to know that our Legislature is to be reminded that there are claims of Woman for Home, that must be protected; and we hope friend Lull will not allow the subject to *lull* until woman has all and equal privilege and protection in the comforts of Home, until the law of the land shall be like a song and a sweet *Lull-a-by* to all their fears for the ham and eggs and poultry of "home manufactures." If these "rights of woman" are not properly and promptly guarded in the present bill of Mr. Lull's, let woman, everywhere in our State, then try the "right of petition" for herself.

ALVARADO, February 9th, 1859.

FRIEND WARREN OF THE FARMER: It being a rainy day, and having nothing else to do, I thought I would make some suggestions with regard to our Exemption Laws.

I see in the Alta, of the 6th inst., an article headed "Laws for the Poor." It is good, and I hope Mr. Lull's bill will pass; but there is something more wanted for the poor man, than to enable him to go to law. Now I am not very well posted with regard to our Exemption law, but I believe it allows an enormous amount of furniture and books (which very few poor farmers and mechanics have).

Now then, while the husband, for instance, is toiling hard in the field or the shop, the wife at the same time is toiling just as hard in her domestic affairs, raising and feeding chickens and pigs; which, by the by, the women justly claim; say all the chickens, and some share in the pigs. Now by some unavoidable misfortune the poor man cannot meet a just demand at the time agreed, and the creditor sends the sheriff forthwith and attaches all the law don't exempt; the chickens and pigs that the woman has under her toilsome care in order from the avails to get such necessary things as the children must have, and even pay school-bills, are slapped upon, by the sheriff or constable; and then if the poor man cannot make a compromise with his creditor, who has got him under his thumb, all is sold under the hammer in less, I believe, than forty-eight hours. Thus the poor woman and children are left destitute of the only means she had of living any way decently; her furniture and books (if she has any), do not supply the vacuum of an empty stomach, or clothe the children's feet, etc.

Now, Colonel, I would suggest an amendment in our Exemption laws, one that will be a benefit to the honest poor in general, and woman in particular. Could not the women of every county get up a petition to the present Legislature, in their own behalf. What say you, Colonel? I feel something ought to be done for our hard-working women.

Respectfully, yours, A. CLARK.

#### Oregon walking up to Home Products.

That excellent Agricultural journal, the Oregon Farmer, of February, comes to us in handsome style and full of useful matter, interesting facts about stock, farming, manufactures, etc. We extract the following interesting article:

We acknowledge the receipt of a pattern of Cassimere, manufactured at the "Williamette Woolen Factory," Salem, which one of the principal merchant tailors in this city pronounces a first-rate article; and for durability, superior to any eastern goods procured on this coast. The machinery used is of the latest and most approved kind in use in eastern factories, and with good material and competent workmen, we cannot see why as good an article may not be turned off in Oregon as any State in the Union. As this is the pioneer work of this kind on the Pacific coast, our people should enter into a hearty support and feel a just pride in sustaining home manufactures.

Messrs. Hull, Knapp & Co., have been appointed agents in Portland, for the sale of all goods manufactured, consisting of cassimere, blankets, yarn, etc., and will offer on terms which warrant their purchase in preference to any other goods in market.

A SEMINARY at NAPA.—It is proposed to erect a Seminary at Napa. The Reporter says: The design is to build a suitable edifice on the joint-stock plan, at an expense of not more than \$10,000, and of this some \$5,250 are already subscribed by some of the most wealthy and influential citizens.

It is stated that the Alta Telegraph Company will on to-morrow, 19th inst., have their office open to Napa City.

## LIVE STOCK.

HENRY COLEMAN'S LETTERS FROM ENGLAND.

## Neat Cattle.

## DAIRY OR MILKING STOCK.

The milking or dairy properties of the different breeds have been matter of much discussion; and it would be difficult to find a unanimous, perhaps not a general acquiescence in any opinion. This should be an argument for forbearance on the part of those persons to whom my judgment might appear erroneous. Mr. Bates, one of the most distinguished breeders of shorthorns in the kingdom, and a successful prize winner for his stock, gave me as his opinion that there were two lines of the shorthorns—the one large milkers, the other different. No such marked or sectional distinction has come within my observation; but individuals of remarkable productiveness in this respect are constantly to be met with. Few things in this world are without exceptions; but as a general rule, other circumstances being equal, the yield of milk will be in proportion to the size of the animal. The cub of an elephant requires mere milk than a calf or lamb, and doubtless there is more provided for him.

The high-bred Darhams are generally poor milkers. They do not give large quantities; the milk is not rich in butter properties. Now I shall contradict this by some examples, but they, I believe, are the exceptions, and not the rule. A Durham or shorthorn cow, owned in Cambridgeshire, made sixteen pounds of butter one week, and at the rate of fourteen for a considerable length of time. I have found several that made twelve pounds and fourteen pounds of butter a week. These, however, are rare instances. Mr. Bates informed me, that one of Mr. Collins' cows gave at one milking, at night, twenty-six and a half quarts; another gave twenty-four quarts of milk per day; another, nineteen quarts. I did not understand him to make these statements of his own knowledge. His own celebrated cow Duchess gave fourteen quarts at a milking. These are all animals of high blood; but it is the general experience of the keepers of such animals, that their qualities for milk are inferior. Mr. Bates informed me, these were beer quarts. Wine to beer measure is about four to five.

The Yorkshire or Teeswater cows, from which the improved Durham are derived, are large milkers. It is an evidence of this, that most of the cows kept in the London milk establishments are the Yorkshires. They are, in general, very large animals, and their size for fattening, when their milking is over, strongly recommends them. In condition, they are variable, a cow giving large quantities of milk seldom showing high condition; though even this is not without exceptions. It is rare, however, in any case, to find them in low condition. At a large milk establishment in Edinburgh, kept by a woman, she told me that she had owned a Teeswater or Yorkshire cow, which had given twenty-two Scotch pints, or forty-four quarts, of milk, per day. I was assured of this woman's credibility; but then, with a perfect respect for the conscientiousness and good intentions of the sex, I habitually distrust their arithmetical accuracy, whether in regard to their own age, if they are for on the journey of life, or to other matters. It is not in their way to remember numbers exactly. The great astronomer, Mrs. Somerville, is a rare and magnificent exception.

At a London milk establishment which I have repeatedly visited, the yield in milk is chalked upon a board, over the head of the cow. Most of them are of the Yorkshire breed. I observed, in my last visit, one yielding twelve quarts per day, one sixteen quarts, and one, an Ayrshire, twenty quarts. One cow was shown to me, a Yorkshire, which had yielded twenty-three quarts per day. These were wine quarts, as I understood. Their feed, at this time, was half a bushel of grain, each, per day; twenty-eight pounds of hay; some potatoes, and newly-mown grass, the quantity not determined. Ale grains, it is said, will make more milk than porter grains. This is the opinion of practical men.

At another milk establishment which I have repeatedly visited, two hundred and fifty cows are kept. Here, both Durham and Yorkshires are principally kept. They are preferred, as being best for milk, but especially as fattening easily, when dry. The average yield was stated at eight quarts per day to a cow, through the year, and, before "the disease" prevailed among them, at ten quarts. This is certainly a large amount. The cows are never turned out; water is given to them in their troughs. They appeared in very good condition; certainly much better than the men who attended upon them. They were kept in milk as long as they would pay, though one of them had been in milk three years, and then gave only three quarts per day. They stand upon brick floors. Their feed was one bushel of grain in the morning, and one in the evening, with ten pounds of potatoes, and twenty pounds of mangel-wurzel to each cow, per day. One truss (fifty-six pounds) of hay was divided among ten in the morning, and one truss among twenty in the evening. In the proper season, grass, clover or rye grass, is supplied, but the quantity not determined. In some cases, one bushel and a half of grain, forty pounds of mangel-wurzel, and ten or twelve pounds of clover hay, constituted the allowance of each cow. This must be considered as very liberal; and what better repays such liberality than a good cow?

In St. James' Park, where several very large cows, Yorkshires, are kept tied constantly through the day, for the purpose of supplying a glass of milk fresh from the spring, for those whose undiluted taste can relish it, and where the cows are petted and highly fed, I have occasionally inquired for the yield. The answer, from an intelligent and civil keeper, has been, sixteen quarts per day, and, within his knowledge, never more.

The first cross of the improved Durham stock with the Ayrshire or the Devon has, I may say, almost invariably, produced a fine milking animal. This point may be deemed established. Innumerable instances of this have come under my own observation. I found one instance, in Leicestershire, of a cross between a Durham and an Alderney. The cow, the progeny of such cross, produced sixteen pounds per week, for ten successive weeks, upon grass only. This farmer had twenty-two cows, nearly all of them high-bred Durham stock; but he candidly stated that they were not good milkers.

The Ayrshire stock are generally deemed the best milking or dairy stock in the kingdom. This is a strong statement; my own observations, which

were, however, of necessity limited, would make me hesitate in speaking so emphatically. Their general reputation is, certainly, strongly in their favor.

The farmers of Ayrshire, and it would be difficult in any part of the kingdom to find their superior, are most emphatic in their preference of their own cows for the dairy. Some of the large farmers, under what is called the *bovine* or *bovine* system, let them to smaller farmers, who pay the owner ten pounds a year for the cow. The owner provides for the cow, and incurs all risks of injury or death. The lessee takes the entire care and management of the cow, and generally gets for his profit two pounds to three pounds per cow. This speaks favorably for the stock, though, to ascertain the exact result, the market value of the produce, and the price of dairy labor, and other circumstances, should be known.

I visited, in Ayrshire, a principal dairy farmer, of high reputation. His cows are all of the pure Ayrshire; he will have no other. They were extremely beautiful animals. His best cows, in the best of the season, gave fifty-four pounds of milk per day. If as is usually reckoned, a pint is a pound, this would be twenty-seven quarts per day. The average yield was forty pounds per day, or twenty quarts. Yet the amount of butter yielded by them was one pound per day, it requiring forty pounds of milk to produce one pound of butter. They were at grass, and had no extra feed. This was a large proportion of milk for the butter. This farmer was then (September 26th) milking thirty-five cows, from which he sold, the previous week, one hundred and fifty pounds of butter; not a large amount. It is stated, confidently, upon authority which I personally know is entitled to entire confidence, that an Ayrshire cow has given eighteen Scotch pints, or nearly thirty-six English quarts, per day; and that a three-year-old heifer gave, for six weeks after calving, fourteen pints, or twenty-eight quarts per day. These were extraordinary animals.

The account given by a celebrated writer on dairy husbandry, that "there are thousands of the best Ayrshire cows, which, in their best condition and well fed, will yield four thousand quarts of milk per year, and produce three hundred and seventy-five pounds of butter each—and that, in a dairy of sixty cows, every one yielded her own weight, annually, of the best cheese to be met with in Scotland"—must, I think, have been penned some evening when the northern lights, the aurora borealis, were peculiarly brilliant in a Scottish sky. I do not deny the truth of these statements; but my own observation has not confirmed them.

The statement of a farmer in Shropshire, of the highest eminence, given to me, was, that his Ayrshire cows, in the best of the season, averaged one pound of butter per day; that he has known two Ayrshire cows to make two pounds and two ounces each per day; and that with him sixteen quarts of milk produced one pound of butter.

The North Devon stock have some strong advocates as a milking stock. The most productive cow in butter which I have found was a North Devon, which, for several weeks in succession, without extra feed, produced twenty-one pounds of butter per week. The character of the owner places the fact beyond a doubt. Mr. Bloomfield, the eminent tenant of Lord Leicester, after many years experience, states that his North Devon cows will give an average of four pounds of butter per week, through the year. One English pint of milk, as he adds, will produce one ounce of butter; that is, eight quarts will make a pound. I give his statement; but the case will obviously be affected by the length of time which has elapsed from the calving of the animal, by the mode of feeding, and whether it is of the milk first or last drawn from the udder. The celebrated Danvers or Oakes cow, in the United States, which made over four hundred and eighty pounds of butter in a year—nineteen and one-fourth pounds in one week—and, within my knowledge, sixteen pounds a week for more than three months, and another cow, also within my knowledge, which produced three hundred and thirty-five pounds per year, were evidently of the North Devon blood, though not pretended to be pure. The first cross of the Durham with the North Devon, as I have remarked, produces an excellent milking progeny. Breeding for this object cannot be continued beyond a first cross with any certainty of success.

The Staffordshire longhorns, a race which I have not described, but which have always been eminent as milkers, and with which Bakewell began his celebrated improvements in stock, have produced some excellent milkers, by being crossed with the Hereford stock. Two of these animals, owned by a friend, an excellent manager of his little farm, as well as a most highly esteemed clergyman, in Worcestershire—two characters not unfrequently united—produced twenty-five pounds of butter per week.

The Kerry cows, of Ireland (not the very small stock referred to page 178, vol. 1.), are greatly valued for their milking properties. Three of these cows, at a milk establishment near Cork, it was stated to me, yielded twenty-one gallons per day, or twenty-eight quarts each. This was at Blarney Castle, but I did not receive it as "Blarney." It was stated to me, on respectable authority, that a reverend gentleman in the county of Kerry had, the previous year, as the produce of five cows, sent to Liverpool twenty-five firkins of butter, of sixty-four pounds each, which would be equal to three hundred and twenty pounds per cow. The cows were fed most liberally upon mangel-wurzel. If there be no mistake in the size of the firkin, this is certainly a most extraordinary yield.

I come, lastly, to speak of the Alderneys as a milking stock. I believe it will be admitted, without a dissentient voice, that for richness of milk, as a race, they are unrivalled, and this with scarcely an exception. I shall state some facts within my knowledge in regard to quantity, obtained without any extra feeding. A farmer in Hampshire owned an Alderney cow, which produced fourteen pounds of butter per week, for a period of thirteen weeks. When I visited him in the summer, he had six Alderney cows, which together had produced fifty pounds of butter per week, during the whole season. Another farmer, whose authority is above question, assured me that, from four Alderney cows, he had made, during the months of May and June, fifty-two pounds of butter per week. Colonel Le Cour, with whose acquaintance I am honored, states the "best Alderney or improved Guernsey cows give twenty-six quarts of milk in twenty-four hours, and fourteen pounds of butter from such milk in one week. Such are rare. Good cows afford twenty quarts of milk daily, and ten pounds of butter weekly, in the spring and summer months."

Mr. Bates, the celebrated breeder of shorthorns, gave me the following minutes respecting some trials of the quality of milk stock produced by him:

One quart of milk, West Highlanders, produced 2 oz. butter.  
" " " of half-bred Durham stock, " 2 1/2 " "  
" " " average of shorthorns, " 1 " "

Of some select or extra stock, the following was the result:

One quart of milk, shorthorns, produced, " 2 1/2 " oz. butter.  
" " " of West Highlanders, " 2 1/2 " "  
" " " of half-bred Durham, " 2 1/2 " "

Of the milk of his famous cow Duchess, a full-bred improved Durham, giving fourteen quarts at a milking, each quart produced one ounce and a half of butter. Supposing the yield at each milking to have been the same, i. e. equal to twenty-eight quarts per day, the amount of butter ob-

\* Doyen means milk-pail.

Journal of the Royal Agricultural Society, vol. part 1, p. 50.

tained is shown to have been eighteen pounds six ounces per week. In the case of another cow in his possession, of the same stock, and I believe, the daughter of the above, one quart of milk produced two and a quarter ounces of butter, but her yield was not stated.

At Welbeck, at the Duke of Portland's, an Alderney cow, giving three and a half gallons of milk per day, produced fourteen pounds of butter per week. An improved shorthorn, yielding six gallons per day, produced twelve and a quarter pounds of butter, in the same time.

In a comparative trial between the milk of the Alderney and Kerry cows, detailed in the Journal of the Royal Agricultural Society, vol. ii. p. 420, the result was as follows, as tested by a lactometer:

Portions of cream, 100: May, Alderney, 25; Kerry, 10.  
" " " June, " 20; " 10.  
" " " August, " 16; " 11.  
Three pints of Alderney cream, gave 1 lb 8 1/2 oz. avoirdupois.  
" " " of Kerry " 1 " 4 1/2 "

The farmer attributes "the falling off of the Alderney in cream to their being old in milk, and having cast their calves. The Kerrys came into pasture fresh in milk after their first calf."

At a trial of the qualities of milk, on a farm near Liverpool, which I visited, the milk of the several breeds was, in point of richness in cream, as follows:

Yorkshire and common cows, as " 8 per cent.  
Ayrshire and common cows, as " 15 " "  
Alderney and common cows, as " 25 1/2 " "

There is obviously much uncertainty in these trials, from the different conditions, in various respects, in which the cows might have been, and other circumstances.

The average yield of new milk cheese to a cow, in the different counties, is given with great uncertainty. The tenant farmers are, in general, disposed to conceal the favorable results of their husbandry, from the effect it may have upon their rents.\* The amount given to me in Gloucestershire was three hundred weight, or three hundred and thirty-six pounds to a cow; on another dairy farm, admirably managed, and where there prevailed a disposition to give the fullest information, three and a half hundred weight, or three hundred and ninety-two pounds. In a report on Cheshire cheese-making, it is represented at three hundred weight, or three hundred and thirty-six pounds. The writer says, in a few instances, five hundred weight, or five hundred and sixty pounds, are produced to a cow; but these cases are rare. The Cheshire cheese, however, is not pure new milk, as some of the cream from the night's milk is abstracted for butter. In the best cheese district in New England, I have known, in a dairy where a good many cows were kept, the average annual yield of entire new-milk cheese to have been, in one case, six hundred and twenty-seven pounds to a cow; in another case, six hundred and thirty-one pounds. This was extraordinary, and showed excellent management. The account may be found in my Report of the Agriculture of Berkshire. In general the yield with us, as here, does not exceed three hundred pounds to a cow.

The result of a small dairy farm, where twenty cows are kept, as presented in a late Journal of the Royal Agricultural Society,\* gives, as the produce of a cow, three and a half hundred weight of cheese, thirty-five pounds of butter, and thirty-five pounds of whey butter. Considerable amounts of butter made from the whey of cheese go to the market, and bring, within two-pence, the price of whole butter.

The precision which one often finds in the information given by interested parties, may be illustrated by a dialogue with a tenant dairy farmer, in the presence of his landlord, to which I myself was a party.

Landlord.—"Will you have the goodness to tell me the average yield in new milk cheese, by the year, of a good cow?"

Farmer.—"There is a great difference in cows."

"I understand that, and do not wish to hold you to an exact statement; but please let me have your opinion of the average yield of cows as they rise?"

F.—"A great deal depends upon their feed."

"I am aware of that; but to be more direct, will a good cow, well fed, produce one hundred and fifty or three hundred pounds of new milk cheese in a year?"

F.—"That is very difficult to answer."

"It may be difficult to answer. I do not expect you to be very exact; but a general opinion is all I want. What do you think? Will it be one hundred and fifty or three hundred pounds?"

F.—"Six cows will produce more and some less."

I gave up in despair; and yet this man every year sold all his dairy produce in the market by weight. The secret was, his rent was very low, and he was a tenant at will.

1 Vol. vii. part 1, p. 164.

## Native Productions for Hedges.

The San Andreas Independent, in the commendable duty of noticing the rural improvements in its section, gives a sensible article in relation to hedges. It says:

Mr. A. Young, proprietor of the Calaveras Lime Kilns, is, at the present time, devoting his energies to the construction of a fence around a portion of his land, which—if the experiment proves successful—will be highly ornamental as well as secure. This fence is a common stone wall with a trench behind and the soil thrown up against the back of it. In this earth along the back of the wall Mr. Young intends to plant acorns, believing they will, eventually, grow into an excellent hedge. There is no doubt but shrubs which are indigenous to our dry hill-sides, will succeed better in hedges than plants of foreign importation. We believe that not only the ever-green Oak of California, but many other native plants, would make far superior hedges to either Buckthorn, Arbor-Vitæ, Locust, Holly, or Yew, while they would be equally ornamental. Besides having strong, lasting hedges around gardens, orchards and farms, a great want might be supplied in ornamental grounds by appropriating many of our native shrubs to making edgings along sides of walks. Box, Thrift, Pinks, and many other plants commonly used in other countries for edgings, are, for such purposes in the mountain sections of this country, comparatively valueless. The *Ceanothus* is very extensively used as a hedge-plant in and around San Francisco, but we think it probable that it never will become very popular as a hedge-plant in the mountains. The evergreen *Euonymus* makes a very fine ornamental hedge; but in point of both strength and beauty, we are aware of nothing that would excel, for a thorough, permanent fence, our native evergreen Oak.

The Hydraulic Press notices the above as a good suggestion, and truthfully adds:

There are certainly many beautiful shrubs indigenous to California, which would prove highly ornamental if regularly planted around our homes. Even if not employed for hedging, they would make a charming inclosure by being planted inside of fences. Some of our native mountain shrubs are covered for many weeks during the spring season with snowy blossoms, which load the air with honeyed odors. These may be obtained without any expense except that attending their transplanting, and do not require irrigation, though that perhaps would prolong their season of verdure. If California residences were surrounded by native plants and flowers, and the cultivation of these made superior to that of imported growths, we believe it would have a tendency to inspire the sentiment of attachment to the soil, without which our people can never enjoy contentment and happiness.

To PRESERVE PENCIL MARKS.—If you have anything drawn or written with a lead pencil that you wish to preserve from rubbing out, dip the paper into a dish of skimmed milk. Then dry it, and let the iron rest a moment (as it will leave a crease or mark) but go over it as rapidly as possible.

## Needs of American Agriculture.

BY HORACE ORNELLY.

We cannot refrain from insisting on the beautifying of the Farmer's Homestead as one of the most needed reforms of our Agricultural economy. We Americans, as a people, do less to render our homes attractive than any other people of equal means on earth. And for this there is very much excuse. We are "rolling stones" which have not yet found time to gather any very graceful moss. We are on our march from Western Europe to the shores of the Pacific, and have halted from time to time by the way, but not yet settled. That sacred and tender attachment to home which pervades all other human breasts, has but slender hold upon us. There are not many of us who would not sell the house over his own head, if he were offered a good price for it. Not one-fourth of us now live in the houses in which we were born; not half of us confidently expect to die in the houses we now occupy. Hence we cannot be expected to plant trees, and train vines, and set flowering shrubs, as we might do if we had, in the proper sense of the word, homes. But we ought to have homes; we ought to resolve to have them soon. We would say to every head of a family, whatever else you do or forbear to do, select your home forthwith, and resolve to abide by it. Let your next move, if move you must, be inflexibly your last. We would say to our youth, never marry, never fix upon any place of abode or occupation, till you shall have selected your homes. If you will have it in Oregon or California, so be it; but fix it somewhere, and so soon as may be—at least before you form any other ties that promise to be enduring. Though it may be but a hut on a patch of earth, let it be your fixed home evermore, and begin at once to improve and beautify it every hour you can be spared from more pressing avocations and needless repose. So shall your later years be calm and tranquil—so shall you realize and diffuse the blessedness which inheres in that sacred temple, home!

The one great point enjoyed by our countrymen over their cousins in Western Europe, is the facility wherewith every American who is honest, industrious, and sober, may acquire, if he does not already possess, a homestead of his own—not a leasehold from some great capitalist or feudal baron, but a spot of earth of which no man may rightfully dispossess him so long as he shall shun evil courses, and live within his means. In Europe, on the other hand—save in France—but a small minority of the workers own the lands they till, the dwellings they inhabit, while a large proportion, even of the thrifty and forehanded, including some who would here be deemed quite rich, cannot call one foot of earth their own. To own arable land in Great Britain is a mark of social distinction, a badge of high caste, so that estates are held at prices which hardly yield three per cent to the producers, and only the very wealthy can really afford to be owners of land. But here, there is not a youth of eighteen, to-day, who cannot, by simple industry, economy, and temperance, have his own farm of fifty to a hundred acres of fair land by the time he shall have attained the age of twenty-five; and it is an amazing fact that two-thirds of our youth seem utterly heedless of this opportunity—wasting their days and their dollars in frivolous amusements or rash speculations, and suffering ripe manhood to creep upon them while still drifting with the tide, with greedy ears for every tale of a new California, Australia, Sonora, or Nicaragua, but blind to the truth that to the instructed brain and willing hand every field is a placer, and that gold is acquired far more surely at home than in New Caledonia. Youth being thus squandered on delusive hopes and vain adventures, the cares and burdens of an increasing family bar the way to future acquisition, and the mistaken dreamer, who, in his youthful prime, regarded the slow and arduous gains of the hired worker with contempt, lives to drag out forty years of grinding toil, floating from farm to farm, never rising above that necessity of living from hand to mouth which he might, while still young and single, have vanquished forever by five years' patient, plodding industry.

Again we would exhort young men, to choose their future homes—choose where you will, choose carefully, but choose soon, and resolve, by years of quiet energy and patient thrift, to make them your own forever, ere you shall be weighed down by the heavy burdens of riper years. You cannot deliberately choose to pass your lives as other men's hirelings; yet this is the end to which you drift if you set sail from the haven of youth without the

ballast of some nest-egg, fairly earned and saved, as the nucleus of future acquisitions. This rule is almost infallible, that the young man who has saved nothing out of the earnings of his first year of independence, will never earn and save anything. So, on the other hand, he who can say, on his twenty-second birthday, "I have fairly earned what I could during the past year, have saved fully half of it, and owe no man a dollar, is morally certain, if his life and health be spared, to win his way steadily to independence and competence. It is the first step that counts as well as costs; let your young men be entreated to take that step thoughtfully and in the right direction.

How light the occasional labor and how great the success with which even the humblest home may be enriched and beautified, especially by tree-planting, is yet but imperfectly realized. Only the few can live in lordly mansions; but roadside-elms which shade the lowliest cot, may be as stately and graceful as any that stud the park of the wealthiest merchant or the proudest earl. Whirling through our rural districts, seeing house after house unsheltered even by a single tree, we mourn the heedlessness, the blindness, which thus denies them an ornament and comfort so completely within the reach of the poorest. The farmer who goes to mill or to market, may return with a sapling which, once fairly planted (and it is a good half day's work to prepare the ground for and properly plant a tree) and effectually sheltered from injury, will be a solace and a joy to his family and their successors for centuries. In a country whose forests are so rich in admirable trees as is ours (where the buckeye, the tulip, the elm, the maple, the white oak, and the hickory, are so easily procured) it is a shame that even one human habitation, so much as a year old, should still be unsheltered by shade-trees. Every schoolhouse, every church (at

least where land can still be bought by the acre) should be half hidden by a grove of the most unbragous, hardy, cleanly trees, and every school-boy should consider himself a debtor to at least one tree to the little edifice in which the rudiments of knowledge were first instilled into his understanding, till such a grove shall there have been completed.

In our capricious, fervid climate, we need shades; but not these alone. The dearth of fruit, especially in the West, is still almost universal. Not one dwelling in ten is flanked and backed by such a belt of apple, peach, pear, cherry, quince, and plum trees as should thrive there. Of grapes, there is not a vine where there should be a hundred. Even the hardy and easily-started currant-bush is not half so abundant as it deserves to be. Most farmers would deem it a waste to devote two square rods of each of their gardens to the strawberry; while the bare idea of cultivating raspberries or blackberries strikes a large majority of them as intensely ridiculous. Now there is no dispute as to the folly of cultivating that which abounds on every side, and may be obtained without labor or care; and we judge, from observations on the fence-sides and corners of many farms, that the cultivation of anything of the brier-kind on those farms would be a most superfluous undertaking. Yet we do not the less insist that as a people we have far too little fruit, and that most of this is of needlessly inferior quality; that the grossness of our food is the cause of many painful and disabling diseases, which a free and frequent use of good fruit would prevent; that, even regarded solely in the light of profit, our farmers ought to grow more and better fruit, both for their own use and for sale, and that noble orchards as well as forests must in time diversify the bare landscape, even the great prairies, breaking the sweep of their free winds, and increasing the salubrity of the atmosphere, and contributing in a thousand ways to the physical enjoyment and spiritual elevation of man.

We leave untouched, at this time, the great fields of drainage, or the mechanical preparation of the soil for tillage; fertilizers, or its material, essential improvement, and of implements, or the means of its economical cultivation; all worthy of consideration. But simply add, with reference to these departments of agricultural knowledge, that we believe we are on the verge of grand, far-reaching transformations; that Genius and Science are destined to revolutionize the production of grain as they have already, and but recently, that of cloth; that the time is at hand when combined organized effort, guided by the ripest experience, the fullest knowledge, will produce and send to market cargoes of wheat, corn, oats, etc., at a cost per bushel and in a profusion with which individual energy, cramped by costly division-fences, stunted in capital, using inferior implements, plowing feebly, and shallowly at a snail's pace a foot in width, instead of tearing up and pulverizing an acre or two per hour to a depth of two or three feet, and using the muscle of men and animals also in thrashing and winnowing, will not be able successfully to compete. Indeed, it were idle to presume that the genius for Mechanical Invention, which has so recently revolutionized household industry by the invention of the Spinning Jenny and the Power Loom, resistlessly taking away the whole business of transmitting fibers into fabrics from the family fireside to the spacious factory, which is now rapidly effecting a still further transformation, in supplanting the needle by the Sewing-machine, and will soon effect a like change in washing and the operations of the dairy, will leave the husbandman sowing and tilling his fields as his father did before him. Already the implements required to till a farm advantageously, in number and cost, overtax the ability of the average farmer, and compel him to work at disadvantage against the owner of broad acres, of steam-power, seed-drills, cultivators, reapers, and thrashing-machines. This disparity is sure to increase, lessening the relative value in Agriculture of mere human muscle, and rendering intellectual force and training not merely an advantage but an absolute necessity to all who would not sink to the lowest level of abject drudgery. But to the instructed, intelligent, wide-awake cultivator, no change which the future has in store threatens evil or counsels discouragement. For him, and such as he is, every advance in the mastery of Nature by man is a personal advantage and an assurance of that ultimate triumph wherein every atmospheric change, being foreseen and prepared for, every latent force of Nature evolved and rendered useful, the marvels of Chemistry shall become the familiar handmaids of tillage, and every breeze that wanders idly across a continent shall journey, laden with bounties and blessings for the human race.

To Mothers.—A medical friend requests us to publish the following prescription, which has proved of great use in all inflammatory attacks of the chest, head or bowels. It is recommended by Raspail, one of the most famous cotemporary chemists, and formerly a member of the French Provisional Government: Dissolve one tablespoonful of coarse salt in a quart of cold water; add to it strong Liqueur Ammonia half an ounce, and one-fourth of an ounce of Spirits of Camphor. Shake well together, and keep always ready for use in a well stopped bottle. It is applied externally, with several thicknesses of linen or cotton fabric, and will insure more speedy and uniform success than all other means adopted by the generality of medical authority. As a wash in fevers it will answer admirably. It should be kept always on hand as a domestic remedy.

ANTIDOTE FOR DESTRUCTIVE INSECTS.—Various salts have been used to preserve woods from destructive insects. One general method is by immersing the wood in various solutions of salts, and forcing the solution into the interstices of the wood. Another method consists in immersing the wood in the heavier oils of coal. For these various solutions, the Scientific Artisan says the phenate of soda of five or six degrees may be substituted. It adds that it is quite as efficacious and much cheaper; and that by daily sprinkling hospitals, barracks, schools, etc., with this preparation of about one degree, they will be kept clear of flies, bugs and fleas, and by washing bedsteads with the same, of about four degrees, and forcing it into all the holes and crevices which harbor bugs, the offensive creatures may be completely destroyed.

NEW TANNING MATERIAL.—The Maine Farmer notices that a premium was awarded at the State Fair for a calf-skin tanned by the use of sweetfern. If it is true that this hitherto useless shrub which abounds in our pastures, can thus be applied to a beneficial purpose, a tremendous saving will be made by the operation. The skins were tanned in one week, and had the appearance of the best French calf-skin.

WANTED.—A small portion of the tar supposed to have been left where the Gipsies pitched their tents. Also, a dozen or two of eggs from a nest of thieves.

HOLLOWAY'S OINTMENT cannot be too implicitly relied upon as a remedy for complaints of the kidneys and the bladder. It should be thoroughly rubbed in over the region affected. The immediate result will be a cessation of pain, and continued applications will consummate the cure.

Sold at the manufactory, No. 80 Malton Lane, New York, and by all druggists, at 25c, 50c, and \$1 per pot.

SICK HEADACHE, DEBILITY, AND INDIGESTION.—Where among all the remedies for these complaints, there are none which so quickly, so effectually, and permanently remove them as the Oxygenated Bitters?

## Miscellany.

[For the California Farmer.]  
TWILIGHT MUSINGS—No. 1.

BY E. A. SARLES.

Mother! what a holy name to utter,  
Mother! what a love the word conveys,  
Mother! what a power thy influence wieldeth,  
Mother! at the sound each nerve obeys  
A master hand that sweeps the chords within my breast.

Mother! the name falls sweetly on mine ear,  
Mother! the word 's a balm for every wound,  
Mother! the purest name my lips can utter,  
Mother! the dearest memory that's around  
My childhood, making it a recollection blest.

Mother! the word recalls a world of hopes,  
Mother! thy name to me is all a joy,  
Mother, dear mother! how I loved to utter,  
The hallowed title, when a merry boy  
And life seemed real, and care and trouble but a jest.

Mother! a gleam of sunlight 'mid the clouds,  
Mother! a pale star in the darkest night,  
Mother! a rudder to the shattered bark,  
Mother! a sure protection 'gainst the blight  
When shipwreck showed how treacherous life's ocean's  
glittering crest.

Mother! a prayer is breathed in the word,  
Mother! thy name, a promise brings from God,  
Mother! when life has vanished away,  
And he who loves thee is beneath the sod,  
Thy name he hopes to utter in Heaven, when he's at rest.  
Collegiate Institute, Berkeley, Feb'y, 1859.

## GIVE AS GOD HATH GIVEN THEE.

Give as God hath given thee,  
With a bounty, full and free;  
If he hath, with liberal hand,  
Given wealth to thy command,  
For the fullness of thy store,  
Give thy needy brother more.

If the lot His love doth give,  
Is by earnest toil to live;  
If with nerve and sinew strong  
Thou dost labor hard and long,  
Then 'e'en from thy slender store,  
Give, and God shall give thee more.

Hearts there are with grief oppressed,  
Forms in tattered raiment dressed,  
Homes where want and woe abide,  
Dens where vice and misery hide:  
With a bounty large and free,  
Give, as God hath given thee.

Wealth is thine to aid and bless,  
Strength to succor and redress;  
Bear thy weaker brother's part,  
Strong of hand, and strong of heart;  
Be thy portion large and small,  
Give, for God doth give thee all.

## THE MILL.

I loved the brimming wave that swam  
Through quiet meadows round the mill,  
The deep pool above the dam,  
The pool beneath it never still,  
The meal-sacks on the whitened floor,  
The dark round of the dripping wheel,  
The very air about the door  
Made misty by the floating meal. [Tennyson.]

## Idle Curiosity Cured.

WEEMS, in his life of Franklin, relates the following: "On his first trip by land to see his father in Boston, he was worried almost to death by the abominable inquisitiveness of the New England tavern keepers. Neither man nor beast could travel among them in comfort. No matter how wet or weary, how hungry or thirsty, the poor traveler might be, he was not to expect an atom of refreshment from the silly publicans until their most pestiferous curiosity was first gratified. And then Job himself could not stand such questions as they would goad him with; such as where he came from—and where he might be going—and what religion he might be of—and if he was a married man—and so on. After having been prodigiously teased in this way for several days, until at last the bare sight of a public house almost threw him into an ague, he determined to try the following remedy at the very next tavern. Soon as he alighted from his horse he desired the tavern keeper to collect his whole family, wife, children and servants, every soul of them; for he had something *really important* to communicate. All being assembled and wondering what he had to say, he thus addressed them: 'My name is Benjamin Franklin. I am a printer by trade. In Boston I have a father, a good old man who taught me, when I was a boy, to read my book and say my prayers. I have ever since thought it my duty to visit and pay my respects to such a father; and I am on that errand to Boston now. This is all that I can at present recollect of myself that I think worth telling you. But if you can think of anything else that you wish to know about me, I beg you to out with it at once that I may answer, and so give you an opportunity to get me something to eat; for I long to be on my journey that I may return as soon as possible to my family and business, where I most of all delight to be.' Forty thousand sermons against *idle curiosity* could hardly have driven it to effectually out of New England as did this little squib of ridicule."

What a glorious thing it would be if Franklin's spirit could make a visit to California, particularly to San Francisco—there's lots of curiosity folks here.

A VOICE FOR EDUCATION.—The following excellent suggestions we find in the Message of the Governor of Massachusetts, relative to public money and public education:

The question of immediate interest is, what disposition shall be made of sales of land, which will bring to the treasury, within five years, at a moderate estimate, from three to five million dollars. An overflowing treasury is prolific of unwise legislation. I regard its application to the temporary debt, or to meet a deficit occasioned by excess of expenditures over income, as unjustifiable and unnecessary. I trust the Legislature will be able to make provision for the application of this property to such public educational improvements as will keep the name of the Commonwealth forever green in the memory of her children; and to this end I earnestly recommend, for reasons already stated, that the first public charge to be made upon this property shall be for the enlargement of the public school fund until it net the sum of three million dollars.

We do pray for mercy!  
And that same prayer doth teach us all to render  
The deeds of mercy. [Shakespeare.]

## NURSERY BUSINESS.

## SHELL-MOUND

## NURSERY AND FRUIT GARDENS,

Near Brooklyn, Alameda county, California  
(DIRECTLY OPPOSITE SAN FRANCISCO.)

THIS WELL-ESTABLISHED  
NURSERY, is now prepared to  
offer to its old Patrons, and the public  
generally,

15,000 FRUIT TREES,

5,000 SHADE AND ORNAMENTAL  
TREES AND SHRUBS.THE ASSORTMENT COMPRISES  
APPLE, PEAR, CHERRY, AND PLUM  
TREES,

From one to three years old, in great variety.

PEACH, APRICOT, NECTARINE, AND ALMOND  
TREES;CALIFORNIA and FOREIGN GRAPES;  
Gooseberries, Raspberries, Blackberries, Berberries,  
Currants, &c.Mountain Ash, American Elm, Locust, Laburnum,  
Lombardy Poplar, Silver-Leaf Poplar,  
Paulonia, Acacia, and many otherORNAMENTAL AND FLOWERING  
TREES AND SHRUBS.

CLIMBERS, BULBS, &amp;c., &amp;c.

For Particulars, see Catalogues, which will  
be furnished on application.THE STOCK OF  
BEARING PEAR AND CHERRY TREES  
IS BOTH EXTENSIVE AND SELECT.

The Catalogues for the present season contain facts going  
to show that the cultivation of these two fruits in California  
at the present time promises to be HIGHLY REMUNERATIVE. Those which relate to PEAR culture  
are extracted principally from the late address of the  
Hon. MARSHALL P. WILDER, before the American Pomological Society.

PRICES REASONABLE... TERMS CASH.

All orders should be addressed to—  
R. W. WASHBURN, Proprietor,  
Care of Wells, Fargo & Co., San Francisco.  
November 26, 1858.

N. B.—Persons calling at the Nursery will have their  
Orders filled by MR. WM. PATTERSON, the Gardener  
in charge. As this Nursery is but 10 minutes walk from  
the Ferry Landing at San Antonio, gentlemen residing  
in San Francisco will find it very convenient to call  
and select Trees for themselves.

1858--1859.  
SAN JOSE NURSERY.

## FRUIT TREES,

ORNAMENTAL TREES,

SHRUBS, PLANTS, ETC.

18,000 ROSES.

GREENHOUSE PLANTS,

Grape-vines, Etc. Etc.

PALM OR DATE TREES

Perfectly hardy in California.

FOR SALE IN LOTS TO SUIT PURCHASERS,

Trade supplied at a Liberal Discount.

I OFFER THE LARGEST VARIETY OF  
Fruit and Ornamental Trees,  
SHRUBS, ROSES, ETC.,

That can be found in any one Nursery in California.

ALL ORDERS will be promptly attended to, and  
the TREES carefully packed up in bundles or boxes,  
according to size and the distance they have to go, and  
delivered free on board the steamer at Alviso.

MY COLLECTION OF  
ROSES

IS THE LARGEST IN THE STATE;

HAS RECEIVED THE

FIRST PREMIUM

At the STATE FAIR, held at San Jose.

MY CATALOGUE, giving the different varieties,  
I have for this season, and other information, will be  
sent to every applicant. It will also be found with my  
AGENTS, as follows:

MONS<sup>R</sup> DELABIGNE,

89 Clay street.....SAN FRANCISCO

MESSRS. GRAVES &amp; WILLIAMS,

67, 69, and 71 Merchant street.....SAN FRANCISCO

MESSRS. STOUT &amp; SARGENT, - STOCKTON.

MONS<sup>R</sup> JACQUIER, - - - - SONORA.

L. PREVOST.

SAN JOSE, Nov. 15, 1858.

SMITH'S  
POMOLOGICAL GARDEN  
AND NURSERY,  
SACRAMENTO,

On the American River, 24 miles from the City.

OFFICE AND DEPOT FOR TREES,  
44 J street, between Second and Third streets.

The Trees offered from the  
above establishments this season  
are more than usually fine,  
and in the NUMBER OF VARIETIES, of each kind

of fruit, we possess the  
our catalogue embracing  
LARGEST COLLECTION IN THE STATE

Over Nine Hundred Varieties,  
as follows:

APPLES, 245 varieties;

PEARS, 276 varieties;

PLUMS, 100 varieties;

CHERRIES, 90 varieties;

PEACHES, 75 varieties;

NECTARINES, 20 varieties;

APRICOTS, 12 varieties;

GRAPES, 90 varieties.

We hesitate not in saying that our  
PEAR AND CHERRY TREES

Are the Finest Ever Offered

for sale in this State, of all sizes, being from 5 feet to 12  
and 14 feet high. The greater portion being not  
only of very large size, but also handsomely  
shaped, are elegantly adapted to planting  
near residences, affording the double

ADVANTAGE OF SHADE AND FRUIT.

Of the above two fine Fruits we offer  
25,000 TREES FOR SALE,

of different sizes and prices, and as low as good Trees  
can be bought at any first-class Nursery in the State.

Many persons have had but poor success with Cherry Trees  
in this State. We state for their information that  
Our Cherry Trees are grown upon the true im-  
ported Mazzard stock, and not upon com-  
mon Native or Oregon stock of this Coast,  
the former being the only stock fit to grow them on.

We have also a very fine stock of the following, viz:

APPLE, PLUM, PEACH, NECTARINE,

Apricots, Grapes, Figs, Almonds.

Besides a Miscellaneous collec-  
tion of other and small fruits.

Particular regard has been paid to the growing of the  
Trees in GOOD SHAPE, and purchasers of our  
Two-year-old Trees will find that they have  
been well "cut back," and are now  
firm, symmetrically shaped Trees.

We guarantee no finer or healthier Trees will be found  
in the market this season.We also offer a superior assortment of  
Shade and Ornamental Trees,  
Shrubs, Roses, and

Greenhouse Plants.

Embracing all the old and well known popular varieties,  
as well as a great many others both good and new.

Also a very fine lot, of different sizes, of that very popu-  
lar shade tree, so full of reminiscences of home, the  
GOOD OLD-FASHIONED ELM TREE

of many varieties, but most of the American and Scotch  
Elms, which are of good size, and when well estab-  
lished in the soil, they are of very rapid growth.

..ALSO..

LOCUST,

LABURNUM, or GOLDEN CHAIN,

MAPLE, in variety,

LINDEN, European and American,

CATALPA,

CHINA, and other Trees.

We call particular attention to our collection of  
THE CAMELLIA,

which has become so well acclimated that we have them  
growing finely in our open grounds, and blooming as  
elegantly out of doors here as they possibly could  
with the tenderest care in a conservatory.

It is no longer a house plant, but one of  
The Gems of the Pleasure Grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY

TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c.,  
see CATALOGUES, which will be sent by mail to all  
applicants.

We invite attention to our very large and general  
assortment of

VEGETABLE SEED,

THE CROP OF THIS YEAR.

which is very fine and large, and we are now prepared  
to supply THE TRADE in quantities to suit, and at

Lower Prices than can be found

at any other establishment in the State.

We have now been growing SEED for a number of  
years, and have given universal satisfaction. We are  
now prepared to supply large quantities of GOOD FRESH  
SEED at very low rates. These seeds will be done up  
handsomely in packages, for Wholesale or Retail Trade  
and will always be in readiness at our Garden, and at

CITY OFFICE, 44 J street,--SACRAMENTO.

Our Trees and Shrubs will be sold for CASH ONLY, and

Orders must be accompanied with the Cash to insure attention

## The California Farmer.

SAN FRANCISCO:  
FRIDAY.....FEBRUARY 18, 1859.

**FREE COPIES OF THE FARMER.**—We shall mail marked copies of our journal to many friends over the State and elsewhere, and we ask their kind and generous interest in behalf of the FARMER. We wish to place it in every family in the land, and we believe each and all our large number of subscribers can send us one or two more. Read the number we send you, and hand it to your neighbor.

**SEND THE FARMER ABOARD.**—Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured that it could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

## Woman, the Emblem of California.

"And, lest a life without the genial aid  
Of social intercourse, should barren prove  
Of real joys, a partner God bestowed,  
Whom milder converse, and endearing love,  
Might cheer the lonely hour."

From the true inspiration, and fired by the spirit of that creative genius that marks the great artist, Powers, the truly great American sculptor, has most beautifully and truthfully given to the world a Statue of California, perfectly in accordance with her condition, character and greatness. Powers presents our State in the form of a beautiful woman, nearly erect, leaning upon a boulder of quartz, the basis of our mineral wealth. In her right hand she holds a divining rod; in her left, partially concealed behind her back, a handful of thorns. Such is the character of this Statue of our State, as announced in the letter from Dr. Reid, in another column of our journal.

From the purest white marble from Carrara, in Italy, where it has lain for ages, it comes from the hands of the great sculptor a beautiful woman! With the rod of divination, she would lead the way in this land of gold; for a type of California, the quartz rock is represented as a partial support, and on which she leans. If the mind of man be bent, wholly, upon acquiring this gold, the thorns, concealed, are close at hand, intimating too plainly that the pursuit of gold only is not a path without thorns. Of this, all who can look back to "forty-nine," when gold was the only God, can well remember the thorns. This was before the dawn of social life, or social intercourse, in California. We know not how near we may come to the true interpretation of these emblems; for, at the moment, though we may have known the true intent of the sculptor, it has passed from our mind. This we do know, that although man may toil, to gather the precious ore from the hills and mountains and to crush the very rock to find it, the very gold he toils for is worthless, unless it can be devoted to the cause of woman—the very boulders of quartz are themselves but the emblems of woman, being the "mother of gold."

The announcement, at this time, of this beautiful Statue of our State, we hail as another evidence of the glorious destiny unfolding before us. Who will not yield due deference to woman, in California, when she is the chief object emblazoned upon our escutcheon for all future time? Who will not loyally bow, like a true knight, and swear he will do all he can to put those thorns far, far behind her, in her pathway, and lead her on in a path strewn only with flowers. Pure and unsullied she stands before us in this statue, like the virgin gold when extracted from the rock on which she leans. Pure and unsullied she will be when man, in true greatness, shall join in her redemption from the shadows that now environ her, and make her the friend, the companion, the equal of himself.

In the early days of California, when the beautiful flowers that so thickly covered our Prairies were gathered by the wanderer over these fair fields, he threw them away as worthless, for the smile of woman blessed not his vision. Like the first hours of Adam in Paradise—

"That garden was a wild,  
And man a hermit sigh'd,  
Till woman smiled."

And so in California, we well remember the loneliness and dreariness amid all the wild excitement. Without woman, man's heart still craved a home. Yes, even the flowers on the prairies were without fragrance by reason of her absence. So it was said and believed. Flowers had no fragrance because man had no home.

Though bright and beautiful they were,  
Their richest gift they'd not confer;  
No fragrance breathed on man alone,  
However bright their petals shone.  
But when her foot first touched the sod,  
A voice came from the throne of God,  
And quick o'er valley, mountain, heath,  
Each flower gave forth a fragrant breath;  
Baptized once more in heavenly dew,  
They hailed the "Beautiful, good, and true;"  
Then unto man a home was given,  
Crowned with the "Last, best gift of Heaven."

With these impressions of woman to influence us, we agree with the sculptor, that woman is the emblem most appropriate for our State.

**TO OUR READERS.**—We commend most earnestly the "Needs of American Agriculture," by Horace Greeley, Esq., of the Tribune; it is a splendid production, full of truth and wisdom. Colman's Letters on Neat Stock, and the Dairy, in this number, is worthy careful reading. Our Ladies' Department has gems worth viewing. Franklin's remedy for curiosity we hope will effect some cures; we know some folks that ought to try it. Twilight Musings, a tribute to a mother, should meet every eye.

**TO CORRESPONDENTS.**—Numerous letters in our hands that crowd upon us, shall have early response. We ask kind forbearance. J. B. M. received; will reply. Z. M. T. No. 3, State Agricultural Society, must not think we slight him by delay; we have a good object in delaying his letter. H. E. S.'s letter and order shall have immediate attention. Letter from Col. Henly, on Summer Fallow, next week.

## Public Festival Days—The World's Great Men.

MORE FESTIVALS—MORE HOLIDAYS—MORE REJOICINGS.

We have been in favor, theoretically, of numerous festivals—days of public rejoicing for old and young. We feel that, as Americans, we are making a sad mistake in this ceaseless work, work, work! Although, personally, we must plead guilty of not practicing what we preach. The fact is, however, we are nothing but an editor: an editor is nobody, and, of course, must work, must plan, must write, must devise and work out all manner of good, all kinds of pleasure for others; but must not expect to participate in the enjoyment.

Be that as it may, in times past or present, we go for reform and progress; and we now begin, with our new volume, to call attention to this subject. We believe that we err greatly in our examples as men, in all the various relations of life, by this continuous, ceaseless, eternal round of duties; all of which tend to the accumulation of wealth. The bad influence of this body and soul destroying habit, first affects ourselves in health, of body and mind; then, by our example, it spreads to our families, our children and our friends, and then extends to our neighbors and the community at large.

There is no nation in the world that has so few holidays as the American nation; and surely there is none that has so much cause of rejoicing as our own. Are we not a free and happy nation? Can we not boast of our intelligence, our civil and religious institutions; of our schools, colleges, seminaries of learning; of our scientific and literary institutes; of our extended commerce; of our climate, soil and productions; of our wealth, on land and sea? Can we not justly boast of being a nation favored of God, and honored of man, world-wide? And yet, with all these blessings and privileges, the great mass of our people live as if these blessings were worthless, and as if nothing but wealth was worth striving for, or worth attaining—that this was the philosopher's stone?

How fatal to human progress has been this error. Already shadows gather upon the earlier days and names in our country's history, that should ever be kept sacred and bright as love could guard and keep them. The Fourth of July grows dim upon the memory and faint are the pulsations of our revolutionary spirit. The Seventeenth of June: The roar of cannon would hardly move the blood of many whose ancestors exhibited true patriotism on that memorable day—the love of gold has clogged the patriotic current. The Twenty-second of December: Where are the Pilgrim Fathers? The news has recently been borne to us, that the surging sea has been making inroads upon Plymouth Rock—the sacred spot where those who gave us being and freedom suffered, amid snow and ice: that birth-day of freedom grows faint in the memory of their descendants.

The Bay of San Francisco witnessed the flash of a few cannon, whose sounds echoed faintly over the hills recently, to announce that that most signal victory, at New Orleans on the Eighth of January, was not wholly forgotten. The Seventeenth of January, ever memorable as the birth-day of Benjamin Franklin, passed almost in silence; while Scotia's generous sons paid their heartfelt and just tribute to their noble bard, the immortal Burns.

Nearly to the dawning comes a day sacred to patriotism, honor and true glory, the birth-day of the great and the immortal Washington, the Father of his Country—the loftiest hero, the purest patriot, and the greatest statesman that ever lived: his birth-day approaches; shall the day be celebrated in an appropriate manner?

And many days, great and good, that are sacred, or should be, in our country's history, each and all should be welcomed, regarded and noticed appropriately; not only as a duty to those that have "passed away," but for the benefit of those that now live; for, a proper observance of such events will do more to keep alive patriotism and love of country, of duty and affection, than can ever be secured, were the wealth of Croesus to be poured into the lap of each mortal.

Could we have our Dictator a few years, we would revive the names and memories of that long list of heroes, patriots, and statesmen, who have waded through seas of blood, struggled through a long life in defense of our institutions and rights, and labored with a pure devotion, that they might leave that rich inheritance which we now enjoy—the blessings of our free institutions.

Could we have our will, such men as Patrick Henry, Thomas Jefferson, the Adamses, William Wirt, Jackson, Calhoun, Clay, Webster, and hundreds more, who have given life and strength for their country; the whole bright list of patriots from Washington down, we would honor.

We would call up too men of genius and science, mechanics and farmers; all whose lives had been marked with usefulness to their country. Franklin and the art of printing; Hoe and other inventors of the press; Arkwright and other designers of machinery; Fulton and his steamboat; Railroad builders, Artists, Poets, Scholars, Divines; we would honor all.

We would honor the memory of the dead for an example to the living, that they might be stimulated to good deeds; and we would honor the living, that it might prompt others to excel in well-doing. We would have every day green with the recollections of some great event or some good deed, that thus the young should have incentives to noble actions.

We feel confident that the putting off a just, public and universal acknowledgment of great deeds, worthy actions and honorable attainments, till death has removed those deserving of honor, has had a fatal effect on the minds of the young.

There is an injustice in such actions, that the quick perceptions of childhood recognize. A reward of merit to a boy or girl, in school, is given at the time it has been merited; not put off until mature age. So should public honor and approval be accorded to men while living, that it may prove an incentive to all.

We trust, in this land of sunshine and flowers, our people are awake to the importance of more public days. In all the varied relations, duties and honors of life, it is of more moment to this people than all the gold in our hills and rivers; for it will give the riches of health and happiness.

## The Statue of California.

The following letter relative to the statue of California, now being finished in Florence, by our own gifted sculptor Powers, is worthy the highest consideration. This letter comes from a true son of California, Dr. Robt. K. Reid, formerly Superintendent of the Insane Hospital, at Stockton. Dr. Reid's heart was always right for California, and he feels the importance of having one of these beautiful and appropriate statues secured at once for our State. New York, the great emporium of our commerce in the old States will possess one statue; the national Capital will possess a second, statue; and shall not California possess one? Surely every heart will respond, ay! Let San Francisco be the place where the third shall be placed. She is the great commercial emporium of the Pacific, and it is fitting it should be so; yet we are not strenuous so that it is secured for our State. Place it in the capital, before our Legislators, and let them reflect upon the future destiny of this State and resolve that it shall be great and glorious. We have heard with much pleasure of the generous, free-will offerings of many of our merchant citizens, many of whom have offered from \$100 to \$500 each, to secure this statue. We hope, however, that our State will at once act, and act promptly, and thus secure to ourselves the emblem of our State. The letter of Dr. Reid describes the statue. The design and the emblems will undoubtedly puzzle many, yet nothing could be more appropriately conceived than is this statue to represent the Golden State. In another column we have given our own ideas of these mysterious emblems:

Rome, Italy, Dec. 24, 1858.

C. M. HENCOCK, M. D., San Francisco, Cal.

My Dear Doctor: Last month I spent some time in Florence, and visited the studio of the great American Sculptor, Powers. The statue of California had just been completed, and forwarded to New York. The second will soon be finished for the Government at Washington, and as, by the terms of the contract, only three can ever be made; he is desirous that the third shall be possessed by the State of California, or by the city of San Francisco. It represents California as the most attractive thing in nature, a beautiful woman in a state of nudity. She is nearly erect, leaning on a boulder of quartz. In her right hand she holds a divining rod, and in her left, slightly concealed behind her back, a handful of thorns. The material is of white marble from Carrara, and without spot or blemish. The contract price, £1500. Will not some effort be made in California to obtain this noble work for the State, before it passes into some private collection?

Truly your friend,  
ROBT. K. REID.

## More Southdowns.

We have had the pleasure of seeing and examining the fine Southdown ewes which were imported on the last steamer, by J. W. Haines, Esq., of Sacramento. They will be a great acquisition to our State. Mr. Haines has furnished us with the following history and pedigree of these sheep:

Number 1—A pure bred ewe from Webb; bought of Col. Morris, in June, 1856. A splendid ewe.

Number 2—Pure Southdown, one year old, dam ewe bought of Col. L. G. Morris, of Mt. Fordham, N. Y. Sire, the splendid buck Fordham, which was imported by J. H. Carroll & Co., last season, and shown at the State Fair, and which, we regret to learn, has lately died.

Number 3—Pure Southdown, one year old past. Dam ewe bought of Col. Morris; Sire, Frank; on dam's side, Young York.

Numbers 4 and 5—Two pure bred ewes, bought of Col. Morris; sire, Frank; grandsire, on dam's side, Young York.

All these fine ewes are in lamb by the World's Prize, said to be the very finest Southdown buck known. The World's Prize was bred by Jonas Webb, Esq., of Babraham, Cambridgeshire, England, and was imported by J. C. Taylor, Esq., of N. J., direct from Mr. Webb, for the handsome sum of \$2000. World's Prize won great favor in England, and was sent to the World's Fair, and there won the great prize in 1856, and was declared by the best judges, to be the best Southdown buck in the world. So highly was he valued by Mr. Webb, as a stock getter, that he wrote to a friend in New York that he would gladly have given 200 guineas for his use, after he had sold him to come to America, and that he should use two or three of his sons in his flock, the present year, on account of his excellent properties.

We can only repeat the pleasure we feel in knowing that we have this valuable breed among us, and we are glad, too, that Mr. Haines has been so fortunate as to secure so fine a stock to start upon. Next fall this stock will be shown at the State Fair. Success say we to fine sheep, and success to the liberal hand that imports them.

## Oregon Pitch Pine.

A very fine specimen of Oregon Pitch Pine has been left at our office, a strip of some ten inches long, upon which there was a layer of pure Pitch from one-half to three-quarters of its thickness. However extraordinary this specimen of pure Pitch, it does not possess power enough to yield the turpentine fit for those purposes, such as is found in the famous North Carolina pines; that State being the great and principal one that furnishes the immense stock of turpentine for all commercial purposes. Thus far none has been found in our State, yet we have hopes that away up in our lofty mountains we may yet find treasures in our forests, and especially this most desirable timber, that shall furnish us with our own turpentine.

PLACERVILLE OBSERVER.—A new journal bearing this title has been started at Placerville, by Messrs. O. L. C. & J. D. Fairchild. We have not had the pleasure of seeing the Observer, but we hear it is a most creditable paper, both in style and matter. Mr. W. F. Stewart, Editor.

STATE AGRICULTURAL SOCIETY.—A bill has passed both Houses of the Legislature, submitting the question of taxing the people of Sacramento county for the erection of State Fair Buildings to a vote.

## Golden Words and Golden Works.

"The truly generous is the truly wise,  
And he who loves not others, lives unblest."

Amid all the trials and perplexities that must ever surround the path of an editor and publisher, it is cheering to know that however dark those clouds may be, bright gleams come to dispel them all. With us, we are happy to say, the bright ones are in the majority. Though they do flit across our path occasionally, there never can come a shadow without a light beyond it, and ours is a hopeful heart, that can peer through the shadow to the light beyond.

Among a goodly host of cheering letters, containing goodly wishes for ourself and our journal in its new era, we have gathered up many a bright and hopeful word, and placed them away in Memory's casket, recording those names that conveyed them in *couleur d'rose*, and have penned beneath them, these words, "never forget! never forget!"

We must take the liberty to copy an extract or two from one letter, from a lady, that came filled with solid evidences of true friendship in the shape of many golden eagles, and many names of goodly citizens, in one of the brightest valleys of our land; but however brightly gleamed the gold, the words in that letter were brighter far than ever gleamed gold to us. We have ventured to extract, without authority or permission, from this, a private letter, and only regret we could not add the name of the writer and the valley, but when this meets the eye of the writer we pray her forgiveness if we have erred in this our wish to testify our high appreciation of this her generous tribute to our cause. With a goodly list of new subscribers, and a letter heavy with gold, came the following gleaming words:

Dear Sir: Saturday, and yesterday afternoon, I went out among our farmers, and succeeded in getting the following new subscribers to the CALIFORNIA FARMER; the money you will please find accompanying this letter. I expect to receive several more subscribers in the course of this week, and those who are among our principal farmers, and who were not at home when I called on them, but whose ladies thought they would be sure to subscribe. You may expect to see our valley represented next fall at the Agricultural Fair, both in agricultural products, and in the fine arts.

Dear Colonel, we have some fine farms in our valley, and what is better still, some fine farmers in this valley. Come and see us. We have looked much for you in the past year, knowing you could get many more subscribers than we could, which has been the cause of our delaying to call upon the friends of THE FARMER.

Colonel, I have not done this for the PRIZES that you offer to those who send you Clubs, but in gratitude for your past favors, and the good of our VALLEY. I intended to get these subscribers, and send them with a New Year's greeting, but was taken ill in December, and have remained so till this. Shall do better for you soon.

With many fervent wishes for your prosperity and happiness, I remain

We might copy many more words of encouragement and cheer, but here we present enough, we know, to prove our assertion that such words are brighter than gold. The wishes of our generous friend, in relation to those whose names are sent us, shall be specially remembered. What editor or publisher but would say that such words and acts were enough to cheer them. They are the words and acts of a true woman, and it is woman who will build up and sustain all our best institutions, and make our State glorious and bright in the future. Woman is the emblem, the type, the talismanic word; and Powers, the greatest sculptor of the age, makes her the Type, Emblem, and Goddess of California, and it is to her power and influence, when rightly directed, that all true hearts will bow and yield. We feel that in laboring to elevate woman to her true position in the scale of social life, as the friend, companion, and equal of man, we are only performing our duty to our race, and we had rather have the approbation and aid of one true-thinking, reflecting woman, in any great enterprise, than a dozen men whose minds are torn hither and thither by the contending strife of politics and bigoted notions of party and sect, and we always feel a new hope of better days when we have evidences like the one recorded above, to whom we tender heart thanks.

## California Fruit will Keep.

As some remarks have been made relative to the keeping of California Fruit, and as we have already asserted that California Fruit would keep, equal or better than any other, we are pleased to have the assurance before us in the shape of a box of fine Pears, from James Lick, Esq.; the variety was Vicar of Winkfield, of fine large specimens, and most delicious, perhaps some two weeks beyond their perfect eating point.

This variety is fit for eating in the old States in December, seldom seen beyond January, and now the middle of February in California we have them with us. This, we think, good proof of an excellent keeping climate. Mr. Lick has one of the finest orchards in our State, and of the choicest variety. We must return thanks for our excellent Fruit.

BUST OF GOV. WELLER.—We have received a fine bust of the Chief Magistrate of California, from those most excellent artists, Devine Brothers, of Sacramento. It will be recollected that a specimen bust of Gov. Weller was exhibited by the Devine Brothers, at the Mechanics' Fair, last autumn, and won universal admiration for its correctness. We are pleased to know that these excellent artists have received a goodly number of orders for the bust; and we can say, that no artists have done more to encourage an elevated taste for art than have the Brothers Devine. The beautiful mantle-piece and fire-place, of these same artists, were exhibited at the State Fair; and we are happy to say, they will have another piece of artistic work to show ere long. We have the bust of the Governor at the Farmer's office, where it can be seen, and it will be readily appreciated as a work of art.

THE STEAMER GOLDEN AGE, for Panama, leaves to-morrow, 10th inst., at 4 o'clock, PM.

## The Pioneer Woolen Factory of California.

The machinery for this Woolen Mill will be superior to anything of the kind in the Atlantic States. We are informed that Col. Turner is to ship his machinery from Boston, in this month; it is said to be the most perfect and complete lot of machinery of its kind, in all its appointments, that has been manufactured in New England for the last ten years. The Mill in all probability will be in successful operation in September next. They will manufacture from one hundred and twenty-five to one hundred and fifty pairs of blankets per day. This will form a new era in the history of our State.

When we reflect upon the vast amount of good that will result to California by the establishment of this one woolen manufactory, we wonder this prospective good does not awaken a greater feeling. Here will be a home product of at least two to three thousand pairs of blankets per month; but this is not all, this Factory will consume 500,000 pounds of wool per annum, equal to 2500 bales of wool; this will greatly enhance the value of this valuable product to our producers. Besides this, this Factory will require something like 50,000 pounds of soap. Here is a very much increased demand for home-made soap. And in addition, they will use 10,000 gallons of oil, annually—this will give Stanford Brothers a new customer. But above all, the large increase of domestic labor that will be called into requisition, is a matter of great satisfaction.

When we reflect, also, upon the seeming fitness of our State as a wool-manufacturing State, it seems providential to us. We can raise wool cheaper than any other part of the world. Tensels grow spontaneously over our State, and of the best kind; wool is grown easily; cochineal and indigo are near at hand, and everything seems propitious. All that is wanted is for the great heart of the people to see the advantages within our reach, and improve them.

## Education of the Laboring Classes.

[No better subject could we present to our readers, at the present time, than the one which we now offer for their perusal; nor could we offer better authority for the truths conveyed in the essay than that of the gifted Channing, from whose memoirs we make these extracts. We ask a careful reading of them by the yeomanry of California.]

WHAT is education? This is one of the watch-words, almost a cant word, of the day; but few terms are so vague. It is said by the friends of the working classes, that their first great want is a better education. Let us try to understand what this is.

"The great end of education is not to train a man to get a living. This is plain, because life was given for a higher end than simply to toil for its own prolongation. A comfortable subsistence is, indeed, very important to the purpose of life, but this is what it may. A man half-fed, half-clothed, and fearing to perish from famine or cold, will be too crushed in spirit to do the proper work of a man. He must be set free from the iron grasp of want, from the constant pressure of painful sensations, from grinding, ill-requited toil. Unless a man be trained to get a comfortable support, his prospects of improvement and happiness are poor. But if his education aims at nothing more, his life will turn to little account.

"To educate a man is to unfold his faculties, to give him the free and full use of his powers, and especially of his best powers. It is, first, to train the intellect, to give him a love of truth, and to instruct him in the processes by which it may be acquired. It is to train him to soundness of judgment, to teach him to weigh evidence, and to guard him against the common sources of error. It is to give him a thirst for knowledge, which will keep his faculties in action through life. It is to aid him in the study of the outward world, to initiate him into the physical sciences, so that he will understand the principles of his trade or business, and will be able to comprehend the phenomena which are continually passing before his eyes. It is to make him acquainted with his own nature, to give him that most important means of improvement, self-comprehension.

"In the next place, to educate a man is to train the conscience, to give him a quick, keen discernment of the right, to teach him duty in its great principles and minute applications, to establish in him immovable principles of action. It is to show him his true position in the world, his true relation to God and his fellow-beings, and the immutable obligations laid on him by these. It is to inspire him with the idea of perfection, to give him a high moral aim, and to show how this may be maintained in the commonest toils, and how everything may be made to contribute to its accomplishment.

"Further, to educate a man in this country is to train him to be a good citizen, to establish in him the principles of political science, to make him acquainted with our history, government, and laws, to teach him our great interests as a nation, and to policy by which they are to be advanced, and to impress him deeply with his responsibilities, his great trusts, his obligations to disinterested patriotism as the citizen of a free state.

"Again, to educate a man is to cultivate his imagination and taste, to awaken his sensibility to the beautiful in nature and art, to give him the capacity of enjoying the writings of men of genius, to prepare him for the innocent and refined pleasures of literature.

"I will only add, that to educate a man is to cultivate his powers of expression, so that he can bring out his thoughts with clearness and strength, and exert a moral influence over his fellow-creatures. This is essential to the true enjoyment and improvement of social life.

"According to these views, the laboring classes may be said to have as yet few means of education, excepting those which Providence furnishes in the relations, changes, occupations, and discipline of life. The great school of life, of Providence, is indeed open to all; but what, I would ask, is done by our public institutions for the education of the mass of the people? In the mechanical nature of our common schools, is it ever proposed to unfold the various faculties of a human being, and to prepare him for self-improvement through life? Indeed, according to the views of education now given, how defective are our institutions for rich as well as poor, and what a revolution is required in our whole system of training the young!

Old Sol again smiles upon the good work which the clouds have been doing for so many days.

## BUSINESS DIRECTORY.

**BANKERS.**

**ALAMEDA COUNTY MILK DEPOT.**  
 135 Kearny street (between Sacramento and California).  
**PURE MILK**  
 ALWAYS ON HAND.

**Hotels, Restaurants and Families** supplied, by leaving their orders at the Depot, or giving them to the driver of the Wagon, who is one of the Proprietors.

**Fresh Ranch Butter and Eggs**  
 Constantly on hand, and delivered to Families at any part of the city.

**A. STAPLES. H. A. BROWN. W. GOLDEN.**  
 33m

**Large Flock of Sheep For Sale.**  
 WE HAVE JUST NOW, 1100 good American EWES, three-quarter cross. Some 500 Young Lambs, and a promise of 300 or 400 more. The Lambs now on hand are cross of the Bakewell. This is a rare chance, and purchasers will do well to call immediately.

Apply to Col. WARREN, Farmer Office.

**ALAMEDA AGRICULTURAL SOCIETY.**—A special meeting of this County Society was held in San Leandro, Monday week. The Alameda Gazette says:

Quite a number were in attendance, and a spirit of unanimity of action seemed to be felt among the members. After the subject of holding a Floral Fair was discussed, a committee, consisting of Messrs. A. B. Myers, H. C. Smith, B. Lewelling, C. C. Breyfogle, F. K. Shattuck and Dr. Gibbons, were chosen to visit places in the county and ascertain what inducements would best offer towards carrying out the subject under discussion; said committee to report, subject to the approval of the Society at its next meeting, March 7th.

The prevailing sentiment seemed to be that this Fair should be held in June, which may be considered the wish of the majority. Some debate was had upon different subjects connected with Societies of this kind, and their results.

By resolution, "any or all the counties in California are invited to compete on equal terms for any premiums offered at any Fair by the Alameda Agricultural Society." And this is saying very much, for several counties in the State will expect to win our premiums at once.

The Gazette thinks the Floral Fair should be held in the city of Oakland; it being near San Francisco, thousands of the metropolitans will wish to visit it daily during their continuance. As to the regular Agricultural Fair, where all the products of the county are to be brought and exhibited in the autumn season of the year, the County-seat would probably be the locality selected. By all means, let Oakland be the site for the Floral Fair, at least.

The Columbia News, of the 10th instant says: It has been raining all the week—on Tuesday afternoon we had a loud peal of thunder, a sound we had not heard for months before. On Wednesday it snowed as well as rained. Altogether we have had a most uncomfortable, miserable week of it. But we are somewhat consoled by knowing that it will furnish abundance of water for our miners.

The same paper says: The proprietors of the Inevitable Tunnel, in the Table Mountain, near Springfield, have, after upwards of a year's toil, and at an outlay of considerable money, at last struck some of the richest pay dirt that we have heard of lately; it prospects from one up to eight dollars to the pan any place they try it. And as the dirt ranges from six to ten feet thick, they have a tolerable prospect of being well paid for their perseverance. We are informed by Mr. Saunders, President of the Monumental Tunnel, near Douglas Flat, that some miners who took up a piece of unclaimed ground, near that tunnel, having sunk a shaft nearly a hundred feet deep, have struck some extraordinarily rich pay dirt. We also hear of the discovery of a quartz lead on a certain claim in Three Pine Gulch, which promises to pay well, the gold in which is nearly black. As to the mining interest in this district, generally, we are happy to state that the miners never had better prospects of doing well than they have for the coming summer, when they will be able to get cheap and abundant water, and we shall be greatly disappointed, if Columbia does not stand out as the richest mining town in the State. The Columbia and Stanislaus River Water Company's Ditch is in order, with about two hundred and fifty tom-streams in it.

The Butte Record, states that a flume, twenty feet wide, four feet deep, and three thousand feet long, is to be built on the middle fork of the Feather River, the coming season.

**GRAIN IN SONOMA.**—The Petaluma Journal says: From every section of the county, we have reports to the effect that our farmers are sowing unusually large quantities of grain, more particularly of wheat. Notwithstanding the yield per acre the past season was less than a fair average, we believe that the crop was a paying one. From present indications, Sonoma county will return a heavy grain crop at the next harvest.

In relation to the agriculture of Los Angeles, the Star of January 22d says:

A large breadth of wheat has been sown, which we believe is in good condition. One of our citizens, J. R. Scott, Esq., has sown on one tract about 800 acres, which gives, so far, promise of an abundant harvest. Barley, the great staple of the farmer, has been extensively sown, although in uplands the plowing was not as early as in more favored localities.

The present season presents a strong contrast to the few previous years. Then, the rains of the winter and spring being light, the grass attained but stunted growth, and soon disappeared before the burning suns of the long summers, and in the fall but little food remained for the cattle, which sunk in condition, and when the cold and rain did come, they were so much enfeebled that thousands died from sheer exhaustion. The early rains of this season gave the grass a good start, which affords food for the cattle and maintains them in good condition so as to be unaffected by the cold and wet weather.

The present is a busy season in the vineyards. The important work of pruning the vines was then in full operation. A rather sharp frost deterred some from commencing pruning, least injury might be done to the bearing wood; whilst others have gone on with their work, undeterred by the visits of Jack Frost. In some vineyards, therefore, the work of pruning was nearly over, whilst in others but commencing. After pruning, the plow is set to work, which closes the operations of the vineyard, until the time for irrigation comes along.

In the orchards a great improvement will be made this year. The desire to cultivate only the best species of each fruit is now universal, and a very superior stock is being secured for this purpose.

The disease in the orange tree, we are sorry to hear, has not been checked. The remedies adopted do not seem to be effectual. We have heard of lime water being used, also tobacco water, ammoniacal liquors, and quack-silver. But the bug once getting hold of a tree, seems indisposed to be deprived of his costly viand. While some orchards have escaped the visitation, others are suffering severely from the disease. The frosts which occurred, affected the young trees generally—in some cases severely, as almost to endanger the tree, or to stop its growth for the season; in other cases slightly, or not at all. And such instances, of almost total blight, and impunity from harm, occur in the same grounds, and at but short distances apart.

On the whole the present season must be considered unusually favorable, and with a few showers, such as are usual at this period, and may reasonably be looked for, an abundant and glorious harvest may be expected.

The fall of rain at Los Angeles on the last day of January, the Vineyard thinks, amounted to about three and a half inches. This is a very large quantity for one day, and a correct rain gauge would probably have indicated a less amount. But it was sufficient to revive the spirits of the farmer and grazer, as well as the herbage of the field.

**THE STEAM-WAGON.**—There has been another trial of this machine at Marysville. The Democrat says: On Tuesday afternoon Warren P. Miller's steam-wagon started, in the presence of a large

## DOMESTIC SUMMARY.

**ALAMEDA AGRICULTURAL SOCIETY.**—A special meeting of this County Society was held in San Leandro, Monday week. The Alameda Gazette says:

Quite a number were in attendance, and a spirit of unanimity of action seemed to be felt among the members. After the subject of holding a Floral Fair was discussed, a committee, consisting of Messrs. A. B. Myers, H. C. Smith, B. Lewelling, C. C. Breyfogle, F. K. **GRAIN IN SONOMA.**—The Petaluma Journal says: From every section of the county, we have reports to the effect that our farmers are sowing unusually large quantities of grain, more particularly of wheat. Notwithstanding the yield per acre the past season was less than a fair average, we believe that the crop was a paying one. From present indications, Sonoma county will return a heavy grain crop at the next harvest.

In relation to the agriculture of Los Angeles, the Star of January 22d says:

A large breadth of wheat has been sown, which we believe is in good condition. One of our citizens, J. R. Scott, Esq., has sown on one tract about 800 acres, which gives, so far, promise of an abundant harvest. Barley, the great staple of the farmer, has been extensively sown, although in uplands the plowing was not as early as in more favored localities.

The present season presents a strong contrast to the few previous years. Then, the rains of the winter and spring being light, the grass attained but stunted growth, and soon disappeared before the burning suns of the long summers, and in the fall but little food remained for the cattle, which sunk in condition, and when the cold and rain did come, they were so much enfeebled that thousands died from sheer exhaustion. The early rains of this season gave the grass a good start, which affords food for the cattle and maintains them in good condition so as to be unaffected by the cold and wet weather.

The present is a busy season in the vineyards. The important work of pruning the vines was then in full operation. A rather sharp frost deterred some from commencing pruning, least injury might be done to the bearing wood; whilst others have gone on with their work, undeterred by the visits of Jack Frost. In some vineyards, therefore, the work of pruning was nearly over, whilst in others but commencing. After pruning, the plow is set to work, which closes the operations of the vineyard, until the time for irrigation comes along.

In the orchards a great improvement will be made this year. The desire to cultivate only the best species of each fruit is now universal, and a very superior stock is being secured for this purpose.

The disease in the orange tree, we are sorry to hear, has not been checked. The remedies adopted do not seem to be effectual. We have heard of lime water being used, also tobacco water, ammoniacal liquors, and quack-silver. But the bug once getting hold of a tree, seems indisposed to be deprived of his costly viand. While some orchards have escaped the visitation, others are suffering severely from the disease. The frosts which occurred, affected the young trees generally—in some cases severely, as almost to endanger the tree, or to stop its growth for the season; in other cases slightly, or not at all. And such instances, of almost total blight, and impunity from harm, occur in the same grounds, and at but short distances apart.

On the whole the present season must be considered unusually favorable, and with a few showers, such as are usual at this period, and may reasonably be looked for, an abundant and glorious harvest may be expected.

The fall of rain at Los Angeles on the last day of January, the Vineyard thinks, amounted to about three and a half inches. This is a very large quantity for one day, and a correct rain gauge would probably have indicated a less amount. But it was sufficient to revive the spirits of the farmer and grazer, as well as the herbage of the field.

**THE STEAM-WAGON.**—There has been another trial of this machine at Marysville. The Democrat says: On Tuesday afternoon Warren P. Miller's steam-wagon started, in the presence of a large

concourse of people, from the corner of Second and B streets. She made much noise, but traveled slowly. Frequently she came to a dead halt, but this was owing to the bad working of the engine. Finally she reached a point near the corner of A and Fourth streets, when it was discovered, all of a sudden, that nearly all the water had leaked out of her boiler, and she was stopped. There is no doubt but that the thing will work. The principle is there, and Mr. Miller will bring it to perfection in the course of time.

**WILD TOBACCO.**—Less than a half mile of Tehama may be seen thousands of the above plants, which, in the season, attain the height of from eighteen inches to three and four feet. The stalks seem to be very vigorous, and the leaves although by no means as large as those of the cultivated article, are nevertheless of very respectable dimensions and afford a passable article for smoking purposes. We are told that the Indians have been in the habit of gathering it for years past and using it in this way; a fact which would go to prove that a plant which is indigenous to the soil might be raised to almost perfection were the same attention given to it that is given to the commonest herb or vegetable of the garden. [Tehama Gaz.]

## SPECIAL NOTICES.

**WE ARE AHEAD OF THE WORLD IN AMBROTYPES;** we are ahead of the world in Photographs; we are ahead of the world in Decoupages. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "Ore."

**MY AMBROTYPES** were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brings so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

**R. H. VANCE,**  
 Corner Montgomery and Sacramento streets.

**SLEEP! SLEEP! SLEEP!**  
 "To each and all, a fair good night,  
 And rosy dreams and slumbers light."

Sleep! Sleep! Sleep!  
 Rest! Rest! Rest!  
 Who is the man who does keep  
 A mattress the sweetest and best?

Sleep! Sleep! Sleep!  
 Rest that refreshes most true!  
 The rest that, while sleeping, our health doth renew,  
 Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!  
 Rest! Rest! Rest!  
 Economy tells us to buy and to keep  
 The mattress that is cheapest and best.

Sleep! Sleep! Sleep!  
 On the mattress from JACOB SCHRIEBER!  
 If bedchambers lie single, then life will not jingle  
 Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go where, where,  
 Those famous mattresses made out of PULU!

**J. SCHRIEBER,**  
 Jackson street, near Hotel International.

**THE HOME OF BEAUTY.**  
 "Creative Genius! from thy hand  
 What shapes of order, beauty, rise,  
 When we are thy potent, mystic wand  
 To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
 And here our gods;  
 Around these portals  
 Around these festooned halls

The good, the great, the living and the dead;  
 And yet they speak—speak all:  
 "We cannot meet the speaking eye,  
 But we are known, and, knowing,  
 Fain would hold sweet converse."

But as we gaze upon their closed life,  
 We know that they are silent  
 While they speak, and gaze on us.

Creative Genius! raise thy wand  
 And gather round us where we stand  
 Within these halls, a living throng  
 That we may raise a glorious song  
 To all who act the noble part;  
 And tribute give to every art.

Creative Genius! here's thy home!  
 And here shall wondrous thousands come;  
 Here speed a season free from care,  
 To worship the beautiful, good, and fair,  
 For is it not a freeman's duty,  
 To worship at the shrine of Beauty?

Behold those flowers that gem the land,  
 Those little children in groups they stand,  
 While here and there, like angels, see  
 They're smiling on their mother's knee.  
 Men, in their prime, each like a brother,  
 Joined hand in hand they're linked together;

Here, too, the aged, the noblest show,  
 They, hand in hand, together go.  
 Young men and maidens, free from care,  
 Single or plighted, like jewels rare,  
 Are gathered round this gorgeous Hall,  
 This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
 We now would ask, O let him stand  
 Before us; him who all this beauty planned.  
 Behold, cries Genius, quickly glance!  
 Enough! the artist, R. H. VANCE!

**Daguerrean Gallery,**  
 Corner Sacramento and Montgomery streets.

**Ornamental and Fruit-tree Seed.**—A small invoice of valuable Ornamental and Fruit-tree Seeds, for sale at the Office of the FARMER.

**The Oxygenated Bitters.**—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Catarrh, loss of Appetite, Fever and Ague, Heart Burn, Water Brash, Acidity, Stomachic, Scurvy, Nausea, Headache, Ennui, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the only safe, certain and efficacious medicine for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and in their formula differ largely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drug; in their nature tonic, not stimulating; retaining their virtues in any climate; they are a "common sense" and "formal index" of Medicine which knows no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character the disease may be, no matter that it has baffled the skill of the physician, and related the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land

## The "Try Company."

A GENTLEMAN who was riding in the cars, noticed a bright little fellow, between five and six years of age, sitting with his father and mother, and engaged in the attempt to untie the knot in a string that bound a small parcel. The knot had become well compacted, and the child's tiny fingers seemed to make no impression thereon. The patient earnestness of the little fellow was contrasted with the apparent indifference of his parents, who looked on, but made no attempt to assist him. At last the gentleman, whose sympathies with children were warm, could bear the sight no longer; so, partly to help the child, and partly to rebuke the parents, he took out his knife, and handing it to the boy, said:

"Here, my little fellow, try the virtue of a sharp blade. You can't untie the knot!"

Something to his surprise, the knife was not taken; but, instead, the child answered, with a smile:

"Please, sir, Father don't allow me to say I can't. I belong to the 'Try Company.'"

"Indeed!" said the gentleman, drawing back his hand. "I never heard of that company before."

"Oh, I've always belonged to it. Haven't I, Father?"

And the child turned with an expression of loving confidence in his face, towards his father.

"He's a worthy member of that excellent association, sir," remarked the father, now speaking to the gentleman, and smiling in a pleased way.

"Ah, I understand you!" Light was breaking in upon his mind. "This is a part of your discipline. You never permit your little boy to say I can't."

"But, instead, I'll try, sir."

"Excellent!" said the gentleman. "Excellent! Here is the way that men are made. It is the everlasting 'I can't,' that is dwarfing the energies of thousands upon thousands all over the land. A feeble effort is made to overcome some difficulty, and then the arms fall wearily, and the task is abandoned."

"And who is most to blame for this?" was inquired.

"Parents," was the hesitating reply.

"Parents who fail to cultivate patience and perseverance in their children. Parents who carry them when they should let them walk, even though their feet may be weary. I see it all as clear as light, and see my own fault at the same time. I cut the knot of difficulties for my children every day, instead of requiring them to loosen it themselves. But, sir, they shall join the 'Try Company' after this. I'll have no more knot cutting in my house."

How is it with you, reader, child or man? Are you a member of the "Try Company"? If not, and you have any ambition to be something more than a drone in the hive, join it at once; and from this time forth, never let the words, "I can't," find a place on your lips.

DANCING.—The Nashville Banner of Peace, the Presbyterian organ, has the following in a communication: "There is no condemnation of dancing to be found from the beginning of the Old Testament to the ending of the New Testament, but on the contrary, it is sanctioned by the habits and words of the patriarchs and psalmists of the original church; yet the orthodox church of this day denounce it as a sin."

All Guns and Rifles made to order, or sold at the Establishment, are warranted to shoot well and give satisfaction. 6-3m

## GREAT REDUCTION IN THE PRICE

..OF.. DR. F. G. JOHNSON'S

## PATENT SELF-REGULATING WINDMILL.

MANUFACTURED BY D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF ALL; and being constructed all of iron, is without doubt the most perfect and durable, as well as the most economical Windmill in the world.

The undersigned having purchased the Exclusive Right FOR THE MANUFACTURE OF THESE MILLS IN THIS STATE, will manufacture and keep on hand the following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$113.00

No. 2—One to one and a quarter Horse-power.....130.00

No. 3—One and a third to one and two-thirds Horse-power.....162.00

No. 4—Two to two and a half Horse-power.....200.00

No. 5—Two and two-thirds to three and a half Horse-power.....230.00

(This power is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

DEPOT OF MANUFACTURE, Nos. 90 and 92 Bush Street, SAN FRANCISCO.

When any greater power is required, the prices will be proportionally increased. They are susceptible of being increased to 20 Horse-power or more; and applied for any purpose where stationary power is needed and as manageable as a Steam Engine, with no risk or expense. To one anticipating using this cheap power (the Windmill), should not fail to examine THIS MILL; such examination will satisfy them of its adaptation and ability to serve their purpose efficiently and fully. It is unlike other Windmills that are called self-regulating; they have stationary Fans and small reversing Fans, which are dependent upon to graduate the speed of the mill; whereas, by Dr. F. G. Johnson's Patent the Fan revolves upon the arms and turn their edge to the wind when a gale or sudden gust strikes it; and again, a child can stop it at once by turning the fan's edge to the wind, by the use of a lever pressed upon the stop-wheel, which is upon the shaft. These Mills can be used for any purpose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH STREET, San Francisco, where the Manufacturer will take pleasure in showing and explaining the mechanical principle upon which reliance is had for their superiority over all other Mills known, or of which we have knowledge.

D. VAN PELT.

C. M'KECHNIE & CO., MANUFACTURER OF ORNAMENTAL STAINED WINDOW AND PLATE GLASS, OAKLAND CITY, ALAMEDA COUNTY, CALIFORNIA.

Where the Manufacturer is ready to fill all Orders for STAINED, PAINTED, ENAMELED, ETCHED, EMBOSSED, BENT, GROUND, AND CUT GLASS.

To Order or Design, Having Designs for Church Windows and other Public Buildings, constantly on hand.

The Manufacturer warrants his work not to be surpassed for Beauty of Design or Durability of Color, by any of the Eastern Manufacturers.

Samples sent to any part of the State.

Advertisements and Subscriptions must be paid for in advance.

#### HORTICULTURAL ESSAYS.

##### LETTER NUMBER TWO.

SMITH'S POMOLOGICAL GARDENS, Sacramento City.

EDITOR FARMER: To continue the subject of irrigation, from where we left off last week: we have never found it necessary, for the benefit of the fruit, to water either the Pear, Apple, Plum, or Quince, or the Apricot or Cherry, as before stated; and should it ever become necessary to irrigate either of the first named fruits, extreme caution must be observed, for the following reasons, which will be plain to every practical man: The Pear, Apple, Plum, and Cherry, form their fruit-buds for the next year's crop upon short "spurs" of the current year's growth, and these "spurs" should be watered by the roots of the trees during the dry season, are very liable to become excited, and present themselves in full bloom at mid-summer. It frequently occurs that these blossoms will set fruit and mature, and produce what is called a "second crop" of fruit. To call it a "second crop" is ridiculous; for in order to do that, it would be necessary that those same fruit-spurs should previously have given another crop earlier in the same season, something that could occur with an early variety of Cherry, but not so likely to occur with Pears or Apples, which ripen after the first of August. This rarely occurs, though it is by no means unusual to see blossoms upon fruit trees late in the season, and to see partially-developed or half-grown fruit; but in every instance where what is called the "second crop," is produced, it is from "spurs" of the same year's growth, that have been excited into bloom, in which instance the crop will mature with our long seasons and bright sun.

In the February number of the Cultivator is a cut and description of a Duchesse d'Angouleme Pear, second growth. The first crop is stated to have ripened in September and October, and the second growth, of which the cut was a specimen, was then ripening. Could it not be possible that the same "spurs" which produced the first crop in September and October, also produced the second before winter? I apprehend not, for they must have been the product of some of the newly-formed spurs, and which ought to have lain dormant for the next year. In any event, those second crops are not desirable, as you of course lessen your crop for the next year, besides weakening your tree ultimately, by causing it to bear those "two crops" in one season, a phenomenon not often seen in our Eastern homes, and which, it is to be hoped, no sensible man will be guilty of doing here, after he understands the theory of cause and effect. It is then not safe to apply irrigation to trees of this class, and I would prefer that my fruit would be a little under size, than to risk the casualty of causing my fruit spurs to break into bloom at that season of the year, by applying much water.

I have heard persons claim an advantage in getting these two crops in one season, but in this establishment we are perfectly satisfied when our Bartlett's and Duchesses are bending under the weight of one crop, each specimen of which weighing variously from twelve to twenty-nine ounces avoirdupois. I can very safely assert that I have never seen an inferior specimen of fruit growing upon a healthy tree on these grounds (and the trees here are all healthy), and our success, of course, we attribute to the treatment to which we subject our trees, from the very starting point in the nursery, and which we steadily pursue up to the period when they become bearing trees in the orchard. To make the whole matter perfectly plain, I will give the treatment of the tree, from the seedling just planted in the nursery row, and bringing it down each year successively, till we have the tree in the orchard, away in the breeze under its luscious burden of fruit—rich, melting, and juicy. And I here wish it to be distinctly understood, that what I relate is strictly the practical operations of things here; and the result of them, the stubborn facts in figures, and the problem has been worked out here, and for which, as statesmen would say, "I refer you to the record."

We will suppose then the trees to be one year old seedlings, and planted in rows three feet from each other, and, if Peaches, twenty inches from each other in the rows, and, if Apple, Plum, Pear, or Cherry trees, from twelve to fourteen inches apart in the rows. If planted in January or February, and the rains have been plentiful, they will make a fine start in the spring; but, as we are often late in planting, we have to plant in a dry time, and in this case we put the steam on the pump, and cause a stream of water to follow after each row of trees as it is planted. Thus they are never allowed to suffer for want of moisture; and we always aim at keeping up a vigorous growth through the early part of the season, and all the irrigation re-

quired in the nursery is done at that particular season, and never applied after the last week in July. By pursuing this course, our young seedlings make a very vigorous growth, are seldom affected with the "red spider" (the great plague of this hot and dry locality), and are in fine working order through the "budding" season, and have ample time to mature or ripen their wood, never presenting the appearance of frozen branches, consequent upon being caught by frost in a green stage of the wood. The second year we pursue the same course, that is, to keep up a vigorous start in the early growth. Root grafts planted the first year, will now average from four to six feet in height. They are also headed back to different heights, to cause them to branch or head out to suit the taste of purchasers. At the end of the second year's growth, such trees as, for instance, Apple trees, will be from eight to twelve and fourteen feet high, with well balanced and branchy heads, while the seedlings which were planted the same spring as the root grafts, having been budded that same season (the bud, of course, being dormant for that season), the second year (they being well established in the soil) will make a growth nearly equal to the root grafts, which were planted at the same time, and which now are in reality two-year-old trees.

I have seen row after row of one year's growth of Cherry trees, that were twelve and fourteen feet high; Pear trees, same age, well branched, from six to ten feet in height; Peach trees by the thousand, stoutly branched a foot and a half from the ground, and elegantly proportioned, that would measure from seven to nine inches in circumference at the union of the bud and stock; Apricot, Nectarine, and Plum, the same. This kind of growth could not have been attained on our soil, nor in any soil in this locality, except only the rich and moist sloughs, which here and there are scattered around us, without the aid of artificial moisture; it would be impossible, and no reasonable man will contend against these facts.

There are in our neighborhood several very flourishing orchards, growing without the aid of summer irrigation, and that are doing very nicely indeed; also, some quite large vineyards; but if they had the convenience of watering, they would make much more progress; and progress is what we want in this fast age and country, where the difference of a season makes a great difference in the profits of the orchard; and that principle of cultivation which will save three years out of six in bringing your orchard into bearing, is certainly worth some consideration; at least so thinks the proprietor of this establishment, who has had ample opportunity of testing the fact.

Trees grown as I have described, and of the size and age mentioned, are now in readiness to be transplanted to the orchard. Taking for granted your grounds are in fine order for planting—rich, deeply plowed, and subsoiled, all marked off and the holes dug, with the trees laid out to each hole, with all bruised roots carefully pared smooth before planting; and after being planted the top and side branches well cut in; and, if planted in good season, and your trees have been procured from a reliable source, and of course reliable good trees, if planted in good land, and having all the advantages of being early and well planted, they will be prepared to make a good start at the first appearance of spring.

Our practice now is, not to allow it to stop growing after it has once started to grow; and if it should have been planted late in the season, and the season unusually dry, with considerable dry winds, the trees will soon give indications of making but a small growth. This we at once counteract by irrigation and frequent use of the horse cultivator, to stir the soil and to prevent it forming a crust on the surface after being watered, as well as keeping it free from weeds, than which nothing so soon absorbs the moisture from the earth. Frequent use of the cultivator lessens the necessity of much irrigation, the moisture being readily perceived beneath the loose soil as deep as the cultivator has stirred it. By this means the newly transplanted tree makes a very flattering growth by the time we cease to irrigate, say the last of July, and it will continue to grow on for some time longer, to perfect its growth and mature its wood before the "damps of autumn sink into the leaves, and prepare them for the necessities of the fall."

The second, third, and fourth year after being transplanted to the orchard, the treatment is the same, save that each year the necessity of much watering is lessened. During the winter, or indeed any time before bursting of the buds in spring, the trees are all pruned, rather close at first, but less so as they attain size and density of body; and after having a four or five years' growth made, they will then, according to their kinds and habits, be in full bearing order; and after they once begin to produce heavy crops, they consequently make less growth of wood, and require thereafter but little pruning, and that principally confined to thinning out branches where they are crossing each other, or are becoming too thick.

It being then an admitted fact, that trees can be, and that they are, grown (and in some parts of the State very extensively grown) without the aid of summer irrigation, we claim only this advantage in favor of our system, and which is: that in

much less time we can attain a much larger and finer tree; hence we irrigate to attain size and body to the tree; and having attained that, we also get, in much less time, a much larger quantity of fruit.

We have also gained another object: our trees, from the first, become so well established in the soil, having never been permitted to suffer through droughts, have rooted deeply; and the roots, also, instead of being inclined all to run straight down, some of them are ramified, or spreading near the surface, this being induced from the moisture they receive from the surface, and which is preserved there through most of the season by keeping the ground mellow by frequent use of the cultivator.

Having then attained a bearing size, and become thus established, such trees produce more fruit, and of larger size, than the same trees would have done had they received the best of treatment at the hands of the opponents of irrigation. The reader will bear in mind, that I am now speaking of trees grown in large quantities in orchard, for profit, and consequently one of the main points to be arrived at is, to grow them in the best manner, and in the least expensive way.

To be sure, it costs a great deal of money, where natural facilities do not exist, for irrigating upon an extensive scale, and to erect steam-pumps, lay pipes, etc., with all their incidental expenses; but it has paid. But the question as it now presents itself is, whether irrigation is a necessity in fruit culture, and also, whether in the future the prospects will justify the expense, supposing the orchard to be one of some extent. I answer then, that in land that will produce good grain crops, orchards can be successfully cultivated without summer watering. This is a fixed fact. But if you possess facilities for watering, pay no attention to the idle talk of the opponents of the system, those who say that trees grown without irrigation (and who advocate the fact as if it were meritorious) are better than trees grown by irrigation. I say to you, use your facilities, for it is the most natural way of carrying nourishment to the parched roots of the tree. It has been tried here, and we are satisfied. Does any sensible man suppose, that after the lengthened experience the proprietor has had, in testing in a satisfactory manner both systems here, that if he was not perfectly satisfied upon the point, he would still continue to turn hundreds of cords of wood into steam, and go to all the other necessarily large expenses of irrigating from fifty to seventy-five acres of ground. It is worse than idle to contend against the point; the living evidence of the advantage derived from the system is too convincing.

#### Summer Fallow.

We would call the attention of our readers to the annexed letter from Col. Henley, Superintendent of Indian Affairs, whose opportunities of judging, and experience, on this question have been extensive. Our readers of the last year will remember that we published a valuable letter from Col. Henley upon the same subject, about a year since, touching the results on the Indian Reservations, and they are so very gratifying we are astonished that every farmer does not practice extensively a system so conclusively excellent and profitable:

SAN FRANCISCO, CAL., Feb. 17, 1859.

EDITOR FARMER: On the 22d of February last I addressed you a communication on the subject of the Summer Fallow, or Spring Plowing, as peculiarly adapted to California farming. As this is the season of the year to commence that system, I beg leave to refer to the subject again, and to call the attention of your readers to the communication alluded to. The importance of giving proper attention to that subject can scarcely be calculated. The farmers, if they choose to do so, can easily double the quantity of land they cultivate, and they will find that the labor can be much more easily and pleasantly performed. Our crop upon the Indian farms, which was sown in the manner I have suggested, before the commencement of the rains in the fall, is now several inches in height, covering the ground all over with a green and luxuriant growth; leaving no doubt or uncertainty whatever as to the result of the crop. But that which was sown upon lands plowed in the ordinary way, since the rainy season commenced, presents but a meager appearance, and for freshness and the prospects for a crop bears no comparison to the other. But there is another important consideration: Plow your land now, and plant it in corn, pumpkins, melons, or anything else that will feed hogs, and you will have feed enough to fatten all the hogs you can raise, besides having your lands in the very best condition for the fall crop. The summer crop will pay the expenses of the spring plowing, if no more. Hence, you commence the expenses of the fall crop with value of the seed, and the expense of sowing.

Your ob't serv't, THOS. J. HENLEY.

We here give extracts from his letter, referred to, of Feb. 22, last year:

Our seasons give us time enough (but there is none to spare) for making our crops. Then those who depend upon plowing the same season they sow will be restricted in the amount they cultivate, driven for want of time, annoyed by the delays of bad weather, and exposed to the inclemencies of a California winter. But he who prepares his land the previous season, and has it sown before the

rain commences, is not subject to these annoyances, and has the consolation to know that his crop is certain.

The difference between the two modes of farming is this: the man who pursues the one, delays his business before him; is never pressed for time; has always a day to spare if he desires it, and is certain of good results. But he who pursues the other, is driven by his business; is always pressed for time; has never an idle day, and the results, if certain at all, are certain to be unsatisfactory.

As it is our object, on the Reservations, to produce as much grain as possible, our plan is to plow during the entire rainy season, and until we are stopped by the dry season; and to sow all that is thus plowed before the rains begin in the fall. I would also mention, that the land which is plowed in the spring, and intended for wheat in the fall, may be turned to advantage by planting it in corn, and if planted early (a little frost does not hurt it) will produce from ten to thirty bushels to the acre, without irrigation.

[For the California Farmer.]

#### In Making Provision for the Future, let us not Neglect the Present.

EDITOR FARMER: While in Britain, proper, every possible means has been resorted to, for a long time, to have the practice of Agriculture conducted in accordance with the teachings of Science—in Ireland, owing to many reasons, like everything else, it has been very much neglected. Now, however, a brighter day seems dawning on that unfortunate island, and Agriculture is there beginning to receive the attention which it deserves. It is from England that British Agriculture has spread over the whole British Islands. But so assiduous have the farmers of Scotland been, since a better system was introduced among them, that they have succeeded in outstripping as scientific farmers those of England. For which reason, the Irish landlords, with a view to have their lands cultivated on correct principles, anxiously look out proper persons from that country, whom they employ as agriculturists, to go over their estates, and converse with and instruct their tenants; and the result of their timely counsels has been, that a better system of Agriculture is being gradually introduced into Ireland.

The superiority of having an Agricultural College, over every other means of promoting Agriculture which can be suggested, would consist in every farmer having an opportunity of becoming a man of science himself, so that no such instructions as Agriculturists may be presumed competent to convey would be needed. But as a temporary mode of affording information, the latter is deserving of much regard. The Commissioner of Patents, in his Agricultural Report for 1856, strongly recommends the appointment of competent persons for that purpose:

"One single, sensible, well informed, experimental Agriculturist," says he, apparently with too much enthusiasm, "might accomplish the entire result; by devoting his time and attention steadily and exclusively to the matter, by visiting different States, and conferring with those most interested in Agricultural pursuits."

Change "States" into "Counties," and I agree with him. But if, in Ireland, it is found advantageous to have at least one Agriculturist on every principal estate throughout the country, I believe that the desired improvement would be materially delayed, by making the labors of such an officer embrace too wide a range.

In making a change from an inferior to a better practice, it would be of importance to try the old and new systems side by side; and such a man ought to do something more than merely make suggestions. He ought to see that the course which he recommends be fairly and properly tried, and not entirely rely on the subsequent accounts of those who labor perhaps under some little prejudice against his innovations. Besides, by being on the spot at different seasons, he would be able to ascertain at once the true cause of any failure, and be better qualified to point out accruing advantages.

In Ireland, the plan adopted works well; and a Scotch Agriculturist is employed by almost every landlord who has his true interest at heart. We want a superior man to many who readily find employment as such at liberal salaries in the old country; for the reason that our farmers are a different class of men from Irish peasantry; but I do not think that, in California, we would have much trouble in finding several who are both scholars and gentlemen, as well as practical farmers.

It may take us some time before we succeed in having an Agricultural College established. The appointment of one or two competent Agriculturists, to visit and converse with our farmers, would so far supply the desideratum; and would, at least, create a spirit of improvement, which otherwise runs the risk of remaining dormant till that time; and would also necessarily pave the way for such an institution.

We need not blush to admit that our Agriculture is not in many cases conducted on correct principles. We have come from States and countries where the climate bears little resemblance to ours. It is not our former practice which we ought to adopt, but an altered application of those principles on which it was founded. Hence it becomes imperative with us to understand those principles. Every common farmer cannot be ex-

pected to be an adept in sciences which he has never had occasion to study. The difference between our climate and those of the scenes of our former labors, demands of us to be qualified to farm according to those principles, without any regard to what our former practice may have been.

All this could be explained in an Agricultural College, and science taught in such a way as would make it of less consequence to the students, where, or under what circumstances, they proceeded to cultivate the soil. It forms another reason why it would be necessary, in selecting Agriculturists for this State, as recommended by the Commissioner of Patents, to have superior men to those wanted in Ireland. There, they are obtained from a country where the climate pretty much resembles that of the country which they undertake to benefit. Here, many things are different; and it would, in consequence, be essential that such an appointment should be confined to those who know enough to enable them to modify their former practice, to suit the peculiarities of our circumstances. AGRICOLA.

MILLESTON, February 12th, 1859.

#### Natural History of the Country.

We most earnestly commend the following excellent suggestions of the Governor of Massachusetts, relative to collecting and preserving the Natural History of the State. The same views taken by Gov. Banks in this important matter, will apply with equal force to our own State, and to every State of our glorious Union; and we trust this subject will receive immediate attention at the hands of those who can control such matters. The matter of a State Geologist, which has been before our Legislature—the value of the services that could be rendered to the State in such a case, is here set forth in glowing terms; and we ask, where, in all the wide earth, could a more rich or more glorious array of nature's gems be found than in our own State? What is wanted is an enlarged and liberal view of such matters. The prospective good, as well as the honor and glory of our State, would be vastly promoted by liberal expenditures in such matters, and we could copy with profit the picture of those States and Nations that have set us noble examples of collecting and preserving specimens of the wealth within their own borders. We rejoice in our heart of hearts to see this matter so nobly set forth by the chief Magistrate of our native State:

The Secretary of the Board of Agriculture, upon his own volition, and without public expense, has commenced and nearly completed, within the past year, a collection of specimens illustrative of the natural history of the State. The idea, creditable alike in connection and execution, is suggestive of scientific enterprises of greater moment, than a chance collection crowded into the vacant rooms of the capitol. Ought not Massachusetts, in the flush of wealth and power, to provide for the most complete illustration of her own natural history, or at least bend her efforts with the cooperative power of individuals, associations and institutions, for the initiation of a work, the commencement of which would shed additional lustre on her name; and the continuation of which from age to age, until in her museum of nature, should be found correct representations of every form of inorganic and organic life, would enable her instructed people to trace the separate stages of existence through all mutations, from nothing to Deity? Neither the means, the occasion, nor the agents are wanting for its complete success. The natural history of the Commonwealth, except in a few departments where individual energy and genius have accomplished great results, is almost entirely undeveloped and unrepresented. Other States, and the continent offer to our researches regions yet mostly unexplored. Even where inquiry has begun, nothing is exhausted. We have also private and public associations devoted to science, collections of specimens that would honor European cabinets, not publicly exhibited, enthusiastic young men to follow the career of Humboldt, and Audubon, in pursuing widely directed inquiry; and among individual devotees of science, we have the first naturalist of the age, to direct their labors; one who has withstood imperial solicitation and declined the chair of science which the death of Cuvier leaves yet vacant, choosing rather citizenship and scientific labor among the American people. The world would wish such an enterprise success.

#### Now Plant Alfalfa.

The time is at hand and now is, when the Alfalfa should be very extensively planted. Be sure, on all light, sandy, alluvial soils, which is the very best, plow deep, subsoil and plow several times, to prepare the ground well at first, for once well done is best done; and Alfalfa once in the ground, it remains for years, the roots penetrating many feet. Clammy land is not fit for Alfalfa; light, sandy, loamy land is the best. Persons wanting Alfalfa will see advertisements in our columns. Messrs. Moore & Co. have some of very extra quality. Persons at a distance can send to us and we will act for them.

The fancy pictures in the agricultural report of the patent office, last year, were rather costly, though not extraordinary specimens of art. In the House edition a horse cost \$10,576; a strawberry, \$10,576; a sheep, \$10,576; a map, \$3,807. For the Senate edition the same pictures cost \$6,076. The man who gets up this report wanted to put a horse, a tea-plant and map in this year's report at a cost of \$32,193, but it was considered too poor a joke to be repeated, and they were left.

## LIVE STOCK.

HENRY COLMAN'S LETTERS FROM ENGLAND.

## Neat Cattle.

THE ALDERNEY OR GUERNSEY CATTLE.

Of all the cows which I ever saw, the handsomest—that which gave me the most pleasure, that which gave the best promise of being what a cow should be—was an Alderney, or rather, improved Guernsey cow, brought from one of the Channel Islands, and shown at the meeting of the Royal Agricultural Society, at Southampton. She was rising two years old, of moderate size, compact, and well-shaped, of that yellowish dun color which generally characterizes the breed, with a large and golden udder, ears of an orange color in the inside, a clean and thin neck, and the bright eye of a gazelle. This showed to what perfection the breed might be brought; for, in general, they are exceedingly ugly, small, thin, coarse-boned, and presenting little more than the skeletons of animals, covered with a yellowish, flabby, and coarse hide. They come principally from the Channel Islands, Jersey and Guernsey, and abound in parts of Hampshire, and counties most accessible to these islands. They are valued mostly for their milking properties, and not so much, in that respect, for the quantity, as for the extraordinary rich and creamy quality of their milk, in which certainly they surpass all other breeds. It is stated that no animals will thrive faster, when well-fed and not in milk; and their size is not always inferior. I found at Welbeck, the residence of the Duke of Portland, a herd of Alderney cows, and in good condition. Few gentlemen or noblemen in England, resident in the country, are without one or more Alderney cows, for the supply of their tables with cream and butter; and I never have had the slightest difficulty in instantly recognizing their produce. They are kept, in some proportion, at some of the large farm dairies in England, for the purpose, by mixing their milk with that of other cows of a different breed, of giving color to the butter, and richness to the cheese; but I was informed, at one of the best dairy farms in Gloucestershire, where forty cows are kept, that a dairy exclusive of Alderney cows "would not make good cheese, or rather would make it too rich; and that, beyond a certain proportion, and that not a large one, it was not advisable to mix their milk with that of other cows. So difficult, however, is it to determine any thing, that I have found other farmers to state that they have succeeded perfectly in making excellent cheese from the milk of the Jersey cows.

The improvement which has taken place in this breed, in the Island of Jersey, a specimen of which I have given an account of above, is most remarkable; and in their improved condition, for certain purposes, especially for the luxury of cream and butter, it would, I think, be impossible to find a more valuable breed. It is objected to their beef, that the fat is too deeply yellow, but otherwise it is deemed excellent in quality.

[The Guernseys were omitted in their regular order. The following are Mr. Colman's concluding remarks on Neat Cattle.]

IMPROVEMENT IN RELATION TO THE UNITED STATES. In thus giving an account of the neat cattle of Great Britain, I have chosen to give my own observations, and facts chosen within my own knowledge, rather than to refer to any published accounts. These are accessible to others as to myself. The facts which an individual circumstance as I am is likely to collect, unless his attention were exclusively directed to the subject, are necessarily few, and furnish imperfect grounds for him to speak with confidence, which I would by no means be thought to do. That the neat stock of the United States is of a very mixed and miscellaneous description every one must admit. Comparatively few attempts have been made in a systematic manner, and upon an extended scale, for its improvement. Where they have been made, they have frequently failed from want of perseverance—very often from want of encouragement, and have been sometimes met with the sneers of ignorance, or the derision of envy. The immense improvements which have been made here strike every observer with grateful astonishment, and are evinced by the accounts which I have given of the progressive size of animals in the Smithfield market. Few subjects, in my opinion, more concern the interests of American husbandry than the improvement of our live stock. Much, undoubtedly, may be done by the selection of the best from our own breeds, and by breeding only from the best; but our stock is so crossed, and mixed up, and amalgamated, that it must be a difficult process to unravel the web, and go back to any original breed. We may certainly, with great advantage, avail ourselves of the breeds existing here in the highest state of improvement. I am quite aware that many very excellent animals have been imported into the United States from this country; and I hope these importations will be increased, and that all pains will be taken to preserve the distinctness and purity of the races, and, if possible, improve them. This can only be done by watchful care, good judgment, and liberal keeping.

In making a selection of breeds, it is plain that regard should be had to the locality where they are to be placed. The improved shorthorns, the Yorkshire, and the Hereford, are best adapted to the rich and deep pastures of the Middle and Western States; the Friesian, and the North Devon, seem to me to be especially suited to New England; while the West Highland cattle would evidently be fitted to the northern, cold, and least productive parts of the country. Great advantages would, in many cases, accrue from a first cross between some breeds. As I have already said, extraordinarily fine milking animals have been produced, in this way, by the crossing of the Durham in the North Devon, and by a cross of a shorthorn, even with an Alderney. An eminent farmer in Ayrshire is accustomed to cross his Ayrshire with the improved Durham breed, and steers of this stock, and heifers, after their first calf, have, as I have seen, proved a most excellent and valuable stock. To proceed further than this has not been attended with favorable results, and is never sure of manifesting the best qualities of their progenitors. Many persons here have accumulated large profits by breeding very superior animals for sale, and the prices have been often exorbitant. The same results can scarcely be expected in the United States, where the means of farmers are very limited, and few can enter into spirited pecuniary competitions for the mere gratification of taste. But a fair and reasonable profit may be expected, under skillful and careful management.

With us, as well as here, the success of farming must mainly depend upon such a conduct of the farm as shall not exhaust its productive powers; or, rather, that it shall, from its own resources, furnish the means, not only of recruiting its strength, but of actually increasing its capabilities of production. There is no more obvious way of doing this, than by consuming the produce of the farm, mainly, in feeding animals, through whom the riches of its vegetation may be returned in a form to furnish other and better crops. The stall-feeding of beef-animals, if the current prices of agricultural produce are brought into the reckoning, is, almost always, a losing operation. It will often be a serious one, where the animals so fed are of a poor and unthrifty character, or where, as dairy animals, the product is small in quantity, and inferior in quality. It is plain how much the favorable chances of success are improved, when the stock to be fattened are of a kind to fatten rapidly; and to return large weights, and where the yield of the dairy stock is of the finest quality, and given in abundance. The difference between one hundred and twenty pounds of butter and two hundred pounds, as the annual produce of a cow, or between three hundred pounds of new-milk cheese and five or six hundred, is of easy calculation. In the attempt to improve our cultivation, to increase our products, and to produce the best, we shall not always succeed; and when we have done all we can, we may fail from causes wholly insurmountable; but we must continually try for success, for we are certain not to succeed unless we do try.

I have never considered farming, under any circumstances, as a source of extraordinary profits, or the means of rapid accumulation; but, under good management, it presents, ordinarily, the means of fair, reasonable, and honest gains. It is a hard case, when, to an industrious and frugal man, it becomes, as it may, a losing concern. Dr. Franklin, with his usual shrewdness, has said, that the thermometer, by which to judge of a man's feelings or enjoyment, is his pocket. When that is empty, the mercury goes down below "zero." With railway speculators, stock-brokers, land-jobbers, and all that class, it may often go up to boiling heat; and in many instances, it may be found frozen in the bulb. Such extremes disturb all comfort; they always endanger morals; they too often lay waste the human heart, stripping it of its best affections, and make shipwreck of life. With the farmers, at least, I should be glad always to find it, at "temperate." As a means of health—as a source of rational and delightful and innocent occupation, as a branch of high intellectual philosophy and study—an enlightened and improved agriculture may commend itself to many thoughtful, and virtuous, and well-governed minds; but to the great mass, in order to stimulate their exertions, and to satisfy purposes which are not unreasonable, it must be a means of comfortable subsistence and profit; and it can only be made so by adopting, pursuing, and, if possible, enlarging, by science, experience, inquiry, and practice, the great improvements which have already been made in this first and best kind of human effort.

## Hints about Breeding.

THERE can be no doubt but that the attention of farmers and others who have a taste for fine animals, is a good deal awakened to the importance of breeding from the best kind of animals. This feeling is now calling forth the careful attention of farmers to the blood of the animals from which they breed, as well as to the form and qualities which belong to the race from which they have been derived. While a great improvement may be reasonably expected from these causes, there is an error which is not unfrequently committed by those commencing to breed fine stock, which ought to be amended.

Many persons think, if they have a fine colt, or calf of superior blood, that the more food it gets, the better it will be. But this is a mistake. The young animal requires the milk only of its dam, if that is an average quantity and quality. It is true they will, as they increase in size, take more milk, if offered them, and by such means their growth will be very rapid, and they will take on a great deal of fat. A colt, or calf, pampered in this way, has an unnatural growth. They are overfed, and the muscles are not as well developed as in animals less stimulated with rich food. Nature is the great teacher, and those who neglect her counsels will be very sure to find out their mistake. A young colt, a calf, a lamb, wants nothing for some months after birth but the milk of the dam and fresh pasturage, with free scope to leap and race at their pleasure, thus stretching to the utmost every muscle, gaining strength, healthy development, and symmetry, with every effort. Overfeeding is not probably so common as underfeeding. But it is an error into which good farmers and good breeders sometimes fall. They have a fine young animal, and they want to make it very extra, and high feed will often deceive pretty good judges. Many a common calf has taken the premium, not because it was the best, but because it was the biggest and fattest. By careful inquiry you would perhaps find that it had taken the milk of two or more cows, for a considerable part of the season.

The continuance of high feed for a few generations, with little exercise, will destroy the good qualities of a fine race of animals. They lose their symmetry of form, which depends on the proper action of the muscles, and become barren and worthless.—[L., in the Am. Stock Journal.]

## Be more Circumspect.

FARMERS should more uniformly engage in all the various branches of Agriculture, says the Oregon Farmer, instead of all bending their energies to the production of one particular article. The frequent failures of the different crops would suggest, that as a remedy, a proportion of the several products should be grown in connection with the main article. The grocer or dry goods merchant, while he loses on one article, balances that loss with a profit on others. Where all the products of the farm are judiciously cultivated, the greater part are sure to succeed, and the price of some of them remunerating. People are too much disposed to carry matters to extremes. In grasping at wealth, much may be lost in once overreaching the mark. To produce a healthy, uniform market, we must supply each want in moderation, leaving but a small surplus. Any intelligent farmer, if he but use the wits he possesses, can know in a measure, to what extent the demand for a specified article will reach, and can arrange his crops accordingly. Let the staples be produced without excess, and the minor details carried out, and the farmer will, as he should, be content to gradually rise to wealth and prosperity. We do not like this dash-ahead, hasty-burly, nerve-straining, tempestuous desire for wealth, to which so many of our people on this coast are addicted; bending their energies to this, that and the other pursuit without apparent design, and totally regardless of the requisite knowledge to carry out their aims to a successful issue.

## Evils of Over-feeding Stock.

For many years grave objections have been repeatedly urged against the practice of the excessively artificial system of feeding cattle, sheep, and pigs for the exhibition of fat stock, especially the Smithfield Christmas Show in London. An elaborate and scientific report on rigid examinations of certain animals which took premiums at the late Smithfield exhibition, has just been published, and which cannot fail to awaken general attention to this subject. The report is the production of Mr. Gant, Assistant Surgeon to the Royal Free Hospital, whose knowledge of general and comparative anatomy, and well known familiarity with the use of the microscope entitles his statements to respect. His microscopical observations are confirmed by the celebrated Professor Queckett, Curator of the Royal College of Surgeons.

After describing the living appearance of certain prize animals at the show, such as cattle, sheep, and pigs, some of them owned by the Prince Consort and the Duke of Richmond, all monstrously fat, and exhibiting great difficulty of breathing, Mr. Gant observes: "Throughout the exhibition one circumstance particularly arrested my attention. It was the size of the animals compared with their respective ages. The bullocks averaged from two to three years; the pigs and sheep were about one year old. When I contrasted the enormous bulk of each animal with the short period in which so much fat or flesh had been produced, I certainly indulged in physiological reflection on the high pressure work against time which certain internal organs, as the stomach, liver, heart, and lungs must have undergone at such a very early age. I therefore resolved to follow up those animals to their several destinations, and to inspect their condition after death." Mr. Gant was admitted to the slaughter-houses when the gold and silver prize bullocks, heifers, pigs, and sheep, that remained in London, were killed, and after carefully removing the heart, lungs, liver, etc., he made dissections of these organs, and provided faithful drawings of both their visible and microscopical appearances. Our space will only admit of a slight reference to their symptoms.

In the sheep, the hearts of several specimens were found to be in an unnatural, that is, unsound condition; the external surfaces very soft, greasy, and of a dirty brownish yellow color, mottled with yellow spots of fat imbedded in the substance of the heart. Under the microscope the process was readily detected of the muscles being changed into, or overlaid by fat. The lungs were flabby, with numerous tubercles, and their function, or power of action, greatly diminished. Similar observations apply to the pigs, whose circulating system suffered serious interruption, indicated by the dark, livid liver. In horned cattle, the left ventricle of the heart had, in the several instances examined, been more or less converted into fat, having a yellow, soft, and greasy appearance. The intestines, also, exhibited a fat, putty-like mass, from an inch to an inch and a half thick, in various parts of their surfaces. The worst feature of high breeding, early maturity, and consequent aptitude to fatten, appears to be under our modern stimulating system to convert the most important organ of life and health into a mass of fat. The stomach may indeed prepare food for the production of blood, and the lungs and kidneys may purify it of excrementitious matter, but these departments of the blood-factory are only subsidiary to the heart, whose special duty it is to propel the vital fluid to the most distant recesses of the body, that every part may be nourished and renovated. Yet I found the great central organ more than any other damaged.

This material (fat) may itself be regarded as the superfluous food with which the animal has been gorged. It was first deposited in all loose parts of the body, these being most adapted for its accumulation, beneath the skin, and around the kidneys, stomach, intestines, and heart. At length, in such localities, the fat invaded the muscles themselves, by passing in between the fibers. Thus is produced the streaked appearance of meat,—a condition which, within due limits, in no way interferes with the health of the animal, nor impairs the nutritive quality of its flesh for food. On the contrary, fat itself is a necessary constituent of the most nutritious food; and by no provisions can a due proportion of this ingredient be secured so effectually as when it is thus intermixed with the substance of the muscles themselves. Thus each mouthful of meat contains a wholesome and agreeable proportion of fat; but beyond those limits an animal cannot be fattened without impairing its own health, and also its nutritive value as human food. Let an animal be fed beyond the limits compatible with health, and the superfluous fat is no longer confined to the interstices of muscular fibers, but actually invades, and eventually supersedes them.

It may be said that there is but little danger of over-fattening live stock in Canada, as our animals, generally, are not distinguished for too high breeding, nor are they crammed and pampered with oily and stimulating food. We have seen, however, particularly at our butchers' Christmas show of meat in Toronto, both cattle, sheep, and swine, fattened to a degree that can scarcely be considered compatible with the health of the animals, or the wholesomeness of their meat for human food. Both sheep and cattle, although in low condition in spring, will often upon our pastures in summer and autumn, lay on fat rapidly, sufficiently so for all useful and practical purposes, without recourse to artificial stimulants.

The report thus concludes: "Under the present system the public have no guarantee, and are not insured the best, if indeed the cheapest food. The bulky withers of a fat bullock are no criterion of health, for his fat, tubular back may conceal the revolting ravages of disease. All this alone can be discovered by an inspection of the animal's interior after death. The flesh of animals which has been produced by organs themselves diseased, is itself also necessarily deteriorated, and ought not to be regarded as prime samples of human food. These facts will be best understood by pathologists, but they also come home to the understanding, and certainly to the stomachs of the people."—[Canadian Agriculturist.]

THE FARMER'S LIBRARY.—It need not be large nor expensive. It need not be purchased all at once. The reading of it need not detract one hour from the important labors of the field. But every farmer should by all means have a library. He needs one for his own benefit. He should have his daily performing, both for his own enjoyment, and so as to be able to give a reason for everything he does on his land. His children should be taught the philosophy of Agriculture more or less thoroughly, that they may be able to make improvements in it.

## Report of the State Registrar.

HAVING received this report, we could not but view it as one of much importance to this community; more so than people, at first thought, would suppose. We have people coming to our shores "out of all the nations of the earth," just as the old prophet foretold; and it is a duty our State owes to thousands and to the world, that a full, clear, and detailed registry should be kept of births, marriages, and deaths. In the first place, it would be wise economy, as in cases of our courts in after years it would save more than the whole cost, by establishing facts of moment in settlement of real estate, and all other causes of litigation. Then again, in those all-important facts connected with marriages and intermarrying of nations, and the results thereof; the various diseases, and all those details so important to be known for the best welfare of the commonwealth. These are surely matters worthy the highest consideration of the State, yet we could not but notice the remarks of E. R. Campbell, Esq., the Registrar, with a recommendation of an unconditional repeal of that office, unless a proper enforcement of the law on this subject, in the several counties, could be had, and the office and its important duties compensated with a just reward.

We give the closing remarks of the Registrar; they are brief and pertinent, and we hope that our legislators will look to this subject, enlarge the sphere of usefulness of the office, give a just and liberal compensation to the Registrar, and enforce the law in each and all the counties, as a duty the State owes herself and her future history, and the rearing true citizens and a healthy generation of sons and daughters:

Remarks by the State Registrar accompanying the Annual Report of Marriages and Deaths.

Beyond occasional strongly marked discrepancies in the ages of the parties—such as the wedding of Fifty to Fifteen, or "a Union of Winter and Spring"—the registration of marriages presents no anomaly, with the single exception of a union of the Mongolian and Caucasian types of mankind, in the marriage of a male representative of the Teutonic to a female of the Asiatic—a German in a southern county having been joined in wedlock to a China woman. What the result of this union will be, I leave to able ethnologists and savans than myself to determine.

To the medical, and other learned professions, the foregoing Report of deaths, with the accompanying facts and statistics, meagre and imperfect and accompanied by errors unavoidable in the labor of compiling and arranging them, as they are, can not fail to be of the deepest interest. To the statistician and statesman, as well, they are pregnant with facts of the utmost importance, which must increase in value, as these registrations are continued, from year to year. To the prosecutor of medical and physiological research, especially in the investigation of disease in its multiform shapes, and in the discovery and application of new remedies, California offers a field to be found nowhere else in the world. They same may be said of the extensive and varied surgical practice of the State.

I regret that the emoluments of the office of State Registrar (whatever of honor may attach to the same), during the eight months of its existence, have been comparatively so insignificant as to preclude my availing myself of any outside aid, or professional assistance, so desirable in the preparation of the foregoing tabular statements, as contemplated by the law. They are solely the results of my own labors, and I alone am responsible for their imperfections, and the unavoidable errors they may contain. In the preparation of the foregoing tables, I have studiously avoided technicalities in the names of diseases, further than was absolutely necessary, discarding tautology, and endeavoring to condense the medical synonyms used in registration into as brief and comprehensive a space as practicable, without marring the symmetry and usefulness of the whole. Many of the terms given in the original entries are extremely vague and indefinite, and there are some used in designating the "causes of death," that may be set down as entirely original, and new to the medical profession. A few of these are: "Effect of Jiggers," "Evil in the Bladder," "Widrius Cliden," "Tennis," etc. But one case of "Strangulation" is reported, although numerous and well-known instances have occurred since the passage of the law, yet no registrations have been made of the same. Although such cases are not rare (the native California patriarchs living to a great age, and eventually dying from the clogging and wearing out of nature's machinery), yet but one case of "Death from old age," it will be seen, is reported: that of Mons. Louis Lauriat, well known to the people of this Union as among the first, if not the first, aeronaut that ascended in a balloon in the United States. This truly scientific old man, whose venerable form was familiar to the citizens of Sacramento, perambulating the streets, went off in August last, at the advanced age of ninety-two years.

It will be seen from the foregoing list, that the most numerous among the causes of death is "Consumption." The greater number of the deaths recorded among the Chinese are attributable to this disease. This is, perhaps, owing somewhat to the difference in climate, but more attributable to this race living, in many cases, in damp, ill-ventilated, and in a great number of instances, in underground tenements. Several deaths from consumption among the California Indians, adopted into families and inducted into the customs of civilization, are among those reported. Enough is known to render the fact indisputable, that the moment Digger children are taken from their native clover-pastures, their diet of grasshoppers, acorns, and similar "chemmuck," and transferred from their turf or dirt huts, away from the vicinity of their sweat-houses, and invested with the clothing of the civilized portion of mankind, or, in fact, submitted to the manners, customs, and mode of living of the white race, they are invariably booked for this fatal complaint—an insuperable barrier to all attempts at civilizing or Christianizing this doomed and devoted race.

Deaths from accident, owing to the nature of the employment of our people, in hazardous mining and other operations, are perhaps more numerous than in any other country; and those from violence are perhaps no less so. In one of the most populous mountain counties of the State, the number of deaths registered since the passage of this law is forty-two; and of this number twenty are set down to accident and violence.

It is to be regretted, for very many reasons, that the entire State has not fully complied with the requisitions of the registration law, although the list of counties has increased since my Report was prepared. San Francisco being the only county that has, perhaps, fully complied with the law regulating the registration of deaths (a record in sanitary municipal regulation), it was my desire to county entire, but time, and want of adequate facilities, have prevented.

Next in order, in point of fullness, are the records of deaths in Sacramento.

In conclusion, although this position has been of no pecuniary benefit to the State Registrar, but

on the contrary, a dead loss of time and labor, I trust that the facts and statistics I have embodied in this Report will be of some benefit to the State and its people.

## The Farmers' Festival Perverted.

PERHAPS it will do but little good, but we mean to repeat our exhortation over and over again, that agricultural fairs should not be perverted from their original and proper design, viz: to promote the interests of agriculture. It is plain enough that the attempt is being made in many quarters, to have them answer the purpose of a grand holiday, to take the place of the old "training days," or to be a sort of second Independence day. In many places, auctioneers, showmen, peddlers, gamblers, and humbug catch-pennies of all sorts hang about the fair grounds, begetting dissipation and vice. Drinking and betting, wrestling and fighting follow close behind mammoth women, hogs with five legs, and nimble Sacks, to the great annoyance of all sober people, and to the moral injury of the young and inexperienced, and to the degradation of the farming interests. Female equestrianism and fast driving are a part of this perversion.

Anybody with half an eye can see where this thing is leading. It is, perhaps, swelling the numbers of those who attend our fairs, but is it not also bringing in the mob? Farmers and respectable, sober-minded country people find themselves elbowed aside by horse-jockeys and "fat" people of all sorts; and year after year, the fairs are made up less and less of those for whom they were originally established. Agricultural fairs, at this rate, will soon be run into the ground. We beg the managers of these festivals to look ahead, and act wisely. If all they aim at is simply to furnish "fun for the million," let them go on. But if their object is to promote an intelligent interest in agricultural pursuits, and to encourage farming, let them change their tactics.—[Am. Agriculturist.]

## Worms in Orange Trees.

SOME complaint has been made of worms destroying Orange trees, in the neighborhood of Los Angeles, and in reply to inquiries for a remedy, a writer in the Bulletin says:

"Let me therefore mention a method which is approved and adopted in Italy, and elsewhere. Dig the soil around the trees down to the roots, shovel the soil out, and make the hole about two feet wide in every direction from the stem or trunk. Let this hole open, until you can observe the sap thriving; then mix the soil with lye, fill the hole up and slam it in (the soil) with water; take a sharp scraper and scrape the outer bark off along the stem, from the first limb down to the bottom; when done, take one-third part of clay, one-third part of lime, and one-third part of cow-droppings; mix the whole up with water, so liquid that you can make a coat on the trees with a brush, and so apply."

TRAVELING IN 1775.—Mr. Jefferson set out from Williamsburg for Philadelphia, to take his seat in Congress, on the 11th of June, 1775. He traveled in a phaeton, with two spare horses, and it is curious to trace his slow progress of ten days, in a journey which can now probably be accomplished in a less number of hours. Once, between Fredericksburg and the Potomac, and again, between Wilmington and Philadelphia, there are entries, in the pocket account-book, of money paid to guides. He took lodgings of Ben Randolph, a carpenter, who had some rooms to let in Chestnut street. He dined at the "City Tavern."

Gen. Harrison, when elected a delegate from the Northwestern Territory to Congress, traveled from Vincennes to Washington, on horseback; and the journey, as he has been heard to say, occupied nearly sixty days. The season was very inclement, and the streams were swollen with floods, causing delays, and often subjected him to great danger in fording them. The way, nearly the whole distance, was but a bridle path through a wilderness. The journey that occupied the first delegate from the Northwest Territory sixty days, can now be made in forty-eight hours.

## THE CALIFORNIA FARMER.

## PROSPECTUS FOR VOLUME ELEVEN.

THE CALIFORNIA FARMER has now entered upon the New Volume, numbering the Eleventh, and the highest attained by any weekly journal on the Pacific Coast, and while we do not arrogate to ourselves the honor of having been longer engaged in the publishing of a journal than the public than our own—among which stands the venerable Alta California, the Golden Era, and the San Francisco Herald, we do claim to have been as long or longer steadily pursuing our calling, without change of the original founder; having now been for years, and with an unflinching faith, the claims of an interest which we believe the greatest, noblest and best in our time, the California Farmer, after one more issue, will complete the Eleventh Volume.

As the founder and proprietor of the first Agricultural and Mechanical Journal on the Pacific, we believe we can claim with some degree of pride and satisfaction, a just share of support from the citizens of the State, for our steady advocacy and adherence to the great industrial interests of California. It is not necessary for us to reiterate all the good things we shall do in our New Volume, nor the wonderful things, for we treat the character of the Farmer is too well known to require this at our hands. But we do promise:

We mean the New Volume shall be superior to all its predecessors, and our aim shall be to make every Volume bear evidence of improvement. We mean the California Farmer shall be the true and fearless advocate of the great interests of the Agriculturists of California; it shall also be the bold and zealous advocate of our "home manufactures," and earnestly battle for Mechanics and Artisans, as the brethren of the Farmer. We shall ever advocate the cause of Agriculture, Mining, Manufactures, and the Mechanical Arts, as the basis of our wealth, prosperity and happiness. We shall advocate the cause of Education, as a means of perfecting our boyhood, and we shall, above all things, advocate the Blessings of Home, and the Home Labor. These are the principles that will guide us in all our labors, and as the guiding star and great light of home is woman, so we shall ever plead for the education of woman as the sure way to elevate and purify the world.

These are the cardinal principles of our journal, and these are we desire to place it on every farm, in every workshop, manufactory, warehouse or place of business (save land), and we further desire, to have it in every family circle in our glorious State—it is there we would plead for the cause we advocate, there we hope to find our earnest friends; to them we look, on them we rely for the continued success of the work in which we are engaged.

As we hope to have a large increase to our list with our New Volume, may we not now appeal to all our friends for their generous co-operation in this work? As we wish to offer a just return for any exertion made in our behalf, we will offer the following:

Every single subscriber, with \$5, shall be entitled to Seeds of all distribute in February, consisting of several thousands of packages. Each new subscriber to receive five packages. Clubs of three subscribers and \$15, will receive the splendid colored plate of California Fruits and a copy of the Little Pilgrim, for one year. For five subscribers and \$25, we will send five copies of the Farmer, the Atlantic Monthly and Arthur's Home Magazine. For ten subscribers and \$50, we will give ten copies of the Farmer, Atlantic Monthly, Arthur's Home Magazine, Harper's Monthly, the Little Pilgrim, and an extra States.

Thus, by a little exertion, our friends may kindly favor us at the same time secure to themselves a valuable library of home literature, such as ten subscribers would secure to them.

We have made arrangements to receive the above publications for the Clubs that we hope to receive, and the grateful thanks for many favors in the past years of our FARMER.

WARREN &amp; CO.

## Miscellany.

## BE HAPPY.

[DISAPPOINTMENTS, crosses, trials, and even afflictions, are often but blessings in disguise, and those who read them thus, read rightly; such are wise. The following lesson is worthy of being engraven on the minds of the young men of California.]

Be happy! There's no need of foolish tears;  
But ill they suit thy manhood's nobler years.  
Resolve to swim the tide and cheat the waves;  
'Tis better to be struggling—to be brave.  
It is resolve that hurls the arms to toll—  
That breaks apart despair's fast-withering coil—  
That treads to dust all shapes that frown and fright,  
And cast on life a ghostly, starless blight!

Resolve then, Colin, o'er all cheats to rise,  
For life is filled with these; they mock our eyes,  
And so prey on us that that we yield to fear,  
And grow bewildered where life's bark to steer,  
Till, goaded thus, we drop into despair—  
Alas! too often man suffers and dies there,  
While but a word defiant would disperse  
The fiends of fear, and lift away the curse.

Be happy, then; 'tis better, safer here;  
It keeps the body longer from the pier—  
It gives the cheek a mantle of the rose,  
And to the breast an Eden of repose;  
It fires the healthy vein, throbs the big heart,  
And makes us into mighty engines start,  
Unto whose thunderous pulse shakes old Time,  
Standing in his white locks, sturdy and sublime.

Thus grim Disease's work Joy's power forbids,  
And shuts the coffin's chill, sepulchral lids,  
And rains on earth sweet showers of fragrant light,  
And flowers spring up where is no night.  
Be happy, then; 'tis noble, prudent, brave;  
It costs a struggle to keep out the grave.  
'Tis said "life is a bitter jest" not so!  
It has its joys worth striving for, we know;  
They make us love to live, for when once got,  
So sweet they are, they thrice enhance our lot.

## Music—Old Hundred—Ole Bul

"Music resembles Poetry: in each  
Are numerous graces which no methods teach,  
And which a master-hand alone can reach."

There are moments, when music comes to the  
soul of man like a beautiful dream, growing more  
and more beautiful, as tableau after tableau  
advances and recedes. So flows stream after stream,  
sinking into the soul, infusing a kind of wild de-  
lirium; and so mighty is this power in Music, that  
even those whom we often pass by in the street as  
men without feeling, to all appearances, when  
Music strikes upon their senses, show an ear and a  
refinement of taste "little dreamed of in our philo-  
sophy." That glorious old anthem, Old Hundred,  
that to ordinary minds and ordinary occasions  
would not elicit the notice of one in a thousand,  
will come home to our souls with a power and  
force that sweeps away every other thought from  
the mind. We remember well the first time we  
felt the full power of this Heaven-inspired melody.  
We were on a visit to Europe, and were attending  
divine service at Westminster Abbey. Charmed,  
bewildered, carried away with the grand and beau-  
tiful in this magnificent temple, enraptured by all  
we saw and heard, we sat like one in a dream, as  
the music of the pealing organ echoed through the  
arches of that lofty frescoed and vaulted ceiling.  
We were listening to the cadences of the waves  
as they swelled and died away, when the voices of  
the choir broke forth in that blessed anthem Old  
Hundred, familiar to every child of Christian birth  
in our land. Never can we forget the rush of feel-  
ing that swept over us. We were away from our  
early home, in then, to us a new country, a for-  
eign land; yet here was the good old anthem of  
our native land, the words of our childhood's home.  
Ere we knew what we were doing we were singing,  
with all our power, that same hymn, while the  
warm tears swept down our cheeks. We could  
hardly account for this feeling until the anthem  
was over, the benediction pronounced, and, with  
the mighty multitude, we were passing through  
and among the monuments of the mighty dead  
who lie beneath the sculptured marble of that  
immortal pile. Old Hundred has always been  
doubly sacred to us ever since, and this vision was  
recalled to us most vividly the other evening, near  
midnight, when passing along Montgomery street  
on the sidewalk of Montgomery Block, we heard  
the swelling strains of this same Old Hundred,  
clothed in beauty, echoing from the Music Rooms  
of Mr. Scott, the Pianist. We could not restrain  
ourselves, and, crossing the street, we went to his  
room and heard him play Old Hundred with varia-  
tions, upon his grand piano. Well has the im-  
mortal poet said:

"He who hath no music in his soul,  
Is fit for treason, stratagem, and spoil."

They who never saw the beauty or felt the glory  
of Old Hundred, let them go to the Music Rooms  
of Mr. Scott, and ask him to play this anthem for  
them, and we would fain believe they would be  
converted from the danger to which the poet  
alludes. Taking up the admirable letters of Mrs.  
Child, a few evenings since, our eyes caught the  
passage upon the music of Ole Bul, and we then  
felt that there were other enthusiasts for music,  
like ourselves, and we copy her beautiful strains,  
believing there are many more in our world who  
love not only Old Hundred, but our National Air,  
also, both pieces being capable of awakening the  
deepest thoughts and feelings of the soul:

New York, December 28, 1844.

I have twice heard Ole Bul. I scarcely dare to  
tell the impression his music made upon me. But,  
casting aside all fear of ridicule for excessive en-  
thusiasm, I will say that it expressed to me more of  
the Infinite than I ever saw, or heard, or dreamed  
of, in the realms of Nature, Art, or Imagination.  
They tell me his performance is wonderfully  
skillful; but I have not enough of scientific  
knowledge to judge of the difficulties he overcomes.  
I can readily believe of him, what Bettina says of  
Beethoven, that "his spirit creates the inconceiv-  
able, and his fingers perform the impossible." He  
played on four strings at once, and produced the  
rich harmony of four instruments. His bow  
touched the strings as if in sport, and brought  
forth light leaps of sound, with electric rapidity,

yet clear in their distinctness. He made his violin  
slog with flute-like voice, and accompany itself  
with a guitar, which came in ever and anon like  
big drops of musical rain. All this I felt, as well  
as heard, without the slightest knowledge of *quar-  
tetto* or *staccato*. How he did it, I know as little as  
I know how the sun shines, or the spring brings  
forth its blossoms. I only know that music came  
from his soul into mine, and carried it upward to  
worship with the angels.

Oh, the exquisite delicacy of those notes! Now  
tripping and fairy-like, as the song of Ariel; now  
soft and low, as the breath of a sleeping babe, yet  
clear as a fine-tuned bell; now high, as a lark  
soaring upward, till lost among the stars!

Noble families sometimes double their names, to  
distinguish themselves from collateral branches of  
inferior rank. I have doubled his, and in memory  
of the Persian nightingale have named him Ole  
Bulbul.

Immediately after a deep, impassioned, plaintive  
melody, an Adagio of his own composing, which  
uttered the soft, low breathing of a Mother's  
Prayer, rising to the very agony of supplication, a  
voice in the crowd called for Yankee Doodle. It  
shocked me like Harlequin tumbling on the altar  
of a temple. I had no idea that he would comply  
with what seemed to me the absurd request. But,  
smiling, he drew the bow across his violin, and  
our national tune rose on the air, transfigured, in  
a veil of glorious variations. It was Yankee  
Doodle in a state of clairvoyance. A wonderful  
proof of how the most common and trivial may  
be exalted by the influx of the infinite.

When urged to join the throng who are follow-  
ing this Star of the North, I coolly replied: "I  
never like lions; moreover, I am too ignorant of  
musical science to appreciate his skill. But when  
I heard this man, I at once recognized a power  
that transcends science, and which mere skill may  
toil after in vain. I had no need of knowledge to  
feel this subtle influence, any more than I needed  
to study optics to perceive the beauty of the rain-  
bow. It overcame me like a miracle. I felt that  
my soul was, for the first time, baptized in music;  
that my spiritual relations were somehow changed  
by it, and that I should henceforth be otherwise  
than I had been. I was so oppressed with "the  
exceeding weight of glory," that I drew my breath  
with difficulty. As I came out of the building, the  
street sounds hurt me with their harshness. The  
sight of ragged boys and importunate coachmen  
jarred more than ever on my feelings. I wanted  
that the angels that had ministered to my spirit  
should attend to theirs also. It seemed to me as if  
such music should bring all the world into the  
harmonious beauty of divine order. I passed by  
my earthly home, and knew it not. My spirit  
seemed to be floating through infinite space. The  
next day I felt like a person who had been in a  
trance, seen heaven opened, and then returned to  
earth again.

This doubtless appears very excessive in one  
who has passed the enthusiasm of youth, with a  
frame too healthy and substantial to be conscious  
of nerves, and with a mind instinctively opposed  
to lion-worship. In truth, it seems wonderful to  
myself; but so it was. Like a romantic girl of  
sixteen, I would pick up the broken string of his  
violin, and wear it as a relic, with a half supersti-  
tious feeling that some mysterious magic of melody  
lay hidden therein.

I know not whether others were as powerfully  
wrought upon as myself; for my whole being  
passed into my ear, and the faces around me were  
invisible. But the exceeding stillness showed that  
the spirits of the multitude bowed down before the  
magician. While he was playing, the rustling of  
a leaf might have been heard; and when he closed,  
the tremendous bursts of applause told how the  
hearts of thousands leaped up like one.

His personal appearance increases the charm.  
He looks pure, natural, and vigorous, as I imagine  
Adam in Paradise. His inspired soul dwells in a  
strong frame, of admirable proportions, and looks  
out intensely from his earnest eyes. Whatever  
may be his theological opinions, the religious *sentiment*  
must be strong in his nature; for Teutonic  
reverence, mingled with impassioned aspiration,  
shines through his honest Northern face, and runs  
through all his music. I speak of him as he ap-  
pears while he and his violin converse together.

When not playing, there is nothing observable in  
his appearance, except genuine health, the uncon-  
scious calmness of strength in repose, and the  
most unaffected simplicity of dress and manner.  
But when he takes his violin, and holds it so  
caressingly to his ear, to catch the faint vibration  
of its strings, it seems as if "the angels were  
whispering to him." As his fingers sweep across  
the strings, the angels pass into his soul, give him  
their tones, and look out from his eyes, with the  
wondrous beauty of inspiration. His motions  
sway to the music, like a tree in the winds; for  
soul and body chord. In fact, "his soul is but a  
harp, which an infinite breath modulates; his  
senses are but strings, which weave the passing  
air into rhythm and cadence."

If it be true, as has been said, that a person ig-  
norant of the rules of music, who gives himself up  
to its influence, without knowing whence it comes,  
or whither it goes, experiences, more than the sci-  
entific, the passionate joy of the composer himself,  
in his moments of inspiration, then was I blest in  
my ignorance. While I listened, music was to my  
soul what the atmosphere is to my body; it was  
the breath of my inward life. I felt, more deeply  
than ever, that music is the highest symbol of the  
infinite and holy. I heard it moan plaintively over  
the discords of society, and the dimmed beauty of  
humanity. It filled me with inexpressible longing  
to see man at one with Nature and with God; and  
it thrilled me with joyful prophecy that the hope  
would pass into glorious fulfillment.

With renewed force I felt what I have often said,  
that the secret of creation lay in music. "A voice  
to light gave being." Sound led the stars into  
their places, and taught chemical affinities to wait  
into each other's arms.

"By one pervading spirit  
Of tones and numbers all things are controlled;  
As ages taught, where faith was found, to merit  
Initiation in that mystery old."

Music is the soprano, the feminine principle, the  
heart of the universe. Because it is the voice of  
Love,—because it is the highest type, and aggre-  
gate expression of passionate attraction, therefore  
it is infinite; therefore it pervades all space, and  
transcends all being, like a divine influx. What  
the tone is to the word, what expression is to the  
form, what affection is to thought, what the heart  
is to the head, what intuition is to argument, what  
insight is to policy, what religion is to philosophy,

what holiness is to heroism, what moral influence  
is to power, what woman is to man—is music to  
the universe. Flexible, graceful, and free, it per-  
vades all things, and is limited by none. It is not  
poetry, but the *soul* of poetry; it is not mathematics,  
but it is in numbers, like harmonious proportions  
in cast iron; it is not painting, but it shines  
through colors, and gives them their tone; it is not  
dancing, but it makes all gracefulness of motion;  
it is not architecture, but the stones take their  
places in harmony with its voice, and stand in  
"petrified music." In the words of Bettina—"Ev-  
ery art is the body of music, which is the soul of  
every art; and so is music, too, the soul of love,  
which also answers not for its working; for it is  
the contact of divine with human."

## NURSERY BUSINESS.

## True Lawton Blackberry.

RECEIVED BY LAST STEAMER, IN THE MOST PER-  
FECT ORDER, by the undersigned, direct from the  
Growers in New York, imported with great care, by Colonel  
Warren.

## HOPE NURSERY,

Between William and San Carlos streets,  
In the Eastern part of the  
CITY OF SAN JOSE.

## D. T. ADAMS,

RESPECTFULLY INFORMS HIS FRIENDS AND  
the public that he has for sale a choice stock of  
APPLE AND PEAR TREES,

that are hardy, and have been grown with much care  
as to selectness of soil, extent of variety, size and vig-  
orous growth, to give entire satisfaction.

A SPECIAL PREMIUM was awarded to the proprietor  
by the California State Agricultural Society, at their Annual  
Fair, 1883, for the BEST APPLE NURSERY.

Early orders to purchase largely are especially solicited  
to call and examine for themselves.

10,000 Apple Trees, 2 years old, 100 varieties;  
0,000 do do 1 year old;  
2,000 Pear Trees, 1 year old;  
1,000 do do do on the true Broad-  
leaved Angora Quince; 100 varieties.

Also—A good assortment of CURRANTS and GOOSE-  
BERRIES; California GRAPE-VINES.

Sold at as low prices as Trees of the same size and quality  
can be purchased at any responsible Nursery in the State.

The larger portion of this stock has been propagated from  
Trees that have borne Fruit in California.

All orders for Trees must be accompanied with the Cash,  
and persons ordering Trees will please state explicitly by what  
conveyance they are to be sent.

Trees packed in the most thorough manner, enabling them  
to endure any probable exposure, delay, or handling; for  
which a moderate charge will be made, barely sufficient to  
pay the cost of material and labor. All packages delivered at  
the landing, Alviso, for the steamer, free of charge.

213m D. T. ADAMS, San Jose.

MOUNTAIN VIEW

of different sizes and prices, and as low as good Trees

can be bought at any first-class Nursery in the State.

Many persons have had poor success with Cherry Trees

in this State. We state for their information that

Our Cherry Trees are grown upon the true im-  
ported Mazzard stock, and not upon com-  
mon Native or Oregon stock of this Coast,  
the former being the only stock fit to grow them on.

## The California Farmer.

SAN FRANCISCO:  
FRIDAY.....FEBRUARY 25, 1859.

## Their Names are Recorded.

As the chronicler of the *Rise and Progress of the Agriculture of California* we should be unfaithful to the cause we have espoused, did we not often look back, and draw experience from the past. We often go back to our early volumes, to review our own work, and to strive to correct every error we have made in the principles we have laid down, or the theories we may have promulgated; and however many errors of omission we may find, we rejoice in the belief that no great and important theory that we have ever advanced, or any great, fundamental doctrine presented, has been controverted by the test of practical experiment; except that, it has been more than realized for the good of the cause we advocated, and the general benefit of our State, and the people thereof.

We can turn over the past completed *Ten Volumes of the Farmer*, with a heart-cheering pride, and find many sketches of the early Agriculture of California, and find there recorded the prophecies of the then future, but now past or present, and find all we said more than verified by the present glorious success visible everywhere over our prosperous State. This, to us, is indeed a glorious reward for past labors and trials.

With the great mass of printed records, we have also volumes of manuscript, containing evidences, strong as Holy Writ, of the real and fidelity of the friends of Agriculture, and we have also a mass of records that have not yet seen the form of type, or the light of any other eyes but our own; but all these we shall faithfully preserve to be recorded and passed down, well authenticated, as the history of this State in the science of Agriculture. We mean that the name of every friend and advocate, all who have cheered on this work, shall be duly remembered, and we mean, too, all who have hindered shall not be forgotten; every one shall be recorded: the liberal, and their abundance, and the widow's mite, alike shall be recorded in faithfulness.

It is always wise to refer to the past, for useful lessons are received therefrom; and as we often refer to legislative action and aid in behalf of this great cause, we desire at this time to bring to the minds of our present legislators an act of their predecessors some five years since. We do this to remind them that however they may act on any great question touching the interests of this State, they should so act that, in all after years, they can look back with pride and satisfaction upon their recorded votes, and feel that they have been instrumental in building up the State.

Five years since, very few of our legislators even dreamed of the magnitude of interests that would be involved in the *Agriculture of California*. They little dreamed that in California horses would sell for \$5,000, or horned stock for \$2,500, or sheep for \$1,000, each. They little dreamed that, ten years had passed, "the cattle on a thousand hills" would outvalue our gold mines; or that the fleece of our flocks would supply fifty thousand spindles; or that the wines of our State would load many ships annually; or that flour, beef, pork, butter, lard, bacon, etc., would be great articles of export, yet such is now, and will be more than realized. Five years since, the Legislature were appealed to, to aid the cause of Agriculture by granting an act of incorporation for a State Agricultural Society, and an annual bestowment of five thousand dollars for four years. That petition had warm friends, and it had opponents. Upon a careful review of that first aid to the cause that California gave, will not those Legislators who aided the bill and voted for it look back upon their vote with joy and pleasure, as they see the great results now beaming upon the State? And how feel those who voted against that measure? Could they have the power would they not change their vote? We recorded their names, at the time, to be a matter of history. Upon the final passage of the bill in the Senate, May 11, we published the following article, which we republish now to show that our views then have proved truthful in the present condition of agriculture. We think the few days would rather be years now. But, gentlemen-Legislators, you do not act for the present only, your acts will tell upon the future of California, and if your vote is recorded against the best interests of the State now, each succeeding year it will weigh upon you until it will become as a mountain, dragging you down. "Act well then in the present, and look hopeful to the future."

Here is the record we made in 1854, five years since:

## STATE AGRICULTURAL SOCIETY.

The Assembly bill to incorporate a State Agricultural Society, and appropriate money for its support, was brought before the Senate on Thursday last, read a third time and passed. (The bill appropriates \$5,000, for four years, for the purchase of premiums.) Mr. Sprague moved to strike out the appropriation, and was seconded by Mr. Keene, but the amendment was lost. The bill passed by the following vote:

AYES—Messrs. Bryson, Catlin, Colbroth, Colby, Crabbe, Crenshaw, Grewell, De La Guerra, Hudson, Livermore, Lyons, Mahoney, May, McFarland, Peck, Wade, Walkup, Whiting, 18.

NAYS—Messrs. GARDNER, BAGAR, KEENE, LEAKE, LENT, SAWYER, SMITH, SPRAGUE, 8.

This prompt and decisive action on the part of our senators is alike honorable to them and to the State. The good that will be accomplished by the means placed thus opportunely into the treasury of the State Society, will cast its reflex influence upon those Senators and Representatives that have thus faithfully regarded the important interest of Agriculture.

The establishment of a State Society with means to commence operations upon a liberal scale the first year, we hail as a boon of no ordinary character: it is an act on the part of our legislators memorable for satisfaction. They will see the rapid development of the real wealth of the country—the satisfaction of knowing they have been in a great measure instrumental in hastening the work onward.

With the publication of the Act of Incorporation we shall publish the names of those members

who have advocated and sustained this wise legislation, and make them a matter of record, that we may refer to them in after years with pride and pleasure. We shall also make a record of those names that opposed the bill, and while we freely accord to every man, especially legislators, a perfect freedom of opinion and action upon all submitted to them, we shall not fail freely to express our own, and to declare boldly that in a measure of such vast importance to the fundamental interests of our State it betrayed a short-sighted policy as well as an ignorance of these great interests, to oppose a measure fraught with the means of accomplishing so much good.

## The Next State Fair.

The next State Fair will be held at the city of Sacramento—our fair sister city, the Queen of the Prairie land. The citizens of Sacramento county seem to be in earnest about the matter. They have already obtained authority from the Legislature to tax the whole people of the county one-quarter of one per cent; by this means, the sum of \$30,000 will be raised for Public Buildings and Fair grounds. This will be a noble beginning, provided a suitable spot is selected, and such buildings erected as will answer the purpose of the cause for which the money is raised. When public money is to be expended it is too apt to be the case that there are too many private interests to serve. In this case, we are pleased to see the matter is in the hands of three good practical men, who we feel as permanent residents and property holders of the county, will labor earnestly for good: D. W. Welty, J. C. Davis, and A. P. Smith. Each of these gentlemen, we know, will do all they can to advance the best interests of the county, thereby promoting their own honor as well as the good of the public. The location is important, it should not be in the middle of the city, nor too far from it; on the line of the Railroad, near by, would be the appropriate place, and we think we know of individuals that would cheerfully donate liberally to aid in this good work.

The recent vote of the citizens of the county, being nearly unanimous, places beyond a doubt the wish of the citizens for this important work. We know we shall not be esteemed dictatorial in any suggestions coming from us; we believe we have given too good proof of our devotion and love to the city of our early years in California, to be charged with any personal feeling in wishing that this edifice, that is to mark so important an era and promote so great a cause, should not only be properly located, but should be constructed of the right material, and built in a style appropriate for the purposes designed. The grounds around it should be in keeping with the buildings, in space and form, else a great portion of the beauty were lost.

We truly rejoice to record the prompt and decisive action of the Sacramentoans; they have honored themselves, and the State. Now then, to work. If a good and glorious State Fair is to be held, one surpassing all previous ones, let plans be immediately laid for a general convocation of all the members of the State Society, at as early a day as possible, and put things in such a train as will secure the hearty cooperation of all the friends of Agriculture everywhere. Away with all sectional and party feelings, away with all foolish, unjust and unwise prejudices, and unite, one and all, for the good of our State. Let the Executive Committee do their duty faithfully and fearlessly; call men to action and labor that are qualified for the duties required in this cause, make that the qualification, and have no other. Select committees from all parts of the State; take men that will act, and act right, without partiality or favor. Publish their names—let it be known who the men are, and this will inspire confidence. The working men of an Agricultural Society should be practical and scientific agriculturists, as far as is possible.

Why should not an Agricultural Society be guided by the same great principles as govern all other great professions? When *Mechanics* assemble for business, they select mechanics for their Committees; when medical men assemble, they select medical men; when the Chamber of Commerce meet for business, they select merchants for business—and shall not the great cause of Agriculture demand as faithful a care as the interests we have named? One great reason why our cause is so backward, is, the most important posts have been placed in the hands of men who had but little interest in the matter. Let it be so no longer. Agriculturists must awake, take the reins in their own hands, watch their own interests, manage their own cause, and control their own public exhibitions. Let them unite as one man, and a proud triumph awaits them.

## The Present Legislature.

The responsibility that rests upon this body of men now assembled, is vastly greater than upon any Legislature heretofore gathered in our capital. In years past the power, influence, resources, capabilities and wealth of the State, were but little known and felt, and our legislators were like men with one talent intrusted to them; at least so they felt and acted. Then, they were blind, but now they see, and to each and all five talents are intrusted, and five more will be required at their hands. Let them remember, to whom much is given, much will be required.

THE TRAVELER'S READING ROOM AT CLEVELAND, Ohio.—A large and spacious reading room, free to all strangers and travelers, has been opened at the above city, to which all are invited to call. A. Meader, Esq., is the proprietor. About one hundred and fifty papers are on file at the room. Stock-raisers and wool-growers of California who may visit Ohio should visit the room. The CALIFORNIA FARMER will always be found on file at the room. Mr. Meader will act as our agent, and our Ohio friends can subscribe to him.

NEW OX-YOK.—We learn that a new Ox-yoke has been invented by H. W. Weeks, of Boston. It is of cast-iron with pipe bolts, weighing from fifty to eighty pounds. The inventor is now in our city, and the invention will soon be presented to the public. The great desideratum which should be aimed at, is light weight and ease upon the cattle's necks, and strength and support to the latter while pulling. We only present the fact of the invention now, but shall give notice of examination and test of its merits hereafter.

## Who shall Build the Bulkhead?

"He sold his birthright for a mess of pottage." Shall a city, destined to be the mightiest, richest, and most favored of all the cities of the earth, yield up all these gifts of Providence for a "mess of pottage"? Shall a Sampson be again robbed of his strength by a Delilah? Hath the poisoned chalice been already raised to the lips of the king, and no talismanic power to dash the death-goblet down? Hath all the people bowed down to the golden calf; and is there not wisdom enough in all the land to raise up a brazen serpent, so that the people may look on him and live?

Is San Francisco a doomed city? She hath already been stricken with many plagues, and is she now to be stripped of the brightest jewel in her crown; is Nature's heritage to be taken from her?

Blow ye the trumpet, call forth the people; gather them quickly upon Pilot Hill (Telegraph Hill); show them, that like the seven-hilled city of Imperial Rome (this city was ordained, with her seven hills), that here, into this magnificent harbor, the finest in the world, is destined to come "all the ships of Tarshish, bringing gold, frankincense, myrrh and spices." Shall these God-crowned hills be destroyed? Shall these richly-laden ships be sent away? Shall this beautiful Bay become the sport of the despoilers, and our city pay tribute money for the buccaners who lord it over the powerless. Forbid it, ye Gods, who hover over and protect the beautiful of earth.

We are no politicians; we know nothing of politics, or party, and we know not the means that are being used to take away the very birthright of this city. If such an enterprise can be made profitable, why should not the city build the bulkhead? Suppose it should cost five millions—what is that to a city like San Francisco? Let the city awake before it be too late. Five millions of dollars is a mere bagatelle; San Francisco can borrow ten millions, if she desire it. Let our city begin and build one-quarter of this bulkhead, and this would produce an income that would build all the balance.

This is the Great Question of this city now, and now is the time; delays are dangerous—delay is Death. Call out the citizens upon the plaza, raise the stars and stripes, and then consider this question and act. Woe be to those who permit this city to be defrauded out of her true patronage. Better that they had never been born.

NOTICES OF OUR NEW VOLUME.—We are very grateful for the many kindly notices of our new volume. We shall remember all and preserve them too, for we do appreciate kindness well meant. Among a host we have received, in print and by letter, we cannot forbear to copy one from the Sierra Citizen, which reads as follows:

"The Farmer.—The California Farmer, volume eleven, appears with a beautiful head ornament and an impression created by new type. The Farmer is indeed an elegant and meritorious publication, whose success we are pleased to chronicle. The editor and proprietor is Colonel Warren. The Farmer is devoted to all the useful sciences including stock raising and women."

Truly you are (Wright, brother of the Citizen, we do go for all the useful sciences; stock and women; and we appeal to your gallantry to answer, is not woman the best stock in the world? Trace the history of the greatest and best of men back, and the starting point is woman: she is the strongest, purest, fleetest, fairest, brightest and best emblem of everything good, true, and beautiful, under Heaven. Then why should we not, as the advocate of our noble State, whose emblem is woman, plead her cause? Correct, are we not, Wright, Sierra Citizen?

And here too comes our neighbors of the Golden Era, with words of kindness; hear them:

"The California Farmer.—We neglected to mention, last week, that the California Farmer made its appearance in an entire change of raiment, and with a new head, on the 4th instant. It is a beautiful specimen of a newspaper, and is as good as it is good looking. The Colonel has grown an inch taller since the event, and elbows his way along the street with an air of intense satisfaction. His felicity will be complete as soon as a five-hundred-pound pumpkin is grown in Napa Valley. He is entirely devoted to the interests of California, and we are happy to learn that the Farmer is a source of profit to its proprietor."

Grown tall have we? We would like to know who wouldn't grow tall to read such a paragraph about one's self? Grown tall? yes, and heavy too—gained half a pound a day, regularly, ever since our new volume commenced. Growing fat—elbow our way don't we? That five-hundred-pound pumpkin will be grown sure; then won't we be happy? Six feet two, and 240 pounds—just right for an alderman; but we ain't no candidate—can't take office—don't want any better than what we have got—wouldn't give it up to be President of the United States. Thanks, brothers, of the Era; may your trio be quadrupled, and the music be a harmonious jingle like shining gold.

WASHINGTON'S BIRTH-DAY.—Tuesday will long be remembered in our city. We rejoice to record the fact, that this holy day was observed most nobly. Merchants, business men, and citizens generally, observed the day. Banks, and places of trade and traffic were closed, and parents and children enjoyed a day, by enjoying the liberty for which the immortal Washington gave the great purposes of his life to secure. Our plaza presented a lively scene: the military in their gay dress, the roar of cannon, and the groups of happy people, all testified to the value of our glorious freedom; and we are happy in recording the fact that it was not only a happy day well and worthily spent, but it was orderly observed. Various demonstrations in all the cities of our State, testified to their co-operation in the same observance of the day.

FREEMAN & CO.'S EXPRESS.—The proprietors of this Express house are about to extend their business to all parts of the State. The steady increase of all kinds of business requires the aid of Expressmen to the remotest portions of the State, and we are glad to know that we are to have more facilities. John Freeman, Esq., the head of this House, is the old Pioneer Expressman who first opened the business on the Sacramento, and the friends has laid a foundation for business, which will be advantageously felt now. We wish the House an abundant success.

## Solomon's Temple.

We passed a brief hour the last week at the late Mechanics' Pavilion, where this work of art, in miniature, is being prepared for exhibition, under the care and study of those who have designed and planned this work. We feel it to be a proud thing for California that "Solomon's Temple" is to be built within her borders; we hail it as a good omen for the future. A stranger would naturally suppose that a work like this Temple, requiring mechanics of the highest order of skill, could not be built in California; but a little reflection will not only convince one, but give assurance that there is "no work or device" requiring skill and ingenuity, which cannot be perfected here. We feel assured, as we have often said before, we have in California mechanics of the very highest order of talent.

The building of this Temple will require workmen of the highest order, for it will require workmen in brass, workers in gold, and workers in all kinds of curious wood. The building of this Temple here in this city, awakens some singular reflections; let any one read the Book of Kings and examine the building material used by King Solomon, and then go to the workmen now employed, and although this Temple is to be built of California wood, it will be of the same material as was the Temple by King Solomon:

"So he built the house, and finished it; and covered the house with beams and boards of cedar."—(1st Kings, 6-9.)

And this Temple is built of California redwood, or cedar. Again:

"The two doors also were of olive-tree; and he carved upon their carvings of cherubims, and palm-trees, and open flowers, and overlaid them with gold, and spread gold upon the cherubims, and upon the palm-trees."—(1st Kings, 6-32.)

And at this time the workmen are engaged in preparing the doors and the carvings from the olive trees of the Pacific coast; the gold that will overlay them will be our own native gold.

We might enlarge upon this theme now, but we only allude to it to awaken an interest in behalf of this magnificent work now in progress; a work which will do more for the mechanics of California than any Public Fair ever held, for it will create a taste for the beautiful in Architecture.

The building of this Temple in our midst will inspire a greater love for the "glorious Order of Masonry," and reveal much of the beauty and harmony not dreamed of even by the brethren themselves. It will be the means, we really believe, of adding a thousand members to the various lodges of the State, if not in this very city. It will inspire builders with a new taste for the beautiful, and be the means of elevating public taste. Our public buildings will hereafter be of a higher order of style; our private residences more chaste and elegant, and by this means a marked improvement in every order of building. We have great faith in the exhibition of this great work, and when finished and opened to the public, we trust there will be such an appreciation of the herculean task accomplished by the proprietors, that the Order of Masons, our city, and our State, will unite in giving it a just tribute of praise and reward.

## When Doctors Disagree, who shall Decide?

The recent convention, at Sacramento, of the medical men of our State resulted just as we anticipated it would upon the famous question touching the report of Dr. Cole.

We can look back with some degree of satisfaction to the opinions expressed by us in our journal of January 14th—the only journal in this State that gave the true exposition of the case. This we are confident will be conceded by the medical gentlemen themselves, for their actions and resolutions at Sacramento confirm our very words.

We now re-publish an extract of our article of that time. We felt at the time that it was an important question, and we felt it a duty to speak out. The very next issue of our journal, after our own publication, we published a letter from a lady that expressed opinions confirming our own, and the late action and resolutions of the Medical Society have shown we took a just and correct view of the whole subject. The result will be as we then said, "Good will come out of evil." The following were our words, June 14th:

"This cruel thrust at the honor of the women of California was first presented to the public in a peculiar light, by one of the journals of our State, and like a flash, every pen, like the sword from the scabbard of a true knight, was ready to defend the wronged one. While we are ready to do our duty faithfully, known as our journal ever has been as the elevator, educator and defender of woman's true rights, we know that woman, as her own defender, will, in her keen-sightedness, see that a different construction has been put upon a document emanating from a responsible Society, if we judge by the names connected therewith; and although that Society may disavow, and will do so, any intention to wrong woman, they cannot now disavow that that document was not intended and had no reference whatever, in the fatal passages selected, to the honor of woman, but only alluded to natural causes and consequences, and expressed them in medical terms. If a just attention had been given to the subject, and every duty had been performed at the time, those passages would never have gone forth without such explanation going intent. However much we deplore the fatal error in that publication we believe that when woman herself shall read the card of Dr. Cole, shall know the relations that surround him, the ties that bind him to a wife, sisters, daughters and nieces, her noble truth, mercy, humanity and love, will be satisfied that a misapprehension of the whole matter has been given, and for some dark and wicked purpose. But good will come out of evil. It will arouse every woman to her true condition; it will awaken them to the importance of a correct knowledge of themselves, and their physical nature. A want of this knowledge has brought about this very discussion."

MCGRAFFIN AND DARIN'S AGENCY.—We desire to call the particular attention of the public, of all wagon makers, carriage builders, manufacturers, machinists, business requiring an Agent to buy and forward materials or goods—to the card of the gentlemen named above, as Purchasing and Forwarding Agents, appearing in our columns. We think this is just such a business as State; and the advertisers being working men, are well competent to act with fidelity and to the profit of their patrons, and we are pleased to recommend them to the public.

## Beautiful Flowers.

"Oh! the flowers look upward in every place Through this beautiful world of ours."

There is a language of these bright and beautiful gems of earth, that is sweeter, richer, more melodious, than was ever uttered by mortals. To the true, reverential soul, the voice of the flowers is the voice of God; and we sometimes feel as if their very touch inspired us—that they knew and recognized us as their friend. And so with all who truly love flowers. There is an affinity, a harmony with bright flowers and the beautiful in the human soul—an electricity that flowers recognize; and we were strongly impressed with this belief upon learning a fact which occurred recently: A lady, whose mind is the temple of the beautiful and pure, had a large rosebud presented to her; it was near to the period of opening into bloom, and had been placed in a vase near to her. Taking it into her hand to admire it as a type of the lovely, as her hand took the bud and pressed it to her lips, it suddenly expanded with a report loud enough to be heard across the room. In an instant the rosebud had become a full-blown rose, and its perfume was sufficient to fill the whole room.

If there ever was an omen of good, this must be one; and we prophesy that it is a promise of the goddess of these gems of Paradise, of a life of restored health and usefulness, to one who has scattered a fragrance around her by a pure life, noble deeds, and bright intellectuality; and the beautiful rosebud could give no other token of recognition than to open its bright petals and cast its fragrance upon one to whom it came with an offering of incense worthily tendered.

## A True Sign.

"I am just moving into this Valley, and I like the soil much; but the way some of the fencing and cultivating is done puts one in mind of the farm we read of in the good book—with the walls broken down and briars and thorns covered the face of the earth. I guess (if you will allow me) that they do not read the FARMER up here much, and I think I can tell pretty well, by the looks of a farm, if the proprietor is a reading man, especially if he reads the FARMER."

We received the above from a kind subscriber and a good practical farmer. We do not give the name of the place or the writer; as we are a Yankee, we guess it would hit twenty places where the fences are down. At all such places we do hope they will take the FARMER. If they read it, they will mend their ways as well as fences. We hope our friend, and all friends, will stir up a goodly list of new subscribers for us right off, and that will be a good remedy for killing off briars and thorns! We hope our friend will try and get us twenty names.

## MEND YOUR WAYS BEFORE YOUR OWN DOORS.

Everybody complains of our streets, their miserable, dangerous condition. It is true, they are bad enough, but will complaining put the streets in order? Let everybody go to work and do something. Many hands make light work. If every property-holder would do a little, and every tenant do a little, our streets would be far better. We commend the example of C. Sherman, Esq., the Upholster, on Washington street; he has laid a fine street-crossing from his store over to the Washington Market side, and ladies can cross in safety. Now, grumblers and misers will say it was for his own interest to do so, to bring his customers to him; yet how many thousands that never enter his store will reap the benefit. It is a public benefit, and shows a public spirit that we like to see, and is most commendable. Let his example be followed, and if "each one mends one," the Lord will mend the whole. Reader, "go thou and do likewise."

THE FUTURE OF CALIFORNIA.—This subject, so admirably pictured forth by our valued correspondent B., in number two of this volume, is worthy the careful perusal of every friend of our State; and yet however glowing this picture may be, even when set forth by the most gifted, the future of California cannot be pictured; it stands yet unrevealed in all its glories. Like a planet that affects the solar system, and elicits the attention of scientific minds that its power may be known; so stands California. She does affect, and will influence, not only our own "little Union," as some term it, but the world; and we believe there is not a State in our glorious Union, whose influence will prove as mighty as this State in ten years; but of this our correspondent has spoken well.

GOOD NEWS FOR THE MINERS.—Emerson & Co., of Sacramento, have made and patented a famous Pick for the miners; solid and eyeless, yet light and strong; a piece of workmanship that reflects great credit upon them as inventors and workmen. They make eight sizes and patterns. Numbers 1, 2, and 3, are drifting picks; number 4, is a tunnel or drifting pick; numbers 5 and 6, are tunnel or bank picks; number 7, is a bank, surface or river pick; and number 8 is a very heavy surface or river pick. A very handsome sample pick has been sent to our office, where it can be seen. It is worthy a high consideration. Success to such workmen.

PANGBURN'S SEED STORE.—We take pleasure in calling public attention to the Seeds offered at this warehouse. They are of extra quality, having been selected as a special favor under the direction of the Hon. M. P. Wilder, well known to the agricultural world as one of the best friends the cause ever had. The order of Mr. Pangburn was sent through a son of Mr. Wilder now in this State, in order to secure a very choice selection, and we know that is particularly worthy of attention. We know, also, that Mr. Pangburn has no seeds but new seeds in his store, having commenced business with an extra new stock of goods, all of the best quality. Mr. P. is well skilled in the business in which he is now engaged, having been the head salesman and director of the United States Agricultural Society formerly kept by Mr. McNally—the location now occupied by Mr. P., to whom we can with pleasure and confidence recommend the friends of Agriculture.

OPPOSITION STEAMERS TO PACIFIC MAIL COMPANY'S LINE.—C. K. Garrison & Co.'s new line is announced for the 5th March, and a very great interest is manifested by the public in the success of this enterprise, on account of so many previous attempts at opposition, all of which have been suddenly withdrawn. Some people say the same result will occur again.

## BY THE OVERLAND MAIL.

The overland mail from St. Louis, Jan. 31st, arrived in this city yesterday, at noon.

PROBABLE END OF THE PACIFIC RAILROAD SCHEME.

On the 27th of January, the Pacific Railroad bill was taken up, and various verbal amendments were made preparatory to a direct vote on the bill. The action of the Senate was as follows: Mr. Doolittle's amendment to advertise the estimates for the three routes being adopted as a final section to the bill, Mr. Simmons of Rhode Island moved to strike out all between the enacting clause and the said final section, which was carried, thus killing the bill—yeas, 38; nays, 20.

The bill was read three times and finally passed by the following vote: yeas, 31; nays, 20.

Mr. Bell then moved that the name of the bill be altered to read, "A Bill to authorize and invite proposals for the construction of a railroad from the valley of the Mississippi to the Pacific Ocean on three separate routes." Agreed to. The following are the provisions of the bill:

That advertisements be inserted in two papers of each State, and the district of Columbia, inviting estimates for three routes; the sum of \$3000 to be appropriated to pay expenses.

On the 29th of January, Mr. Gwin made a motion to reconsider the bill. He prefaced it with a few remarks, stating that his object was to make the estimates to be advertised for more specific, to prevent bids of men of straw, and include in the invitations for estimates proposals for a branch road to Oregon.

Mr. Stewart, of Michigan, moved to lay the motion to reconsider on the table; but the hour of one arriving, the vote thereon was postponed to Monday, 31st January, on the morning of which day the overland mail left St. Louis.

Boston, Jan. 29.—William H. Prescott, the historian, died yesterday very suddenly from paralysis. He had been enjoying good health up to the morning of his death.

A verdict was rendered in the Supreme Judicial Court against the Boston and Worcester Railroad for \$20,000 damages awarded to Mrs. Sarah E. Shaw, whose husband was killed and herself injured some years ago by a train coming in contact with the plaintiff's carriage.

A private letter, dated January 10th, from Port-au-Prince, received via St. Thomas and Havana, says that the Emperor Souleuvre has been defeated by Jeddard, and the Imperial troops were running back toward the city. The writer thinks that the contest is nearly ended, and that in a day or two a republic would be in force.

Baltimore, Jan. 30.—The Steamer North Carolina, Captain Cannon, bound to Norfolk, and one of the colored stewards perished. She was a first-class steamer, and insured for \$80,000.

New York, Jan. 28.—The Harlem boat, to-day, ran into the city barge, containing physicians bound to the Wards of Blackwell's Island, when nine persons were drowned, supposed to be physicians.

Washington, January 30.—The special agent of the Treasury Department, dispatched some time ago to investigate matters connected with the California Mint and Custom House, has laid his report before the Secretary. The report charges gross mismanagement and abuses as existing in all the Departments of California, and it is probable removals will be made.

A person has arrived here representing the squatters on the Mariposa property in California, to ask the intervention of the Government in settling aside the Fremont patent, on the ground of fraud in the survey. The subject has been laid before the Attorney General.

The House Post Office Committee will endeavor at their next meeting to abolish overland mail service to California. This move is made with the view of cutting down and retrenching the expense of the Post Office Department.

The report of Mr. Nugent, late Commissioner to British Columbia, is being printed. It is lengthy. Mrs. Gwin's hall was a great success. The services of Mrs. Brown are considered among the most attractive of the season. Lord Napier gives a grand ball to-night.

The depreciation of the French funds, in consequence of Napoleon's few harsh words to the Austrian Minister, had been five per cent in London; six per cent in Austria; and three per cent in Turkey, making an aggregate depreciation in the nominal value of public stocks and shares in the European markets, of not less than \$6,000,000 sterling.

The Prince Napoleon had gone to Turin, to marry the King of Sardinia's daughter. His visit was expected to produce a sensation. The impression seemed to prevail that this marriage would secure the support of France to Victor Emanuel in becoming King of Italy.

MORGAN HORSES IN KENTUCKY.—Many persons at the West and South have within the last few years endeavored to introduce into their respective districts this celebrated breed of horses. We believe most of them have found the adventure a profitable one, and we occasionally find in our exchanges accounts of the success of individuals which are well worthy of note. A case in point is that of Elias Dorsey, Esq., of Louisville, Kentucky. Some three or four years since, Mr. Dorsey commenced breeding from this stock, and purchased in Vermont first class animals, for which he was compelled to pay the highest prices. These he has since bred with judgment and care, and the result is he now has some superior young animals. Mr. Dorsey exhibited his stock in the autumn of 1857, at the St. Louis, Louisville, and other Fairs, and received over eight hundred dollars in premiums. He exhibited them again at several Fairs during the past season, and although he has but few animals, he received the sum of thirteen hundred and thirty-five dollars in premiums.

His almost invariable success wherever he exhibited his stock, whether at home or abroad, furnishes ample evidence of the superior character of his animals. [Am. Stock Jour.]

THE CHINESE.—The Sierra Citizen says: The perpetuation of Asiatic presence in American gold mines cannot be with the consent of our people. The recent decision of the Supreme Court pronouncing the act to prohibit the immigration of Chinese unconstitutional, has created a general desire for new legislative action on the important subject. The San Andreas Independent sincerely trusts that committees may be appointed in both branches of the Legislature, to this end: that they may be men gifted in expedients and knowledge, and that they may be fortunate enough to discover a clear, safe and Constitutional remedy for this great evil, under which the State has so long suffered, and which is so startling when we contemplate its probable future influences upon our population.

A NEW GUN, invented by Messrs. Armstrong, of Newcastle, England, has been satisfactorily tested at Shoeburyness, the projecting power of which completely distances that of any piece of ordnance hitherto known. At an elevation of thirty-three degrees it has sent a 32 pound shot a distance of 9,000 yards, or more than 5 miles. The same range has been obtained by a nine-pounder, weighing sixteen cwt., of similar construction.

MOUNTAIN WINE.—The Sonoma Democrat notices a sample of wine from the vineyard of Mr. Peter Wynne, near Big Oak Flat. Mr. W. bottled about 800 gallons of white and red wine this season.

HOLLOWAY'S PILLS AND CATHARTIC.—The genuineness of these invaluable remedies is easily known. Look to the water-mark of the words "Holloway, New York and London, in semi-transparent letters in the paper of the book of directions. If this is not to be seen when held to the light, the same is spurious.

Sold at all druggists, at 25c, 60c, and \$1 per box or pot.

## Wholesale Produce Report.

(Corrected by Loomis, Hall & Co., Commission Merchants, foot of Washington street, San Francisco.)

Wheat, per cwt. \$2.20 @ \$2.75	Potatoes, per cwt. \$2.20 @ \$2.75

## San Francisco Cattle Market.

February 21.

There has been an advance of 1c per lb. in the price of first quality Beef since our last report, but the quality now coming in is much superior to anything that has been in the market for some time past. The market remains about the same. Pork has advanced considerably, and good choice dressed carcasses bring 15 cents readily.

We quote slaughterer's prices, as follows:

Barry—American, first quality, 14c per lb. Spanish, first quality, 12 1/2c per lb.	do do do do 11c 3/4 quality, 2 @ 3c per lb.
Metrol—Choice, 22 @ 23 1/2c	
Lamb—Choice, 21c per lb.	
Pork—Unsalted, 10 @ 12c; dressed, 15c per lb.	
Veal—Normal at 12 1/2c per lb. (Bulletin.)

ALAMEDA COUNTY MILK DEPOT.

138 Kearny street (between Sacramento and California).

PURE MILK ALWAYS ON HAND.

Hotels, Restaurants and Families supplied, by leaving their orders at the Depot, or giving them to the Driver of the Wagon, who is one of the Proprietors.

Fresh Ranch Butter and Eggs

Constantly on hand, and delivered to Families at any part of the city.

A. STAPLES. H. A. BROWN. W. GOLDEN.

Fruit and Ornamental TREES AND SHRUBS, Roses, Vines, and Exotic Plants.

PARSONS & CO.,

Flushing, near New York.

INVITE attention to their fine stock of HARDY and EXOTIC TREES and PLANTS constantly enriched by their collections in America and by importations from abroad.

Their EXOTIC DEPARTMENT, occupying a number of houses, is full of rare and valuable Plants and is worthy the inspection of visitors. The varieties of EXOTIC GRASSES are kept genuine by constant propagation from fruit-bearing vines, to which two houses are devoted.

Their ROSE department contains a large assortment of all the finest varieties, and the best standard sorts are cultivated in very large quantities and sold at reduced rates, for massing and for dealers. They do not bud their Roses and cannot therefore sell them to compete with those who have adopted that mode of cultivation. No stock upon which to bud has yet been found that will not sucker up and destroy the variety worked upon it.

In the OPEN GROUND DEPARTMENT they offer a large stock of well grown and thrifty FRUIT TREES, suitable either for the amateur or the dealer, including the most kinds of STANDARD and DWARF PEARS, CHERRIES, PLUMS, PEACHES, APPLES, &c. These are now offered at reduced prices.

In the HARDY ORNAMENTAL DEPARTMENT will be found a large quantity and variety of DECIDUOUS and EVERGREEN TREES and SHRUBS, for the avenue, lawn, or garden. A new feature of their establishment is the extensive propagation of the RARE evergreens, cultivated in very large quantities and sold at a great reduction from the usual rates.

Among them are:

Spirea, Lilac, Forsythia, Weigela, Stuartia, Andromeda, Pyrus Japonica, Norway Spruce, Deciduous Cypress, Larch, Ash, Maple, Beech, Linden, and others.

They have made the RHODODENDRON a specialty, and have cultivated it in so large quantities that they can offer it at greatly reduced rates. The beauty and richness of the foliage and flowers of this valuable shrub cannot be too highly appreciated. A new feature of their establishment is the extensive propagation of the RARE evergreens, cultivated in very large quantities and sold at a great reduction from the usual rates.

For Hedges, they would call attention to the SIBERIAN ARBORVITAE, which is far more valuable than the AMERICAN, in that it bears transplanting well, is very close and compact in its habit, requires no trimming, and is not affected by the coldest winter.

A General Trade Catalogue will be sent on application. Careful attention is given to PACKING and FORWARDING.

Persons about Putting Up Fences WILL find it much to their advantage to get one of HYDE'S PATENT Self-Adjusting Post-Drivers.

Under the disadvantages of their first trial they have put in Post three times as fast as the same force could do in any other way. And no one can be told how superior a driven post is to a set one. Price of Machine, \$75. HYDE & HOUGLTON, VALLEJO, Solano county.

22

## B. F. ROUNTREE, 115 CLAY STREET.

**BUTTER! BUTTER!! BUTTER!!!**

I HAVE IN STORE, AND FOR SALE, AT GREATLY reduced prices:

300 Erkins Choice TABLE BUTTER, 100 Erkins Cooking BUTTER.

## SEED, PLANTS, &amp;c.

**7000 LBS ALFALFA OR CHILE CLOVER**

SEED, crop of 1853;

25,000 lbs SEED CORN (choice varieties);

1,000 lbs SHAKERS HERBS and HERB SEEDS;

10,000 lbs SEED PEAS;

10,000 lbs SEED BEANS, choice varieties;

100,000 CHOICE FRUIT and SHADE TREES;

**Garden Seeds.**

500 lbs Orange seed;

400 lbs Yellow Dutch Onion seed;

300 lbs French Sugar-beet seed;

300 lbs Turnip seed, assorted;

100 lbs Yellow Danvers Onion seed;

100 lbs Red Onion seed;

150 lbs Radish seed;

100 lbs Cabbage seed, assorted;

300 lbs Carrot, seed;

**Grass Seeds, &c.**

20 bush Kentucky Blue Grass;

50 bush Timothy;

25 do Mixed Lawn Grass;

25 do Rye Grass;

20 do Hungarian Grass;

20 do Mesquit Grass;

50 do Redtop Grass;

5000 do White and Red Clover;

2000 do Millet;

1000 do Canary;

1000 do Hemp;

Top Onions, Jerusalem Artichokes, HYACINTHS, TULIPS, LILIES, UROCOS, JAPONICAS, And a variety of other Bulbous Roots.

PRUNING AND BUDDING KNIVES, and a variety of Horticultural Implements, And receiving by every Express from the States, and Europe, a general assortment of

**SEEDS, &c.**

N.B.—Catalogues furnished on application by mail or express, or otherwise; and all orders directed to S. W. MOORE, Seed Warehouse, 110 California street, will meet with prompt attention. A liberal discount made to the Trade.

For sale in lots to suit purchasers, by S. W. MOORE, Seed Warehouse, 110 California street, 20-3m

**SEEDS! SEEDS!!**

Crop of 1858.

Just Received by Express, on the steamer John L. Stephens,

A FULL ASSORTMENT OF SEEDS, Selected by Hon. Marshall W. Wilder, President of the Massachusetts State Horticultural Society, from responsible Growers, and warranted to be the CROP OF 1858.

**TAKE NOTICE,**

The undersigned being desirous of establishing a reputation, and being aware of the imposition that has been practiced on Farmers, thinks proper to state, that he has not an OLD Seed in the Store. All Seeds sold guaranteed true to name. Planters and Traders will find it to their interest to secure GOOD, RELIABLE SEEDS, at as low a price as they would have to pay for worthless trash.

Have also on hand and for sale, a very desirable assortment of Foreign and Fancy Grape Roots, Peach and Cherry Trees, Together with a full and complete assortment of AGRICULTURAL IMPLEMENTS.

For sale by J. L. PANGBURN, 85 Washington street, 1-2m Between Front and Battery streets, San Francisco.

**ALFALFA SEED.**

A SUPERIOR LOT, JUST RECEIVED, PURE, by the undersigned, from Valparaiso, and For sale in lots to suit purchasers, by

STOWELL & STODDARD, Nov. 1. 14-3m 87 Front street (up stairs),

**SEEDS! SEEDS!!**

Fresh Arrivals AT THE Agricultural and Horticultural SEED STORE, NO. 108 CALIFORNIA STREET.

New Crop of 1858:

7000 lbs. Alfalfa, 3000 lbs. Red Clover, 500 lbs. White Dutch do, 3000 lbs. Timothy Seed, 50 bushels Blue Grass, 50 " Red Top Grass, 20 " Bay Grass, 20 bus Mixed Lawn do, 500 lbs. Vetches, 3000 lbs. Early Kent Peas, 50,000 assorted Fruit Trees.

Double Hyacinths, Narcissus, Anemones, Crown Imperial, Dahlias, Ranunculus, Tulips, Tuberoses, Crocus, Iris, Gladiolus, &c.

Also, a full collection of all kinds of FIELD, FRUIT, GARDEN, and FLOWER SEEDS; all of which we can warrant.

Sold wholesale and retail, in quantities to suit purchasers, at our Seed Store. Also, Pruning Shears, Budding and Pruning Knives, &c.

N.B.—All orders forwarded to J. P. SWEENEY & CO., Seedmen and Florists, will meet with immediate attention.

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MARCH 4, 1859.

NUMBER 5.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 133 Washington street (up stairs), San Francisco.  
TERMS.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.  
Advertisements and Subscriptions must be paid for in advance.

[For the California Farmer.]

#### HORTICULTURAL ESSAYS.

LETTER NUMBER THIRD.

I HAVE often felt that the hostility of some Nurserymen against our system of irrigation, was not because they really thought the system bad, as much as it was that, not having the conveniences themselves to irrigate, they endeavor thus, by their opposition to it, to make capital out of that for the benefit of their own wares. But it affords me pleasure to say, that I know of some gentlemen who are too high-minded to allow their judgment to be warped by any such selfish motives; and, in making this exception, I will state that I have seen any quantity of stuff, grown by those "grumblers," which would have been greatly benefited had they received an occasional watering through the dry season. And again, I have visited Nurseries, the trees of which are claimed to be grown on ground which is never irrigated; and what did I see? Why, simply that the Nursery was planted on low ground, so low and moist, in some places, that the land was thrown up in the form of beds, with a dead furrow between, for the evident purpose of carrying off all surplus moisture; and those trees are claimed to be grown without irrigation, (!) when, in the very driest time, they could not be out of the reach of water. I do not by any means say, that those trees were not as good, in every respect, as they ought to be; but I do say, that as they were then growing upon that description of soil, the owner ought never to raise his voice, either directly or by implication, against irrigation, for it would be almost impossible for us, with all our steam power, to keep amongst our trees a fractional part of the moisture in which the trees I speak of were continually luxuriating.

This subject of irrigation is not soon exhausted, and I could go on to give other reasons and state many other advantages, but I must be brief, as well as endeavor not to be tedious; but, before proceeding any further, either on this or a new topic, I will have to copy a note from my memoranda (made the past season) of a Pear tree, which is now exactly six years old—the oldest and largest Pear tree on the place, and about a fair specimen of what the rest will be at the same age; they having all received the same treatment, and such as I have attempted to describe in a previous communication. The tree is composed of two varieties of the Pear, the Winter Nellis and the Bartlett, the former variety predominating. It has given good crops the last three years, and has never been irrigated since that time; the only moisture it receives is the leakage from the hose, which sometimes pass close by it, when supplying water in the vicinity where it stands. For reasons previously given, we are very cautious how we use water near such trees. From this tree I gathered and weighed: from the Winter Nellis portion, two hundred (200) pounds of fruit from large size fruit; there being not an inferior specimen upon the whole tree. The Bartlett portion had not been weighed, but it would be rather under than over the weight to estimate at about eighty (80) pounds. This all sold at prices ranging from half a dollar to one dollar per pound; a very profitable tree it will be admitted, as well as being a gratifying result of the care and attention bestowed upon it, and others; being at the same time an index to the future of several hundreds, which, in another year, will be just like it.

Before dismissing this subject of irrigation, I would like to direct attention to another very important advantage in having a good supply of water. The past two seasons have each been particularly unfortunate for the Peach crop; the trees having been badly affected with the "curl leaf," a disease (if it be a disease, but upon that I have my doubts, and will, therefore, call it a casualty) upon which Cultivators entertain diverse opinions, each alleging a theory of their own; and but few, that I have heard, agree upon any one point. In my own mind, I feel convinced it is not a disease, or that it can be transmitted from tree to tree; nor do I believe that, because a tree suffers badly from the "curl" this year, that it must of necessity suffer from the same again next year. For two years all of our Peach trees were badly affected with it; and to that extent, that a sound leaf could scarcely be found upon any of the trees. I had never seen it as bad before, but had often seen it, more or less, upon Peach trees, without, apparently, in the least affecting the crop, or the general health of the tree. At first, nothing very serious was apprehended, but perceiving it to still prevail and becoming much worse after three weeks had elapsed, since it first appeared, and, upon an examination, found a great portion of the young fruit quite black, upon being cut open, symptoms now became rather alarming, as to the prospect of saving the crop.

Here then was a case presented for immediate action, and which baffled at once all known remedies for other existing evils in fruit culture. Before we were aware of the magnitude of the evil it was upon us, demanding immediate action, without a guide or precedent to direct us. The trees (the early varieties more particularly) looked bad, sickly—all growth had ceased, the leaves, which at first had curled up or blistered, were now a mere crisp, and the ends of the young green shoots were dying. We guessed at the cause of the plague, and we guessed at the remedies; and, finally concluded about thus: that it might be owing to some very cold nights, which had followed some very warm days in March and April—there having been previously some very warm weather, which had hastened vegetation. And, the more we thought upon this, the more we thought we were right. If, then, it was the result of cold nights, and some nights it nearly froze (following some very warm, summer-like days), checking not only the growth of the tree, but, I imagine, rupturing the tender and partly developed cells of the young leaf and causing decay, it seemed to me that, at this stage of the complaint, what the tree needed most, was assistance of a stimulating nature from some source; but, of what nature and how to be applied? was the query. I knew that if water was applied to Peach trees that hung full of young fruit, approaching the stoning period, that the excitement would cause the fruit to drop off; but, the trees affected by the "curl leaf" were not sufficiently far advanced to be affected in this instance. And why, then, would not a good and thorough irrigation be beneficial? Evidently what they required was something to stimulate them into growth; to excite them from the torpid state into which they had been thrown, by circumstances of temperature adverse to young growth, and consequent health of the whole tree. The injured fruit was, at this time, dropping off by the hundred thousand, and, at worst, irrigation would not cause them to drop any faster.

The experiment was resolved upon; it was tried; and, the result justified our expectations. Soon the trees began to push forth a new growth; the original crop of leaves entirely dropped off, being nearly as thick under the tree as if it were the Fall of the year. The blackened fruit also dropped (what was left of it) upon the instant, as it were; but not any of the fruit, which had escaped, was subsequently affected. In a short time the whole Orchard presented a healthy and luxuriant appearance, where, but a few days before, all looked sick and discouraging; and a partial crop was the result of the experiment, when, at one time, it was exceedingly doubtful if there would be sufficient fruit to test the varieties. It is worthy of remark, that the early varieties suffered the most; and the Early Strawberry Peach, of which we have a great many (comprising the bulk of the early crop), was a complete failure; and it required considerably more attention to bring them back to their usual healthy standard of excellence than did any of the other varieties.

This was two years ago (Spring of 1857), and last year (1858), having learned a few items from the previous years' operations, we were on the guard for the appearance of the "curl leaf." Everything being in readiness, we anxiously watched the weather, and, when a cold night succeeded a very warm day, we looked searching among the young tender leaves for the appearance of the "curl." A fine warm spell of weather had brought things rapidly forward, and then succeeded that bitter cold spell, which proved so disastrous to so many Orchards throughout the State; in many instances, in one night destroying the crops of some of our largest Orchards. It was hardly as severe with us, but the "curl" was unmistakable. It could be perceived on those partly developed leaves near the points of the young growth, while those just below them, and which were a little more matured, were apparently unaffected.

We now began to irrigate. Our theory being, that if we could keep up the growth and vigor of the tree unchecked, it would struggle on and overcome it. It did so prove. We lost but, comparatively, a small portion of the crop, which could hardly be expected to be otherwise, as we could not irrigate the whole Orchard at one time, and some, of course, had to suffer before their turn came. But we proved our views to be, in the main, correct. We feel satisfied that irrigation is the remedy for the "curl leaf," at least until a better one is discovered; and, when found, I hope the discoverer will make it known as speedily as possible. Whether our views are correct as to the cause of the "curl" in the leaf, is yet, of course, an open question, and one which I hope to see discussed by those who must have had the subject, for the last two years, brought very painfully to their notice.

I elsewhere mentioned, that irrigated trees suffered less from the attacks of the red spider. This is an important advantage, especially to the Nurseryman who has a large lot of young stock to bud in the hot and dry months, when this pestiferous insect is most obnoxious.

We have also noticed that our most luxuriant growing trees are almost entirely exempt from the destructive attacks of the "borer;" it seeming as if they could not exist in the soft and sappy growth

of a vigorous growing tree. At any rate, trees which are in process of rapid growth seem to be peculiarly exempt of them, while I have noticed them to prevail mostly in trees which we have not considered it necessary to irrigate much, and which are sometimes caught "napping."

I think I have thus far given very sufficient reasons "for the faith that is in me," in regard to irrigation. I could go on and weary the reader with more minute particulars, but I think it unnecessary. I think the point clearly established, that even upon soil where trees can be successfully grown, unaided by water artificially applied, that there is a decided advantage to be derived from it; and I know of other, and several Orchards, that would be equally as much benefited by a judicious application of the system as the Orchards of this establishment.

Upon such lands as are to be found on the banks of the Sacramento river (which I suppose are unequaled by any lands in the world), that are always moist enough to vegetate seed sown in the middle of the dry season and produce luxuriant crops of the finest vegetables throughout a season, when not a drop of water falls upon them from the skies—upon such soils, rich beyond description, and possessing all the elements of vegetable life, Nature requires but little assistance from the art of man, to develop her rich stores; and, least of all the practices of skill demanded under these circumstances, is irrigation.

I am not prejudiced in favor of any one system in anything, any farther than I believe that system to be correct. Principles are immutable; we err only in their application; and irrigation is a principle, in the understanding and application of which many errors have been committed—to say nothing of willful misrepresentation and exaggeration. To understand it, it must be studied, and its application must be governed by circumstances of soil and locality and other considerations; the nature of which the reader may have learned in a previous communication.

SMITH'S FOMOLOGICAL GARDENS, Sacramento.

#### Letter from a Miner.

We cheerfully give place to the following excellent letter from a miner, and hope the good counsel he gives will be received and regarded by all the farmers to whom it would be applicable, especially those who do not, but who should, take the FARMER and read his good advice about leaving the farm. Gold will never of itself bring happiness; that springs only from the mind; "a contented mind is a continual feast," and it is more, it is health and riches. What our correspondent hints at, relative to the feeling that should exist between the miner and the farmer, we fully indorse. We wish they could avoid every unkind feeling, and regard each other's rights, as brethren of one great family. The miner and farmer are each dependent on the other for many blessings, and it is a pity they cannot look upon each other as friends and co-workers in each other's career of prosperity. We do hope a more enlightened feeling will spring up in all our mining region, for many a brave and noble heart dwells beneath the flannel shirt of the hardy miner. Our friend has our thanks for his interest in the "tap-root question," and we do hope he will speak his opinion freely, and give us his experience, for it is all-important that we hear from all practical farmers.

Relative to our neighbor of the Cultivist: it don't trouble us; there will be no lives lost. We don't lose appetite or sleep upon it. He can fire away all day, if he pleases; his shots don't hit; his ammunition is not good; after his report and the smoke has cleared away, we find it didn't strike anywhere; it was only a Wada-word of material, and when the noise and smoke were gone, it was all over. The Colonel is all right: the Cultivist talks of the waning of patronage; we don't wonder he thinks of that subject. We shouldn't be surprised to see that he went into the cultivation of the willow. We are sorry the "Colonel" troubled him so much; he only used the term "Colonel" ten times on one page, in his last. Pity to put him to such cost.

Our correspondent will find, by referring to the numbers we send him, that we agree with him, and we should be glad to see a dozen agricultural papers prosperously sustained; there is room enough for all, and we have always done what we could to aid our neighbor, but we cannot please him anyhow. He has been rubbing up our regimentals for us, and we think he may have been playing too freely with the point of our sword, mistaking it for a tap-root, and the smart is not not all gone. Grip will find us all O. K. We remember Napoleon's counsel, and we never fear blank cartridges.

P. S.—Grip, give us your hand. Don't we feel the true grip? That V, with an order for the FARMER, is the true kind of preaching. Let others in your neighborhood go and do likewise.

COL. WARREN: Although your paper is chiefly devoted to Agriculture, yet I trust that you and your readers will not object to a miner having a "put in" occasionally; especially one who has but recently laid aside the plow and the hoe, and taken up the pick and shovel. I assure you it is not from

choice that this change has been made, but from necessity, and often do I wish it was in my power to possess a little farm of my own, where I could enjoy the pleasures of a farmer's life; but alas! instead of that most healthful and pleasant employment, I am toiling in mud and water; where, instead of the sweet warblings of the little songsters, is heard the roaring of water, and the harsh grating of the pick and shovel. Farmers, is there any among you who are thinking of leaving the farm, and turning miner? If so, then let me, as one who has "tried both pursuits on," tell you to think of it no more; for though you might, by one lucky strike, take out your "piles," there are a hundred chances to one that you will work for years, and barely earn a subsistence. Therefore, I say, stick to your farms; take, pay for, and read the FARMER, and you will not regret the day you resolved not to turn miner.

Farmers and miners in this section appear to be in good spirits, the crops of the former, having been got in in good season, look well, and the prospects of the latter for a bountiful supply of water during the dry season were never more flattering.

What a great pity it is that those engaged in two pursuits, so dependent on each other as the farmer and miner are, in this country, cannot always get along smoothly and peaceably in their affairs; but I am sorry to say it is not the case. A farmer goes to work, and improves a piece of land, where he may think the "color" cannot be found. He sows his grain, or plants out an orchard, or vineyard, and, perhaps, the first thing he knows, along comes a miner, and fancies to himself that the "lead runs right through that ranch," and forthwith sinks a shaft; if he gets a good "color" other miners flock to the same place, and do as the first one did, thus disfiguring the ground, and often destroying trees or grain to a considerable amount. The farmer asks for damages. The miner refuses to pay it, and tells him he ought to have been in "better luck" than to have a ranch in the mines. A lawsuit is generally the result, and as the miner usually has nothing in sight, but his pick and shovel, the farmer can recover nothing.

I did intend saying something on the "tap-root question" when I commenced this, but shall not have space; besides, I notice from what little has been said about it in the FARMER, has caused the Cultivist man to devote, almost exclusively, his last number to the discussion of this question. He evidently sees that he is in a "tight place" and is determined to extricate himself in some way; and to do this, he has assumed quite a savage (judging from his remarks in the Feb. number) attitude towards his "ancient military cotemporary." By the way, Colonel, that military handle to your name appears to "stick" the gentleman very much; and to make the thing more equal, and also to gratify his (apparent) desire, I would suggest that you fit some appropriate civil prefix to his name, such as "Judge" or "Squire." If you could do this, I think it would cause him to lay aside, for the present at least, the "tap-root question," and take up something more pleasant to himself, and far more profitable to his readers. A word of advice to both of you, and I will close. California is large enough, and her citizens in general, and the farmers in particular, are liberal enough to support two agricultural journals, and they will do it, if they are conducted in a spirit of harmony, and an energy commensurate with the requirements of this all-important branch of industry.

Adios, Grip.

#### A Prompt and Useful Subscriber.

MR. EDITOR: Not having noticed any definite means for "exterminating the Squirrels in California," I feel that I might be of some interest to state the declaration of Mr. Cunningham, who resides on the stock road on Miles Creek, leading from Stockton to Millerton, in Mariposa county. The poisoned bait is proportioned as follows: Take one gallon of wheat and wash it clean, soak it soft and take enough sirup to give all the wheat a complete coating; first put in the sirup one-half bottle of strychnine, and mix it in thoroughly; after rolling or coating the wheat in the same, then place ten or twelve grains on a chip for each squirrel hole—put it down a foot or more. I am credibly informed that the second application of the bait will completely exterminate them.

With due regard, I remain the subscriber of your interesting FARMER for 1859.

Yours, &c., J. K.

[We are truly pleased, doubly so, to receive the approbation of good and practical men, and also their cooperation; this is a double reward. We call attention to the squirrel remedy.]

BUILDINGS IN SACRAMENTO.—The Sacramento Union presents a tabular view of the number of brick and frame buildings within the city limits (as ascertained from actual count), on or about the 1st of January of the years mentioned:

	1855.	1856.	1857.	1858.	1859.
Brick.....	393	528	740	943	1022
Frame.....	1846	2111	2202	2302	2388
Total.....	2229	2639	2942	3245	3410

The increase during the past year has been, it will be perceived, in brick buildings, 79; in frame structures, 86—a total of 165 buildings.

#### Gone to Farming.

WE have received a letter from an old friend, who having become disgusted with city life, has concluded to adopt the most proper employment for man, that of farming. Would that there were more like him. We make some extracts from his letter:

"You may think it strange to hear from one of your old friends, so far in the mountains, and that too, in the midst of natural curiosities. You will recollect that one year ago I was one of the fraternity of typos; but about seven months since I got flat broke and left Sacramento in disgust, and am now in the far-famed "Clear Lake Valley," ranching, or farming. I have seen but one copy of the FARMER since I came here, and that contained an article from my old friend Gov. Bigler, on the new grass "Alfalfa," which I was very much pleased to read. I have procured some pounds of the seed, which I will sow soon, and write you my success, giving such items as to its growth, culture, etc., as may come within my observation.

"I am going to try and get you five subscribers, but the people want stirring up with a long agricultural pole, and if you would come up the object would be accomplished. You would be much interested with the beauty of the country, its natural curiosities, etc. I send you inclosed one of the many natural curiosities—I call it "Silicious Cotton." It is found near Sigler's Valley, on the surface of the earth, among the chaparral, and in considerable quantities there. Will you have it examined, and give us the result in your paper. By rubbing it in the fingers, it becomes like fine white silk or cotton, and will not burn in the blaze of a candle or lamp.

"At some future time I will give a long letter for the FARMER, that will I trust be of general interest to the people. Do not fail to send me the "Weekly Farmer." I am a new hand at farming, and want all the information I can get."

We shall be happy to receive the "long letter," and hope to hear often from our friend. The "natural curiosity" was duly received, for which we return thanks. It is doubtless Asbestos, a term applied to varieties of hornblende and pyroxene, occurring in long delicate fibers; usually of a white or gray color, and also in compact fibrous masses and seams, of greenish and reddish shades. It is said the finer varieties have been wrought into gloves and cloth, which are incombustible. The cloth was formerly used as a shroud for dead bodies, and has been recommended for firemen's clothes. Asbestos is also employed in the manufacture of iron safes, and for lamp-wicks.

#### Supreme Court Decisions.

The People vs. Martin. The Board of Supervisors of Tuolumne county, in August last, ordered an election for County Judge, the office being vacant in consequence of the death of its former holder. No proclamation of such vacancy or election was made by the Governor. The defendant was in the office by appointment from the Governor, and this proceeding is to oust him. The Court held that the election was not valid without the Governor's proclamation. Judgment affirmed.

The People ex rel Fox vs. Templeton. This was an action in relation to the County Judgeship of San Mateo county. Fox was elected to that office at a special election in 1857, and Templeton was elected at the general election in 1858. The Court decided that County Judges, when elected by the people, are chosen for the constitutional term of four years, just as District Judges are chosen for the full term of six years.

Ellison vs. Jackson Water Company. The mechanics' lien law does not apply to mining ditches, neither are ditches such property as can be mortgaged. Cause remanded.

A. C. Hunter vs. Watson and Vance. This was a case which came directly under the law of conveyances, or that portion of it, rather, which the Court desired the Legislature to alter, so as to do away with the presumption that possession, with an unrecorded title, is good against non-possession and recorded title. The Court say: "We must therefore hold, in obedience to this authority [the statute as it now stands], that the open, notorious possession of real estate, by one having an unrecorded deed for it, is evidence of notice to a subsequent purchaser of the first vendee's title. To guard against misapprehension, we say that the possession must exist at the time of the acquisition of title or deed of the subsequent vendee from the common vendor." Judgment reversed and cause remanded. Opinion by Justice Baldwin, Field concurring. Terry dissented for reasons hereafter to be given.

TREE PLANTING.—Many persons seem to think that the season is full late, or the ground too wet, to plant trees. There is no danger at all; although it were better the trees were all in the ground before the rains came, yet now, or even a month hence, will do for trees that have been retarded by previous lifting. Where ground is very wet, it should be thrown up in ridges to dry. Care should always be taken to have the soil soft and mellow around the roots of trees. If the ground is extremely wet, drainage under the roots is necessary.

THE YUBA RIVER FILLING UP.—The Yuba river is so rapidly filling up with sand and tailings from mining operations, as we are informed by an up-country resident, that several ferries are frequently compelled to suspend operations, owing to the formation of islands in the track of the boats. The channel is changing continually, and eventually the river must wash down its banks to the destruction of rich agricultural land. [Marysville Dem.]

BY HENRY WADSWORTH LONGFELLOW.

A wind came up out of the sea,  
And said, "O mist, make room for me."  
It hailed the ships, and cried, "Sail on,  
Ye mariners, the night is gone."  
And hurried landward far away,  
Crying, "Awake! it is the day."  
It said unto the forest, "Shout!  
Hang all your leafy banners out!"  
It touched the wood-bird's folded wings,  
And said, "O bird, awake and sing."  
And o'er the farms, "O chanticleer,  
Your clarion blow; the day is near."  
It whispered to the fields of corn,  
"Bow down, and hail the coming morn."  
It shouted through the belfry-tower,  
"Awake, O bell! proclaim the hour."  
It crossed the churchyard with a sigh,  
And said, "Not yet! in quiet lie."

## Facts About Friday.

From time immemorial, Friday has been frowned upon as a day of ill omen. And though this prejudice is less prevalent now than it has been of yore, when superstition had general sway, yet there are many, even in this matter of fact age of ours, who would hesitate on a day so inauspicious, to begin an undertaking of momentous import. And how many brave mariners, whose hearts undaunted could meet the wildest fury of the ocean storm, would blanch to even bend their sails on Friday. But with how much reason this feeling is indulged, let us examine the following important facts in connection with our own settlement and greatness as a nation, and we will see what great cause we Americans have to dread the fatal day.

On Friday, Aug. 3d, 1492, Christopher Columbus sailed on his great voyage of discovery. On Friday, October 12th, 1492, he first discovered land. On Friday, January 5th, 1493, he sailed on his return to Spain, which, if he had not reached in safety, the happy result would never have been known which led to the settlement of this vast continent. On Friday, March 15, 1494, he arrived at Palos in safety. On Friday, Nov. 22, 1494, he arrived at Hispanola, on his second voyage to America. On Friday, June 13, 1494, he though unknown to himself, discovered the continent of America.

On Friday, March 5th, 1496, Henry VII of England gave to John Cabot his commission, which led to the discovery of North America. This is the first American state paper in England. On Friday, Sept. 9th, 1565, Melendel founded St. Augustine, the oldest settlement in the United States for more than forty years. On Friday, November 10th, 1620, the Mayflower, with the pilgrims, made the harbor of Provincetown. On the same day was signed that august compact, the forerunner of our present glorious constitution. On Friday, Dec. 23d, 1620, the pilgrims made their final landing on Plymouth Rock. On Friday, June 16th, 1775, Bunker Hill was seized and fortified. On Friday, October 7th, 1777, the surrender of Saratoga was made, which had such power and influence in inducing France to declare for our cause. On Friday, September 22d, 1780, the treason of Arnold was laid bare, which saved us from destruction.

On Friday, October 16th, 1781, the surrender of Yorktown gave the crowning glory to the American arms. On Friday, June 7th, 1776, the motion in Congress was made by John Adams, and seconded by Richard Henry Lee, that the united colonies were, and of right ought to be, free and independent.

Thus, by numerous examples, we see that however it may be with other nations, America need never dread to begin on Friday any undertaking, however momentous it may be.

With these facts before us, we have no fear of unlucky Friday, and believe the FARMER, published on Friday, is about as lucky as journals in general. Let us do away with all unlucky days. We can make all days lucky if we will. Look on the bright side; that's the way to do it. Remember and trust to your own energies. Industry must prosper. Every man makes his own future.

## Lamas and Alpacas.

By a late arrival from Australia, we learn that a large and valuable stock of Lamas, Alpacas and Vicuñas had arrived at Sydney, from Caldesa, South America. As shipped, the flock consisted of 161 Lamas, 130 Alpacas, 50 Guarizos, and 9 Vicuñas—280 arrived at Sydney in a sound and healthy condition. They were the produce of stock collected five years back in Bolivia, taken from there into the Argentine Republic, thence over the Andes to Chile. The party in charge of the flock was pursued by the authorities of Bolivia, and had great difficulty in getting the flock safe within the boundaries of the Argentine Republic; and, as much greater vigilance is now used, it is probable that many years will elapse ere another flock will find its way to Australia. The Lamas are chiefly used in Peru as beasts of burden; their wool is very inferior to the Alpaca or Vicuña. They, however, make an excellent cross with the Alpaca, producing a hybrid known as the Guarizo, which yields as fine wool, but longer in staple and of greater weight than the Alpaca alone. The wool produced by the Vicuña is shorter, but much finer, than that of the Alpaca or Guarizo. The Paca Vicuña, or hybrid between Vicuña and Alpaca, is of great value. Its wool possesses the fineness of the former combined with length of staple of the latter. Ten Lamas, imported by another ship, were sold by private contract, for £600, or \$3000. This price, \$3000 apiece, seems a high one, yet it was stated that the importer would lose money on the transaction. If the first mentioned lot did not find a market in New South Wales, they were to be taken to the colony of Victoria for sale.

## Bright Prospects.

Since the discovery of gold in this portion of the Sierra Nevada, says the La Porte Messenger of the 19th inst., never have the prospects been more flattering. We have had more snow this winter than has been our portion for years; and by the quantity of snow falling at this season we form our estimate of the amount of water which we will have for mining in the spring. Taking it as an almost certain rule that the greater amount of snow and rain we receive in winter, the more ample the supply of water in spring, we may truly look forward to the approaching mining season with bright hopes. More extensive preparations are being made for mining in this place, St. Louis, Pine Grove, Gibsonville, Howland's Flat, Warren Hill, Port Wine, Secret Diggings, and all the mining towns in this portion of the county, than have ever been known. All the tunnels that have been run this season have prospered well. In many cases, where branch tunnels and drifts have been run, the miners have found pay dirt where they had no expectation of finding it. All the preparations for mining will be completed in a couple of weeks, and the boys will then have an opportunity to rest a short time, previous to their engaging in their spring work.

## Our Mountaineers.

A glance over our State, says the Hydraulic Press, reveals a spectacle which is quite singular in the history of a country so noted as North America for its fertile valleys and broad prairies, affording facilities for easy settlement. We behold a considerable body of people colonizing a rough, mountainous region, whose hills and ridges and profound cañons border on the limits of perpetual snow. There, with unparalleled energy, they have built up towns and villages and homes, constructed finely graded roads, which ascend to the greatest altitudes by sinuous windings, establish the various institutions which characterize and advance civilization, and invest themselves with all the surroundings of steadfast communities.

We know the magnet that drew them past the richer soil and gentler-featured lands of the East. They came for gold; but they are enamored of fair skies and healthful breezes and a climate of unrivaled mildness. Winter may be all around them, but his rigor is softened; and instead of being forced, like the tenants of Alpine lands, to flee the mountains at his approach, they remain and brave his utmost. But should their habitations be whelmed in snow and neighboring communication be impossible, except by means of tunnels through the white translucent drifts, these hardy mountaineers remain, keeping up a glow of cheerfulness and waiting contentedly for the coming Spring. Women and children abide with them, like flowers observed by Kane in the frozen regions of the North. The existence of such a class of population in our State affords cause for rejoicing. Mountaineers have ever been conservators of physical energy and civil freedom. They appear periodically on the field of history as the quickeners of lowland life, infusing into the enervated denizen of luxurious climes more vigorous characteristics, restoring virtue and accelerating the progress of the race. California will maintain her mountain population; and the Sierra Nevada, whose glistening snow peaks sentinel the blooming vales lying far below, will yet nurture a native race imbued with all noble, energetic traits, and loving the grand scenery amid which they were born.

## Agricultural Meeting in Jackson County, Oregon.

We are happy to notice and record the proceedings of the Convention reported below, from the Oregon Sentinel. We are glad to hear of the energy displayed and the zeal manifested. Success to their efforts.

Pursuant to a previous notice for an Agricultural County Convention to take into consideration the propriety of organizing an Agricultural Society for Jackson county, a number of the farmers of the valley and citizens of the town met at McCully's Hall, in Jacksonville, on Tuesday, February 8th, at 2 o'clock p. m. The Convention was called to order by Dr. Jesse Robinson, and, on motion, Col. John Ross was elected Chairman, and W. J. Robinson Secretary.

Mr. James Kilgore stated the object of the Convention, and made some very appropriate remarks on the benefits and advantages to be derived from an Agricultural Society.

Messrs. J. A. Brunner, J. H. Reed, Jesse Robinson, Thomas Hopwood, and other gentlemen, addressed the Convention upon the propriety and necessity of organizing an Agricultural Society, and it seemed to be the general feeling of all who were present that such an organization would be beneficial, and advance the best interests of the whole people of Jackson county.

On motion of Mr. James Kilgore, the Chair appointed a committee of five, consisting of Messrs. James Kilgore, Stephen Watson, Curtis Myers, Jesse Robinson and J. H. Reed, to draft a constitution and by-laws, to be presented to an adjourned Convention, to meet at Jacksonville on the 22d February.

## Night-Blooming Cereus.

GLANCING over the new old volume, "Mrs. Child's Letters from New York," we find the following:

Zeal for horticulture was damped by the pecuniary embarrassments so universally felt a few years ago, but it is reviving. There are many pretty gardens in and about the city. I went to one of these last week, to see, for the first time, the Night-Blooming Cereus, or Cactus Grandiflorus. It was the most alive thing I ever saw. The vine from which it sprang seemed dry as an old rope, and the bud was like a little tuft of tow; but the flower looked in my face, with such vigor and earnestness of expression, that I could hardly believe it to be a vegetable. It was as large as a pint bowl; its calyx, or outer circle of leaves, of an orange brown tinge; the petals double as a pond-lily, white as the drifted snow, and transparent as rice paper. The feathery-tufted stamens were likewise of the purest white; but deep down in its bosom was a delicate tinge of lively green, faint as the reflection of an emerald on a snow-wealth. It is marvellous indeed, that such prodigality of beauty and vigor should be sent forth in the night time, and for a few hours only. Nature and genius are ever heedless of their jewels, and throw them forth in the very playfulness of profusion. This superb blossom happened to open on Sunday evening, and therefore some people lost the sight of it, from conscientious scruples; but I thought if there was anything wrong in coming out on Sunday, the flower would have known about it.

A RUSSIAN HOT-HOUSE.—The Char's green-house is thus described by Bayard Taylor: The Botanical Garden, in which I spent an afternoon, contains one of the finest collections of tropical plants in Europe. Here, in the latitude of sixty degrees, you may walk through an avenue of palm trees sixty feet high, under tree ferns and bananas, by ponds of lotus and Indian lily, and banks of splendid orchids, breathing an air heavy with the richest and warmest odors. The extent of these giant hot-houses cannot be less than a mile and a half. The short summer, and long, dark winter of the north, requires a peculiar course of treatment for these children of the sun. During the three warm months, they are forced as much as possible, so that the growth of six months is obtained in that time, and the productive qualities of the plant are kept up to their normal standard. After this result is obtained, it thrives as steadily as in a more favored climate. The palms, in particular, are noble specimens. One of them (a phoenix I believe) is now in blossom, which is an unheard of event in such a latitude.

COAL VERSUS WOOD.—Samuel J. Hays, Superintendent of Machinery on the Illinois Central Railroad, makes a statement showing the comparative cost of coal and wood for running locomotives. The coal-burning furnaces are made of copper, and seem to stand coal quite as well as iron ones miles on eight hundred tons of coal, and run as regular as wood-burning engines. The table he gives for two months is interesting and to the point. We regret that the price of coal and wood scarcely of either has no bearing on the matter, yet experiment is decisive, very. The general average is about 55 per cent in favor of coal.—[Phila. paper.

the homage of a circle of admirers at one of the most brilliant of foreign courts.

On the table before us, lies a letter from a lady of fortune in Philadelphia, whose sincere and hearty enthusiasm in country life always delights us. She is one of those beings who animate every thing she touches, and would make a heart beat in a granite rock, if it had not the stubbornness of all "facts before the flood." She is in a dilemma about the precise uses of time (which has staggered many an old cultivator, by the way), and tells the story of her doubts with an earnest directness and eloquence that one seeks for in vain in the essays of our male chemo-horticultural correspondents. We are quite sure that there will be a meaning in every fruit and flower which this lady plucks from the garden, of which our fair friends, who are the disciples of the Seignior school, have not the feeblest conception.

There are, also, we fear, those who fancy that there is something rustic, unfeminine and unrefined, about an interest in country out-of-door matters. Would we could present to them a picture which rises in our memory, at this moment, as the finest of all possible denials to such a theory. In the midst of the richest agricultural region of the Northern States, lives a lady—a young, unmarried lady; mistress of herself, of some thousands of acres of the finest lands; and a mansion which is almost the ideal of taste and refinement. Very well. Does this lady sit in her drawing-room all day, to receive her visitors? By no means. You will find her, in the morning, either on horseback or driving a light carriage with a pair of spirited horses. She explores every corner of the estate; she visits her tenants, examines the crops, and projects improvements, directs repairs, and is thoroughly mistress of her whole demesne. Her mansion opens into the most exquisite garden of flowers and fruits, every one of which she knows by heart. And yet this lady, so energetic and spirited in her enjoyment and management in out-of-door matters, is, in the drawing-room, the most gentle, the most retiring, the most refined of her sex.

A word or two more, and upon what ought to be the most important argument of all. *Exercise, fresh air, health*—are they not almost synonymous? The exquisite bloom on the cheeks of American girls, fades, in the matron, much sooner here than in England—not alone because of the softness of the English climate, as many suppose. It is because exercise, so necessary to the maintenance of health, is so little a matter of habit and education here, and so largely insisted upon in England; and it is because exercise, when taken here at all, is taken too often as a matter of duty; that it is then only a lifeless duty, and has no soul in it; while the English woman, who takes a living interest in her rural employments, inhales new life in every day's occupation, and plants perpetual roses in her cheeks, by the mere act of planting them in her garden.

"But Mr. Downing, think of the hot sun in this country, and our complexions!" Yes, yes, we know it. But get up an hour earlier, fair reader; put on your broadest sun-bonnet, and your stoniest pair of gloves, and try the problem of health, enjoyment and beauty, before the sun gets too ardent. A great deal may be done in this way; and after a while, if your heart is in the right place for ruralities, you will find the occupation so fascinating that you will gradually find yourself able to enjoy keenly what was at first only a very irksome sort of duty.

## The Unfruitful Tree.

A COUNTRYMAN had a brother dwelling in the town, who possessed a magnificent orchard full of the finest fruit trees, so that he was renowned in all the neighborhood for his beautiful trees, and the skill he showed in rearing them. Now the countryman came one day to visit him in the town, and gazed in wondering admiration upon the trees.

Then the gardener said unto him, "See, my brother, I will give thee a tree, the best in my nursery."

The gardener, having thus spoken, called his assistants, and pointed out to them the tree, in order that they should dig it out of the ground. And the countryman rejoiced because of the tree, and caused it to be carried to his own field. The next morning his heart was much divided, as to where he should plant the tree. "For," he thought within himself, "if I plant it up there upon the height, the wind may visit it too roughly, and the goodly fruit may be shaken off the tree before it is yet ripe; and if I plant it down here, near the road, it will be seen by the passers-by, and the smiling apples may tempt them to rob me."

So, when he had turned the matter over in his mind, he went and planted the tree behind the barn, on the north side, and said, within himself, "Here, at least, the spying eye of rapacious plunderers will be slow to discover it." And he rejoiced in secret at his own prudence. But lo! the first year passed away, and the tree had borne no fruit; and the second passed away likewise, and still none had appeared. Then he sent and called his brother, the gardener to him, and exclaimed, in anger, "Thou hast surely deceived me, and given me a miserable, barren stump, instead of a fruitful tree; for see, it is already the third year, and yet it hath borne nothing but leaves."

But the gardener only smiled, when he saw the tree, and answered his brother, saying, "It is no marvel to me that the tree has failed. 'Tis no plant it where only the cold winds blew upon it, and neither light nor heat imparted vigor to its boughs. How, then, could it bear these either flowers or fruit? It was a plant of a noble nature, and such still remains; but thou didst plant it with an evil and suspicious heart. How, then, couldst thou expect to gather from it noble and refreshing fruit?"—[Arthur's Home Magazine.

EFFECT OF THE LATE RAINS ON THE ARTESIAN WELLS OF SAN JOSE.—The San José Telegraph, of the 23d of February, says: The recent heavy rains have had a very gratifying effect upon many artesian wells in San José which had ceased to flow. They are now running out freely. Some of these wells stopped flowing over the surface last summer and fall, for want of sufficient supply in the subterranean current, occasioned by the long-continued dry weather and the little rain that had fallen for several previous years. These were chiefly hundred and fifty feet to three hundred feet deep. The artesian wells of a less depth (for in some sixty feet) continued to flow out, but in a gradually diminishing volume until the occurrence of the late rains, which greatly affected them. Many of the wells in the pipe below the mouth. That was the case since the late heavy rains, each of these is discharging water almost as copiously as ever before. The city artesian well, on Market street, which is of great depth, began to flow on the morning of the 23d of February, which shows that the late rains have affected subterranean currents two and three hundred feet below the surface of the ground.

French house, the beau ideal is to have every thing en suite; all the rooms open into each other; or at least, as many of the largest as will produce a fine effect. In an English house, every room is a fine effect in itself. It may be very large, and very complete in itself, but it is all the worse for being connected with any other room; for that destroys the privacy which an Englishman so much loves.

Does any one, familiar with the progress of building in the United States for the last ten years, desire to be told which mode we have followed? And yet there are very few who are aware that our love of folding-doors, and suits of apartments, is essentially French.

Now our national taste in gardening and out-door employments, is just in the process of formation. Honestly and ardently believing that the loveliest and best women in the world are those of our own country, we cannot think of their losing so much of their own and nature's bloom, as only to enjoy their gardens by the results, like the French, rather than through the development, like the English. We would gladly show them how much they lose. We would convince them, that only to pluck the full-blown flower, is like a first introduction to it, compared with the life-long friendship of its mistress, who has nursed it from its first two leaves; and that the real zest of our enjoyment of nature, even in a garden, lies in our looking at her, not like a spectator who admires, but like a dear and intimate friend, to whom, after long intimacy, she reveals sweets wholly hidden from those who only come to her in full dress, and in the attitude of formal visitors.

If any one wishes to know how completely and intensely English women enter into the spirit of gardening, he has only to watch the wife of the most humble artisan who settles in any of our cities. She not only has a pot of flowers—her back-yard is a perfect curiosity-shop of botanical rarities. She is never done with training, and watering, and caring for them. And truly, they reward her well; for who ever saw such large geraniums, such fresh daisies, such ruddy roses! Comparing them with the neglected and weak specimens in the garden of her neighbor, one might be tempted to believe that they had been magnetized by the charm of personal fondness of their mistress, into a life and beauty not common to other plants.

Mr. Colman, in his European Tour, seems to have been struck by this trait, and gives a capital portrait of rural accomplishments in a lady of rank he had the good fortune to meet.

Now, as a contrast to this sketch of the Duchess, here is a little fragment—a mere bit—but enough to show the French feeling about a country life. It is from one of Madame de Sevigne's charming letters; and, fond of society as she was, she certainly had as much of love of the country as belongs to her class and sex on her side of the channel. It is part of a letter written from her country home. She is writing to her daughter, and speaking of an expected visit from one of her friends:

"It follows that, after I have been to see her, she will come to see me, when, of course, I shall wish her to find my garden in good order; my walks in good order—those fine walks, of which you are so fond. Attend also, if you please, to a little suggestion en passant. You are aware that haymaking is going forward. Well, I have no haymakers. I send into the neighboring fields to press them into my service; there are none to be found; and so all my own people are summoned to make hay instead. But do you know what haymaking is? I will tell you. Haymaking is the pridiest thing in the world. You play at turning the grass over in a meadow; and as soon as you know that you know how to make hay."

Is it not capital? We italicize her description of haymaking, it is so *française*, and so totally unlike the account that the Duchess would have given Mr. Colman. Her garden, too; she wanted to have it put in order before her friend arrived. She would have shown it, not as an English woman would have done, to excite an interest in its rare and beautiful plants, and the perfection to which they had grown under her care, but that it might give her friend a pleasant promenade.

Now we have not the least desire, that American wives and daughters should have anything to do with the rough toil of the farm or the garden, beyond their own household province. We delight in the chivalry which pervades this whole country, in regard to the female character, and which even foreigners have remarked as one of the strongest national characteristics. But we would gladly have them seize on that happy medium, between the English passion for every thing out of doors, and the French taste for nothing beyond the drawing-room. Every thing which relates to the garden, the lawn, the pleasure-grounds, should claim their immediate interest. And this, not merely to walk out occasionally and enjoy it; but to know it by heart; to do it, or see it all done; to know the history of any plant, shrub, or tree, from the time it was so small as to be invisible to all but their eyes, to the time when every passer-by stops to admire and enjoy it; to live, in short, not only in the in-door but the out-of-door life of a true woman in the country. Every lady may not be "born to love pigs and chickens" (though that is a good thing to be born to); but depend upon it, she has a shilling's patrimony, if she does not love trees, flowers, gardens, and nature, as if they were all part of herself.

We half suspect, if the truth must be told, that there is a little affectation or coquetry among some of our fair readers, in this want of hearty interest in rural occupation. We have noticed that it is precisely those who have the smallest gardens, and, therefore, who ought most naturally to wish to take the greatest interest in their culture themselves—it is precisely those who depend entirely upon their gardener. They rest with such entire faith on the chivalry of our sex, that they gladly permit every thing to be done for them, and thus lose the greatest charm which their garden could give—that of a delightful personal intimacy.

Almost all the really enthusiastic and energetic lady gardeners that we have the pleasure of knowing, belong to the wealthiest class in this country. We have a neighbor on the Hudson, for instance, whose pleasure-grounds cover many acres, whose flower-garden is a miracle of beauty, and who keeps six gardeners at work all the season. But there is never a tree transplanted that she does not see its roots carefully handled; not a walk laid out that she does not mark its curves; not a parterre arranged that she does not direct its colors and grouping, and even assist in planting it. No matter what guests enjoy her hospitality, several hours every day are thus spent in out-of-door employment; and from the zeal and enthusiasm with which she always talks of every thing relating to her country life, we do not doubt that she is far more rationally happy now, than when she received

## On Feminine Taste in Rural Affairs.

[We copy from Downing's Rural Essays, the following excellent chapter, and hope our American women will give heed to it. The sketch of the character and accomplishments of the Duchess of Portland, from Colman's Letters, alluded to by Downing, we published in Number nineteen of Volume ten.]

WHAT a very little fact sometimes betrays the national character; and what an odd thing this national character is! Look at a Frenchman. He eats, talks, lives in public. In town, on the boulevards, in the cafe, at places of public amusement, he is all enjoyment. But in the country—ah, there he never goes willingly; or else, he only goes to sentimentalize, or to entertain his town friends. Even the natural born country people seem to find nature and solitude ennuient, and so collect in little villages to keep each other in spirits! The Frenchman eats and sleeps almost anywhere; but he is never "at home but when he is abroad."

Look, on the other hand, at John Bull. He only lives what he feels to be a rational life, when he lives in the country. His country place is to him a little Juan Fernandez island; it contains his own family, his own castle, everything that belongs to him. He hates the smoke of town; he takes root in the soil. His horses, his dogs, his trees, are not separate existences; they are parts of himself. He is social with a reservation. Nature is nearer skin to him than strange men. His dogs are truly attached to him; he doubts if his fellows are. People often play the hypocrite; but the trees in his park never deceive him. Home is to him the next best place to heaven.

And only a little narrow strait of water divides these two nations!

Shall we ever have a distinct national character? Will a country, which is settled by every people of the old world—a dozen nations, all as distinct as the French and English—ever crystallize into a symmetrical form—something distinct and homogeneous? And what will that national character be?

Certainly no one, who looks at our comparative isolation—at the broad ocean that separates us from such external influences—at the mighty internal forces of new government and new circumstances, which continually act upon us—and, above all, at the mighty vital force of the Yankee Constitution, which every year swallows hundreds of thousands of foreigners, and digests them all; no one can look reflectively on all this, and not see that there is a national type, which will prevail over all the complexity, which various origin, manners, and different religions bring to our shores.

The English are, perhaps, the most distinct of civilized nations, in their nationality. But they had almost as mixed an origin as ourselves—Anglo-Saxon, Celtic, Roman, Danish, Norman; all these apparently discordant elements, were fused so successfully into a great and united people.

That a hundred years hence will find us quite as distinct and quite as developed, in our national character, we cannot doubt. What that character will be, in all its phases, no one at present can precisely say; but that the French and English elements will largely influence it in its growth, and yet, that in morals, in feeling, and in heart, we shall be entirely distinct from either of those nations, is as clear to us as a summer noon.

We are not going into a profound philosophical dissertation on the political or the social side of national character. We want to touch very lightly on a curious little point that interests us; one that political philosophers would think quite beneath them; one that moralists would not trouble themselves about; and one that we are very much afraid nobody else will think worth notice at all; and therefore we shall set about it directly.

What is the reason American ladies don't love to work in their gardens?

It is of no use whatever, that some fifty or a hundred of our fair readers say, "we do." We have carefully studied the matter, until it has become a fact past all contradiction. They may love "potter" a little. Three or four times in the spring they take a fancy to examine the color of the soil a few inches below the surface; they sow some China Asters, and plant a few Dahlias, and it is all over. Love flowers, with all their hearts, they certainly do. Few things are more enchanting to them than a fine garden; and bouquets on their center tables are positive necessities, with every lady, from Maine to the Rio Grande.

Now, we certainly have all the love of nature of our English forefathers. We love the country; and a large part of the millions, earned every year by our enterprise, is spent in creating and embellishing country homes. But, on the contrary, our wives and daughters only love gardens as the French love them—for the results. They love to walk through them; they enjoy the beauty and perfume of their products, but only as amateurs. They know no more of that intense enjoyment of her who plans, creates, and daily watches the growth of those gardens or flowers—no more of that absolute, living enjoyment, which the English have in out-of-door pursuits, than a mere amateur, who goes through a fine gallery of pictures, knows of the intensified emotions which the painters of those pictures experienced in their souls, when they gazed on the gradual growth and perfected splendor of their finest master-pieces.

As it is plain, from our love of the country, that we are not French at heart, this manifestation that we complain of, must come from our natural tendency to copy the social manners of the most polished nation in the world. And it is indeed quite wonderful how, being scarcely in the least affected by the morals, we still borrow almost instinctively, and entirely without being aware of it, so much from *la Belle France*. That our dress, mode of life, and intercourse, is largely tinged with French taste, every traveler notices. But it goes further. Even the plans of our houses become more and more decidedly French. We have had occasion, lately, to make considerable explorations in the domestic architecture of France and England, and we have noticed some striking national peculiarities. One of these relates to the connection of the principal apartments. In a

## Miscellany.

[For the California Farmer.]  
TWILIGHT MUSINGS.—No. 2.  
BY M. A. SAKLES.

[These lines are an accompaniment to No. 1, from the same author, addressed to "Mother." We would suggest to our correspondent the subject of Home; these form the grand harmonic trio of human hopes and desires—Mother, Father, Home.]

## FATHER.

A good old Saxon name is this,  
It rings with an iron sound,  
It tells of a love which is pure and strong,  
Which exists through a life however long,  
Which has neither limit nor bound.

It tells of an everlasting Truth,  
It's a trumpet sound in the fray,  
Which gives one a nerve for each trying hour,  
And o'er ills that befall us, a dominant power,  
It's a sunlight for every day.

It tells of a confidence changeless as time,  
Oh! grand is a Father's trust,  
The hopes of this world may be dashed to the ground,  
Our work all be broken and scattered around,  
But his Faith though like steel, cannot rust.

It tells of energy, sinew and bone,  
Of a will that defies decay,  
It prompts us to win a success in life,  
To bear up through failure's result of the strife,  
And look far beyond the "to-day."

To sum it up, it's a grand old word,  
Combining his toil and his care,  
With a sister's pride, without a guile,  
An anxious brother's cheering smile,  
And a mother's tearful prayer.

COLLEGIATE INSTITUTE, Benicis, February, 1859.

## SPURZHEIM, THE PHRENOLOGIST.

[Although more than twenty-five years have passed since this man of mighty mind and unswerving heart and life passed from this earth, many a warm heart-throb is felt at the mention of his name. His name will live in his works, which are now text-books of the science of mind. Brief as was his life after he visited New England, few men ever made so many friends in so short a time, or lived that time so well beloved; who was more honored while living, or died more deeply lamented. We remember him well, and even now we seem to hear the voice whose tones won so many hearts. The following just tribute, written by the Rev. John Pierpont, speaks the true sentiments of one who knew him. Spurzheim was buried at Mount Auburn, and a beautiful cenotaph marks his resting-place.]

Written for the Obituary of Dr. Garard Spurzheim, which were celebrated in the Old South Church, Boston, November 17th, 1832.

Stranger, there is bending o'er thee  
Many an eye with sorrow wet;  
All our stricken hearts deplore thee;  
Who, that knew thee, can forget?  
Who forget what thou hast spoken?  
Who, thine eye,—thy noble frame?  
But that golden bowl is broken,  
In the greatness of thy fame.

Autumn's leaves shall fall and wither  
On the spot where thou shalt rest;  
'Tis in love we hear thee thither,  
To thy mourning Mother's breast.  
For the stores of science brought us,  
For the charm thy goodness gave  
To the lessons thou hast taught us,  
Can we give thee but a grave?

Nature's priest, how pure and fervent  
Was thy worship at her shrine!  
Friend of man, of God the servant,  
Advocate of truths divine,—  
Taught and charmed as by no other  
We have been, and hoped to be;  
But, while waiting round thee, brother,  
For thy light,—thine dark with thee.

Dark with thee?—No; thy Creator,  
All whose creatures and whose laws  
Thou didst love, shall give thee greater  
Light than earth's, as earth withdraws.  
To thy God thy godlike spirit  
Back we give, in filial trust;  
Thy cold clay,—we grieve to bear it  
To its chamber,—but we must.

## The Considerate Doctor.

A poor girl who had just recovered from a fit of sickness, gathered up her scanty earnings and went to the doctor's office to settle her bill. Just at the door, the lawyer of the place passed into the office before her on a similar errand.

"Well, Doctor, I believe I am indebted to you, and I should like to know how much?"

"Yes," said the Doctor, "I attended upon you about a week, and what would you charge me for a week's services?"

"Oh," said the lawyer, "perhaps seventy-five dollars."

"Very well, then; as my time and profession are as valuable as yours, your bill is seventy-five dollars."

The poor girl's heart sank within her, for if her bill should be anything like that, how could she ever pay? The lawyer paid his bill and passed out, when the Doctor turned to the young woman and kindly inquired her errand.

"I come," said she, "to know what I owe you, although I know not that I can ever pay you."

"I attended upon you about a week?"

"Yes, sir."

"What do you get a week?"

"Seventy-five cents," said she.

"Is that all?"

"Yes, sir."

"Then your bill is seventy-five cents."

The poor girl paid him thankfully, and then went back with a light heart.

An old and rich man of my acquaintance was once remarking to the Doctor, that no one earned their money so easily as he, or could get rich so easily. The Doctor reminded him of the many losses he incurred, as he must visit the poor as well as the rich.

"Well," said my old friend, "you charge the rich more, and then you can afford to lose by the poor."

Not many weeks after, the old man was obliged to employ the Doctor for some time. At the last visit his bill was presented and strongly protested against as enormously high.

"But," said the Doctor, "you know what you told me, and I have only followed your advice."

Not a word more was said, but the amount was immediately paid.

NEVER judge by appearances. A seedy coat may cover a heart in full bloom.

Love of children is always an indication of a genial nature, pure, unsworn, and unselfish heart.

## The Old Oaken Bucket.

[However old this song may be it will refresh many hearts to read the following, and probably there may be some to whom its history will come for the first time:]

This most popular song was written by Samuel P. Woodworth, while he was a journeyman printer, working in an office at the corner of Chambers and Chatham streets. Near by, in Frankfort street, was a drinking shop, kept by a man named Mallory, where Woodworth and several friends used to resort. One afternoon the liquor was super-excellent. Woodworth seemed inspired by it; for, after taking a draught, he set his glass upon the table, and, smacking his lips, declared that Mallory's *can de vie* was superior to anything he had ever tasted. "No," said Mallory, "you are mistaken; there was one which, in both our estimations, far surpassed this in the way of drinking." "What is that?" asked Woodworth, dubiously. "The draughts of pure, fresh, spring water that we used to drink from the old oaken bucket that hung in the well, on our return from the labors of the field on a sultry day in Summer." The tear-drop glistened for a moment in Woodworth's eye. "True! true!" he replied, and shortly after quitted the place. He immediately returned to the office, grasped a pen, and, in half an hour, the "Old Oaken Bucket," one of the most delightful compositions in our language, was ready in manuscript, to be embalmed in the memories of succeeding generations.

YANKEE DOODLE WITH VARIATIONS.—Vieuxtemps' violinistic execution of Yankee Doodle has been often and well described, but never better than by one "Borax," a droll Mobilian. Hear "Borax": "It is difficult to conceive how this slender melody could have been arrayed in such an ample garb of splendor. Ingenuity must have been exhausted in revising the variations performed by this king of violinists. He played it low down and then high up on the E string; with all four parts at once; with the bow against the bridge; without any bow at all, he played it backwards and forwards, and I believe sideways and crossways; began at the end and left off at the beginning; then commenced at both ends and finished in the middle; twanged it like a guitar, growled it like a base viol (a base violation of the time, quoth my neighbor), squeaked it like a life, whistled it like a banjo. It was Yankee Doodle all the time, however; sometimes solos, like a boy whistling; anon as a duet, like a pair of harmonious cats; then again with all the variations, all of which displayed and set off the original air, as a multitudinous array of jewels adorn and enhance the beauty of the fair wearer."

[Our friend Weston is growing musical of late; he not only shines out in his Journal in elegant style with new and beautiful type, but he picks out all the gems of music, poetry, and other useful articles. In his last he is singing Yankee Doodle with Vieuxtemps, as quoted above.]

BRIEF, BUT COMMON HISTORY.—I saw him first at a social party. He took but a single glass of wine, and that at the request of a young lady with whom he conversed. I saw him next when he supposed he was unseen, taking a glass to satisfy the slight desire formed by his social indulgence. He thought there was no danger.

I saw him again with those of his own age, meeting at night, to spend a short time in convivial pleasure. He said it was only innocent amusement. I met him next, late in the evening, in the street, unable to reach home. I took him thither. He looked ashamed when we next met.

I saw him next reeling in the street. A confused stare was on his countenance, and words of blasphemy were on his tongue. Shame was gone! I saw him yet once more. He was pale, cold, motionless, and was carried by his friends to his last resting place. In the small procession that followed, every head was cast down, and seemed to shake with uncommon anguish.

His father's gray hairs were going to the grave in sorrow. His mother wept to think that she had ever given birth to such a child.—[Exchange.]

SOUL HOUSES.—There are apartments in the soul which have a glorious look-out; from whose windows you can see across the river of death, and into the shining city beyond; but how often are these neglected for the lower ones, which have earthward-looking windows. There is the apartment of veneration. Its ceilings are frescoed with angels, and all exquisite carvings adorn its walls; but spiders have covered the angel ceiling, and dust has settled on the delicate moldings. The man does not abide there. The door of Conscience is so rusted it cannot be opened. Hope has but one downward-looking window, and Faith and Worship are cold and cheerless. All these are shut up in most soul-houses. In lower apartments you shall hear, in some riot and wassail—for the passions never keep Lent, but are always holding carnival—and in others sighs and lamentations of wounded hopes, and in others the groanings of disappointed ambition, and in others bickerings and strifes; while in others, there are sleep and stupidity.—[Beecher.]

## POLAR OIL.

30,000 GALLONS

## REFINED POLAR OIL,

In Barrels and Cases,

## FOR SALE AT LOWER PRICES

Than ever before offered in California.

Purchasers of Oils would do well to visit our establishment, before laying in their winter stock.

WE will guarantee to suit ALL as to quality and price.

LARD OIL, Is also offered at greatly reduced rates.

WINTER SPERM OIL, Warranted to burn the best of the coldest weather.

BINNAGE OIL, Warranted to burn a lamp dry without trimming.

CAMPENE, Distilled fresh every day.

ALCOHOL, In Barrels and Cases, 95 per cent.

BURNING FLUID, Of superior quality.

STANFORD BROTHERS, PACIFIC OIL AND CAMPENE WORKS, 93m 48 Front street, near California.

TYPE FOR SALE. A FONT OF NEW BOURGEOIS TYPE (110 pounds), of superior quality, from a Boston Foundry, for sale at Eastern prices.

Also, about 300 pounds Bourgeois, lately in use on the Farmer. This type is in very good order (as the past numbers of the Farmer will show), having been used with care on an Adams' press, which does not destroy type like a cylinder. This will be sold very reasonable.

Apply at Farmer Office, 430 Washington street (opposite).

Colored Plates of California Fruit. The beautiful Fruit Pictures which were so finely prepared, of the Fruit of California at the State Fair in 1855, are on sale at the Farmer Office. Every person who wishes a beautiful Fruit Piece should have a copy.

# SMITH'S POMOLOGICAL GARDEN AND NURSERY, SACRAMENTO.

On the American River, 24 miles from the City.

OFFICE AND DEPOT FOR TREES, 44 J street, between Second and Third streets.

The Trees offered from the above establishments this season are more than usually fine,

and in the NUMBER OF VARIETIES, of each kind of fruit, we possess the

LARGEST COLLECTION IN THE STATE

our catalogue embracing

Over Nine Hundred Varieties,

as follows:

APPLES, 245 varieties;

PEARS, 276 varieties;

PLUMS, 100 varieties;

CHERRIES, 90 varieties;

PEACHES, 75 varieties;

NECTARINES, 20 varieties;

APRICOTS, 12 varieties;

GRAPES, 90 varieties.

We hesitate not in saying that our

PEAR AND CHERRY TREES

Are the Finest Ever Offered

for sale in this State, of all sizes, being from 6 feet to 12 and 14 feet high. The greater portion being not only of very large size, but also handsomely shaped, are elegantly adapted to planting near residences, affording the double

ADVANTAGE OF SHADE AND FRUIT.

Of the above two fine Fruits we offer

25,000 TREES FOR SALE,

of different sizes and prices, and as low as good Trees can be bought at any first-class Nursery in the State.

Many persons have had but poor success with Cherry Trees in this State. We state for their information that

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common Native or Oregon stock of this Coast, the former being the only stock fit to grow them on.

We have also a very fine stock of the following, viz:

APPLE, PLUM, PEACH, NECTARINE,

Apricots, Grapes, Figs, Almonds.

Besides a Miscellaneous collection of other and small fruits.

Particular regard has been paid to the growing of the Trees in GOOD SHAPE, and purchasers of our

Two-year-old Trees will find that they have been well "cut back," and are now

firm, symmetrically shaped Trees.

We guarantee no finer or healthier Trees will be found in the market this season.

We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and

Greenhouse Plants.

Embracing all the old and well known popular varieties, as well as a great many others both good and new.

Also a very fine lot, of different sizes, of that very popular shade tree, so full of reminiscences of home, the

GOOD OLD-FASHIONED ELM TREE

of many varieties, but most of the American and Scotch Elms, which are of good size, and when well established in the soil, they are of very rapid growth.

LOCUST, LABURNUM, or GOLDEN CHAIN,

MAPLE, in variety, LINDEN, European and American,

CATALPA, CHINA, and other Trees.

We call particular attention to our collection of

THE CAMELLIA,

which has become so well acclimated that we have them growing finely in our open grounds, and blooming as elegantly out of doors here as they possibly could with the tenderest care in a conservatory.

It is no longer a house plant, but one of

The Gems of the Pleasure Grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY

TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c., see CATALOGUES, which will be sent by mail to all applicants.

We invite attention to our very large and general assortment of

VEGETABLE SEED,

THE CROP OF THIS YEAR,

which is very fine and large, and we are now prepared to supply THE TRADE in quantities to suit, and at

Lower Prices than can be found at any other establishment in the State.

We have now been growing SEED for a number of years, and have given universal satisfaction. We are now prepared to supply large quantities of GOOD FRESH SEED at very low rates. These seeds will be done up handsomely in packages, for Wholesale or Retail Trade and will always be in readiness at our GARDEN, and at

CITY OFFICE—44 J street—SACRAMENTO.

Our Trees and Shrubs will be sold FOR CASH ONLY, and Orders must be accompanied with the Cash to insure attention

Golden Gate Nursery.

TREES! TREES!! TREES!!!

GRAVES & WILLIAMS,

GENERAL COMMISSION MERCHANTS,

Nos. 67, 69 and 71 Merchant street,  
SAN FRANCISCO.

(Opposite Washington Market.)

WE, THE UNDERSIGNED, RESPECTFULLY inform our friends and the public, that we are the Agents of A. H. Myers' Pioneer Nursery, Alameda county; L. E. Frost, San Jose Nursery, Santa Clara; E. W. Case's Nursery, Santa Clara; and are prepared to fill orders, large or small, for Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Plants, &c., of every variety and description, at the shortest notice and on the most favorable terms.

We are also the sole Agents of Rumford and Bro., Contra Costa county, for the sale of their large crop of Sweet Potatoes, raised from genuine Carolina Seed of the Red Variety. Messrs. Rumford & Bro. received the First Premium for their Potatoes at the late Mechanics' Fair held in this city, and at the Santa Clara County Fair, held in San Jose during the past autumn.

We are also the sole Agents of Daniel L. Perkins, of Alameda county, who is the Pioneer Seed Grower of California, and who is giving his undivided attention to the raising and preparing Garden Seeds for this market.

We are also Agents for the Nurseries of D. T. Adams and Joseph Lee, San Jose.

Farmers and Gardeners desiring fresh and genuine Garden Seeds, which can be warranted true to label, will do well to examine our stock before buying elsewhere.

GRAVES & WILLIAMS,  
Nos. 67, 69, and 71, Merchant street,

RIVER BANK

NURSERIES!

SAN JOSE,

CALIFORNIA.

THE SUBSCRIBERS INVITE ATTENTION TO THEIR STOCK OF

FRUIT AND ORNAMENTAL

TREES!!

Which they offer for sale the present season, at reasonable prices, consisting in part as follows:

8,000 Pear Trees  
(On Seedling Pear Stocks), one and two years old;

10,000 Apple Trees, one and two years old

3,000 Cherry Trees, one year old;

1,000 Plum Trees, one year old.

ALSO,

PEACHES, APRICOTS, GOOSEBERRIES, CURRANTS, LAWTON BLACKBERRY (strong, well-rooted plants), RASPBERRIES, ETC.

IN THE ORNAMENTAL DEPARTMENT,

will be found:

American Elms, 4 to 6 feet; Silver Maples, 5 to 7 feet; Mountain Ash, 4 to 6 feet; English Walnuts, Chinese Arbor Vitae, California Redwood, Etc.

Also, a fine variety of

FLOWERING SHRUBS.

We would invite those who are about to plant out PEAR TREES, to examine our stock, as particular attention is paid to the cultivation of the Pear. They are budded on Pear Seedlings of our own raising, and have made a fine growth from 3 to 7 feet, according to the habit of the variety. We have all of the varieties that are worthy of cultivation, procured from one of the most reliable Pear Cultivators at the East, and no pains are spared to insure complete accuracy.

THE NURSERIES

Are situated at the Residence of GEORGE SANDERSON, on the Road, leading from San Jose to Alviso; about three-quarters of a mile north of Beatty's Hotel.

Orders by mail, or by Wells, Fargo & Co., will receive prompt attention, and the Trees securely packed, so as to bear transportation to any part of the State—for which a reasonable charge will be made. Terms Cash.

## Progress.

This is the age of Progress, and there is no State in our glorious Union that is making more progress than our own State. Ship-building is rapidly advancing, and the specimens of the builders' skill reflect honor upon them. Already, small vessels have been sent upon the wave, equal to any afloat, and yesterday the first national steamer built in California, the *Toucey*, named in honor of the Hon. Secretary of the Navy, was launched from our Navy Yard at Mare Island.

It will be found that we can build as fine vessels here as in any other State, for we have the main thing to do it with—*splendid mechanics*; for good workmen can make a good ship out of poor material, better than poor workmen can make a ship out of the best. We hope this steamer, built in California, will always bear in mind that she is bound to sea (Toucey) on a voyage for the protection of our own State, and her interests, and we hope she will always be ready to see (Toucey) that justice is done our State.

Another evidence we have of progress is in the style of our architecture for the land. Our public and private buildings are being erected in a style of completeness and beauty rivaling many of the older States; and this arises, also, from the fact of the skill of our builders. We are also peculiarly blessed with building material of all kinds, and we venture the prediction that, within ten years, we shall have, in California, specimens of architecture, equal, if not surpassing, any in the world.

Our Manufactures are another evidence of Progress. In any and all departments of mechanical manufactures, adapted to Agriculture, or the mechanical trades, we are almost independent of other States, as our foundries, sawmills, machine shops, turning lathes, and other factories testify.

Progress is marked on all our hills and valleys, our vineyards and orchards, our gardens and our homes. There is beauty and progress everywhere, and it is the duty of every good citizen to notice and mark it; but not to be content even with present progress, but thankful for the present opportunities. Raise the banner of "Excelsior," and press on! Press on, while yet ye may!

## Mechanics' Institute Election.

This most important and useful institution holds its annual meeting on this (Friday) evening. Let every member feel that his vote will tell, not only for this year, but forever; for the influence of it, whether it be good or bad, will go on through all future years, elevating or depressing the mechanical interests of this State. We notice that there are two strong parties with rival candidates for the offices of the Society. Can it be that this Society is divided in its interests? Can it be that party spirit, sectional interests, or local prejudices, weigh against the greater interests of the working man? We look upon the Mechanics' Institute of San Francisco as one of the great levers of our State's prosperity. It has done great good, and can wield a mighty power for good, if it will; for there are a host of strong men connected with that society; and we should deeply regret to see disunion, or a rupture, among good men, which would retard the good in their power to accomplish. Let every man reflect upon his own act in this election; cast his vote for the best man; for the man and men who will honor the cause they have thus far so well built up. If any man, or set of men, forget the true action, and jeopardize the Institution, they will have cause to mourn over their acts to the latest day of their lives, for this Society, well directed, is destined to accomplish a mighty work on this coast for the working man.

## Cattle Market of San Francisco.

Like all great cities, our own is soon to have its Headquarters for Stock on the hoof, and slaughtered material also. We learn that a plan is under way to establish "A Cattle Market," where all stock for the shambles will be brought, and where the purchasers and sellers from all quarters will assemble on given days, the same as at Smithfield, or the celebrated Brighton market of New England. This is a good plan, it will benefit both buyer and seller, and it will also be a great purifier of various spots around our city that are now offensive to health. By a general convocation of all stock ready for market, buyers will know what can be had, and sellers will always command the best price for the best stock.

We learn that the spot now selected, is appropriate in position and name, being beyond the Mission and the Race-course, at a place called the "Bull's Head." It is a little singular, but this was the name of the first cattle market of New England, and we can remember it well in the days of "lang syne," for it was near the spot where we rambled, when a little chap, with scotch on our shoulder, the next day after a good New England Sunday; this we do well remember, though grown a little older, "That famous day at Brighton market, 'Monday'."

RAIN STORM.—The late rains have swept over all the State in a deluging storm, penetrating to the greatest depth in the earth of any storm known for several years. In the northern and mountain counties, snow has come down in avalanches from the skies, and also from the mountains where it had fallen. As no good comes unmixed to man, so this great blessing has been attended with the usual floods by rain and falling of buildings with snow. However great the good done, there will be many that will complain: it is either too wet or too dry, too hot or too cold; but He, whose right it is to rule and reign, will do His own good will and pleasure. One thing is very certain: we shall have an abundant season, and for this let us all be thankful.

HOLCOMB BROTHERS.—This famous boot and shoe warehouse is known widely over the Pacific shore, as one of the most reliable houses to deal with that can be found. A purchaser can send his address, and feel he is dealt with the same as if present.

## Pacific Railroad.

The arrival of the Great Overland Mail has brought the intelligence of the fate of the Pacific Railroad. It is contracted for—in a *resolue*; it is built—in *imagination*; it has been approved by—*politicians*; and Californians will see it *finished* and travel upon it—*when they build it*. We have eyes, but we see not; we have ears, but we hear not; and hearts, but we will not understand, and be converted to the duty we owe ourselves as a State, and take measures to value our own interests, to guard them, and improve the vast resources God has placed within our own reach and entrusted to our care. California can build the railroad herself, if she will! What other State in our glorious Union can dig from her soil \$50,000,000 annually? Here is the means; shall we use it?

Where does all this gold go to? What has built up and sustained the other States for the last ten years but California gold? California has sent away from her shores, within the last ten years, gold enough to have built the railroad and entirely equipped it—enough gold, that, with a wise foresight in her legislators and care by her citizens, could have been saved here, by using our own resources, instead of importing the products of other States and Nations. There is no disguising this fact.

Let California begin now, and show the world that she will be true to herself. The remarks of Senator Seward, as alluded to by Senator Gwin, in relation to the separation of the Pacific from the Atlantic States, may be an idle surmise; but who can read the future? Shall a State like California, with an area of territory vastly more than all the New England States, and with resources and wealth beyond computation, be taxed *three times* as much for her letters as any other State? and shall she be placed fifteen or twenty days behind time, by a lack of those facilities which are her due? and when she demands aid, that she may do more for other States, and reveal more of her greatness, she is trifled with by politicians and tricksters. Awake, Californians, and show Congress and the world that you mean to do something more than merely resolve to build a railroad. What has the resolution of Congress accomplished? Look at our cities, risen from ashes repeatedly, and can we not build a railroad? "All the soul of man is resolution, which expires never, from valiant men, till their last work; and then 'tis with it like a flame extinguished for want of matter—it does not die, but rather ceases to live."

## More Voices for the Types.

NEWSPAPERS in California are like the flowers, they come at all seasons, spring forth everywhere. Some are annual, some biennial, and some perennial; some are beautiful to look at, even the foliage has beauty and grace. Some have a freshness about them, like a flower wet with the morning dew, and some tell best in the rich, delicious fruit they yield. Newspapers claim an affinity also with color; some are true-blue, some fiery red, and some they call black. Some, from a constitutional formation, are green, others changeable—after a little grow rusty and brown, and by reason of being often singed in the warfare they become seared, and in the yellow leaf, and die of a consumption of blood. In the garden of newspaper literature, we find two more plants, just budding into bloom:

The Democratic Standard, a new herald of the party bearing that name, published at the Levee City, by J. R. Hardenbergh, Esq., Postmaster, and edited by C. L. Bolts, Esq.; both men of energy of character, and ability to give rank and stability to a party paper. It will undoubtedly be ably conducted and maintained.

The Daily Times may be said to be a new paper. If new bones, blood, flesh and sinews make a new man, then new publishers, new editors and new subjects, new purposes and aims, make a new paper. The Times appears with the names of Messrs. Washburn & Flanders as the publishers, and is avowedly a party paper, hoisting the Republican flag. E. H. Washburn, Esq., is so well known as one of our ablest writers, that it is only necessary to announce the fact; it will be conducted in a manner that nothing will be wanting on his part to win success.

## Books Received.

*The House*, one of the series of little manuals issued by Messrs. Fowler & Wells, of New York. They have issued "House," "Garden," "Farm," and "Domestic Animals"—all valuable books in our rural homes, invaluable in the family, especially among our youth. We wish these works could be introduced as "rewards" in our schools. They would create a taste for the useful as well as the beautiful. This work, "The House," commences the history of design for a house, a home of man: first, the red man's wigwam; then the log cabin, cottage, country house, villa, and all the order and progress in taste in the architecture of the country and age. This is a most truly entertaining work—everybody should have a copy. Messrs. Fowler & Wells have done a world of good by the excellent books of this kind they have published.

*Rural Annual and Horticultural Almanac*. This is a capital little work, published by Joseph Harris, Esq., of Rochester, N. Y. It has been issued two years, and is now in its third year. Every farmer should have it.

A NEW MILITARY COMPANY.—In accordance with a published notice, Col. J. H. Stewart organized on Saturday last, a new Military Company, at the Franklin township School-house, under the name of "Franklin Grays." The roll contains about fifty names, all good working farmers, living in that vicinity, and give promise of being a fine company. The following officers were elected: J. W. Pugh, 2d do; A. D. Crawford, 1st Lieutenant; Thos. H. Hunt, 1st Sergeant; J. D. Foulks, 2d do; H. H. Porch, 3d do; W. J. Epperson, 4th do; J. S. Nevins, 1st Corporal; F. M. Stone, 2d do; J. C. Hubbs, 1st do; J. H. Jeffries, 4th do; J. F. Pockman, 3d do.

[We like this. Give us our brave working farmers to defend our soil and our homes, and we shall be sure we are safe. What a sweeping charge they would make, with their sythes, grain-cradles and mowers! Wouldn't they "cut down" their enemies?]

## State Agricultural Society.

ROOMS OF CAL. STATE AGRICULTURAL SOCIETY, SACRAMENTO, FEBRUARY 23, 1859.

At a meeting of the Board of Managers of this Society, held this day, the following transactions were had: Resolved, That the regular monthly meetings of this Board shall be held on the second Wednesday of each month, at the rooms of the Society.

Resolved, That the proposal of F. Takey, to rent to the Society rooms in his building on J street, between Fourth and Fifth, be accepted.

Resolved, That in addition to the five thousand dollars appropriated by the State for premiums, this Society will offer seven thousand dollars, making an aggregate of twelve thousand dollars.

Resolved, That the five thousand dollars appropriated by the State for premiums, shall, in all cases, be paid in cash; and the seven thousand dollars appropriated by this Society from its own funds may be paid in plate, medals, diplomas, books, etc., as the Board of Managers shall deem for the best interests of the Society.

Resolved, That J. W. Osborn of Napa, and D. J. Staples, of San Joaquin, be added to the Committee to draft a schedule of premiums, and present for the consideration of the Board. [The Committee now stands: E. B. Crocker, A. P. Smith, O. C. Wheeler, J. W. Osborn, and D. J. Staples.]

Resolved, That the Annual Fair of this Society, for 1859, be commenced on the twenty-seventh day of September next, and continued ten days, in the discretion of the Board.

At a previous meeting it was resolved unanimously that all premiums offered in plate, books, etc., shall be paid at the actual cost of the articles.

O. C. WHEELER,  
Corresponding Secretary.

We publish the above for the information of the public. This bears the stamp of true action, and we rejoice to make record of the fact. Great complaint was made last year, of the price which was paid for medals, plate, etc. The course pursued by the Society should be such as to give proof that speculating in premiums was not the aim of the Society. The last vote seems to imply as much.

## Blossoming of Fruit-Trees.

As we have previously commenced, we desire to continue, the record each year of the time of blossoming, in the different sections, of the principal kinds of fruit. In this city, on the 14th of February, we noticed some blossoms on pear trees, and on the 20th, a peach tree in full blossom; but these were exceptions. At this time, March 4th, peach trees here are generally in blossom, and pear trees just opening. Apple buds are commencing to open, but they will not probably blossom till April. In the interior, the blossoming is generally a week or two earlier than on this Bay. In Calaveras, February 14th, the peach was reported to be in bloom; but at most other places we judge the blossoming to have been the last week in February. At Los Angeles, February 24th, the peach and pear were in full blossom. We hope our friends in the various sections, will keep record and report to us.

GRAND BALL AT SACRAMENTO.—Sacramento has always been noted for its social and intellectual gatherings, and we do not derogate from any other part of our State when we say the "Levee City" is preeminently distinguished for social life. The grand Ball of the season (the Legislative Ball) will take place this evening, March 4th, a day somewhat noted in legislative halls; and we do believe there will be a grand display of glorious legislators—fair ones too; and their petitions will be heard and must be granted; and we suppose what they do will become a law to all courtly gentlemen. As this is to be the Ball of the season, great preparations have been made. It is to be held in the National Theatre, which has been elegantly prepared for the occasion. We have been courteously attended to, receiving cards of invitation; and, of course, being an advocate of the fair, we shall attend, that we may duly report the bright and beautiful flowers that Heaven has sent to blossom over our fair land. The whole programme of entertainments in every department has been gotten up in the most splendid and knightly style, worthy the Queen City of Prairie Land, the day, and the occasion.

SAVE YOUR FRUIT.—The Placerville Observer, of the 2d inst., makes the following well-timed remarks: Last year, in this locality, the peach trees were in bloom much earlier than they are likely to be this season, and, consequently, were more exposed to the late frosts, which destroyed the fruit. We are glad to see the backward tendency of the bloom; and have, at present, good reason to hope for a bountiful crop of this luscious fruit, but it would be well for those who have orchards to be prepared for an emergency. By keeping fires under the trees on a frosty night, most of the fruit can always be saved, no matter how cold the weather may be. This experiment was tried by some of our citizens last Spring, and was completely successful. We hope our fruit-growers may think of this simple method at the proper time.

TOO TRUE.—The Recorder of Chicago, Illinois, in charging the Grand Jury, recently, said: "During the past five years that I have held this court, it has been my unpleasant duty to try, and sentence to the State prison, several hundred persons; and I am sorry to say, that while it is an easy matter to find jurors who are ready and willing to punish poor offenders, without position or friends, it is with great difficulty that jurors can be found who appreciate the fact, that one bad man, of position and wealth, can do more harm than one hundred poor men can, who are in the humble walks of life."

How would this apply to California? Has it not too often been the case that the question has been: Is he poor? Hang him! Is he rich? How much can he pay? The record of escaped felons will answer.

FALL OF BREADSTUFFS AND COTTON IN EUROPE.—By the late accounts, both in England and France, we notice a heavy decline and a dull market for Breadstuffs. This must retard shipments from the United States, and, of course, affect the exchange. The great Southern staple (Cotton) has had a fall also. The main articles of export being thus disturbed, it will cause considerable uneasiness among shippers and manufacturers under contracts. It has already advanced the rate of interest and caused a stringency in the money market.

THE HESPERIAN.—The friends of this newly expected Magazine are waiting with a good degree of anxiety for its appearance. Much is expected, and we have every reason to believe no one will be disappointed. One thing is certain, Mrs. Day will do all that Woman can do to make it a Magazine worthy of California, and one edited by a complete triumph and unbounded success.

## Celebration of Washington's Birthday.

AT THE COLLEGIATE INSTITUTE, BENICIA.

Not being able to attend this Festival, on the 22d, our reporter sends us the following interesting sketch of the pleasant celebration which took place, and we cheerfully give place to it; not because it is the all-important festival of the times, but because it is important that our colleges and schools should be thus encouraged to notice and celebrate such days, and bring to remembrance the lives and actions of great and good men, and thus have the youth of our State taught to emulate their noble example. We have always advocated the observance of such days, and we wish we had many more days observed which are marked in the history of our country. When the young men of our land are thus trained we shall hope for better days. The Collegiate Institute at Benicia is one of the best colleges in our State, and worthy the attention of parents who desire a correct training of their sons.

BENICIA, Feb. 23, 1859.

EDITOR FARMER: Pursuant to invitation I presented myself as the representative of the FARMER at the Collegiate Institute, on the morning of the 22d, and found, in the large hall, a number of invited guests collected. The following programme was handed me:

1. Opening Hymn.
2. Reading of Washington's Farewell Address, By Geo. M. Fall, of Marysville.
3. Singing of the Ode for the day, "Washington, the Guiding Star of Columbia."
4. Oration, by I. Hurlburt.
5. Trio and Chorus, "Three Cheers for the Red, White, and Blue."

The opening hymn was impressively sung. The Farewell Address was read with an emphasis which showed that the reader appreciated and felt the immortal truths which it contains, and which have a peculiar application at the present time. The Oration, a copy of which I have requested, and which I send you, was delivered in a very graceful manner, at times warming into eloquence. It is an effort which the young gentleman will have no reason to regret, when he looks upon it in his maturer years. The singing was admirable. The boys exhibited a patriotic enthusiasm which speaks well for their future usefulness.

I am very highly pleased at your earnest advocacy of such anniversaries. The FARMER is always to be found on the right side in every popular movement.

## ORATION

DELIVERED BY I. HURLBURT, JR.,

On the occasion of the Celebration of the 126th Anniversary of Washington's Birthday, at the Collegiate Institute, Benicia.

FRIENDS AND SCHOOLMATES: We meet here to-day to celebrate Washington's birthday. Why do we celebrate the anniversary of this day? We live in the land of the free! under the Star-spangled Banner! enjoying all the blessings that free institutions can afford. It is, therefore, our duty to commemorate such days as are sacred in our country's history. The anniversaries of such events as the Landing of the Pilgrims, the Declaration of Independence, the great battles fought by our forefathers, and the birthdays of the Fathers of the Republic, we should never suffer to pass by unnoticed; for, the commemoration of those events infuses new spirit into the hearts of the people, and reminds us of the duties we owe to our beloved country, and to those great men now passed away. Next to the Declaration of Independence, the birthday of him should be celebrated who is so justly called the Father of his country; "the first in war, the first in peace, the first in the hearts of his countrymen."

George Washington was born in Virginia, Feb. 22d, A. D. 1732. He attended school until he was sixteen years of age, when he commenced to face this stormy world. At this early age he became a surveyor, which avocation he followed till he was eighteen; then, receiving a commission in the Virginia militia, he arranged the military affairs in the northern part of that colony. The bloody French and Indian war having broken out in the western territory, Washington was sent thither by the Virginia government. Although, then, a young man of but twenty-two, his deeds were the deeds of a hero, and attracted general attention. For it was he who fought the battle of Fort Mifflin; he who stood by the side of Braddock, and he who rallied the broken ranks for retreat, when over half of the army, and among them the commander himself, had fallen. He, then, amidst the shouts of the people, returned to Virginia.

When the colonies began to be oppressed by the injustice of the mother-country, and the whole land was in a state of dissatisfaction, Washington was chosen one of the delegates to the first and second colonial Congress. As such he always opposed the aggressions of the British government. When that body declared the colonies free and independent States, Washington was chosen Commander-in-Chief, since he was found to possess, in a high degree, all the necessary qualities. He, at once, put the colonies in a state of defence.

Then follows the long and eventful period of the Revolutionary War. The States were overrun by the foe, and the horrors of war desolated the country far and wide. Through eight long years Washington was seen at his post, and though the prospects of his country were darkened by heavy misfortunes, yet his mind was cheerful, trusting, as he did, in Providence and the justice of his country's cause. And, indeed, he was not mistaken; for, in the words of Patrick Henry, he laid the proud British Lion at his feet. Thus it was he to whom we owe our freedom and independence.

His course of action, after the close of the war, was characteristic of his pure love of country; for, he did not think, for a moment, of using the power he had placed in his hands, for any selfish purposes; but, on the contrary, he cheerfully resigned his commission.

But it is quite natural that the people did not permit their benefactor to live long in retirement; and, when the new Constitution had been formed, George Washington was unanimously elected President of the United States. The task that awaited him, in this high office, was indeed a very difficult one; the new government had to be organized; the unavoidable bad effects of a long war had to be overcome, a revenue to be created, and ably did he discharge the arduous duties of his high post that, when his term of office had expired, he was re-elected. However, at the end of his second term, he declined a third election, desiring to spend the rest of his days in quiet and peace. Accordingly he retired to Mount Vernon, where the great warrior and statesman lived the peaceful life of a farmer.

Once more, however, the Father of his country was called by the voice of the people. A war due preparations for it. For Commander-in-Chief, on who, notwithstanding his love of retirement, was ready to sacrifice himself again for the good of his country. But before the difficulties with the French government were settled, death called the

great man from this sphere of action to one beyond the skies. His demise was, indeed, a sad event, and created, all over the Union, and far beyond it, the deepest feelings of sorrow; the fourteenth of December, 1799, was justly considered a day of great national calamity.

He has gone! Has the world ever produced another such man, equally great in war and in peace, and more beloved by his countrymen? When Napoleon Bonaparte was invested with power, he had, like Washington, to fight foreign foes. Like Washington he conquered; but, after the victories over the enemy, what a different use did Napoleon make of his power! Instead of giving France the longed for peace and freedom, he thought of himself, satisfied his own ambition, made himself the despotic ruler of his country, and carried on a long series of wars of conquest. Napoleon turned the wheels of government for his own benefit: Washington, for the good of his country. Napoleon fought as a tyrant: Washington, as the champion of freedom. Napoleon, the tyrant, dies in exile: Washington, the breaker of the chains of tyranny, lives immortal in the hearts of his countrymen. And can Oliver Cromwell, perhaps compare with Washington? It is true, Cromwell was an able general and statesman, and has great merits for saving and reestablishing the constitutional liberties of England. But did he do for freedom what Washington did? Was he not a fanatic in matters of religion? Was he not, after all, a despot? He was feared; Washington, loved.

If we turn our thoughts back to the history of ancient Rome, we find the name of Julius Caesar, certainly one of the greatest generals and statesmen the world ever saw. Was he, perhaps, like Washington? Did he combine with his high talents the same purity of heart and the same unselfish character as Washington? History answers in the negative; for Caesar, after having achieved the greatest success, both in the field and the cabinet, could not withstand the temptation of his unbounded ambition.

Wherein, then, consists the consummate glory of Washington? What is it, that essentially constitutes his greatness? It surely cannot be his capacity as a military leader and his statesmanship alone. O, no! There is something besides, which makes him, above others, a truly great man. This is the *spotless integrity* of his private character, and his being the most perfect pattern of a citizen.

Examine the pages of the history of all nations and of all ages, and tell me the name of that prominent general and statesman, who can, in this point, excel or even approach Washington. I know of none! Of what sterling qualities of character must he have been possessed, to accomplish what he has accomplished! to be the Commander-in-Chief from the beginning to the end of a long, protracted war, amidst so many difficulties and vicissitudes! to infuse new courage and confidence into the hearts of those who began to despair of success! to cheer up his countrymen, and lead them to final victory! Those great qualities of character must still higher be estimated, when we consider the pure intentions for which they were brought into action. There is no selfish purpose to be found underlying Washington's course of actions; no vain-glory, no undue ambition, no desire for self-aggrandizement; nothing prompted him to act but the good of his country, the happiness of his fellow-citizens. Where is the chief of any army or government who, under the same circumstances and with the same power in his hands, would act with the same disinterestedness, and in the same noble spirit? Can there any other man be pointed out, who surpasses him in truth, rectitude, and justice? any, in short, who might, like him, be called the model of a citizen? I repeat, I know of none.

George Washington, then, is, in my humble opinion, the greatest man the world ever saw; he was a great general, a great statesman, but he was greater still as a citizen of the Republic.

SPORTING INTELLIGENCE.—The great match, for a stake of \$8000, with an outside bet of \$16,000, was trotted over the Pioneer Course Wednesday afternoon, and drew together a large number of spectators. The day was pleasant and the track good. The match was between g. g. Glencoe Chief and b. m. Princess, to wags, a single heat of ten miles. The Alta says: About four in the afternoon the horses got the word. The start was good—slightly in favor of the mare. Soon after passing the score, Glencoe broke, and the mare shot ahead a couple of lengths. This position was maintained throughout the first six miles, the mare widening the distance on the back stretch and the horse narrowing it on the home stretch. But in the seventh mile Glencoe, on the back stretch, again went up. He soon got down to his work and made a handsome effort to recover his lost ground. The mare on the back stretch in the eighth mile, was about six lengths ahead of her opponent, which distance she continued widening throughout the last two miles, and came home from the draw gate, at about a four minute gap, a winner of the immense stake in 29 minutes and 107 seconds, without making a skip in the heat. To every unprejudiced mind, it was perfectly manifest that the mare had it all her own way from first to last; and that there was no moment during the race when she could not easily have increased the breach between herself and her opponent. The slowest mile was in 3:01, and the fastest 2:47. The following is the time of each consecutive mile: 2:50; 3:01; 2:57; 3:02; 2:58; 2:56; 2:56; 2:49; 2:47; 2:49.

The second match, which came off yesterday, between the above horses, the mare to wagon and the gelding to harness, for a stake of \$10,000, was won by the mare in 29:16 minutes.

INTERNATIONAL HOTEL.—The last steamer brought to this House some sixty or more passengers, to find a home in a new land that was so well commended to them, from every State in the Union. We believe that the Hotel International is now most favorably known in all parts of the Union, and those of our citizens who leave it for any other part of the world, are sure to send those friends that come this way, to a Hotel that is so admirably adapted to answer every want of its patrons. We do not believe there is a Hotel in the country where every want is more quickly supplied, and that too without stint or cost. There is no progress in any art or science connected with the comfort of eating and sleeping, but is not secured to this House. Mr. and Mrs. Haley are determined that the "International" shall be one of the best hotels in the State, and we think it will ever be so and that very truly. Mr. Robinson is ever ready at the cashier's desk, where all will be received and made to feel "at home."

WATERS' NEW YORK MUSIC STORE.—We would call the attention of our readers to the large advertisement of Horace Waters, of New York. His collection of Pianos, Accordions, and Music, is among the largest and best selected in the Eastern States. Mr. Waters' establishment is quite celebrated, both as a manufacturing and publishing house, and his music and instruments are found in all parts of our country.

B. F. ROUNDTREE & Co.—This old establishment, formerly an auction house, is now furnishing groceries to their patrons at very moderate prices, and are driving a profitable and satisfactory trade. Their store is on Clay street, between Sanson and Battery, where we can cheerfully recommend all.

## DOMESTIC SUMMARY.

The gas works at Mokelumne Hill were destroyed by fire on Sunday morning week, loss \$300.

About two thousand fruit-trees, the Red Bluff Beacon makes note of, are on the way to Townsend Flat, Shasta county, for Mr. Elmore, who intends planting the same.

Many of the dunes on the ditches in the vicinity of Jones City were blown down during the late storm, causing much damage, and delaying the miners.

A fire occurred at La Porte, on the 23d ult. A stable and a tin shop were burned; the Union Hotel, by skorching snow upon it, was saved. Loss, \$1500, or more.

Stitches in the mines have lately been robbed by the means of a piece of galvanized copper being thrust in among the amalgam, which adheres to it, and the results of the miners' work is extracted.

FARE TO NEW YORK.—The fare by the mail steamer Sonora, is stated to be: \$150 cabin, \$100 second cabin, and \$50 in the steerage. By the Orizaba: \$175 upper cabin, \$160 saloon, \$120 second cabin, \$60 steerage.

The Turn Verein Association of Stockton give a grand masquerade and fancy ball, at their hall, on Tuesday next. A theatrical entertainment, in German and English, will come off early in the evening.

OFFICIAL returns of votes at the special election in Sacramento on the 19th ult. give Duncombe 1466, Bacon 1296, Lord 324; for agricultural tax 2362, against 462. Duncombe's plurality 170. Majority for Agricultural Tax 1900.

At Carson Hill the miners have been doing a very excellent business for the past fortnight, says the San Andreas Independent of the 26th ult., and several large nuggets have been taken out, one of which weighed eight ounces.

SOME of the mineral lands having been surveyed and offered for sale "by authority," the miners are taking measures to prevent the sale by making affidavit that they know of its being mineral land, which it is hoped will prevent the intended sale.

WEATHER at Santa Cruz, says the Sentinel of the 26th ult., has continued cold and stormy during most of the week. Repeated showers, attended by cold winds, have given rather a gloomy aspect to everything, business included.

LASCA PLANA, says the Amador sentinel, contains some two hundred houses, and the carpenters are busy putting up more. The demand for lumber is unprecedented; much for building purposes, but more for mining uses. The claims are paying well.

At Placerville, says the Observer of Wednesday, the weather is heavy and blue; it rains, or snows continually; the miners cannot work, and the business men are idle. Men have not even spirit enough to get on a bender—in a word it is a painfully dull.

REMOVAL.—The Rooms of the State Agricultural Society at Sacramento, have been removed from the corner of Sixth and J streets, to the large room on the lower floor of Tukey's building, on J—between Fourth and Fifth streets.

At Honey Lake the thermometer was four degrees below zero at one time during the cold weather in January. But with warmer weather the snow soon disappeared, and farmers were preparing to put in their crops, of which there would be a great increase over last year.

A sample of California Wine has been received by the Tuolumne Courier, from Mr. Schilling, made at Columbia, this season. The editor says: It is pure, and although so new, it is extremely good. It is white and resembles claret in taste. Schilling is our pioneer wine-presser, and has made a large stock this year.

CHEERING.—The farmers of Yolo county, generally, says the Sacramento Union, have finished putting in their crops, and are confident of a large yield next season. At Hutchinson & Green's ranch, on Friday last, eleven teams (a portion of which were six mule teams, working gang-plows), were actively engaged, simultaneously, in the good work.

RAIN, rain, plenty of it, at Stockton, says the Republican of the 1st inst. Consequence: the earth soaked, sloughs running, ditches and reservoirs full, snow on the mountains, grass rising so fast one can almost see it grow. It is years since that part of the country has been so blessed, though even now they think they have less than their neighbors.

The Steam Navigation Company have announced the steamer Goodman Castle to be placed on the Upper San Joaquin, under the command of Capt. G. V. Hight, to run from Stockton to Fresno City and to the embankment of Visalia. This latter place will soon become a place of large business, and other points of trade will be opened. When facilities are increased, business also increases.

They have a singular way of dispensing justice to Indians in Fresno county. An Aborigine sentenced for any delinquency to be imprisoned for a certain time, is sold for that time to labor to the highest bidder, thus instead of being a tax, he is a source of county revenue. The Mariposa Gazette says the system works admirably, though we do not know of its being practiced in any other county.

G. C. HICKOX, Esq., business agent of Freeman & Co's Express, has been locating offices and appointing agents in the interior. The Amador Sentinel says Mr. Hickox has displayed much good sense and excellent judgment in his selection of agents (this might be reckoned a matter of course, from what we know of the gentleman), and nothing now remains for the company to do to secure the business, but to pursue a straight-forward, honorable, just and liberal course.

Mr. W. BRADSHAW has purchased the Contra Costa Gazette, and will continue its publication. The last number appears much improved, and from the experience in newspaperdom of the new publisher (being a practical printer), we predict that the Gazette will be a credit to, and assist in the development of, the rich agricultural section in which it is located. "Brad" is well posted in the figures, and will no doubt give us a good Prices Current.

At La Porte, Sierra county, says the Messenger, a tunnel has been run along the sidewalk, from the Union Hotel to Conly's banking-house; another one from the Union to El Dorado Saloon, and a third one from Evans & Morley's butcher shop to Freeman's restaurant—all of them at least ten feet below the more surface. They have been run for the convenience of persons having occasion to travel in these localities, and not as a matter of amusement, as some might be led to suppose.

The Fifth departure of the Overland Mail from Stockton for Kansas City, on the Albuquerque route, occurred on Tuesday. The mail is in charge of Mr. Henry Stewart, and by him the Republican learns there is little doubt of the murder of Mr. Wesley Cooper and his party of fifteen, who left Kansas City Feb. 1, with the mail for Stockton, the rapid flight of Lieut. Col. Hoffman

and the dragons, having left the poor fellows at the mercy of the Mojaves. But it is thought the principal difficulties on this mail route will soon be removed.

An interesting celebration, at the dedication of the new School-house on Center street, Stockton, took place on Friday last. A procession was formed, of several hundred children, of both sexes, accompanied by a band which marched to the building, where the exercises were: Playing of the Star Spangled Banner by the band, an original song of welcome by a class of girls, a Prayer by Rev. Mr. King, and an Address by Mr. Hager. The celebration, we learn, was a very happy affair.

HEAVY LAND OPERATIONS.—The San Joaquin Republican says, the well known firm of Sperry, Burkett & Co., of Stockton, have purchased of Capt. Weber, a tract of over twelve hundred acres of land lying between that city and French Camp. The sum realized for the land, is over \$12,000. The surveyors are now engaged in surveying it. We also hear that several other large land negotiations are in progress, the proposed purchasers being outside parties. This shows that a strong confidence is entertained of the future growth and prosperity of the city.

The miners at Mariposa are everywhere busy, says the Gazette of the 25th ult., a sufficiency of rain having fallen to enable them to wash thrown-up dirt in most instances, and to mine in many of the gulches for a considerable time. As a consequence, the times have much improved, money is more plenty, loafers, sellers and tilters are generally at work—for all of which gratitude should be expressed by the community.

Not until within the present month (February), were miners forced to leave the San Joaquin river. At Millerton, it is stated, that every claim opened, from one mile below to fifteen miles above that place, pays in the aggregate handsomely.

The Sierra Citizen says the snow which has been falling on Goodyear's Hill for more than two weeks, closed the Downville trail, and they were without the mails for a whole week; consequently, there was a very inquiring time. The work of opening the trail was accomplished by removing the obstruction, which extended from below the Mountain House to a distance of eight miles, with shovels. This should be considered an enterprising as well as extraordinary performance.

Under the heading of "Continued," the Citizen says: This third chapter of our bad-weather story, brings us down to a prospect of rain. Snow having fallen almost continually for three weeks, we shall be pleased to have it rain, fast and slow, for about six weeks; after which we should like to announce the approach of pleasing weather.

NEVADA COUNTY.—The Hydraulic Press of the 21st inst. says: One day of sunshine cheated us into the belief that spring time and heaven were near at hand, but the gloomy storm-season returned on the morrow, and another week of rain, and snow and darkness, renews the "winter of our discontent." The mountains lying to the north are thickly covered with snow; at Arnold's Ranch it lies thirty inches deep, at the toll-house five feet. The towns in Sierra county are almost swallowed up in snow. At Forest City, it was over eight feet deep. We have had no connection with Downville for a week past. There has not been so much snow in the mountains for several years.

The weather is not at all favorable to the active resumption of mining operations. In some localities on the ridge, deep snow prevents labor; in others the ground is frozen, and where neither of these obstacles exists the fierce storms have deterred men from working. Owing to these circumstances not many yields can be reported for the last week. On the advent of spring there will be more companies washing on San Juan Hill than ever before, and their weekly gold cleanings will reach a very high aggregate. The Bloomer Company, under the excitement of rich dirt, have been washing through all the bad weather, and on Saturday last took up the sum of \$5,800. This, for seven and a-half days' washing, with only one hundred inches of water, is nearly twice as good as was ever done on this hill before.

MESSENGERS, MANFIELD & WOOD.—This most excellent clothing establishment is truly worthy the consideration of the public. The stock is what it should be; material, style, quality, and finish, are such as are always sure to give satisfaction to customers. Messrs. M. & W. do not pride daily of a thousand customers, but what is far better, they have thousands of customers that talk of them and their excellent goods. By reference to their card it will be seen their work is made to order, and warranted; and any one visiting their establishment will soon be convinced it is the best in this city, and beyond what we have said of it.

UNCERTAINTY OF ARTESIAN WELLS.—Mr. Carey is putting up a large and strongly built windmill at the city artesian well on Market street, San José. Upon a recent alarm of fire, it was found that the reservoirs, constructed by the city at different points for holding water for the supply of the fire-engines on emergency, were empty, and that water ceased to flow from the well into the aqueducts. To supply this want, the city fathers contracted for a windmill for pumping the water out; and now, on the very day that the contractor got his windmill at the well, the water begins to flow out of it into the basin and down into the aqueducts leading to the reservoirs.—[San José Telegraph.

GAMBLERS CONVICTED.—The law against gambling has triumphed, and Robert Beatty has been sentenced to pay a fine of \$500 and imprisonment for one year in the State prison. We are truly progressing in self-government, when laws of this kind can be enforced, which we trust, will prove in this case; although we learn immediate steps will be taken to appeal to the Supreme Court. There, we think, our laws are safe.

MINT STATISTICS.—The deposits of gold in the San Francisco Mint, during the last month, ending February 28th, amounted to:

Gold.....\$532,800 04  
Silver.....4,310 22—\$537,112 26  
Gold coinage, double eagles, \$600,000 00  
Silver coinage, half dollars, 10,000 00—\$610,000 00

## SPECIAL NOTICES.

WE are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it, the witnessing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "Ora."

My Ambrotypes were not exhibited at the last Fair in this city. Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE,  
1 Corner Montgomery and Sacramento streets.

SLEEP! SLEEP! SLEEP!  
To each and all, a fair good night,  
And rosy dreams and slumbers light."

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Who is the man who doth keep  
A mattress the finest and best

Sleep! Sleep! Sleep!  
Rest that refreshes most true!  
The rest that, while sleeping, our health doth renew,  
Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Economy tells us to buy and to keep  
The mattress that is cheapest and best.

Sleep! Sleep! Sleep!  
On the mattress from JACOB SCHRIEBER!  
If bedchambers lie single, then life will not jingle  
Till they're married and purchase one wider!

So come to J. SCHRIEBER's, they go where, where,  
Those famous mattresses made out of PULU!

J. SCHRIEBER,

THE HOME OF BEAUTY.  
"Creative Genius! from thy hand  
What shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius! Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
And here our gods;  
But they are mortal.  
Around these fastened halls  
The good, the great, the living and the dead;  
And yet they speak—speak all:  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent  
While they speak, and gaze on us.

Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng—  
That we may raise a glorious song  
To all who set the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wondrous things come;  
Here send a season free from care,  
To worship the beautiful, good, and fair,  
For is it not a freeman's duty,  
To worship at the shrine of Beauty!

Behold these flowers that gem the land,  
These little children in groups they stand,  
While here and there, like angels, see  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;  
Here, too, the aged, the noblest show,  
They hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us! him who all this beauty planned.  
Behold, cries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

Daguerian Gallery,  
Corner Sacramento and Montgomery streets.

Ornamental and Fruit-tree Seed.—A small invoice of valuable Ornamental and Fruit-tree Seeds, for sale at the Office of the FARMER.

The Oxygenated Bitters.—For the cure of DYSPEPSIA or INDIGESTION, Liver Complaint, Asthma, Cerebral weakness, loss of Appetite, Fever and Ague, Heart Burn, Water Brash, Acid Stomach, Scurvy, Rheumatism, Headache, Neuralgia, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the only safe, certain and sovereign SPECIFIC for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and in their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drugs: in their nature tonic, not stimulating; retaining their virtues in any climate; they are a "combination and a form indeed" of Medicine which knows no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character, the disease may be; no matter that it has baffled the skill of the physician, and related the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.  
For sale by—CHARLES MORRILL, HENRY JOHNSON & Co., and REDINGTON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere.

## HOTEL INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Travelling Public and strangers in particular, to the merits of this House.

It was established under the present management on the 1st January, 1887, as a

FIRST-CLASS HOTEL,

in every particular. The present Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY, and E. R. ROBINSON.

With a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT,

THE PRINCIPAL THOUGHFARES,

THE FASHIONABLE PROMENADES,

AND STRAMBOAT LANDINGS;

thus rendering it at all times the most DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen,

during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

BANKERS, ETC.

MARK BRUMAGIM &amp; CO.,

BANKERS,

No. 100 Montgomery street,

SAN FRANCISCO, CALIFORNIA.

## Ladies' Department.

## A Chapter from Mrs. Ellis' Women of England.

[As there is much discussion at the present time upon the causes of the misery and unhappiness in social life, and the increase of divorces, we have selected a chapter from one of the best English works upon the domestic life of woman, and we believe it will, if carefully read, throw light upon the causes of this moral disease which in California is so fatal to the peace of domestic life.]

**DOMESTIC HABITS—CONSIDERATION AND KINDNESS.**  
That branch of the subject upon which I am now entering, being one of so much importance in the sum of human happiness, as scarcely to admit of comparison with any other, it might be expected that I should especially direct the attention of the reader to the duties of consideration and kindness in the married state, by entering into the minutiae of its special requirements, and recommending them with all the earnestness of emphatic detail, to the serious consideration of the women of England. Happy indeed should I be to do this, did I not feel that, at the same time, I should be touching upon a theme too delicate for the handling of an ordinary pen, and venturing beyond that veil which the sacredness of such a connection is calculated to draw over all that is extreme in the happiness or misery of human life.

I shall therefore glance only upon those points which are most obvious to the eye of a third party; and in doing this, it will be found, that many of the remarks I have made upon the behavior of daughters to their fathers, are equally applicable to that of wives towards their husbands. There is, however, this great difference—the connection existing between married people is almost invariably a matter of choice. A daughter may, sometimes, imagine herself excused, by supposing that her father is too uncongenial in mind and character, for her to owe him much in the way of companionship. She may think his manners vulgar, and believe that if she had a father who was a gentleman, she would be more attentive and considerate to him; but her husband cannot have married her without her own consent; and therefore the engagement she has voluntarily entered into, must be to fulfill the duties of a wife to him as he is, not as she could have wished or imagined him to be.

These considerations lead me to a view of the subject which I have often been compelled to take with deep regret, but which I fear no human pen, and still less mine, will be able to change—it is the false system of behavior kept up between those who are about to enter into the relation of marriage; so that when they settle down upon the true basis of their own characters, and appear to each other what they actually are, the difference is sometimes so great, as almost to justify the inquiry, whether the individual can really be the same.

I presume not to expatiate upon that process denominated courtship, as it is frequently carried on by men. I venture not to accuse them of injustice, in cherishing in their early intercourse with the object of their choice, the very faults which they afterwards complain of in the wife. My chief solicitude is for my own sex, that they should not be so faithful after marriage, but upright and sincere before; and that they learn to engage a lover, by little acts of consideration and kindness, which they are not prepared to practice even more willingly towards the husband.

I have known cases in which a kind-hearted woman would have esteemed herself robbed of a privilege, if her lover had asked any other person than herself, so much as to mend his glove. Yet is it not possible for the same woman, two years after marriage, to say, "My sister, or my cousin, will do that for you. I am too busy now."

Nor is it the act alone, but the manner in which the act is done, that conveys a false impression of what will be the manner of that woman after marriage. I charge no one with intentional deception. The very expression of the countenance is that of real and intense enjoyment, while the act of kindness is performed. "All I regret is, that the same expression of countenance should not always accompany the same performance in the wife. All women of acute sensibility must feel the loss of personal attractions, when time begins to tell upon their youthful charms. But, oh! that they would learn by the warning of others, rather than by their own experience, that it is more frequently the want of this expression of cheerful, genuine, disinterested kindness, than the want of youthful beauty, that alienates their husbands' love, and makes them objects of indifference, or worse.

The cultivation of acquaintance before marriage, with a view to that connection taking place, for the most part goes to a very little way towards the knowledge of real character. The parties usually meet in the hey-day of inexperienced youth; and while they exult in the unclouded sunshine of life, their mutual endeavors to please are rewarded by an equal willingness to be pleased. The woman, especially, is placed in a situation highly calculated to excite the greatest possible degree of complacency. She is treated by a being upon whom she depends, and he most probably her superior, as if she were incapable of error, and guiltless of a single fault. Perhaps she warns him of his mistake, speaks of her own defects, and assures him that she is not the angelic creature he supposes her to be; but she does all this with so sweet a grace, and looks all the while so pleased to be contradicted, that her information goes for nothing; and we are by no means assured that she is not better pleased it should be so.

If, for instance, she really wishes him to know that her temper is naturally bad, why is she invariably so mild, and bland, and conciliating in his presence? If she wishes him to believe that she has a mind not capable of entering fully into the interest of his favorite books, and the subjects of his favorite discourse, why does she appear to listen so attentively when he reads, and ask so many questions calculated to draw him out into conversation? If she wishes him to suppose that she is not always a lively and agreeable companion, why

does she not occasionally assume the tone and manner so familiar to her family at home—answer him shortly, hang down her head, and move away the evening when he is near her? If she really wishes him to believe her, when she tells him that she is but ill-informed, and wanting in judgment; why, when he talks with her, does she take so much pains to express opinions generally believed to be correct, and especially such as coincide with his own? If she occasionally acts from caprice, and really wishes him to know that she does so, to the injury of the comfort of those around her; why, whenever she practices in this way upon him, does she win him back again, and soothe his feelings with redoubled kindness, and additional solicitude to please.

Perhaps she will tell me she acts in this manner, because it would be unamiable and ungenerous to do otherwise. To which I answer, If it be unamiable and ungenerous to the lover, how much more so must it be to the husband? I find no fault with the sweetness, the irresistible charm of her behavior before marriage. It is no more than we ought to practice towards those whose happiness is bound up with ours. The falling off afterwards, is what I regard as so much to be deplored in the character of woman; for wherever this is observed, it seems to indicate that her mind has been low enough to be influenced by a desire of establishing herself in an eligible home, and escaping the stigma foolishly attached to the situation of an old maid.

I have devoted an earlier chapter in this work to the consideration of dress and manners; but I have omitted one of the most striking points of view in which these subjects can be regarded: the different characters they sometimes assume before, and after, marriage.

When a young lady dresses with a view to general approbation, she is studiously solicitous to observe, what she believes to be, the rules of good taste; and more especially, if a gentleman, whose favorable opinion she values, evinces any decided symptoms of becoming her admirer. She then feels him with her hair arranged in the most becoming style; with the neat shoe, and pure white gloves, which she has heard him commend in others; with the pale scarf, the quiet-colored robe, and with the general aspect of her costume accommodated to his taste. He cannot but observe this regard to his wishes, and he notes it down as a proof of amiable temperament, as well as sympathy of habitual feeling. Auguring well for his future happiness with a woman, who even in matters of such trifling moment is willing to make his wish her law, he prevails upon her at last to crown that happiness by the bestowment of her hand.

In the course of three years, we look in upon this couple in the home they are sharing together. We suppose the lady to be the same, yet cannot feel quite sure, her whole appearance is so changed. The hair that used to be so carefully braided, or so gracefully curled, is now allowed to wander in disheveled tresses, or swept away from a brow, whose defects it was wont to cover. There is a forlornness in her whole appearance, as if she had not, as formerly, any worthy object for which to study these secondary points of beauty; and we inwardly exclaim how the taste of her husband must have changed, to allow him to be pleased with what is so entirely the opposite of his original choice. On a second observation, however, we ask whether he actually is pleased, for there is nothing like satisfaction in the look with which he turns away from the unbecoming cap, the soiled kerchief, and the neglected aspect of the partner of his life.

If married women, who allow themselves to fall into that state of moral degradation, which such an appearance indicates, feel pained at symptoms of estrangement in their husbands' affections, they must at least be satisfied to endure the consequences of their own want of consideration, without sympathy or commiseration. They may, perhaps, feel disposed to say their punishment is too severe for such a fault. They love their husbands as faithfully as ever, and expected from them a love that would have been more faithful in return, than to be shaken by any change in mere personal appearance. But let me tell them, that the change which owes its existence to our own fault, has a totally different effect upon the feelings of a friend, from that which is the consequence of our misfortune; and one of the most bitter and repulsive thoughts that can be made to rankle in a husband's bosom, is, that his wife should only have deemed it necessary to charm his eye, until she had obtained his hand; and that, through the whole of his after life he must look in vain for the exercise of that kind consideration in consulting his tastes and wishes, that used to lend so sweet a charm to the season of youthful intercourse.

It is a subject well calculated to inspire the most serious regret, that men should practice throughout the season of courtship, that system of indiscriminate flattery which lulls the better judgment of woman into a belief that she must of necessity be delightful to him—delightful, faults and all—nay, what is infinitely worse than this, into a secret suspicion, that the faults which his female friends have been accustomed to point out, have no existence in reality, and that to one who knows and loves her better, she must appear in her naturally amiable and attractive character.

Could she be persuaded, on that important day, when she is led home from the altar, adorned, attended upon, and almost worshipped—could she be persuaded to cast one impartial glance into her own heart, she would see that the treasure she was bestowing, had many drawbacks from its value, and that all the happiness it was in her power to confer, must necessarily, from the nature of that heart, be accompanied with some alloy. "Alas!" she would say, after this examination, "he knows me not. Time will reveal to him my secretly cherished faults." And when this conviction was confirmed through the days and years of her after life, she would esteem it but a small sacrifice of time and patience to endeavor to render herself personally attractive to him. Nay, so grateful would she feel for his charitable forgiveness, that when the evil dispositions inherent in her nature were thrown into more glaring light, she would esteem it a privilege to be able by the simplest means to convince him, that, with all her faults, she was not so guilty of a disregard to his wishes, as to refuse in these minor points to conform her habits to his taste.

(TO BE CONTINUED.)

**A GOOD LESSON.**—I learned one good lesson when I was a little girl," says a lady. "One frosty morning I was looking out of the window into my father's barn-yard, where stood many cows, oxen and horses, waiting to drink. The cattle stood very still and meek, till one of the cows in trying to turn round happened to hit kicked and hit another. Whereupon the neighbor herd were kicking each other with great fury. "My mother," laughed and said, "see now what comes of kicking when you are hit!" "Just so have I seen one cross word set a whole family by the ears, some frosty morning. "Afterwards," when my brothers or myself were howling the fight in the barn-yard began. Never return a kick for a bit, and you will save your-

**Have Charity.**  
Charity, my friends, charity! Believe me, that no difficulty will ever be smoothed away with harsh words. Harshness only begets harshness again, as love begets love. Our path through this world is rugged and rough. We must needs hear much that grates with strange discord upon our hearts and brains; but a little patience, a little forbearance. It is not the sharp-pointed word that most wins upon the human heart. Would you right aught that is wrong, chase a scowl from the clouded brow, or win a smile from the sour lip? try charity; you will find it the surest and safest weapon of truth. It never descends in bitter drops to poison a brother's soul, wounds no one, and where it will not win it cannot harm.

There are, indeed, trials that sorely test the heart; times when gentleness and forbearance are almost impossible. The indignant lip will curl, the eye will flash, and the outraged heart will give utterance; but such trials and provocations we need not reek. Undoubtedly they will meet us too often at best; and be sure, if we go about seeking faults and flaws, we will find enough of them to keep us in a perpetual broil all our lives. We need not read a paper or book that we do not think worthy of perusal; we need have no intercourse with the man or woman who is repulsive to us; or should such offences be thrown in our way, let us pass them by silently; for pointing out their faults to the world will not mend them, but it will beget in us an unamiable, uncharitable disposition, that will make our life a burden, and will also be sure to make for us hosts of enemies; yea, our best friends will weary of us, and we will be counted as a pest upon the earth.

But if we, on the contrary, resolutely turn away our eyes from the faults of our neighbors; if we make a proper allowance for their shortcomings, and give them due credit for their virtues, and with whomsoever we cannot live peaceably, turn quietly away; then will our lives be truly blessed. The good and noble will ever crowd around us, and even old age will come and pass away as sweetly as a bright summer morning.

Important as the laws of charity are to us in the most obscure paths of (and they are all important), yet are they more so when we take it upon ourselves to send our thoughts out into the world, to be read by thousands of our fellow beings. Then it becomes us to nobly lay aside all petty prejudice, all personal grievances, all bitterness of soul, and let truth and virtue be our only guide, and inspire our pens. Though perchance we write with "a stiff, hard, steel pen," we will soften its sharp point in the gentle dews of charity; for if we do not, we may ere long regret that we ever learned its use; for we must remember that we are giving our thoughts to an uncharitable world. We are placing ourselves at the mercy of those who are ever seeking to exalt themselves by degrading others. However, we need not fear them, so long as we are careful not to harsh, rude, or unkind word escapes our pen; only let our course be pure and upright, then we need not blush, however short-lived our writings may be.

I would write more, but I see that the sun is now setting, and other things require my attention; so, for the present, I must lay aside my pen. Though I would like much to have a social chit-chat with some of the writers in the Ladies' Department, I will have to defer this for a more convenient opportunity.

BERTHA BAY.

OAKLAND, February 20.

## Health of Daughters.

MOTHERS, says Mrs. Sigourney, is there anything we can do to acquire for our daughters, a good constitution? Is there truth in the sentiment sometimes repeated, that our sex is becoming more effeminate? Are we capable of enduring hardships as our grandmothers? Have our daughters as much stamina, as much aptitude, as we ourselves possess? These questions are not interesting to us simply as individuals. They affect the welfare of the community, for the ability or inability of woman to discharge what the Almighty has committed to her, touches the equilibrium of society, and the hidden springs of existence.

Tenderly interested as we are for the health of our offspring, let us devote peculiar attention to that of our daughters. Their delicate frames require more care in order to become vigorous, and are in more danger through the prevalence of fashion. Frequent and thorough ablutions, a simple and nutritious diet, should we secure for all our children.

But I plead for the little girl, that she may have air and exercise, as well as her brother; that she may not be too much blighted, if in her earnest play, she happens to tear or soil her apron. I plead that she may not be punished as a romp, if she keenly enjoys those active sports which city gentility proscribes. I plead that the ambition to make her accomplished do not chain her to a piano till the spinal column, which should consolidate the frame, starts aside like a broken reed; nor bow her over the book till the vital energy, which ought to pervade the whole system, mounts into her brain and kindles the death fever.

**A MOTHER'S GRAVE.**—Earth has some sacred spots where we feel like loosening the shoes from our feet, and treading with holy reverence; where common words of pleasure are unfitting; places where friendship's hands have lingered in each others' where vows have been plighted, prayers offered, and tears of parting shed. Oh, how the thoughts hover around such places, and travel back through unmeasured space to visit them. But of all the spots on the green earth, none is so sacred as that where rests, waiting the resurrection, those we once cherished and loved. Hence, in all ages, the better portions of mankind have chosen the loved spots for burial of their dead, and in those spots they have loved to wander at eventide to meditate and weep. But among all the charnel houses of the dead, if there is one spot more sacred than all the rest, it is a Mother's Grave. There sleeps the mother of our infancy—the guide of our youth—the counselor of our riper years—our friend when others deserted us; whose heart was a stranger to every other feeling but love, and who could always find excuses for us when we could none for ourselves; There she sleeps, and we love the very earth for her sake!

A merry companion on the road is as good as a nag. Better to ride on an ass that carries me than a horse that throws me.

## APPEAL OF THE

## Ladies' Mount Vernon Association, TO THE PEOPLE OF THE STATE OF CALIFORNIA.

A recent appointment by Miss Ann Pamela Cunningham, Regent of the "Mount Vernon Ladies' Association of the United States," has devolved on the undersigned, the duty and the privilege of placing before the people of this State, the purposes of the Association.

An Act of Incorporation from the State of Virginia authorizes the Association "to purchase, hold, and improve two hundred acres of Mount Vernon, including the mansion as well as the tomb of George Washington," and to receive a deed in fee simple, and to exercise full power over the use and management of the same.

Under this charter, a constitution has been adopted, which vests the power of management in a Regent and Vice Regents, selected one from each State of the Union.

In April, 1858, under the advice of legal gentlemen, a contract was executed for the purchase of Mount Vernon for \$200,000, of which \$18,000 was to be paid cash, \$37,000 on the 1st January, 1859, and the balance in three equal instalments of \$41,566 66 each, with interest from the date of the contract, payable on 22d February, 1860, 1861, 1862.

Until payment in full, the proprietor is to retain possession, but such payment may be made at any time.

The cash payment was made, and the gratifying intelligence has lately reached us, that the instalment of \$37,000 was duly met; in sums of not less than \$5000, as soon as collected, thereby arresting the accrual of interest. All efforts, therefore, are now turned to the collection of funds for the payment of the deferred instalments at the earliest possible day, thereby saving a large amount of interest, and realizing the cherished hope of at once obtaining possession of Mount Vernon.

To this noble cause, the Women of the Union, deserting for a season the seclusion of domestic life, have brought their talents and all their energies. Amidst the discord of sectional strife, they hid us gathered around the tomb of Washington as children of a common heritage, recall his moderation of spirit and pure patriotism, and lay to heart the solemn warnings of his last public words. They know, that standing on that hallowed spot, the pilgrims gathered from the wide expanse of the Republic, can feel but one sentiment—reverence for his teachings, and devotion to the Union he so loved.

Men of high station and intellect (among whom Everett stands preeminent) are lending their influence and their eloquence to the cause. In twenty-one States of the Union, the good work goes bravely on, and California is now invited to do her part. Youngest of her sisters, she yields to none in reverence for the name of Washington and devotion to the Union. Animated then by these sentiments and by a just State pride, let her people bring their offerings to this common altar of patriotism. Shall the gold of her glittering soil be poured alone into the lap of Commerce, and none be devoted to preserve and guard with sacred care the Groves of Mount Vernon? Let all then vie in generous rivalry, to show that California lacks not the heart to sympathize, nor the hand to help in this work of patriotism.

At the Press of California, this appeal is especially made. Your Sisters of the East have assumed this honorable duty, and claim your zealous cooperation. Our State will do her part liberally, if you resolutely take the matter in hand. On you, therefore, will it depend whether she shall respond to the call.

Although contributions of any amount are solicited, yet the price of membership is but One Dollar. Concerted and systematic action, therefore, must be adopted to canvass the State from the Sierras to the Pacific. The duty of such organization devolves on the Vice Regent, and she proposes the following plan as simple and also effective, if seconded by your hearty cooperation.

Lady Managers will be selected, one or more, for each city, town, village, and mining camp in the State, who will appoint Assistant, issue to them Credentials authorizing them to receive contributions and enroll members. These assistants will report upon the progress of the Managers appointing them.

The several Lady Managers will report monthly, also, to the Vice Regent, a complete list of names enrolled and the amounts received, with such suggestions as they may deem proper. Monthly the Vice Regent will forward to the Regent, the sums received and a complete list of contributors, whose names will be recorded in the book preserved at Mount Vernon, in perpetual memory of their tribute to this noble cause.

An Advisory Committee of Gentlemen has been selected, and their names are hereto appended.

Let McLane be the Treasurer of the Association for this State.

Communications will be addressed: Mrs. Magdalen G. Blanding, Vice Regent Mount Vernon Association, and forwarded through Wells, Fargo & Company's Express, which has generously offered to convey them free of charge.

Office of the Association, No. 1, Lucas, Turner & Co's building, San Francisco.

MAGDALEN G. BLANDING,

Vice Regent for California.

We, the undersigned, take great pleasure in uniting with Mrs. Blanding in commending to our fellow citizens the cause which has been committed to her charge, and will gladly cooperate with her in every successful effort.

Wm. Ingraham Kip, M. H. McAllister, Harry I. Thornton, Ogden Hoffman, Belle Peyton, Louis McLane, Edward Stanley, T. W. Freeman, E. D. Baker, Edward J. Pringle, F. P. Tracy, H. W. Halleck.

## ADVISORY COMMITTEE.

His Excellency John B. Weller, Sacramento; Hon. Joseph Walker, do; Hon. W. C. Stratton, do; Hon. Stephen J. Field, do; Hon. M. H. McAllister, San Francisco; Hon. Ogden Hoffman, do; Hon. J. S. K. Oiler, Los Angeles; Right Rev. Bishop Kip, San Francisco; Right Rev. Bishop Alleyman, do; Hon. John C. Fremont, Mariposa; Hon. Henry I. Thornton, San Francisco; Hon. Edward Stanley, do; Hon. Milton S. Latham, Sacramento; Hon. E. D. Baker, San Francisco; Hon. Ballo Peyton, do; Edward J. Pringle, Esq., do; Henry W. Allen, Esq., do; Wm. M. Leont, Esq., Santa Clara; Major E. D. Keyes, San Francisco; Hon. E. C. Blake, do; Hon. T. W. Allen, do; F. P. Tracy, Esq., do; Hon. E. W. McKinstry, Napa; Hon. Benjamin Hayes, San Diego; Hon. Joaquin Carrillo, San Luis Obispo; Hon. Samuel Bell McKee, Oakland; Hon. John P. Hayes, Crescent City; Hon. P. D. Fairfield, Santa Helena; Hon. B. Bliss, Marysville; Hon. B. F. Myers, Auburn; Hon. Edward Norton, San Francisco; Hon. Charles M. Greaser, Stockton; Hon. Niles Sears, Downsville; Hon. Warren T. Sexton, Oroville; Hon. Pablo de la Guerra, Santa Barbara.

**Fruit and Ornamental TREES AND SHRUBS, Roses, Vines, and Exotic Plants.**

**PARSONS & CO.,**  
Flushing, - - - - - near New York,  
INVITE attention to their fine  
COLLECTIONS OF HARDY AND EXOTIC TREES  
AND SHRUBS, and PLANTS, constantly enriched by  
their collections in America and by importations  
from abroad.

Their EXOTIC DEPARTMENT, occupying a number of houses, is full of rare and valuable Plants and shrubs, and is open to the inspection of visitors. The varieties of EXOTIC GRAPES are kept genuine by constant propagation from cuttings, and to which two houses are devoted.

Their ROSE department contains a large assortment of the finest varieties, and the best standard sorts are cultivated in very large quantities and sold at reduced rates, for massing and for display. They do not bud their roses and cannot therefore sell them to compete with those who have adopted that mode of cultivation. No stock upon which to bud has yet been found that will not sucker up and destroy the variety worked upon it.

In the OPEN GROUND DEPARTMENT they offer a large stock of well grown and thrifty FRUIT TREES, suitable either for the amateur or the professional, including the finest kinds of STANDARD and DWARF PEARS, CHERRIES, PLUMS, PEACHES, APPLES, &c. These are now offered at reduced prices.

In the HARDY ORNAMENTAL DEPARTMENT will be found a large quantity and variety of DECIDUOUS and EVERGREEN TREES and SHRUBS, for the avenue, lawn, or garden. Of these, some rare varieties are cultivated in very large quantities and sold at a great reduction from the usual rates.

Among them are  
Spiraea, Lilac, Forsythia, Weigela,  
Stuartia, Andromeda, Pyrus Japonica,  
Norway Spruce, Deciduous Cypress,  
Larch, Ash, Maples, Beech, Linden,  
and others.

They have made the RHODODENDRON a specialty, and have cultivated it in so large quantities that they can offer it at greatly reduced rates. The beauty and not to be highly appreciated. A new feature of their establishment is the extensive propagation of the HARE EVERGREEN, the cost of importing which has hitherto placed them beyond the reach of any but the wealthy.

They can thus offer at moderate rates the fine sorts, as  
Podocarpus, Retinospermum, Cephalotaxus,  
Thuopsis, Taxus, &c.

For Hedges, they would call attention to the SIBERIAN ARBUTUS, which is far more valuable than the AMERICAN, in that it bears transplanting well, is very close and compact in its habit, requires no trimming, and is not affected by the coldest winter.

A General or Trade Catalogue will be sent on application. Careful attention is given to PACKING and FORWARDING.

## PIANOS, MELODEONS, Alexandre Organs, and Music!

Prices Greatly Reduced!

## HORACE WATERS,

No. 333 Broadway, New York.

AGENT FOR THE SALE of the best Boston and New York Pianos and Melodeons. The largest assortment of Music Merchandise in the United States. Pianos from five different manufacturers, of every variety of style—from those in plain rosewood cases, for \$200, to those of the most elegant finish for \$1000. No house in the Union can come in competition for the number, variety and celebrity of its instruments, nor the extremely low prices at which they are sold.

**Horace Waters' Modern Improved Pianos**, with or without iron frames, have in their new scale an improved action, in power and compass of tone equalling the grand, with the beauty and durability of the square Piano. The French and Italian masters have justly pronounced them equal, if not superior to any other make. They are guaranteed to stand the action of every climate.

**Horace Waters' Melodeons** (tune the equal temperament), superior in each desirable quality. Can also furnish Pianos, Carharts, and South's Melodeons. Prices from \$45 to \$125; for two sets of reeds, \$150; two banks of a liberal organ pedal bass Melodeon, \$250, \$675 and \$300 (less a liberal discount). Each instrument warranted to give perfect satisfaction, or purchase money refunded.

**Alexandre Organs**, five stops, \$160; eight stops, \$180; eight do, with pedal bass, \$225; twelve stops, \$225; twelve do, size larger, \$250; twelve do with pedal bass, \$300; fifteen stops, etc., \$375.  
Second-hand PIANOS, at great bargains, constantly in stock. Price from \$30 to \$140.

**Music.**—One of the largest and best catalogues of Music now published; all Music and Musical Works published in the United States for sale by this House. Also, Martin's celebrated Guitars; all kinds of Musical Instruments and Musical Merchandise, at the lowest prices. Music sent wherever ordered, post paid. Catalogues sent by mail. A liberal discount made to dealers, teachers, seminaries and clergymen.

**TESTIMONIALS OF THE HORACE WATERS' Pianos and Melodeons.**

"The Piano came to hand, and in first-rate order. It is a beautiful instrument and no mistake."—*Lee & Walker, Phila.*  
John Hewitt, of Carthage, N. Y., who has had one of the Horace Waters' Pianos, writes as follows: "A friend of mine told me to purchase a Piano for my wife. She likes the one you sold me in December, 1856. My wife is becoming popular in this place, and I think I can introduce one or two more; they will be more popular than any other make."

"We have two of your Waters' Pianos in use in our Seminary, one of which has been severely tested for three years, and we can testify to their beauty and durability."—*(Wood & Gregory, Mt. Carroll, Illinois.)*

"H. Waters, Esq.—Dear Sir: Having used one of your Pianos for two years past, I have found it a very superior instrument.—*(A. Gray, Principal Brooklyn High Seminary.)*  
"My friend, H. Waters, writes as follows: 'I received your Piano, July 23, '58. Mr. Waters—Dear Sir: I received the Melodeon safe and in good order; am well pleased with the external appearance, and the tone also. Hope I shall have occasion to order one or two more the present season.'

"I received your Piano, Aug. 5, '58. Horace Waters, Esq.—Sir: The Melodeon you sent me was duly received in good order. I am now fully prepared to say that the instrument is highly satisfactory; and I beg you will accept my thanks for the very liberal terms on which you furnished it, and for the very honorable manner in which you have fulfilled, and more than fulfilled, all the promises you made."—*(J. L. Sargent, N. Y.)*

"The Piano I received from you continues to give satisfaction. I regard it as one of the best instruments in the place."—*(J. L. Clark, Charleston, Va.)*

"The Melodeon has safely arrived. I feel obliged to you for your liberal discount. Will do all I can for you in these parts."—*(H. J. M. McCormick, Parkersville, S. C.)*

"The Piano was duly received. It came in excellent condition, and is very much admired by my numerous family. Accept my thanks for your promptness."—*(Robert Cooper, Warrenham, Bradford county, Pa.)*

"The Piano came to hand, and is the best one in our country."—*(Thomas A. Latham, Campbellton, Gretna, Pa.)*  
"We are very much obliged to you for having sent us such a fine instrument for \$250, and we shall take pains to recommend it."—*(Frank, Held & Co., Buffalo, Democrat.)*

"The Horace Waters' Pianos are known as among the very best in the Union, and are enabled to sell them at such low prices, from personal knowledge of their excellent tone and durable quality."—*(N. Y. Evangelist.)*

"We can speak of the merits of the Horace Waters' Pianos, from personal knowledge, as being of the very best quality."—*(Christian Intelligencer.)*

"The State Fair displayed greater excellence in any department than Horace Waters' Pianos."—*(Churchman.)*  
"The Horace Waters' Pianos are built of the best and most thoroughly seasoned material. We have no doubt that buyers can do as well, perhaps better, at this than at any other house in the Union."—*(Advocate of the Journal.)*

"Waters' Pianos and Melodeons challenge comparison with the finest made anywhere in the country."—*(Home Journal.)*  
"Horace Waters' Pianos are of full, rich and even tone, and powerful."—*(N. Y. Musical Review.)*

"For friends who find at Mr. Waters' store, the very best assortment of Musical and Musical Merchandise in the United States, and we urge our southern and western friends to give him a call whenever they go to New York."—*(Graham's Mag.)*

**Warerooms, 333 Broadway, N. Y.**

## The Angry Father.

One day Sadi was reading the holy Scriptures, but suddenly he closed the book and looked stern and serious.

Allimed perceived it, and asked the youth: "What ails thee, Sadi? why does thy countenance change?"

Sadi answered: "The Scripture speaks here of the wrath of God, and in other places he is called love. This seems hard and contradictory."

Then his master said calmly: "Shall not the Scriptures speak humanly to human beings? Thou takest no offence when mortal members are attributed to the Most High?"

"No," said the youth, "that is innocent figurative language; but anger—"

Then Allimed interrupted him, saying: "I will relate to thee a tale. There lived two rich merchants in Alexandria, who had two sons of equal age. They sent them to Ephesus on affairs of their trade. Both youths had been well taught in the faith of their fathers."

"When they had lived for some time at Ephesus, they were dazzled by the splendor and the pleasures of the town, and were seduced to deny the faith of their fathers, and to bow down in idolatrous worship in the temple of Diana."

"A friend in Ephesus communicated this to Kleon, one of the fathers in Alexandria. When Kleon had read the letter, he was grieved in his heart and very wroth with the young man. Then he went to the other, and told him of their apostasy and his grief."

"But the other laughed, and said: 'If my son carry on his trade the better for it, I shall easily console myself.'"

"Then Kleon turned away from him, and his anger increased."

Now Allimed said to the youth: "Which of these two fathers seemeth to thee the wiser and better?"

Sadi answered and said: "He who was angry."

"And who," asked his tutor, "was the most loving father?"

The youth answered again: "He who was angry."

"But was not Kleon angry with his child?" asked Allimed.

And Sadi answered: "Not with his child, but with his apostasy and transgression."

"What seemeth to thee to be the origin of such anger at transgression?" asked the master.

The youth answered: "The holy love of truth."

"Behold, my son," said the old man, "if thou only art able to explain the divine by the divine, thou wilt no longer take offence at the human word."

When Sadi had sat for some time in thought, he looked at his tutor; and Allimed said to him: "Thou seemest not yet satisfied—a question is on thy lips."

Then the youth answered and said: "Yes, my father, it seemeth to me very daring to speak in such a way of the Highest and Purest."

"Indeed," said the old man, "it is a human expression, and I commend the fear of thy heart. But behold, my Sadi, when the faithless son, after acknowledging his fall, may have thought, in an hour of repentance, of the time of his innocence and his pious father, how thinkest thou would then the heart of his father have appeared to him, even if he were not wroth?"

"Ah," said the youth, "I understand thee, my father. His father must have appeared angry to him; and the holy Scriptures speak to a fallen race."—[Parables of Krummacker.

A SATIRE ON FASHIONS.—The following admirable hit at ridiculous fashions, is too good to be laid away on the shelf:

When lovely woman veils her bosom  
With modish fashionably thin,  
What man with eyes could ever refuse 'em  
From casually peering in?

And when his ardent gaze returning  
The dry goods heaved to deep-drawn sighs,  
Would not his fingers' ends be burning  
To press—his hat down o'er his eyes?

EMILY.—"Shall you dress much to-night, dear?"  
Lillian.—"No, as little as possible; I am going to a ball!" Oh!

## THE CALIFORNIA FARMER.

## PROSPECTUS FOR VOLUME ELEVEN.

THE CALIFORNIA FARMER has now entered upon the New Volume, numbering the Eleventh, and the highest attained by any weekly journal on the Pacific Coast, and while we do not arrogate to ourselves the honor of having been longer engaged in the publishing of a journal than any of our contemporaries, several having been longer before the public than our own—among which stands the venerable Alta California, the Golden Era, and the San Francisco Herald—we do claim to have been as long or longer steadily pursuing our calling, without change of the original founder; having now been five years pursuing, with an unflinching faith, the claims of an interest which we believe the greatest, noblest and best in our land.

As the founder and proprietor of the first Agricultural and Mechanical Journal on the Pacific, we believe we can claim with some degree of pride and satisfaction, a just share of respect from the citizens of this State, for our steady advocacy and adherence to the great industrial interests of California. It is not necessary for us to enumerate all the good things we shall do in our New Volume, nor promise wonderful things, for we trust the character of the FARMER is too well known to require that at our hands. But this we do promise:

We mean the New Volume shall be superior to all its predecessors, and our aim shall be to make every Volume bear evidence of improvement. We mean the CALIFORNIA FARMER shall be the true and fearless advocate of the great interests of the Agriculturists of California; it shall also be the bold and zealous advocate of our "home manufactures," and earnestly battle for Mechanics and Artisans, as the brethren of the FARMER. We shall ever advocate the cause of Agriculture, Mining, Manufactures, and the Mechanic Arts, as the basis of our wealth, prosperity and happiness. We shall advocate the cause of Education, as a means of perfecting our happiness. We shall, above all these, advocate the Blessedness of Home, Education for Home, Beautifying and Protecting Home and the Homestead. These are the principles that will guide us in our labors, and as the guiding star and great light of home is woman, so we shall ever plead for the education of woman as the sure way to elevate and purify the world.

These are the cardinal principles of our journal, and with these we desire to place it on every farm, in every workshop, manufactory, warehouse or place of business in our land; and we further desire, to have it in every family circle in the glorious State—it is there we would plead for the cause we advocate, there we hope to find our truest friends; to whom we look, on them we rely for the continued success of the work in which we are engaged.

As we hope to have a large increase to our list with our New Volume, may we not now appeal to all our friends for their generous co-operation in this work. As we wish to offer a just return for any exertion made in our behalf, we will offer the following:

Every single subscriber, with \$5, shall be entitled to Seeds we shall distribute in February, consisting of several thousands of packages. Each new subscriber to receive five packages.

Circle of three subscribers and \$15, will receive the splendid colored plate of California Fruits and a copy of the Little Pilgrim, for one year.

For five subscribers and \$25, we will send five copies of the FARMER, the Atlantic Monthly and Arthur's Home Magazine.

For ten subscribers and \$50, we will give ten copies of the FARMER, Atlantic Monthly, Arthur's Home Magazine, Harper's Monthly, the Little Pilgrim, and an extra copy of the FARMER mailed to any friend in the Eastern States.

Thus, by a little exertion, our friends may kindly favor us, and at the same time secure to themselves a valuable library of long literature, such as ten subscribers would secure to them.

We have made arrangements to receive the above publications for the Clubs that we hope to receive, and we now leave the work in the hands of our friends, with the grateful thanks for many favors in the past years of our FARMER.

## J. L. POLKHEMUS DRUGGIST

190  
J. St.

OFFICIAL NOTICE!  
POLKHEMUS' DRUG STORE,  
No. 190 J street, corner of Seventh,  
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unflinching patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged  
By other Druggists, legitimate or illegitimate, and of  
The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open All Night!  
And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure. Bland's Nerve and Bone Liment, warranted the best in California.

Glover's of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

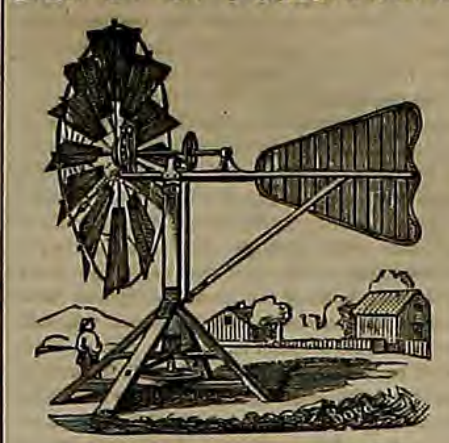

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

93-12 J. L. POLKHEMUS

## GREAT REDUCTION IN THE PRICE

## DR. F. G. JOHNSON'S

PATENT SELF-REGULATING  
WINDMILL.

MANUFACTURED BY  
D. VAN PEL.

THIS MILL IS NOW WITHIN THE REACH OF ALL; and being constructed all of iron, is without doubt the most perfect and durable, as well as the most economical Windmill in the world.

The undersigned having purchased the Exclusive Right for the MANUFACTURE of these Mills in this STATE, will manufacture and keep on hand the following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00.  
No. 2—One to one and a quarter Horse-power.....130 00.  
No. 3—One and a third to one and two-thirds Horse-power.....162 00.  
No. 4—Two to two and a half Horse-power.....200 00.  
No. 5—Two and two-thirds to three and a half Horse-power.....230 00.  
(This power is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

DEPOT OF MANUFACTURE,  
Nos. 90 and 92 Bush Street,  
SAN FRANCISCO.

When any greater power is required, the prices will be pro rata as the power is increased. They are susceptible of being increased to 20 horse-power or more; and applied for any purpose where stationary power is needed, and as manageable as a Steam Engine, with no risk or expense. Those anticipating using this cheap power (the Windmill) should not fail to examine THIS MILL; such examination will satisfy them of its adaptation, and ability to serve their purpose efficiently and fully. It is unlike other Windmills that are called self-regulating; they have stationary Fans and small reversing Fans, which are depended upon to graduate the speed of the mill; whereas, by Dr. F. G. Johnson's Patent the Fans revolve upon the arms and turn their edge to the wind when the sails or vanes catch the breeze; and again, a child can stop it at once by turning the fan's edge to the wind, by the use of a lever pressed upon the stop-wheel, which is upon the shaft. These Mills can be used for any purpose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH STREET, San Francisco; where the Manufacturer will take pleasure in showing and explaining the mechanical principle upon which reliance is had for their superiority over all other Mills known, or of which we have knowledge.

D. VAN PELT.

PAINTS, OILS, WINDOW GLASS,  
do., do., do.,  
OLIVER & BUCKLEY,

HAVE NOW LANDING AND IN STORE, AND FOR SALE AT LOW PRICES:

3,000 kegs White Lead,  
2,000 kegs snow white Zinc,  
30,000 gallons Linseed Oil (boiled and raw),  
10,000 gallons Spirit Turpentine,  
2,300 gallons Alcohol (25 per cent) in this,  
2,000 gallons Varnish (English and American),  
5,000 boxes Window Glass (assorted sizes),  
700 dozen Paint and White-wash Brushes (best do),  
6,700 pounds Ghee (assorted qualities).

Together with a large stock of all articles in our line, which we are receiving regularly from the best Manufacturers.

WE ALSO HAVE ON HAND,  
Camphine, Sperm Oil, Polar Oil, Tanners' Oil,  
Lard Oil, and Solar Oil.

In lots to suit,  
At 86 and 88 Washington street,

Great Volcanic Eruption on Hawaii, H. I.

IN SHASTA COUNTY, the white miners have lately been endeavoring to expel the Chinese, and several hundred have been driven from the mines. This action of the miners not being considered strictly legal by the Sheriff, he has summoned quite a number to his aid, and is endeavoring to resist the miners. At last accounts matters were very unsettled, and serious difficulty was apprehended. It is to be regretted the Legislature will not take such action as to relieve the miners from the necessity of taking the law into their own hands.

**ARRIVAL OF THE OVERLAND MAIL.**—The stage from St. Louis, Feb. 7th, reached this city, at 10 o'clock and 40 minutes, am, Wednesday, having made the trip in 24 days 1 hour and 40 minutes. It is stated that the best time, this trip, was made on the eastern half of the route. This is worthy of remark, as it is the first time the California drivers have been beaten.

#### Pacific Railroad, State Aid, and the Establishment of an Internal Improvement Fund.

A SERIES of articles have recently appeared in the columns of the *Alta*, over the signature of Henry S. Fitch, which seem to have been written and considered with more than usual ability. Our attention was particularly drawn to them on observing that they promulgated a plan of action for the State. We consider it a bold step for any man to take, who has not been particularly distinguished as a man of letters, and as possessing great financial ability, to originate, print, and put his name to a paper touching the policy which this or any other State should pursue; and it was with some misgiving that we set out, to follow the author's train of thought. That we did so, we are pleased, for we have been instructed, encouraged—have a better opinion of California humanity, and believe we shall yet cross the continent in a railroad car! Happy thought! The author has done more to set the people on the right track in relation to this question of a railroad, than all the speeches and writings with which politicians have flooded this land since it became a State. No clap-trap about it—straight-forward business, and every nail driven to a smooth surface.

We will give a few extracts this week, and follow the subject hereafter; the five numbers which constitute the series, occupying more space than we can spare this week. The articles are headed:

THE PACIFIC RAILROAD.  
Plan by which the State can aid its construction, and secure a combination of beneficial finance sufficient to extend such enterprises wherever the interests of the State require.

TO WHOM IT MAY CONCERN: As our National Congress is not likely to agree upon the provisions of a railroad bill this session, it may not be amiss to cast about us, and see what our necessities will enable us to invent, whereby the mischief of delay may be averted.

It has been set forth in the histories of nations, as also in some biographies of men, that emergent circumstances very often develop resources which result in far greater benefit to the oppressed than could have been realized by the grant of primary demands. The saying that "the gods help those who help themselves" is not altogether impotent or untrue. The propriety of waiting till Congress pass a Pacific Railroad bill (which can only have reference to the Territory) is subject to very reasonable doubt.

It is not well to speak with reserve upon the policy it stands in hand to pursue concerning this enterprise. It is a question which will have some day to be considered; and if there is wisdom and patriotism in our legislative assembly, it will not defer action when the moments have become golden.

If there be any who feel a patriotic concern in reference to the construction of the said railroad, and the installation of a new era in internal improvements within this State, and who deplore the causes which do now, and have heretofore, tended to delay the commencement of this work, and the onward progress of the State, we will endeavor to present to him or them, an outline of a plan by which the Pacific Railroad may be constructed from San Francisco to the eastern bound of the State, upon the most feasible route, within the next three years following, without material cost to the State—without increasing rate of taxation—without liability to embarrass the State finances—without increase of the number of State officers—without establishing precedents which the people of the State can possibly have cause to regret.

It may be a comfort to the minds of those of our fellow citizens who favor this great enterprise, to know that we have within ourselves a resource which may, under judicious direction, go far to accomplish the end desired.

The programme we set forth in substance as follows:

That the State ask, with impressive earnestness, for a grant from the Federal Government of ten millions acres of the public land, in aid of our internal improvements. "Ask, and ye shall receive," although a divine maxim, may with a little variation of disposition, apply with equal force to our temporal condition.

Having asked with obsequious tenderness that Congress would grant us a Pacific Railroad, and having been answered with a scornful mockery, stinging to our sensibilities, it may be well to vary this request for a grant of land, so that it shall take the measure of a firm and dignified demand of a sovereign State.

If Congress refuses to make such donation to this Commonwealth, the inference must follow that we are regarded as mere "tenants at will" of the General Government, without sovereign rights, and the soul and purpose to maintain a position in the Federal Union with dignity.

And next, that the Legislature pass a law authorizing the establishment of a State internal improvement fund, and the dedication of all of the swamp and overflowed lands belonging to the State, and also all lands hereafter granted by the General Government to this State in aid of internal improvements, to be set apart, together with all proceeds and accumulating interest, to the entire use and purposes of said internal improvement fund; stipulating that the said State internal improvement fund shall exist for a term of twenty-five years from and after the passage of the act establishing the fund, and further stipulate that the interest on said fund be only employed by the

State in aid of any works of internal improvement within our sovereign limits.

Stipulate further, that warrants may be drawn on said fund, to run a period of time not to exceed ten years, bearing interest not to exceed the rate of six per cent per annum; and that these warrants shall be drawn on the State internal improvement fund when it shall be ascertained that the accumulated interest on said fund falls short of the necessary, actual disbursement arising out of the State guarantee of interest on the bonds of the said Pacific Railroad Company. Warrants issued for the supply of any such deficit in the fund shall be canceled as soon thereafter as an accumulation of the said fund, from its interest source, shall justify together with such other provisions as the Legislature may think it prudent to enact.

Make it the duty of a committee, composed of members of the Senate and Assembly, each year during their legislative session, to report a graduated scale of prices at which the lands belonging to the State internal improvement fund shall be sold, so that during the year following, entries and purchase of those lands may be made, with a full knowledge of the State valuation thereof—the price per acre being not less than one dollar, nor exceeding five dollars.

Authorize the entry and sale of these lands, according to their yearly valuation, upon the following terms, to wit: A credit not to exceed the term of ten years, upon the payment of ten per cent per annum interest, payable annually in advance. Failure to pay interest or principal, or either, when due, to constitute an immediate forfeiture and reversion of land, and all moneys paid to the said fund. Give to purchasers the privilege of paying up the principal at any time within the ten years that they may desire to do so, and when so paid in full, to receive a patent from the State for their lands.

This plan of disposing of the State lands, will enable every laboring man in the country to enter and pay for a tract of land suited to his wants, and it will become an inducement to a large class of those men adrift among us and homeless, to settle down, become tillers of the soil, and found for themselves a basis of happiness. The terms are such that none can reasonably find fault. The State Internal Improvement Fund cannot possibly have a more secure or advantageous source of revenue for the fulfillment of its purposes.

Second. Make it lawful for the State to contract a contingent liability, by guarantee of the payment of interest on bonds issued by railroad companies in aid of works within the State, to the extent of a guarantee of interest on bonds representing one-half the cost of such works, interest not to exceed the rate of five per cent per annum—bonds not to run a longer term than twenty years.

Third. Enact a law, granting the right of way for the Pacific and Atlantic Railroad from San Francisco, whereever the survey and construction of the same shall be made, to the eastern line of the State, embracing a grant of land from that now belonging to the State over which said road may be constructed, one hundred and fifty feet wide. Also, grant the aid of the State to any responsible company who shall undertake the construction of the said road, from the city of San Francisco to the eastern boundary line of the State (said company locating the said road), in the manner following, to wit:

That the Governor of the State of California, be, and he is hereby authorized and directed, so soon as one section of twenty-five miles of said road is made and put into successful operation, to indorse, or cause to be indorsed upon the bonds of the said railroad company, to the extent of and representing one-half of the proper and reasonable cost of the section so completed—the guarantee by the State of the payment of the interest semi-annually, as the same shall fall due.

And in like manner, when another section of twenty-five miles of the said road is made and put into successful operation, bonds of the said company, equal to the half of the fair and proper cost thereof, shall be indorsed as aforesaid by the State guaranteeing the payment of the interest thereon, and so on, and to continue to indorse the guarantee of the State, of the interest on bonds of the said company to the extent, and on the conditions before stipulated, on the completion of and putting into successful operation each and every section of twenty-five miles of said road, until the whole road from San Francisco to the eastern boundary line of the State shall have been completed and in successful operation. Provided, first, that the bonds drawn by the said company and so indorsed by the State shall not be drawn to run a period exceeding twenty years from date of issue. And provided, second, That the interest to be paid on such bonds so indorsed, shall not exceed the rate of five per cent per annum. Provided, third, That the yearly aggregate of liability of the State, on the bonds so indorsed shall not exceed \$500,000.

It being the intent of this act to aid the said railroad company, by the credit of the State indorsement of guarantee of the payment of the interest on the bonds of said company, to the extent of one-half of the fair and proper cost of said road; and that the aid of the State is so given on the condition and with the understanding that if it should so occur that the State be called upon to pay the whole or any part of the interest when due, the said railroad company be held to pay back again to the State, within one year thereafter, any and all such sums so paid by the State, together with interest thereon at the rate of six per cent per annum; and conditioned, further, that the road, buildings, furniture, and rolling stock, be mortgaged to the State to secure it against loss thereby. Further stipulating that the road shall be finished, and in complete operation, from San Francisco to the State line, as aforesaid, within three years from the date of commencement.

Fourth. Submit the question of State aid of the aforesaid railroad enterprise to the people, and if the law be affirmed by such vote as the Constitution requires, the work will be commenced at once, on the supposition that the people of the State are willing, and will, as soon as possible, do away with any constitutional impediments which may arise to prevent the construction of the road under the aid of the State as desired.

This last clause, concerning a submission of the subject to the vote of the people, is only asked for in the event that such aid be declared unconstitutional.

This appears to us to be a scheme practicable,

and eminently calculated to forward the interests of California and her toiling people. We shall, in our next number, continue our observations upon this great plan of Col. Fitch.

#### Dioscorea Batatas.

This singular root which has excited so much curiosity and notice the last two years, has recently been carefully experimented upon, and valuable reports made relative to it. As it has been introduced into California at considerable cost, and only slightly tried, and generally rejected, by reason, we think, of too little care in the growing of it, although several trials were made, we now give a report upon it, made to the Chairman of the Vegetable Department of the Massachusetts Horticultural Society; and also a report upon it, published in the London Gardener's Chronicle, together with an analysis of the same, and also of the Sweet Potato and common Potato, by distinguished chemists of France.

It will be seen that the *Dioscorea Batatas* can be made to yield ten tons to the acre, in New England. If such is the case, what will be the result in California, when a just and careful experiment be given to it? We hope our readers will observe the report from the Gardener's Chronicle, relative to it as a climbing plant and floral treasure, and make some careful trials of it the present year. Who has the tubers for sale?

These reports we copy from the Transactions of the Massachusetts Horticultural Society; a handsome volume of 140 pages, kindly sent us by E. Wright, Esq., Corresponding Secretary:

Boston, January 14, 1849.

DEAR SIR: I inclose to you some observations upon the culture of the *Dioscorea Batatas*, or Chinese Yam, and regret that I cannot give more information upon the subject: my experiments thus far having been almost entirely confined to the discovery of the soil best adapted to their cultivation.

Upon the question of soil, the result of my experiments has been that a moderately rich and light soil, with a deep sandy subsoil, is, of all others, the best adapted to their successful cultivation. The strong feeding roots of the plant do not extend above six inches below the surface, striking off horizontally from the neck of the tuber, so that the soil from which the plant derives its sustenance need not be of a much greater depth; but, as the tuber at this point begins to expand and strikes perpendicularly into the earth, it is, I think, imperatively necessary that the subsoil should be light and easily penetrated. I have cultivated them in deep and rich soils, with clay and gravelly subsoils, with but very indifferent success—the tubers being short and irregular in form. The plant seems capable of withstanding almost any degree of drought; some, which I cultivated last season in very dry sandy soil, showed no symptoms of drooping in the hottest and driest part of the season, although every other vegetable growing in similar soil drooped for want of water, and some entirely perished.

With regard to the yield, I am not now prepared to give any very exact information; but, from the result of my experiments thus far, I should have no hesitation in saying that in soil adapted to its cultivation, the yield must exceed twenty thousand pounds to the acre.

The proper time of planting depends somewhat upon how they are propagated—whether from tubers which germinate from the bud at the extremity of the neck, or from small pieces of the tubers which germinate from the eyes, like the common potato. The bud will germinate almost immediately after planting, and will break from the ground in from eight to ten days; while the eye, planted two inches deep, requires for its germination from two to three weeks, according to the temperature. While the tuber, if suffered to remain in the earth, will withstand a very low temperature, the foliage is quite susceptible to the effects of frost, and therefore the planting should not be made until danger from this source is at an end.

If germination takes place by the first of June, I think it will be sufficiently early for the tuber to arrive at perfection, which, in this latitude, will be, I think, about the first of November.

The coming season I intend to make further and more extensive experiments, with a view not only to the soil best adapted to its cultivation, but with reference to the value of this production as a crop.

Very respectfully, your obedient servant,

DANIEL T. CURTIS, Esq., Chairman, &c.

The following is from the London Gardener's Chronicle:

THE CHINESE YAM.—I have grown this successfully for the last three years, and I coincide with the opinion you expressed in a recent number, that the plant may be improved, and its utility extended by cultivation. The first year that I obtained the yam, as the sets were small and weak, I had them planted in a cucumber frame, where they had for a short time the advantage of a little heat; the result in the autumn was a number of well-developed tubers, the weight of which, in the aggregate, was estimated to be equal to an ordinary crop of early potatoes, grown under similar circumstances. The second year the sets were started in heat, and planted in the open ground in June, with the ridge cucumbers, on a bed made up in the usual way with lawn sweepings, cabbage stumps, and garden rubbish; the bottom heat given by this mass of fermenting matter evidently suited the habits of the yam, the plant grew luxuriantly, and produced some remarkably fine tubers; these tubers had penetrated to the very bottom of the trench, which was two feet six inches in length.

I have again this year associated the yam with the ridge cucumbers, and they present a healthy and vigorous appearance; but by far the most promising plants are some which have sprung from the tubers left in the old beds of the year before; these grew so luxuriantly that I was induced to afford them the support of stakes, which they speedily clung to and covered. I am disposed to

imagine that I shall have some very large tubers from these plants.

The elegance of the foliage of the yam, and the rapidity of its growth, led me to employ it as an ornamental climbing plant, and last year two sets were planted and their slender shoots trained over a trellised porch. The roots remained undisturbed during the winter, and this year the plants made a more vigorous growth, covering the same trellis, which is eight feet high and as many wide, with a profusion of graceful foliage. Within the last month the yam has blossomed abundantly, and in the exceeding sweetness of its tiny, unattractive racemes of flowers, it has revealed a quality which I have not seen noticed, but which will make it worthy of association with the more elegant and ornamental objects of the gardener's care.

I had nearly omitted to state that the plants left in the old ridge cucumber trench have also blossomed this season, but under a crowd of foliage the bloom has been in a measure obscured and destroyed; the beauty of the plant is best displayed when trained over an open trellis.

The following is the analysis of the Chinese Yam (*Dioscorea Batatas*) made by Fremy in 1854, of specimens cultivated at the Garden of Plants, Paris, France:

Water.....	79.3
Solids.....	20.7
100.0	

The solids contain:	
Starch.....	16.
Cellulose.....	1.
Albuminous matter.....	1.5
Fatty bodies, sugar, and soluble principles.....	1.1
Mineral salts.....	1.1
20.7	

The following is the analysis of the common Potato, by Payen:

Water.....	74.
Starch.....	20.
Nitrogenized substances.....	1.60
Fatty matters.....	.11
Sugary matters.....	1.09
Cellulose.....	1.64
Salts.....	1.56
100.00	

The Sweet Potato, as analyzed by Payen, gives the following results:

Water.....	87.50
Solids.....	32.50
100.00	

The solids contain:	
Starch.....	18.05
Sugar.....	10.20
Fatty and nitrogenized matters.....	1.80
Cellulose, &c.....	1.55
Salts.....	2.90
32.50	

From these comparative analyses, it appears that the Yam is about five per cent more watery than the common Potato, and about twelve per cent more watery than the Sweet Potato; or, in other words, contains less solid matter in the above proportions. Of the solid matters, it contains four per cent less starch than the common Potato, and about as much as the Sweet Potato; the cellulose, or fibrous, woody structure, is about the same in all three, but somewhat the least in the Yam; the nitrogenized and fatty matters are also nearly the same in all; the sugar is about the same in the first two, but one-tenth of the amount in the Sweet Potato; the Yam contains less mineral salts than the other two. It may be said, therefore, that the Yam is somewhat less nutritious than the potato; but that it is more desirable as food for the invalid and convalescent, as, from its less amount of woody fiber and mineral salts, it must prove more easily digestible and less irritating to a delicate or diseased stomach. It would seem, therefore, to merit the attention of the sick, as it contains sufficient alimentary material, with remarkable absence, when properly cooked, of all irritating and indigestible matter.

#### Hubbard Squash.

This is a new variety of Squash, recently introduced to public notice through the Massachusetts Horticultural Society, and taking their first premium last year. This Squash takes its name from the originator, G. G. Hubbard, a member of that Society. We give a notice of this Squash from their Report. They report the successful growing of it in California. Will those who have eaten it report to us:

The Hubbard Squash was somewhat extensively noticed in our last report as among the best winter varieties; and, whatever may have been its origin, we still feel that our obligations are due to Mr. Gregory for taking up the subject, and using every effort in his power to bring before the public this fine squash for winter use. As a successor after the Marrows have passed their prime, it is like having winter pears and apples after the earlier sorts have disappeared. As far as the culture of this variety has been extended, and its quality known, it has ranked number one, if the soil and culture have been such as the family requires—light, warm, gravelly loam; for cold, moist soils will not give fine-flavored long-keeping squashes of any variety.

In California, from seed distributed there last season, we learn that it succeeded well, and was very much liked for quality and productiveness. On referring to the contributions at the annual exhibition, we see that it had become popular, as in nearly every collection it was represented, though not matured.

BLAZE-PROOF DRESSES.—The Medical Times, in referring to the many melancholy accidents from dresses taking fire, says: The light fabrics manufactured for ladies' dresses must be made blaze-proof. Nothing can be more simple. The most delicate cambric handkerchief, or flannel gauze, or the finest lace, may, by soaking in a weak solution of chloride of zinc, be so protected from blaze, that if held in the flame of a candle they may be reduced to tinder without blazing. Dresses so prepared might be burnt by accident without the other garments worn by the lady being injured.

#### Warranty of Soundness.

A very important case to the horse-dealing world was decided in the Court of Queen's Bench, and is thus spoken of in Bell's Life:

A person had bought a horse with a warranty of soundness. It turned out that the horse habitually shied. The purchaser brought his action on the warranty. It then appeared that the horse had a peculiarly convex cornea, which prevented him from seeing objects till they were close upon him, and he shied on seeing them thus suddenly. This defect of the cornea was described as being natural to the horse, and not the result of injury. The case was tried in the Lord Mayor's Court, before the Common Serjeant, who told the jury he thought a horse was unsound if it had a natural defect, which prevented it at all times from being used in a reasonable manner. The jury found that it was unsound, and that its unsoundness arose from the cause stated. A verdict was therefore given for the plaintiff. Mr. Keene moved, in the Court of Queen's Bench, for a new trial for misdirection, and contended that this was a disease which came within the description of soundness, and he cited various cases, which showed that where there had been a disease which, though very injurious at the time, was capable of being cured, and did not affect the horse's power of working, the court had held the warranty of soundness not to be broken. The court, however, adopted the broad principle that where there was anything which prevented a horse from being safely employed, in that reasonable manner which was the only object of his purchase, he was unsound, and, therefore, that where a horse suffered from an evil which rendered his employment habitually unsafe, the warranty of soundness could not be said to be complied with. The rule for a new trial was therefore refused.

The decision is, to a certain extent, new. The principles on which it rests have long ago been enunciated, but no such plain case for the application of them had ever before come before the court. In one great case, indeed, a case relating to a horse, these principles had seemed to be denied; but that case never met with the approval of the profession, or the acquiescence of the public. If a man sells or leases a thing which he knows is to be used for a particular purpose, he must, in common honesty, be understood to declare that it is fit for that purpose; but, though on an ordinary sale he may get out of his difficulty by saying that he did not warrant it to be so, he must, when he does warrant it, be absolutely bound. Now, a horse that is habitually shying is not fit for use; he is dangerous to his rider, or driver, and to the public. It is absurd to say that such a horse is sound. Soundness means full fitness for work. With the most skillful rider on his back he wastes time in annoying struggles of fear with skill. A carriage, in which one of the shafts dropped on the ground at every hundred paces, could not be called a thorough-built carriage, even though the shaft could be replaced in half a minute; nor can a constantly shying horse be called sound when he shies, in consequence of a natural and incurable defect, which prevents him from being put with safety and certainty to the ordinary uses of a horse.

#### Poultry Experience.

A New Hampshire lady writes to the Journal of Agriculture of that State, that she had eleven hens, which for the six months, commencing with the first of January, laid 978 eggs, which sold at 17 cents per dozen. During that time their feed cost six bushels of oats at 50 cents a bushel, and four and a-half bushels of corn at 75 cents, or a total of \$7 50, leaving her a profit of \$6 50.

The Michigan Farmer in noticing the above, says, eggs here during the past year, have not ruled higher than at the rate of eight and ten cents the dozen, and if laid at the above rate, the eggs would not have done much more than paid for the food consumed, but which latter would have cost somewhat less than the New Hampshire estimate.

[Who amongst our California ladies can furnish us with the amount of their products in the poultry line?]

Indian Corn for Poultry.—If chickens are fed on Indian meal, they become very fat; but they make neither bone nor hard flesh, as if they were fed on oat-meal. Adults fed on Indian corn or meal become enormously fat, especially inside, and frequently die from it. This fat melts away in cooking, and the lean of an animal fed on it is hard and badly flavored. Numerous experiments have been tried on poultry, and this is the invariable result.—[London Cottage Gardener.]

#### Dutch Cows.

Mr. Cheney, of the Highland stock-farm, near Boston, Mass., has made two importations of Dutch cattle, consisting, altogether, of three cows and one bull. They were selected from the best herds in Holland. Mr. C. informed the editor of the Veterinary Journal, that "Lady Louise," when in poor condition and very lame, has given over twenty-five quarts of rich milk, when on grass alone, and milked morning and evening only. By high feeding and milking three times a day, she will produce from thirty-three to thirty-six quarts per day. Mr. Cheney is so well satisfied with these Dutch animals, that he proposes to send to Holland for more of them, in the spring. He also has a large herd of hogs, which he imported from the same country, that he considers very valuable for farmers.

MORNING.—That was a beautiful conceit of Daniel Webster, that every succeeding sunrise "is a new creation," says the Placerville Observer, and remarks: There is something ineffably sublime in the effulgent glory of the king of day when his flaming pinions dash upon the darkened earth; and the dull squalor, who never avails himself of an opportunity of beholding a spectacle so grand, when it may be seen any day without money and without price, is truly to be commiserated for his stupidity.

A boy's construction of a proverb: "Spoil the rod and spare the child."

## Convention of Agriculturists at Washington.

The delegates invited by the Secretary of the Interior, to represent the agricultural interests, from the several sections of the United States, met in the Patent Office in Washington, on the 3d of January.

D. J. Browne, Esq., who has charge of the Agricultural Division of the Patent Office Bureau was present, and explained to the members of the convention the objects of the meeting to be for the purpose of aiding the department in obtaining more thorough and reliable information in regard to the present condition and progress of agriculture throughout the Union, both as it regards statistical facts, and as to the results of improvements instituted and practices followed in the various branches of farm and plantation management. This information to be published in the Reports, with a view to the "elevation of agriculture, so essential to our wealth and prosperity, as a nation, at least to an equality with other pursuits."

The Convention then proceeded to organize. Hon. Marshall P. Wilder, of Massachusetts was chosen President, and Major Ben. Perley Poore, of the same State, was chosen Secretary.

The roll of names being then called, it was found that the different States and Territories were represented by the following gentlemen:

Maine, Dr. Ezekiel Holmes; Massachusetts, Hon. Marshall P. Wilder, Dr. Charles T. Jackson, and Ben. Perley Poore; New Hampshire, Levi Bartlett, Esq.; Vermont, Frederick Holbrook, Esq.; New York, William Lawton, Esq., Col. C. C. Morrell, and Rev. A. Brown; Pennsylvania, James Gowan, Esq., Hon. J. C. G. Kennedy, Hon. John H. Ewing, and W. P. Shattuck, Esq.; Delaware, ex-Governor George H. Ross; Maryland, Clement Bill, Joel Blew, and Charles B. Calvert, Esqs.; District of Columbia, W. W. Corcoran, Jonathan Seaver, and J. O. Lewis, Esqs.; Dr. Charles G. Page, Virginia, Pierce, E. Harte, and E. Kingman, Esqs.; South Carolina, Col. Milton Garnett, Lewis Bayley; North Carolina, James G. Holmes, Hon. J. H. Hammond; Indian Territory, Col. P. P. Pitchlyn; Texas, W. T. Mecklin; Indiana, Hon. P. D. Holloway, Hon. E. Cane; Illinois, Dr. John A. Kennicott, Dr. L. S. Pennington; Michigan, Hon. H. L. Stevens; Minnesota, Dr. T. T. Mann, Hon. W. W. Phelps, J. J. Noah; Ohio, F. G. Carey, Esq.; Wisconsin, Gustavus De Neven; California, A. W. McKee; Nevada, Colonel James M. Crane; Oregon, Hon. Delazon Smith; New Mexico, Hon. Manuel A. H. Otero.

The Secretary then read a list of questions presented by Mr. Browne.

A discussion then sprang up in regard to the name by which the Convention should be known, and it was finally voted that it should be called the "Agricultural Advisory Board of the Patent Office."

It was also voted to divide the Board into five divisions, as follows:

1st. The New England States, New York, New Jersey, and Pennsylvania.

2d. Delaware, Maryland, District of Columbia, Virginia, North Carolina, South Carolina, and Georgia.

3d. Florida, Alabama, Mississippi, Louisiana, Texas, Indian Territory, Arkansas, Missouri, Kentucky, and Tennessee.

4th. Ohio, Indiana, Illinois, Michigan, Wisconsin, Iowa, Minnesota, Nebraska, and Kansas.

5th. New Mexico, Arizona, Nevada, California, Oregon and Washington.

The delegates of each division form a committee to examine and report upon the interrogatories submitted to them, with power to change and to propose other, or more, as they might think proper.

It was then voted that a committee of five be appointed by the chair, as a business committee, to bring forward subjects of discussion during evenings, and the following gentlemen were appointed:

Hon. D. J. Browne, of Patent Office (ex officio); E. G. Cary, of Ohio; Dr. John A. Kennicott, of Illinois; James G. Holmes, of South Carolina; Frederick Holbrook, of Vermont; and Hon. Delazon Smith, of Oregon.

It was then voted that there should be a regular meeting of the Board, each morning at ten o'clock, after the adjournment of which the several divisions should go into session by themselves in committee room for the transaction of such special business as devolved upon them.

On the second day, Tuesday, January 4, several delegates made their appearance, among them two from New England, Dr. J. B. Eastman, of New Hampshire, and Edward A. Phipps, of Connecticut.

One of the subjects reported by the business committee, was that of "National legislation in behalf of Agriculture."

On Wednesday, the 5th, among other delegates, Thomas J. Field, of Massachusetts, and John Bowman, of New York, took their seats.

The Board made a visit to the Secretary of the Interior and the Commissioner of Patents. In response to the introductory speech of Hon. M. P. Wilder, the Secretary of the Interior made the following remarks:

"Gentlemen: You are here with my consent and with my decided approbation. It is because I have regarded you as practical men that I have desired to see you here. It is practical information that the country wants; and whatever practical information we can obtain by a collision of minds and the comparison of opinions, must be advantageous to that great interest upon which this country depends for its prosperity and happiness."

Commissioner Holt spoke as follows:

"I am happy to meet you here, gentlemen. The Department trusts that much reliable information will be the result of your deliberations. It is upon that, and that alone, that the success of this experiment depends. The action in which you are engaged may be exposed to misapprehension, and of course to much criticism upon the part of some portions of the country; but still I am certain that, if this experiment succeeds, the future will be an ever-brightening one for our national agricultural interests. We must, therefore, rely upon your patience and earnest cooperation in furnishing as reliable information in reference to the agricultural processes and products of the States as you represent, placing it in such form as will enable us to embody it in the forthcoming agricultural report of this office, and thus give it to every homestead and its just influence to every field and garden in the land. It is such information that we confidently expect at your hands."

Thursday, January 6th, the Board visited the building now being prepared for experimenting in the cultivation of the tea plant.

Friday, January 7. A resolve from the Committee on Agriculture, of the present Congress, was laid before the Board. It calls on the Commissioner for information respecting the doings of the Advisory Board of Agriculture—and a statement of the character and capabilities for usefulness of the past and present operations of the Agricultural Division of the Patent Office, together with an expression of the views of said Board in regard to such improvements as they may deem calculated to enhance its efficiency in promoting the agricultural interests of the country. The consideration of the matter was postponed until the next day.

A preamble and resolves were introduced by Mr. Mann, of Minnesota, approving and recommending the method adopted by the Agricultural Division in resolving the whole system of agriculture, with its correlative branches, into a system of direct questions and answers, and advising a perfection of that system; also, recommending the appointment of a committee to draw up an address from the Board to the agriculturists of the coun-

try, setting forth the views of the Department and the Board, and asking their cooperation in answering the questions, etc. They were referred to the committee of the whole.

The Board then visited the various rooms in which the operations of this division are conducted, including the apartments in which the seeds, cuttings, etc., are received, inspected, and prepared for distribution, as well as that in which the clerks are engaged in conducting the correspondence, writing and revising papers for the reports, and performing other duties of like character under the direct supervision of Mr. Browne.

The Board then resumed business, and several essays were read by delegates.

Saturday, January 8. The resolve from the Committee on Agriculture, received yesterday, was referred to a select committee of eight.

Prof. Henry, of the Smithsonian Institution, explained at some length the plan and object of the series of meteorological observations being taken all over the North American continent by more than three hundred persons, under the direction of the Smithsonian Institution, in connection with the Patent Office. In consideration of its importance to the interests of agriculture, the Patent Office has for two years past borne one-half the expense of taking these observations, principally for the purpose of instruments and the reduction of the observations after being made.

In the afternoon, the Board waited upon the President of the United States, at the Executive Mansion, where, after the general introduction, Hon. M. P. Wilder addressed the President as follows:

Mr. President: We appear before you, as has been stated by the honorable Commissioner, as a body of Agriculturists, who are assembled as an Advisory Board, at his invitation, and under the sanction of the Secretary of the Interior. We have been for several days engaged in the performance of our duties, and hope that they will not only be serviceable to the Department, but beneficial to our own districts and to the whole country at large. Agriculture is the great business of our people; it is the great source of national and individual wealth. And when we consider the vast extent of our territory, and capable of producing almost every agricultural product of the world; and when we reflect upon our rapidly-increasing population, already spreading themselves down our mountain slopes and over our broad valleys, a population which before the close of the present century will, in all human probability, reach two hundred millions of souls, it then becomes a matter of vast moment that the interest of agriculture should receive the fostering care and patronage of the government, and that this branch of industry should be advanced to its highest state of cultivation. This, Mr. President, is the mission of the farmer; and believing that you would sympathize with us in these views, we could not return to our several homes without paying you our personal respects, and expressing to you our most sincere desire for your health, welfare, and future happiness. Long may you continue to enjoy the confidence of a grateful people, and the consolation resulting from a well-spent life. And may your last days be your best days.

To which the President responded as follows:

Mr. President and Gentlemen: I need not say that I am exceedingly happy to see you, and that I feel very much honored by this visit. I have ever been fond of agriculture itself, though I have never had much time to devote to it practically; but I heartily rejoice that the Secretary of the Interior and the Commissioner of Patents have assembled you here upon this important mission. The other interests of the country are pressing forward. The farmer stays at home, follows his plow, and minds his own business, and we hear very little of him in public. Notwithstanding the energy, the activity, and the enterprise of our national character, it is in agriculture very often ineffectually exerted without the necessary skill and science to produce the effect which is so much desired; for science, combined with practical experience, when applied to the pursuit of agriculture, must shed blessings upon the country. I am very happy indeed to see here so many practical agriculturists, who understand that science fully. And I have no doubt that the great truths which will be elicited by the questions which are to be propounded to agriculturists in all parts of the country, when they shall have been collected and brought here, arranged, and circulated all over the nation, will have the best effect imaginable upon the whole country.

I thank you cordially for your kind expressions and wishes for my health and happiness. I cannot, in the course of nature, expect to live long; but as long as I do live I shall feel the deepest interest in the success of agriculture, because it is, after all, the great interest upon which the foundation of Nations and States must rest; for without a hardy, noble, and robust people, capable of holding the handles of the plow, we shall degenerate into a feeble race, unworthy the attention of the world, and incapable of perpetuating the honor and glory of our country.

The members of the Board were then introduced personally to the President. After a visit to the green-house attached to the Executive Mansion, the members of the Board retired to their several abodes.

On Monday, January 10, the several committees to which the list of interrogatories was referred, reported progress, with the intimation that they would complete their labors to-day.

A long discussion arose upon the question of the effect of the breeding in and of cattle, horses, etc.

The select committee to which was referred the resolution of the Agricultural Committee of the House of Representatives made a report endorsing the past action of the agricultural division of the Patent Office, and recommending increased appropriations to augment its efficiency in the future. After some discussion, the report was adopted.

Tuesday, January 11. The various divisional committees made their final reports.

Mr. Byington, of Iowa, offered the following resolution, which was adopted:

"Resolved, That the practical efficiency of the agricultural division of the Patent Office would in some degree be promoted, first, by confining to it the distribution of a greater relative proportion of its annual volume of reports to its agricultural correspondents; second, by the more general circulation of specific directions, as to the manner of planting and cultivating plants which are entirely or partially new to our husbandry; and, third, by incorporating into this publication synoptical sketches of the most important essays and experiments emanating from the State, district, and county agricultural schools and associations throughout the Union."

Quite an extended discussion took place in regard to the culture of the grape in this country.

The Board then waited upon and took leave of the Secretary of the Interior. Commissioner Holt P. Wilder, in behalf of the Board, Hon. M. P.

Mr. Commissioner: In behalf of the body of agriculturists who have been convened by your kind invitation, it becomes my duty to inform you that Board to be dissolved. The divisionary committees have examined in detail the schedule of interrogatories submitted to them from time to time. They have analyzed the various questions, and have made alterations and additions such as, in their judgment, would be likely to aid in the objects for which we have been called together. We have passed upon more than fifteen hundred interroga-

ories, a report of which, together with a copy of the proceedings of the Board, and a synopsis of its action and discussions, will be submitted to you for your consideration. And now, Mr. Commissioner, with expressions of sincere desire for your welfare, we most respectfully bid you adieu.

To which Commissioner Holt responded as follows:

Mr. President and Gentlemen: The statement which has just been made, in regard to the labors in which you have been engaged, I have heard with the greatest satisfaction. I am sure that you will all receive, what you have so well deserved, the thanks of the whole country, as you certainly have mine, for the promptitude with which you responded to the invitation from this office, and for the earnestness and zeal with which you have entered upon the duties assigned to you. I cannot, however, too deeply impress upon your minds our conviction that in point of fact your labors are but begun, and our trust that upon returning to your respective homes you will still pursue them and give us the result at the earliest moment practicable. It is our confident expectation that these results will tell upon the pages of the forthcoming agricultural report of this office, in such a manner as to challenge the respect if not the admiration of the public, and silence the clamors of those who have so ruthlessly assailed what they have so little understood.

It has been a source of unfeigned regret to me that the pressure of official duties has denied me that pleasure and instruction which I would certainly have derived from an attendance upon your deliberations. I may be permitted to add that apparently the time has at length arrived for the agriculturists of this Republic to arouse themselves to a sense of their actual condition, and to a just estimate of the devoted mission with which they are charged. A pursuit which has given to the world a Cincinnati, a Toll, and a Washington, may well stand unabashed in every earthly presence. Uncounted millions, gentlemen, have been expended in building up and maintaining a gigantic system of manufacture, in enlarging the area of our commerce, and in guarding it alike from the perils of the deep and the perils of the foreign foe. And yet we do all know that commerce and manufactures in their very best estate, are but outpouring streams from the great fountain of agriculture—a fountain which is the nursery, too, of all those virtues upon which this Republic rests as its only sure foundation, and without which it may be safely affirmed, it could not exist a single day or a single hour—a foundation without whose vivifying and fertilizing influences every other domain of human labor and enterprise would wither away and become as waste and arid as the deserts of Sahara; and yet, strange to tell, the noble pursuit, which had its origin in the very bowers of Paradise, and which, in all ages and in all lands, has commanded (what it so richly deserved) the profound homage of mankind, is in our own favored country far, confessedly far, behind those other great pursuits which engage the efforts and solitudes of the public life.

The reason is that we tread too indolently, too slavishly, in the paths in which our fathers walked. The plowman has permitted the steamer to career along the rivers, and the locomotive to dash even across his fields without catching that irreplaceable spirit of progress of which they are at once the tokens and the triumphs. Hence it is that the slovenly, reckless, impoverishing, and wasting system of tillage which belonged to the olden times still lamentably prevails. And hence it is that the farmers of our country, unlike those beyond the Atlantic, continue still rather to abuse than use our mother earth, approaching her bosom not gently, kindly, caressingly, but like some rough, unskilful surgeon, cutting and slashing with their instruments, and extracting from that bosom, thus mangled, rather the blood, the loss of which wastes life, than the milk that nurtures and sustains it.

The manifest remedy for all this is in the collection and the rapid and broad diffusion of practical, accurate, and scientific information in reference to the soils and the agricultural processes and products of our country; in giving to this information the most popular and attractive form possible, and in pressing it home upon the thoughts and sympathies of the farming classes throughout the nation; and I must say that I know of no more efficient or honorable instrumentality for that great work than the Board which I have now the honor of addressing; and when that work shall have been accomplished, and that information thus spread abroad, pondered upon, and appreciated properly, then I doubt not our farmers, like the tillers of the soil elsewhere, will resolve that not a furrow shall cross their fields, and not a seed enter that furrow, but under the guidance of those lights of science which, in this age of inquiry and intelligence, are every where leading the footsteps of every human enterprise. When that resolution shall have been taken and maintained, and not till then, can we expect to see here what the traveler in the Old World beholds: fields which have been cultivated more than two thousand consecutive years, and yet to-day are groaning beneath the weight of crops surpassing even those which are borne upon the richest alluvial soils that border the great rivers of your South and West.

I will not further detain you but to simply express to you my complete and abounding sympathy with this and every other movement which looks to the advancement and the elevation of agriculture. And I may be allowed to give to this expression the more emphasis, since in other years it was my own fortune to be, not a theoretic, but a practical tiller of the soil; and there floats not, sure I am, there can never float down to me from the wastes of the past, memories more steeped in the very fragrance of life than those associated with the green fields and breathing bloom of the flower garden of my native land.

I renew to you, gentlemen, the expression of my official and personal thanks, and wish you all, from my heart, a safe and pleasant return to your families and homes.

After individually taking leave of the Commissioner, the Board returned to its session room. After the consideration of some closing proceedings, the Board adjourned sine die.

**LARGEST YIELD OF CORN ON RECORD.**—A correspondent of the Ohio Farmer, writing from Vanderburgh county, Indiana, informs them that at the State Agricultural Exhibition a silver pitcher was awarded for the best five acres of corn. The award was made upon the decision of three distinguished men in each town, who examined the corn growing in the fields, and measured one acre of each plot. They then made oath to the yield of the single acre, and of the whole five estimated from the acre actually measured. The award made, under oath, was for 8571 bushels of shelled corn on five acres, or 1714 bushels to the acre.

If this has been exceeded, the editor remarks, at any other time, or in any other place, we shall be glad to hear of it. Till we do, we shall put Vanderburgh county, Indiana, at the head of the van column—unless we hear of some mistake in the above report.

**PINK MARTENS.**—These animals, whose fur is quite valuable, are said to be plentiful up the ridge along Hanging Cañon, Nevada county. One was caught at Manzanito Hill last week, and their tracks are very numerous on the snow in that vicinity.

## Road-Making—Gillespie's Manual.

GILLESPIE'S Manual of Road-Making is a book that should be studied by every Supervisor in the State, says the Ohio Farmer, and the remark, we should judge, applies to this State as well as Ohio. We have doubtless many good natural roads here, and the declaration with which the book opens, is more applicable to the older States, than to the common roads of the United States, that "the roads of any other civilized country."

Patriotism, or perhaps national vanity (continues the paper mentioned), might prompt us to controvert this statement; but it will, we think, do more good if we call attention to the book and its contents. Roads are considered from the following, among other points of view:

**As to their direction.** Straightness is of great importance, saving distance, time and labor, where other conditions are equal. But this is not an excellence to be secured at all hazards; a level surface is of vastly more consequence, and oftentimes, it is not a rod further to course round the base of a hill, than to follow a compass-line over its summit. The only difference is between a vertical curve and a lateral one, while the road that follows the latter has the advantage of requiring, perhaps, less than half the draft.

**As to their slopes.** The nearer to level a road can be made, the less the draft required upon it, taking into account both directions. In ascending a hill, with a perpendicular rise of one foot in ten, a horse will draw but one-fourth of what he will pull on a level; with a rise of one foot in twenty-five, he will draw about half as much as on the level. The extra labor, and, consequently, expense of hauling loads up steep ascents, would compensate for a considerable curve to avoid a hill, or soon pay, on a much traveled road, for cuttings and embankments. Although a slope is undesirable, as regards the team, yet in wet soils a rise of one foot in one hundred and twenty-five is sometimes found advantageous, from the way in which it facilitates drainage.

**As to their cross section.** The necessity of making a road crowning, through a low, wet region, is everywhere admitted; but the proper form for the raised road is not always so well understood. If the cross section of a road is made to represent the segment of a circle, or true curve, the center is the only part on which a carriage can be driven comfortably; and consequently such a road is soon worn into ruts and hollows. Instead of the curve, the cross section should represent two planes, declining from the center, with a fall of one-fourth to one-half inch to the foot. On any part of a road, of such form, a carriage can be driven with ease; the center is less liable to be cut up, and the water escapes more readily.

**As to their surface.** The surface of a road should be as smooth and hard as possible; upon these qualities the excellence of a road mainly depends. From the manner in which a large proportion of the overseers of highways exercise their skill, it would seem that the reverse of all this is supposed to be true. Roads are often plowed late in the fall, and the loose earth drawn to the center, and left in heaps, a scrupulous in a place, so that, in fact, the most impassible of all roads are, in general, those upon which the road tax has just been expended. What is there to hinder the working of roads at the proper time, or making of the surface perfectly smooth, by means of a plank scraper, or harrow and roll? There ought to be a law to punish every lazy set of fellows, who first take infinite pains to make a piece of road as rough as possible, and then lay rails and all sorts of obstructions on the sides, to compel the traveling public, with great delay and danger, to smooth down their work. It is, perhaps, impossible to make a road hard at all seasons, without a covering of gravel, or broken stones; and the expense of this would be so great, in most places, that earth roads will probably be used for a long series of years. But, would it not be good policy for most road districts to undertake the gradual McAdamizing of all the worst portions of the most traveled roads?

**As to drainage, &c.** A good road cannot be made if the water is allowed to stand by the side, either in or out of ditches. The practice of making ditches in the road, close by the carriage-way, is both slovenly and dangerous; they should always be made quite at the outside of the road, next the fence; and between the ditch and carriage-way, a good raised path, of six or eight feet in width, should be made, for foot travelers. Under the footpath, small covered sluices should be made, at short intervals, to permit the escape of water from the sides of the carriage-way into the ditch. This arrangement prevents carriages from overturning into the ditch, even in the darkness; the raised footpath gives warning of the danger. If necessary, the footpath may be protected from the intrusion of horsemen or carriages, by posts or turn-stiles.

In the work referred to above, earth roads, pavements, McAdamized and plank roads, and also railroads, are all discussed in an able and practical manner. This is one of the subjects in which the farming community is greatly interested. Farm produce is worth, on the farm, the market price, deducting the cost of carriage to market, and this depends as much on the quality of roads as upon the distance to be traveled.

## Fruit Trees in the Mountains.

The San Andreas Independent states that time and attention given to the cultivation of fruit in the high lands, are greater than is supposed. Take the whole range of the Calaveras river, from the line of San Joaquin county, and follow it as far as mining is done, and every choice piece of ground is well fenced and planted with fruit trees. Not alone to the flats close to the river, is this business confined, but a great scope of country on elevated plateaus, is planted in thrifty trees. However much the idea of raising fruit on our hill-sides may be accounted by writers versed in pomology, it is nevertheless a fact that extensive preparations are being made to test thoroughly the suitability of soil and position. The day is rapidly approaching, when not only waving fields of grain, but the mellow fruit glistening under an autumn sun, will charm the vision of our mountain residents, and we shall as far excel the inhabitants of older countries in fruit growing, as we already do in energy of character.

We say true to the above, for it is what we have long ago predicted.

## New Seedling Roses.

A new seedling rose is now exciting much attention in the Eastern States, and the information and opinion of its beauty and worth come to us with considerable eclat. We give the opinion we have received from many distinguished florists, and hope our florists will soon have it under cultivation.

We, the undersigned, have seen the new seedling rose, America, and pronounce it the best of Noisettes. It has no rival among light-colored roses, and presents a combination of more of the desirable qualities than any other rose extant. It is a superb and distinct flower, of large size, perfectly full, of delicious fragrance, and borne in clusters, each flower being upon a very long and stout stem. Its predominating color is a creamy white or yellow, with flesh tints upon the outer surface of the petals. It is a free and continuous bloomer, has a very vigorous climbing habit of growth, a shining, heavy and beautiful foliage, is very hardy, and its rare combination of many excellent qualities commend it to universal favor. The fine, healthy specimens of its flowers and foliage exhibited here on the 17th of December, and during Christmas holidays, 1858, indicate an extraordinary value as a forcing rose, the time of year being most unpropitious, and the weather for many weeks previous having been of the most unfavorable kind for culture under glass. This magnificent variety originated in the garden of Professor Charles G. Page, of Washington, in the course of his experiments in hybridizing, and we are informed is a cross between Solferino and Safrano, to each of which parent it retains a likeness.

John Saul, Washington, D. C., Nurseryman, Seedsman, and Importer, late of Bristol, England; S. Jerome Diggs, Amateur; John Watt, Superintendent of grounds and plants at the mansion of the President of the United States; Henry Baldwin, Principal Examiner, United States Patent Office (amateur); A. Lyell McIntire, Chief Draughtsman, United States Patent Office (amateur); Wm. Cammack, Florist, Washington, D. C.

Another new rose is also announced and is described as follows:

**Cinderella, or the Fairy Climber.**—A large, perfectly full, exceedingly fragrant Noisette rose, of salmon-pink color, deepening towards the center of the rose, blooming freely through the rose season. Its fragrance is similar, and fully equal, to that of the justly celebrated rose Devonensis. The flower is distinct, and the habit of growth remarkably so. The foliage is very small, and the shoots are peculiarly slender, and having a rapid climbing growth, they may be trained with ease in any desired shape, either in pots or the open ground. It is perfectly hardy here, having withstood, without the least injury, the rigorous winters of 1855-6 and 1856-7. As the flower buds are about to expand, they present a curious disproportion to the slender foot-stalks and branches, and their warm tints and delicious odor, together with the fairy-like growth, combine to render it a most fascinating acquisition to the rose garden. It commends itself especially to propagators, as not one in a hundred cuttings will ever fail to strike and grow, and its foliage and branches offer so little obstruction to light and air that it is peculiarly well adapted to cultivation under glass. The average number of its petals, large and small, is one hundred and fifty.

## Alfalfa and Sheep Raising.

The San Andreas Independent copies the short article headed "Now Plant Alfalfa," published in the FARMER of the 25th ult, and adds the following important comments, which we commend to the attention of our readers:

"Some months since, we directed the attention of our readers to the importance of cultivating the Alfalfa generally throughout the State, as the most reliable and available grass for autumn pasturage. In proof of its excellence we mentioned that a gentleman living in San Joaquin county had, from a few acres, cut four times the quantity of hay that the same area of wild grasses usually produces, besides having excellent fall and winter pasturage for his milch cows. Since then, quite a favorable impression has obtained among valley farmers in regard to the adaptability of the Alfalfa to their wants. Now, what we wish to say here is, that, as the attention of stock-raisers is being turned towards the mountain lands as the best ground for raising sheep, would it not be an excellent experiment at least, for some of our farmers to introduce it here? It would doubtless succeed. Sheep do not require any other food than such as our hills supply, from the month of February to November. But later than November they begin to fall away in flesh, and when great numbers are grazed together, a large per cent is often lost by starvation. If the patrons of agriculture in the mountain counties, succeed at all in stock-breeding, sheep must be their staple. From the extreme drought and burning heat of our autumns, it will never be possible for the mountains to do much at raising horned cattle. They require too much food. Sheep are different: they are precisely adapted to our climate, and require but little food. But that little they must have the year round, and we believe the sowing of the Alfalfa would secure it. In a few years it would spread over a large scope of country, and thousands of acres of land, now without any value whatever, would be made to contribute largely to our wealth."

## HORSE-CHESTNUTS FOR CATTLE AND POULTRY.

If Tommy Mac wishes to give his sheep horse-chestnuts he should steep the nuts in lime-water, wash them well afterwards and boil them to a paste. So prepared they are very fattening. This process effectually destroys their bitterness, which is considered to be injurious to sheep. Deer will eat them uncooked. They enrich the milk of cows, and are said to cure horses of coughs, and hence the Latin name given to this tree. Turkeys stuffed with horse-chestnuts when living, as well as with the sweet chestnut when dead, and lambs fed on pistachio nuts, were in former days considered great delicacies; and the wild turkey in America is especially fond of and fattens on "pearnuts." I used to think that it was the oil in the chestnut that rendered it so nutritious, but find it is nearer the pulse tribe than the nut in its qualities, and very farinaceous.—[London Field.

**WHITE LILY.**—Up North, in the Forest City and Downville region, there is found a species of Mountain Lily, of delicate form, virgin whiteness, and a fragrance equal to that of the Swamp Lilies of New England. The Placerville Observer says the flower is produced by a plant exactly similar in appearance to the Tiger Lily of that region, and it would certainly be a valuable acquisition to our gardens if properly cultivated.

## Miscellany.

## CHILDREN.

BY H. W. LONGFELLOW.

[The following beautiful song should be set to music and sung in every household:]

Come to me, O, ye children!  
For I hear you at your play,  
And the questions that perplexed me  
Have vanished quite away.

Ye open the Eastern windows  
That look towards the sun,  
Where thoughts are singing swallows  
And the brooks of the morning run.

In your hearts are the birds and the sunshine,  
In your thoughts the brooklet's flow,  
But in mine is the wind of Autumn,  
And the first fall of the snow.

Ah! what would the world be to us  
If the children were no more?  
We should dread the desert behind us  
Worse than the dark before.

What the leaves of the forest,  
With light and air for food,  
Ere their sweet and tender juices  
Have been hardened into wood,

That to the world are children;  
Through them it feels the glow  
Of a brighter and sunnier climate  
Than reaches the trunks below.

Come to me, O, ye children;  
And whisper in my ear  
What the birds and the winds are singing  
In your sunny atmosphere.

For what are all our contrivings,  
And the wisdom of our books,  
When compared with your caresses,  
And the gladness of your looks.

Ye are better than all the ballads  
That ever were sung or said;  
For ye are living poems,  
And all the rest are dead.

## European Agriculture.

The Transactions of the New York State Agricultural Society has an article on "The Agriculture and Agricultural Schools of Europe," by Prof. W. H. Brewer, a gentleman, says the Germantown Telegraph, long known as a thorough agriculturist theoretically, a good farmer, an accurate observer and sure reasoner. The following extract applies chiefly to the agriculture of Baden, and is full of interest:

The traveler from the new world landing on the shores of the old, is more struck with the new and strange look of the landscape, than with the strange people, dress or architecture. This striking difference does not arise so much from the natural features of the country, as to those imparted to it by the labor of man; and as the great and chief occupation of every civilized people must be that of agriculture, the different systems, or I might say, the customs of civilization, are written on the landscape, frequently imparting to it its more striking features.

Although nearly the same grains, grasses, fruits and other products are cultivated and grown in Central Europe as in the Northern United States, and man calls to his aid the same beasts of burden, yet the whole features of the country are very different, arising not only from the slight differences in climate, and other natural causes, but mostly from the political, social and intellectual condition of the people as shown in their labors. Customs of previous ages have been perpetuated, making the different countries as unlike each other as they are from us, customs giving their peculiarities not only to each country, but to a certain extent, to each district, or even limited valley. To notice these differences and peculiarities in detail, even of Germany or France alone, would require years of observation, and then would but poorly repay the observer.

The bottom land nearer the river is very fertile, as has been stated. It is under close cultivation, but not with any system. The land is very much subdivided. There are scarcely any large estates; it is owned in portions of but a few acres each by those who cultivate it. A large proportion of these farms, if a piece of land of that size can be called a farm, are of less than ten English acres, and very often of less than half that amount. As a consequence we may reasonably style the cultivation, garden farming. The appearance of this valley when seen from the mountains on either side, is very beautiful and peculiar. It seems one immense garden. No fences clutter the ground, a mere furrow, and often not that, marks the line of division between different crops or the possessions of different owners. The roads follow no regular order, but wind wherever fancy seems to call them; straight or crooked, angular or curved, as it happens. No fences mark their course, but they are often bordered with fruit trees or the English walnut (*Juglans regia*), and in many cases the same trees are planted on the limits of the farms, marking the boundary line. Neither the dwellings of the people nor their barns are on the land cultivated, but are clustered together in villages, at intervals of every few miles. There are no rural farm houses.

These villages are very numerous, and of all sizes, from the hamlet of a few houses to the large town, or even expanding into a city. In the portion of the Rhine valley, between Frankfurt and Straasbourg, so dense is the population, that from the light on either side of the valley, from one hundred to one hundred and fifty villages and cities may be counted with the naked eye at one view, and many more may be discerned with a glass. Yet this whole population is supported by the soil; there is no import of food, but an export of some kinds of agricultural produce. These villages, especially near the mountains, often present a most picturesque appearance when seen from the distance. Especially in the Odenwald does one see very pretty villages, with quaint architecture, and curious churches, little gardens, fruit trees, and crooked narrow streets, nestled in the loveliest of valleys, picturesque enough when seen from the hills above, but wretched and dirty when seen from within; the streets filthy as well as narrow, filled with filth of every kind, and equal poverty staring one on every side. Nor are those of the plain any better; they are all dirty, the inhabitants have all the disadvantages of both village and country life, without the advantages and comforts of either.

The hillsides on the margins and the more gentle slopes of the southern part, is devoted to the cultivation of the vine. Besides this, the principal crops cultivated are wheat, oats, barley, rye, spelt, turnips, potatoes, sugar-beets, tobacco, clover, rape, lucerne, and grass, with some others to a

less extent. Buckwheat is raised on the hills adjoining, but not extensively, and then mostly on new land. Colza is raised in the south-western or French portion, while poppies (for oil), peas, beans, horse-beans, and some root crops, are occasionally seen. Although tobacco is grown to some considerable extent, Indian corn grows very small, and will not ripen well, so does not constitute a crop of any considerable importance.

The team is very various; one horse or two, one cow or two, or a horse and cow yoked together, according to the possession of the owner. It is customary here, over a large region, to work the cows; in fact they constitute, perhaps generally, the only team. Their labor is not severe, and their owners maintain that they will yield nearly (some say quite) as much milk as if not worked.

They draw by a yoke, consisting of a nearly straight stick tied on the forehead of the animal, in front of the horns, the yoke cushioned to prevent bruising. Not unfrequently a sort of harness is worn in addition to this, to assist in holding back in going down hill. These constitute the general farm team of this region, but it is quite varied. I have even seen the plow drawn by a cow and a woman, the latter leading the former, and at the same time, assisting with her strength in drawing the implement. But all the peasants are not thus wealthy; they may possess no team, and in that case, the little farm is filled entirely by hand. Instead of plowing, the land is turned up with a heavy clumsy hoe, worked by hand. The implement is effective, but the process is slow and laborious.

There is, however, one branch of rural labor closely allied, of which we have no representative—this is forest culture.

As the region has been thickly inhabited for ages, since the days of the ancient Romans, the forests would have long since disappeared had not special pains been taken in their preservation. In the region I have been describing, there are a few forests on the plain, mostly of pine (*pinus sylvestris*), but by far the greater portion of the wood and timber is grown on the mountains skirting the valley on either side. These mountains are of moderate height, seldom over 2000 feet high, and their tops and sides are clothed with forests. Some of these belong to private individuals, but the most belong to the government, and all are cultivated. This is a strange sight to an American; accustomed to his native forests, he can scarcely believe that these woods, often many miles in extent, were planted by the hand of man, and are as much cultivated crops as are wheat or corn.

The trees are either transplanted from nurseries or their seeds planted on the spot where they are destined to grow. They are protected while growing, and can only be cut by authority. Alternate crops of different kinds succeed each other as do crops of grain the cultivated fields. This imparts a peculiar feature to the forest scenery. From any point where an extensive prospect is had, the various kinds of trees may be seen, each growing in its place; here a forest of oak, there of pines, and another of beech or chestnut, the lines of division are as strongly marked as between fields of grain; some are large, some are small. The forest is but a great cultivated field; it has none of the appearance of the wilderness of nature; man has laid his hand upon the landscape; he has tamed it. Nature cannot even call the forests her own.

Everything relating to forest culture has been carefully studied, even more than agriculture in proportion to the numbers employed; more skill and knowledge are requisite. Voluminous books are written on the subject, and there are special means for the education of foresters.

There is a department devoted to instruction in this branch in all the Universities, and there are ample means of illustration and practice. Lectures are delivered and examples for illustration and practice abundant.

## Labor With Cheerfulness.

We often wonder how some men ever get along with their work, for they are ever out of humor, and a smile never plays upon their visages. The original punishment of man for sin and transgression of law was labor, and yet it was a blessing in disguise. It was the great plan of exercise for man's physical power, by which alone he could maintain those powers in a healthy state. Look to the hard-working man; his cheerful song, his active step, his robust constitution, and compare him with the idler, who does nothing but live by other men's labor, or his own wits or fraud. There are too many such; and, alas, too many of the grumbling kind too. Hear what Henry Ward Beecher says of the latter:

It is not work that kills men: it is worry. Work is healthy; you can hardly put more upon a man than he can bear. Worry is rust upon the blade. It is not the revolution that destroys the machinery, but the friction. Fear secretes acid, but love and trust are sweet juices.

We know a man with a patient good, Christian wife, and we never heard him speak a kind, pleasant word to her, and doubt if he ever did in the half century they have lived together.

He is always on a fret. Everything goes wrong. You would think he was made of cross-grained timber, and had always been trying to digest a cross-cut saw. He is eternally cross, and always thinks that his wife and children, hired hands, and all the domestic animals have entered into a combination to worry him to death. He is not only rusty, but fairly crusted over with it. He is incased in a shell of acid secretions, through which no sweet juices ever distill. Friction has literally worn him out, and he will soon worry himself to death. Of course he has never worked to any advantage to himself or anybody else. With him everything always goes wrong. He superstitiously believes "it is because the devil has a spite against him," when in truth it is nothing but his own fretfulness.

Crop of 1858.

Just Received by Express, on the steamer  
John L. Stephens,

A FULL ASSORTMENT OF SEEDS,  
Selected by Hon. Marshall P. Wilder, President  
of the Massachusetts State Horticultural Society,  
from responsible Growers, and warranted to be the  
CROP OF 1858.

## TAKE NOTICE,

The undersigned being desirous of establishing a reputation,  
and being aware of the imposition that has been practiced on  
Farmers, shirks proper to state, that he has not an OLD Seed  
in the Store. All Seeds sold guaranteed true to name.  
Planters and Traders will find it to their interest to secure  
GOOD, RELIABLE SEEDS, at as low a price as they  
would have to pay for worthless trash.

Have also on hand and for sale, a very desirable  
assortment of

Foreign and Fancy Grape Roots,  
Peach and Cherry Trees,

Together with a full and complete assortment of  
AGRICULTURAL IMPLEMENTS.

For sale by  
J. L. PANGBURN,  
85 Washington street,  
12m Between Front and Battery streets, San Francisco.

## SMITH'S

## POMOLOGICAL GARDEN

AND NURSERY,

SACRAMENTO,

On the American River, 24 miles from the City.

OFFICE AND DEPOT FOR TREES,

44 J street, between Second and Third streets.

The Trees offered from the  
above establishments this sea-  
son are more than usually fine,  
and in the NUMBER OF VARIETIES, of each kind

of fruit, we possess the

LARGEST COLLECTION IN THE STATE

our catalogue embracing

Over Nine Hundred Varieties,

as follows:

APPLES, 245 varieties;

PEARS, 276 varieties;

PLUMS, 100 varieties;

CHERRIES, 90 varieties;

PEACHES, 75 varieties;

NECTARINES, 20 varieties;

APRICOTS, 12 varieties;

GRAPES, 90 varieties.

We hesitate not in saying that our

PEAR AND CHERRY TREES

Are the Finest Ever Offered

for sale in this State, of all sizes, being from 5 feet to 12  
and 14 feet high. The greater portion being not  
only of very large size, but also handsomely  
shaped, are elegantly adapted to planting  
near residences, affording the double

ADVANTAGE OF SHADE AND FRUIT.

Of the above two fine Fruits we offer

25,000 TREES FOR SALE,

of different sizes and prices, and as low as good Trees  
can be bought at any first-class Nursery in the State.  
Many persons have had but poor success with Cherry Trees  
in this State. We state for their information that  
Our Cherry Trees are grown upon the true im-  
ported Mazzard stock, and not upon com-  
mon Native or Oregon stock of this Coast,  
the former being the only stock fit to grow them on.

We have also a very fine stock of the following, viz:

APPLE, PLUM, PEACH, NECTARINE,

Apricots, Grapes, Figs, Almonds.

Besides a Miscellaneous collec-  
tion of other and small fruits.

Particular regard has been paid to the growing of the  
Trees in GOOD SHAPE, and purchasers of our  
Two-year-old Trees will find that they have  
been well "cut back," and are now  
firm, symmetrically shaped Trees.

We guarantee no finer or healthier Trees will be found  
in the market this season.

We also offer a superior assortment of  
Shade and Ornamental Trees,  
Shrubs, Roses, and  
Greenhouse Plants.

Embracing all the old and well known popular varieties,  
as well as a great many others both good and new.  
Also a very fine lot, of different sizes, of that very popu-  
lar shade tree, so full of reminiscences of home, the

GOOD OLD-FASHIONED ELM TREE  
of many varieties, but most of the American and Scotch  
Elms, which are of good size, and when well estab-  
lished in the soil, they are of very rapid growth.

..ALSO..

LOCUST,  
LABURNUM, or GOLDEN CHAIN,  
MAPLE, in variety,  
LINDEN, European and American,  
CATALPA,  
CHINA, and other Trees.

We call particular attention to our collection of  
THE CAMELLIA,  
which has become so well acclimated that we have them  
growing freely in our open grounds, and blooming as  
elegantly out of doors here as they possibly could  
with the tenderest care in a conservatory.

It is no longer a house plant, but one of  
The Gems of the Pleasure Grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY  
TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c.,  
see CATALOGUES, which will be sent by mail to all  
applicants.

We invite attention to our very large and general  
assortment of  
VEGETABLE SEED,

THE CROP OF THIS YEAR.

which is very fine and large, and we are now prepared  
to supply THE TRADE in quantities to suit, and at  
Lower Prices than can be found  
at any other establishment in the State.

We have now been growing SEED for a number of  
years, and have given universal satisfaction. We are  
now prepared to supply large quantities of GOOD FRESH  
SEED at very low rates. These seeds will be done up  
handsomely in packages, for Wholesale or Retail Trade  
and will always be in readiness at our GARDEN, and at  
CITY OFFICE—44 J street—SACRAMENTO.

Our Trees and Shrubs will be sold for CASH ONLY, and  
Orders must be accompanied with the Cash to insure attention.

TREES AND PLANTS,

FRIDAY.....MARCH 11, 1859

DEATH OF EX-GOVERNOR SLADE.—Ex-Governor Slade of Vermont, died at his residence in Middlebury, Vt., on Sunday, the 14th Jan. He was about seventy-four years of age. His life was able, and his death peaceful and happy.

## DOMESTIC SUMMARY.

The town of Nevada is to be supplied with water from iron pipes laid through the principal streets by the Nevada Water Company, taking the water from their reservoir on Lost Hill.

At Placerville, says the Observer of Wednesday, if the weather will remain settled for a few days longer, we will have livelier times in every department of business than we have enjoyed for many a long day.

Snow was several inches deep in the town of Mariposa on the 1st inst., and on Bear Valley eighteen inches deep. The Gazette thinks there is more snow in the mountains to the eastward of Mariposa than has been before known.

Iron tubing is recommended by the Columbia News, in place of stumps and fixtures, which are liable to be blown down, for hydraulic claims, as it is cheaper and more durable than any other plan.

The first stage from Chinese to Big Oak Flat drove through on the 26th ult., the long projected wagon-road from Moccasin up Grizzly Gulch having progressed sufficiently to be traveled at last. The stage was welcomed with cheering and the *Anvil Chorus*.

The editor of the Stockton Republican has been shown a specimen of millet, grown this year, the stalk of which is three feet in height, and the head of which is in bloom. It is from the ranch of Mr. John Kaller, about seven miles from Stockton, on the Mariposa road.

A Conterville correspondent of the Mariposa Gazette says: "As soon as the weather settles, a party will go to work on the Yosemite trail, preparing for the spring travel. This will be the season to visit that celebrated place, as there are quantities of snow on the mountains."

A new German paper, the California Staats Zeitung, has commenced at Sacramento, published tri-weekly, by Messrs. A. Wagner & C. Wolleb; edited by the latter gentleman. No doubt the "Staats Zeitung" will be liberally supported by the good Germans of our sister city.

At a session of the Stockton Society of Natural History, held on the 3d inst., Mr. S. H. Debnam presented a small box of quartz specimens, containing gold sulphate of iron, and a handsome specimen of the oxide of cobalt, from Conterville, Mariposa county.

At Omega the snow is said to be from five to ten feet deep. Mining operations are necessarily suspended. Above Omega the snow is from ten to twenty feet deep, and all communication between the towns in that section and Nevada had been stopped for two weeks.

The Solano Herald says: Our neighboring town of Fairfield is very rapidly improving, and gives evidence of energy and enterprise. Among the numerous buildings now in process of erection is a new hotel, by Mr. John Barton. When Fairfield and Suisun are united, they will present a town of no inconsiderable proportions.

By the Salt Lake Mail a gentleman in Placerville received a letter which came through from St. Charles, Illinois, in 28 days, says the Observer. It adds: This is not only quick work, but is also unmistakable evidence that the mails are forwarded with equal dispatch over both ends of the route.

RUPES, ETC.—Some time back the banking houses refused to take rupees and Bolivian half-dollars at a higher valuation than forty cents. Since then the refusal to take them as half dollars is becoming general. The market folks, butchers and restaurant-keepers, are getting "down on 'em."

A land slide occurred at the Buena Vista Ranch near Grass Valley, where it is said about seven acres of the hillside slid into the valley, doing considerable damage to the ranch. Another slide is mentioned by the Grass Valley National, which says: Since the recent heavy rains, about four acres of "Old Block's Nose" has taken a notion to slide several feet down hill.

The troubles in Shasta, in relation to the Chinese, had quieted down, at the last accounts. The miners arrested had been discharged by the court, and the sheriff had disbanded his posse. But the adherents to their determination to "get quit" of the Chinese, and will doubtless convince them that it will be more "comfortable" for them to *vacate*.

Mr. C. B. Linton, formerly a merchant of Sacramento, arrived on the Sonora, having with him sixty-five of honey bees, most of which he got through in good condition. Mr. T. V. Hoag, of Washington, also, received in excellent condition, sixty-five hives, brought on by Mr. Linton. Honey will doubtless be plenty in Sacramento and vicinity, this season. So says the busy Bee.

A Settlers' League Association has been formed in Santa Cruz county, Wm. Blackburn elected President; A. J. Sloan and Wm. Anthony Vice Presidents; A. McPherson, Treasurer, and T. T. Tidball, Secretary. The object of the League as announced, "is to settle our boundaries amongst ourselves equitably, and to prevent the unprincipled few, who have been accidentally favored by the late survey, from despoiling their neighbors." It is stated that in all newly settled districts in the Western States, where the inhabitants have been allowed to pre-empt lands, like associations have been formed for mutual protection.

The difficulties between the stockholders and creditors of the Columbia and Stanislaus-river Water Company, are progressing favorably, says the Columbia News, towards a settlement. A long list of the creditors have signed an agreement to reduce the interest accruing to them on their claims against the Company; and it is to be hoped that the matter may be brought to an early and amicable conclusion. The interests of every class in the country will be greatly advanced by its being so.

The News states that an immense amount of snow has accumulated in the mountains, which will furnish an abundance of water for the miners in that section during the whole of the next dry season.

On the morning of the 17th ult., says the Humboldt Times, a keen clap of thunder aroused the sleepers of Eureka. It was preceded by a vivid flash of lightning, but no rumbling sounds followed. The severity of the weather continued. There has been more snow on the low mountains and bald hills the past six weeks, than has fallen there before since the settlement of this Bay, in one season. Indeed, it is feared by those who have been in the stock ranges in the bald hills between Yager Creek and Kueland's Prairie, within the past week, that the cold storm which we have experienced since the 16th, will cause the cattle to suffer greatly. The snow in that region cannot be less than from eighteen inches to three feet deep at this time.

NEVADA COUNTRY.—The Hydraulic Press of the 5th inst., says: The roads of Nevada county were never in a worse condition than at present. The prolonged rains and occasional freezes have rendered them almost impassable. Owing to the snow, we have received no Downville papers for two weeks. "Music hath charms to soothe a savage," &c. Such was our involuntary reflection on hearing two Indian boys whistle "Pop goes the weasel. John Digger is very fond of music and learns it readily. The amount of lumber used for mining purposes in this vicinity is very large,

and to supply the demand there are five mills kept constantly employed. By the end of winter when the snow begins to melt, look out for a general liquidation and fortune-making in Nevada county.

COMMUNICATION between Petaluma and the surrounding country, says the Journal, is nearly closed at present, in consequence of the extreme muddy condition of the roads. The traveling was never known to be so heavy throughout the county. As a matter of course, business is at a stand still, waiting better times coming.

AN Exhibition of Horses is to take place at the Frontier Hotel, Petaluma, on Saturday, April 2d. The Sonoma County Journal says the owners of the various stallions in the county will exhibit their horses and the offspring, and a fine opportunity is thus offered stock-raisers to see and judge the merits of the blood (not blooded) horses of the country.

AGAIN with the heading of "Continued," the Sierra Citizen of the 5th inst., says: This is chapter four of our storm story. The scene changed slightly during the middle of the week, uncovering the sun and diffusing a very mild temporary warmth. On Thursday night the wind was tempestuous, bearing much rain, and hurrying bricks from the limited number of Downville brick chimneys; and then it snowed like the old—lead of winter.

POVERTY BAN, is comparatively a new mining camp, says the San Andreas Independent. Water is abundant and business has assumed the liveliest aspect. Two ditches have been extended to the bar, and it is asserted there is no place in the Southern Mines, except Columbia, which opens a wider field for profitable employment to men of limited means. At Salt Spring Valley every preparation for successful mining is completed, the lake and reservoirs are full of water, and the miners making good wages.

The Humboldt Times says, the sale of public lands in that District commenced at the office in Humboldt, on the 14th ult., and ended on the 17th. All the lands advertised, not having been previously entered, were offered, and the following aggregate of lands sold in the several counties in the District: Humboldt county, 1745 acres; Del Norte county, 516 acres; Siskiyou county, 3080 acres; Shasta county, 200 acres, and in Napa county, 2180 acres. There was but little speculation in the lands of any of the counties except Napa. Most of the lands sold there, were purchased by speculators, and principally by non-residents. We are glad that people were not disposed to speculate in the lands of our country, for they will now be subject to private entry, and will hold out greater inducements to persons to settle in the county than if large bodies of them were held in the grasp of ruthless speculators.

In relation to the paragraph about the inhabitants of La Porte running tunnels under the snow for communication with each other (copied by us last week), the Hydrault Press remarks: The story of Monchausen riding over a snow-buried town, and hitching his sled to the point of a church-spire, thinking it a post, might almost be realized in California. The fact that the tremendous snow-storms do not depopulate the sections they visit is a remarkable proof of the mildness of our climate. If the cold was equal to what it is in other countries where such storms are common, not a soul could remain in the mountains through the winter, but all would have to imitate the Alpine peasants, who, on the approach of the season of snow, drive their flocks and herds down to the warm valleys, where they remain with them until spring. Californians alight in their mountain homes through the deepest snows, conducting business, marrying, dying, and publishing newspapers as though nothing unusual had occurred, waiting for the spring thaw to melt them out.

The Columbia News of the 3d inst., says: The Stanislaus River Fluming and Mining Company, having disposed of all the shares in the undertaking, have commenced operations, and we have no doubt that they will realize handsomely during the coming summer, as in every case where the miners have been able to reach the bed rock in that locality, it has invariably paid well. The chief obstacle, heretofore, being the water, but as the Company will construct a flume of nearly a mile in length, for the purpose of avoiding that hindrance, we feel confident that the undertaking will be a profitable one, and will afford another proof of the advantages to be derived by combining capital with labor to effect objects which neither can alone accomplish. Owing to the continuance of cold weather, the frost having cut off nearly all the supply of water, all there is being what the old company supplies; consequently there are but few miners employed, and we shall have to wait till the weather gets a little warmer, before we shall be able to report a better condition of affairs.

LADIES ON SNOW SHOES.—To those individuals residing in the lower country, says the La Porte Messenger of the 5th inst., it may appear rather strange that a great deal of the traveling here, at this season of the year, by females, is done on snow shoes; though considered a somewhat novel means of locomotion a short time since, it is now becoming so common as to scarcely attract attention. We are informed that during the late snow storm nearly all the ladies at Gibsonville attended the parties with snow shoes—we mean they used them for underpinning in going to the place where the "twinkling footed muse" was to preside. Picture to yourself a number of ladies with wooden appendages, twelve or fourteen feet in length, buckled on after the manner of skates, coming down the hill at a 2-40 rate, with ermine and merino floating in the breeze, and you will imagine a sight to which we have lately been treated. Occasionally the seraphs lose their equilibrium, the balance-pole takes an aerial flight, and after it goes the performer, and then follows ground and lofty tumbling, in which ease and nature predominate over elegance.

HOLLOWAY'S PILLS.—Professional prejudices die hard, but the cures of dyspepsia, bilious disorders, and dysentery, wrought by this unapproachable remedy, are breaking it down everywhere. The liberal-minded members of the faculty admit the value of the medicine. Well they may, for it shames the old treatment by its countless cures.

Sold at the manufactory, No. 80 Maiden Lane, New York, and by all druggists, at 25c., 63c., and \$1 per box.

THE TRUE REMEDY FOR DYSPYPSIA AND INDIGESTION.—It is acknowledged on all hands that the Oxygenated Bitters is the true remedy for these complaints. They are free from alcohol, and contain, judiciously combined with hygienic substances, oxygen, the chief vital element.

VALUABLE PUMP FOR SALE. A LARGE WORTHINGTON PUMP, with Tubular Bore and most complete apparatus; throws a 4-inch stream of water with great power. The whole apparatus is in the most perfect working order, and offers a grand chance to any person wishing a superior pump. It cost \$3700. Can be bought for \$2000. Been used but little. Can be seen at Brannan's Ranch, opposite Nicasio. Apply to JULIUS WETZEL, Sacramento, or SAM'L BRANNAN, San Francisco.

Greyhounds. SEVERAL FINE FULL-BLOOD GREYHOUND PUPS for sale. Apply at Farmer office, 120 Washington street (opposite).

WOOL! Purchased at the Highest Market Rates. GEORGE HOWES & CO., 125 Sansome street.

THE CAMEL'S STRENGTH.—The Galveston (Texas) News of a late date, says that one of Mrs. Watson's camels, recently imported, was loaded to test its strength. It was of the largest size. Upon the word of command being given, the camel lay down, ready to receive his load, which consisted of five bales of hay, weighing in the aggregate over 1400 pounds, which were firmly bound to the pannel placed on the animal's hump. Upon the utterance of command by the native keeper, the huge animal rose, without an apparent effort, to his feet, and walked off in a stately manner along the wharves and through the city. We are informed that the same camel had had 1600 pounds placed upon him, with which enormous weight he easily rose.

For some cause, probably from the fact of their superior strength, laws were passed recently at Galveston, forbidding the camel to come into the city, except to pass through in leaving the country. Wise legislation, that?

## SPECIAL NOTICES.

BOY FOR A FARMER.—A place is wanted with some good Farmer, for an active and intelligent BOY, about nine years of age. Any person that would like to adopt such a Boy, can learn of an opportunity, by applying at the Farmer Office.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerrotypes. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "vera."

My Ambrotypes were not exhibited at the last Fair in this city. Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE, Corner Montgomery and Sacramento streets.

SLEEP! SLEEP! SLEEP! To each and all, a fair good night, And rosy dreams and slumbers light! Sleep! Sleep! Sleep! Rest! Rest! Rest! Who is the man who doth keep A mattress the finest and best.

Sleep! Sleep! Sleep! Rest that refreshes most true! The rest that, while sleeping, our health doth renew, Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep! Rest! Rest! Rest! Economy tells us to buy and to keep The mattress that is cheapest and best.

Sleep! Sleep! Sleep! On the mattress from JACOB SCHRIEBER! If bechevels lie single, then life will not jingle! Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go, where, where, Those famous mattresses made out of PULU!

J. SCHRIEBER, Jackson street, near Hotel International.

## THE HOME OF BEAUTY.

"Creative Genius! from thy hand What shapes of order, beauty, rise, When waves thy potent mystic wand To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle, And here our gods; But they are mortal. Around these fustianed halls The good, the great, the living and the dead; And yet they speak—speak all: "We cannot meet the speaking eye, But we are known, and, knowing, Pain would hold sweet converse." But as we gaze upon their closed lids, We know that they are silent While they speak, and gaze on us.

Creative Genius! raise thy wand And gather round us where we stand Within these halls, a living throng: That we may raise a glorious song To all who set the noble part; And tribute give to every art.

Creative Genius! here's thy home! And here shall wondrous thousands come; Here spend a season free from care, To worship the beautiful, good, and fair, For it is not a Freeman's duty, To worship at the shrine of Beauty!

Behold these flowers that gem the land, These little children in groups they stand, While here and there, like angels, see They're smiling on their mother's knee. Men, in their prime, each like a brother, Joined hand in hand they're linked together; Here, too, the aged, the noblest show, They, hand in hand, together go. Young men and maidens, free from care, Single or plighted, like jewels rare, Are gathered round this gorgeous Hall, This Home of Beauty, in truth we call.

Creative Genius, raise thy wand! We now would ask, O let him stand Before us; him who all this beauty planned. Behold, cries Genius, quickly glance! Enough! the artist, R. H. VANCE!

Daguerrean Gallery, Corner Sacramento and Montgomery streets.

Ornamental and Fruit-tree Seed.—A small invoice of valuable Ornamental and Fruit-tree Seeds, for sale at the Office of the FARMER.

Dr. Wistar's Balsam of Wild Cherry.—Where the above preparation is known, it is so well established as an infallible remedy for the cure of Coughs, Cold, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Whooping Cough, and every form of PULMONARY COMPLAINT, that it was a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly appreciating in public favor, until its use and its reputation are alike universal; and it is now known and cherished by all (and their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED! The whole history of this Medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well-nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cold or a Confirmed Consumption, and its power as a safe, certain, speedy, pleasant and effectual remedy cannot be equalled.

Caution! Purchase none unless it has the WRITTEN signature of "Dr. Wistar" on the wrapper, as well as the printed name of the proprietors.

BETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.

For sale by—CHARLES MORRILL, HENRY JOHNSON & Co., and HENNINGSON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere.

## HOTEL INTERNATIONAL.

San Francisco, California. THE UNDERSIGNED INVITES the attention of the Traveling Public, and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a FIRST-CLASS HOTEL, in every particular. The present Lessee and Managers, A. S. HALEY, JNO. J. HALEY, and E. R. ROBINSON,

with a delicate not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the FIRST RESPECTABILITY, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT, THE PRINCIPAL THROUGHPATHS, THE FASHIONABLE PROMENADES, AND STEAMBOAT LANDINGS; thus rendering it at all times the most DESIRABLE STOPPING-PLACE For Families or Single Gentlemen, during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, Lessee, ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

The Lambs now on hand are a cross of the Bakewell. Those in prospect are American cross.

This is a rare chance, and purchasers will do well to call immediately.

## Ladies' Department.

## THE WIND AND THE STREAM.

A brook came stealing from the ground;  
You scarcely saw its silvery gleam  
Among the herbs that hung around  
The borders of that winding stream—  
A pretty stream, a placid stream,  
A softly gliding, bashful stream.

A breeze came wandering from the sky,  
Light as the whisper of a dream;  
He put the o'erhanging grasses by,  
And gaily stooped to kiss the stream—  
The pretty stream, the flattered stream,  
The shy, yet unreluctant stream.

The water, as the wind passed o'er,  
Shot upward many a glancing beam,  
Dimpled and quivered more and more,  
And tripped along, a livelier stream—  
The flattered stream, the simpering stream,  
The fond, delighted, silly stream.

Away the airy wanderer flew,  
To where the fields with blossoms teem,  
To sparkling springs and rivers blue,  
And left alone that little stream—  
The flattered stream, the cheated stream,  
The sad, forsaken, lonely stream.

That careless wind so soon came back;  
He wanders yet the fields I deem;  
But on its melancholy track  
Complaining went the little stream—  
The cheated stream, the hopeless stream,  
The ever-murmuring, moaning stream.

## TRIP LIGHTLY.

Trip lightly over trouble,  
Trip lightly over wrong;  
We only make grief double  
By dwelling on it long.  
Why clasp we's hand so tightly?  
Why sigh o'er blossoms dead?  
Why cling to forms ungloriously?  
Why not seek joy instead?

Trip lightly over sorrow,  
Though the day be dark,  
The sun may shine to-morrow,  
And gaily sing the lark;  
Fair hope has not departed,  
Though roses may have fled;  
Then never be down-hearted,  
But look for joy instead.

Trip lightly over sadness,  
Stand not to rail at doom;  
We're pearls to string of gladness,  
On this side of the tomb;  
Whistlers are nightly shining,  
And heaven is overhead;  
Encourage not repining,  
But look for joy instead.

## Religious Education.

[We are pleased to welcome our new correspondent "Ivy Dell" to our columns, especially as she comes to advance the cause of Education, and that, too, of woman; for this is the basis of all education. Until woman is properly and fully educated to guide, control, and qualify the youth of our land to become good and true citizens, all the legislators in the world will not, cannot, make men what they should or might be. The mother, alone, can infuse the highest, holiest, and most lasting impressions upon the children. The world is full of the various systems of education, but one thing is certain: none can be permanent or lasting that does not inculcate a religious training. By this we do not mean the religion of a sect, but the religion of the Gospel, the religion of the Bible. It is deeply to be deplored, that sectarianism has so long made the Bible a sealed book to millions who, by reason of bigotry and fanaticism, by cruel want of charity and Christian love, have been estranged from truth and kept in error; but, thanks to God, light is breaking, and Christians of all denominations are beginning to see and feel that the Bible, instead of being an advocate of sects and creeds, is a simple and plain treatise of great truths, relating to all that interests man in every relation of life; that all there is of art or science in the world can be traced to the Bible, as the founder, promulgator, and expounder of these truths, and, as our able correspondent says, and very justly too, the "history of olden times, the genealogy of the human race, natural history," etc., etc., can be traced to, and taught from the Bible, in the simple form of a treatise, and with the most lasting impressions. If there is one science, more than any other, that is pictured forth in the Bible, it is natural history, and the cultivators of the earth will always find it the very best text-book on agriculture that can be found in the world. When the Bible shall become a book for common study in our schools and homes, in order that we may know our duty, instead of supporting creeds and parties, the world will become suddenly changed. As it has often been said that the Bible can be made to suit any creed, so it can be made to enlighten and bless all. The manner in which the Bible is presented to a child's mind, in its early years, constitutes its charm or ban. It should ever be rendered attractive; then its influence will be felt and enjoyed. The biography of the greatest and best men who ever lived show the glorious results of Bible-teaching, and we hope that it will always be kept in schools, a reading-book, to be read without bias to any creed. The letter of Ivy Dell is full of good suggestions, and we hope to hear often from her pen.]

Is I had a family of sons and daughters, and could not educate both, I would educate the daughters first, said a neighbor to me, yesterday.

This expression, with many others of like kind, are falling before the public eye every day. How changed the notions now, compared with those when you and I were "going to school." A woman of the present day must not only be educated, but religiously educated, in order to be qualified for all the walks of life as a wife, mother, sister, or friend. By saying religiously we do not mean as a sectarian. Sectarianism is to be despised and abhorred by every reasonable person. It is a thing without brains, a heart fostered and matured by ignorance and pride. You have but to look around you, and compare institutions under your own observation, to come to the conclusion that those under religious auspices succeed the best. See the Seminaries that have started with means, talent, and everything necessary, except the religious ingredient, and witness the failures.

Who ever heard of an atheist putting his daughters under an atheist to be educated? How careful is the parent who has no settled views upon religious matters, in expressing them before his listening sons and daughters. It is the natural preference of every parent that their children should be religious.

How can they become so without religious instructors? The little in the common school is the first grand stepping-stone; to reject it would be taking away the great foundation of the cherished object. In other branches of education, it is of equal importance. The arts and sciences of the early day, the wonderful miracles of olden time, the genealogy of the human race, Natural History, Ancient Geography, in short, a vast amount of well authenticated knowledge would be withheld from the scholars that is theirs in their right. I hear one say, "all this could be taught at home, or in the Sabbath-school." Admit it: but why in excluding this book, do you stop there? Could you not, with as much propriety, exclude Anatomy, Botany, Astronomy, or Philosophy? All these could be equally well taught on the Sabbath, and in the Sunday-school. The proximity of each to a Superior Power must cause any one to pause.

The beneficial influences of the Bible on the minds of the young are without limit. To illustrate one point: A Methodist elder said in my hearing, a short time since, that it was only necessary to read the Bible to become a good, law-abiding citizen; not necessary, even, to study the constitution of your own State, or know its laws. There would never be any danger of breaking those laws, if the teachings of the Savior were lived up to.

In the Bible, the great cardinal doctrines of religion are found. The intelligence of any child who can read can comprehend it, with the proper supervision and direction of the teacher. The child while young receives the impression which in after life will have a telling effect, though years may intervene, apparently, without its influence; it will be seen and felt, sooner or later. The bronzed sailor, who furls the sails of the vessel as it is tossed and pitched about over the rough, angry sea, mid storm and wind, the clouds ever and anon hiding the pale moon, thinks, with the twinkling of an eye, of the time, far back in his memory, when he knelt by his Mother's knee, saying, "Our Father which art in Heaven." He feels the warm hand yet upon his head, with its blessings so sincerely asked. The soldier in battle, after the excitement dies away, perhaps around the camp fire, or perchance, as he spreads his blanket by the side of a confidential messmate, refers back to his native place with pride and pleasure; he thinks of his early impression from a pious mother, but does not speak of them; they are too sacred to him to breathe to another. So with men and women in any station in life; they look back to their youth, and account for their present position, their sentiments, their very nature, by their early associations, early trainings, and early education.

Why is it that those who love the Roman Catholic church are the first to establish the Asylum for the orphan children? get up Seminaries for the young on so cheap a scale that many are induced to patronize them for the sake of economy? Is it not that they fully realize the truth of the adage, "as the twig is bent, so is the tree inclined?" Give them the young, tender mind to mold, and what do they turn out for you but the unswerving Catholic? With the orphan, his gratitude alone, which is a noble component of the human heart, to say nothing of the thousand influences brought to bear, is sufficient to bias one in favor of the institution, which, when he was a stranger, took him in, was naked and clothed him.

The importance, then, of the right kind of early education, must be fully realized by those who are in the habit of observing and thinking for themselves. As the heart becomes pure, so does the mind become strong; but it is always the case that as the mind becomes enriched, that the heart is making a corresponding improvement? The heart cannot be improved without enriching the understanding. The character of our beloved Washington, whose very intelligence and every act seemed to be a spontaneous production of his noble heart, speaks volumes for care and nurture of something else besides brains. It is said that he went through the Revolution on his knees. As often as we hear the name of Martha Washington, do we not as often see a brilliant example of early religious training in her son? It was this, that forbade the little hero of the cherry-tree-and-hatch story to tell a lie. Could the Mother of the great and good Washington rise to witness the zeal and enthusiasm of the wives, mothers, and daughters, of the present time, in trying to secure the home and tomb of her loved son, would she not feel that the homes and firesides were yet safe?

How signally proper for this work to be accomplished by the women of America. In doing so, every one must feel that a portion of their tribute goes to the Mother of that great man. Not a woman who hears of the enterprise, no matter how remote she may be, but has a dollar or more to give, however hard it may have been earned, so that she may cast her mite in assisting so laudable an undertaking. That it will succeed, and, as time rolls on, that more Washingtons and Havlocks will come before the world as striking illustrations of the influence of early religious education; thus encouraging the faltering mothers, teachers, and sisters, throughout the land.

IVY DELL.

## A Chapter from Mrs. Ellis' Women of England.

## DOMESTIC HABITS—CONSIDERATION AND KINDNESS.

[CONCLUDED.]

MANY of the remarks into which I have been led by a consideration of the subject of dress, are equally applicable to that of manner, as relates to its connection with social and domestic happiness before and after marriage. We are all aware that neither beauty, nor personal adornment, nor the most brilliant conversation, can be rendered altogether charming to any individual, without the accompaniment of a peculiar kind of manner, by which that individual is made to feel that he partakes in the pleasant thoughts and kind feelings of the party whose object it is to please.

Women who possess the tact to know exactly how to give pleasure, are peculiarly skilled in those current looks, and cheerful smiles, and animated responses, which constitute more than half the charm of society. We sometimes see, in social evening circles, the countenance of an intelligent young lady lighted up with such a look of deep

and glowing interest, as to render her perfectly beautiful, during the time she is addressed by a distinguished friend, or even an attractive stranger.

I will not say that the same expression is not always worn by the same individual at the domestic hearth, when she listens to the conversation of her husband. I will not so far libel my countrywomen, because I know that there are noble and admirable instances of women who are too diffident and too simple-hearted to study how to shine in public, who yet, from the intensity of their own feelings, the brilliancy of their own powers of perception, and the deep delight of listening to the gentle tones of a beloved voice, when it speaks at once to their understanding and their hearts; I know that such women do wear an aspect of almost spiritual beauty, and speak and act with an almost superhuman grace, when no eye beholds them but that which is most familiar, and which is destined to look upon the same path of life with theirs.

After acknowledging these instances, I must suppose a case; and, for the sake of argument, imagine what would be the feelings of a husband, who, in mixed society, should see his wife the center of an animated group—pleased herself, and giving pleasure to all around her—the expression of intense interest depicted on her countenance, and mingled with an apprehension so lively and vivid as almost to amount to presentiment of every probable turn in the discourse; her eyes lighted up with animation, and her cheeks dimpled over with the play of sunny smiles—what would be the feelings of a husband who should have marked all this, and when at his own fireside he felt the want of pleasant converse to beguile the winter's evening of its length, should be answered by that peculiar tone of voice, that depression of countenance, and that forbidding manner, which are more powerful in imposing silence than the most imperative command?

In fact, there is a manner all-powerful in its influence upon domestic happiness, in which there seems to be embodied a spirit of evil too subtle for detection, and too indefinite to be described by any name. It is not precisely a sullen manner, nor, in its strictest sense, a repulsive manner: for the individual who adopts it may be perfectly civil all the while. It does not consist in pointed insult, or, indeed, in anything pointed. It conveys no reproach, nor suffers the party upon whom it operates to suppose that redress is the thing desired. It invites no explanation, and makes no complaint. Its only visible characteristic is, that the eye is never raised to gaze upon its object, but invariably directed past it, as if that object had no ubiquity; in short, had no existence, and was not required to have any.

This is the manner I should describe as most expressive of natural antipathy without the energy of active dislike; and yet this manner, as before stated, is so potent in its influence, that it seems to lay, as it were, an unseen ax at the root of all domestic confidence; and difficult as it must necessarily be, for a woman to maintain this manner, there have been instances in which it has destroyed a husband's peace, without affording him even the satisfaction of any definite cause of complaint. There are degrees of the same manner practiced every day in all classes of society, but never without a baneful effect, in poisoning our kindly feelings, and decreasing the sum of human happiness. We are all too much disposed to put on what I would describe as company-manners. Not only are our best dresses reserved for our visitors, but our best behavior too. I have often been struck with the bland smiles that have been put on in welcoming guests, and the appearance of extreme interest with which such guests have been listened to; when, five minutes after their departure, the same subject having been taken up by some unfortunate member of the family, no interest whatever has been elicited, no smile awakened, and scarcely so much as a patient and respectful answer drawn forth. I have observed, also, with what forbearance the absurdities of a stranger have been endured: the twice-told tale, when begun again in company, has apparently been as fresh and entertaining as the first time it was heard. The folly of ignorance has then had no power to disgust, nor the impertinence of curiosity to offend.

When I have marked all this, I have thought, if we could but carry away our company-smiles to the home fireside, speak always in the gentle and persuasive tones made use of in the evening party, and move along the domestic walk with that suavity of manner which characterizes our intercourse with what is called, society,—how pleasant would those homes become to the friends who look for their hours of refreshment and relaxation there; and how seldom should we have to complain of our companionship being neglected for that of more brilliant circles and more interesting scenes!

In writing on the subject of consideration and kindness before and after marriage, I have purposely confined my remarks to a very slight and superficial view of the subject. The world that lies beyond, I cannot regard as within the province of my pen—I might almost say, within the province of any pen; for such is the difference in human character, and in the circumstances by which character is developed, that it would scarcely be possible to speak definitely of a line of conduct by which the lives of any two married women could properly be regulated, because such conduct must bear strict reference to the habits and temperament of the husband, whose peculiarities of character would have to be taken into account.

I must therefore be satisfied to recommend this wide and important field of contemplation to the serious attention and earnest solicitude of my countrywomen; reminding them, only, before we leave this subject, that if, in the first instance, they are induced by selfish feeling to consult their immediate interest or convenience, they are, in a secondary manner, undermining their own happiness by failing to consult that of the being whose destiny is linked with theirs.

What pen can describe the wretchedness of that woman, who finds herself doomed to live unloved; and to whom can she look for confidence and affection, if shut out from the natural sources of enjoyment at home? There is no loneliness, there can be none, in all the waste or peopled deserts of this world, bearing the slightest comparison with that of an unloved wife? She stands amidst her family like a living statue amongst the marble memorials of the dead—insistent with life, yet paralyzed with death—the burning tide of natural feeling circling round her heart—the thousand channels frozen, through which that feeling ought to flow.

So pitiable, so utterly destitute of consolation is this state, to which many women have reduced themselves, by mere carelessness of the common and familiar means of giving pleasure, that I must be pardoned for writing on this subject with more earnestness than the minuteness of its detail would seem to warrant. We may set off in life with high notions of loving, and of being loved,

in exact proportion to meritorious desert, as exemplified in great and noble deeds. But on a closer and more experimental view of human life, we find that affection is more dependent upon the minutiae of everyday existence; and that there is a greater sum of affection really lost by filtering away through the failure of seeming trifles, than by the shock of great events.

We are apt to deceive ourselves with regard to the revival of affection after its decay. Much may be done to restore equanimity of mind, to obtain forgiveness, and to be reinstated in esteem; but I am inclined to think, that when once the bloom of love is gone—when it has been brushed away by too rude or too careless a hand, it would be as vain to attempt to restore it, as to raise again the blighted flower, or give wings to the butterfly which the storm had beaten down.

How important is it, then, that women should guard, with the most scrupulous attention, this treasure of their hearts, this blessing of their homes; and since we are so constituted, that trifles make the sum of human happiness, that they should lose no opportunity of turning these trifles to the best account.

## Grace Greenwood at the Capital of Ohio.

The following very handsome notice of this distinguished lady we find in the Ohio Farmer, and we are most happy to record her success; for, by these efforts, we have proof of her recovering health, which had long been feeble, so much so as to require that she should leave her post at Philadelphia, and visit her kindred and friends at Michigan, where she had been for many months previous to entering her new field of labor, which is now announced with so much praise. We wish Grace Greenwood would visit California; she would meet a noble reception:

COLUMBUS, Jan. 24, 1859.

We have had "Grace Greenwood" at Columbus Long have I earnestly desired to look into the face of this noble, good woman, for ever since we were blessed with "little folks" at our house, "Grace Greenwood" has been a household word with us. Heaven reward the good woman for all she is doing for the dear children. Well, we have not only had the pleasure of seeing Grace, but the greater pleasure of hearing her in two of her very pleasant lectures: "The Children of To-day, the Men and Women of Twenty Years Hence," and "Joan d'Arc." Unfortunately, both lectures fell upon tempestuous nights, yet large audiences were in attendance. Both lectures were very able, and very beautiful. Her defence of the "Maid of Orleans," from French cowardice, and English slander, was triumphant and most womanly; it was every way an able lecture, but I confess my greater delight was with the fair woman's talk about the children. It was as brilliant as a winter night's sky, most excellent in sentiment, and delivered, as the Journal editor well says, "in a sweet voice, gently tremulous, and suffused with a perceptible lip." Most earnestly would we pray that Grace Greenwood might have strength to deliver her lecture about the children, in every town of our country, and that then the lecture should be printed, and a copy left with every family.

## ANOTHER DISTINGUISHED LADY LECTURER, AT THE CAPITAL OF OHIO.

The Ohio Farmer thus notices a new lecturer who has just made a successful debut at Columbus. Such a lady would create an excitement anywhere:

We have also had another distinguished woman lecturing here, in Columbus, the last week, to crowded houses—a very different woman from Grace Greenwood, and a very talented lecturer—Miss Emma Hardinge, just now the most distinguished among the lecturers of that division of our fellow-citizens known as "spiritualists." Miss Hardinge is a young English woman, of perhaps twenty-five years, of a handsome, brilliant face, pleasant person, very lady-like in manners and dress, eloquent and logical; indeed, as an orator, I have met but two or three individuals who were her equals. It is not strange that this young woman draws such crowds to her lecture, for disbelievers, as the large majority of her audiences undoubtedly do, her peculiar doctrines, all are charmed with her wonderful eloquence.

EXTRACT FROM A PRIVATE LETTER.—When I first folded my babe in my arms, I was taught, that if the heart of a woman is not known unto itself until after she loves with the full worship of her soul, neither are its capabilities comprehended until they are revealed in the deep, tender, enduring passion, which wakens with the name of mother. Woman sees in a noble love, the fulfillment of her affectionate nature, and yearns to adorn it with attributes the most beautiful and the most holy. How precious then comes to her the delicate, vondrous, lovable baby—drawing hearts yet closer with its helpless little hands.

"DEAR mother," said a delicate little girl, "I have broken your china vase!"

"Well, you are a naughty, careless, troublesome little thing, always in mischief—go up stairs until I send for you!"

And this was a Christian mother's answer to the fearful little culprit, who had struggled with and conquered the temptation to tell a falsehood to screen a fault. With a disappointed, disheartened look, the child obeyed; and in that moment was crushed in her little heart the sweet flower of truth, perhaps never to be revived to life! Oh! what were a thousand vases in comparison!

## JOSEPH GENELLA!

..AT THE..

## PIONEER CROCKERY STORE,

180 and 182 Montgomery street.

Near Jackson street. SAN FRANCISCO.

HAVING JUST RECEIVED A

NEW AND WELL SELECTED STOCK OF GOODS,

Invites his Old Friends and Customers to call and examine.

The Goods have been Bought at Low Prices.

They have been selected by himself, who has twenty years' experience in the Crockery and Glass business.

THE GOODS ARE OFFERED AT LOWER PRICES

Than ever offered before.

Looking Glasses!

A large lot of Glided and Ornamental

Plor, Mantle, and Oval, Looking Glasses,

At 20 3m

APPEAL OF THE

## Ladies' Mount Vernon Association,

TO THE PEOPLE OF THE STATE OF CALIFORNIA.

A recent appointment by Miss Ann Pamela Cunningham, Regent of the "Mount Vernon Ladies' Association of the Union," has devolved on the undersigned, the duty and the privilege of placing before the people of this State, the purposes of the Association.

An Act of Incorporation from the State of Virginia authorizes the Association "to purchase, hold, and improve two hundred acres of Mount Vernon, including the mansion as well as the tomb of George Washington," and to receive a deed in fee simple, and to exercise full power over the use and management of the same.

Under this charter, a constitution has been adopted, which vests the power of management in a Regent and Vice Regent, selected one from each State of the Union.

In April, 1858, under the advice of legal gentlemen, a contract was executed for the purchase of Mount Vernon for \$300,000, of which \$120,000 was to be paid cash, \$57,000 on the 1st January, 1859, and the balance in three equal instalments of \$11,566 66 each, with interest from the date of the contract, payable on 22d February, 1860, 1861, 1862.

Until payment in full, the proprietor is to retain possession, but such payment may be made at any time.

The cash payment was made, and the gratifying intelligence has lately reached us, that the instalment of \$57,000 was duly met; thus securing the contract, which allows payments to be made, in sums of not less than \$5000, as soon as collected, thereby arresting the accrual of interest. All efforts, therefore, are now turned to the collection of funds for the payment of the deferred instalments at the earliest possible day, thereby saving a large amount of interest, and realizing the cherished hope of at once obtaining possession of Mount Vernon.

To this noble cause, the Women of the Union, desiring for a season the seclusion of domestic life, have brought their talents and all their energies. Amidst the discord of sectional strife, they bid us gather around the tomb of Washington as children of a common heritage, to recall his moderation of spirit and pure patriotism, and lay to heart the solemn warnings of his last public words. They know, that standing on that hallowed spot, the pilgrims gathered from the wide expanse of the Republic, can feel but one sentiment—reverence for his teachings, and devotion to the Union he so loved.

Men of high station and intellect (among whom Everett stands preeminent) are lending their influence and their eloquence to the cause. In twenty-one States of the Union, the good work goes bravely on, and California is now invited to do her part. Youngest of her sisters, she yields to none in reverence for the name of Washington and devotion to the Union. Animated then by these sentiments and by a just State pride, let her people bring their offerings to this common altar of patriotism. Shall the gold of her glittering soil be poured alone into the lap of Commerce, and none be devoted to preserve and guard with sacred care the Groves of Mount Vernon? Let all then rise up, generous rivals, to show that California lacks not the heart to sympathize, nor the hand to help in this work of patriotism.

To the Women of California, this appeal is especially made. Your Sisters of the East have assumed this honorable duty, and claim your zealous co-operation. Our State will do her part, if you resolutely take the matter in hand. On you, therefore, will it depend whether she shall respond to the call.

Although contributions to any amount are solicited, yet the price of membership is but One Dollar. Concerted and systematic action, therefore, must be adopted to canvass the State from the Sierras to the Pacific. The duty of such organization devolves on the Vice Regent, and she proposes the following plan as simple and also effective, if seconded by your hearty co-operation.

Lady Managers will be selected, one or more, for each city, town, village, and mining camp in the State, who will appoint Assistant Managers, issue to them Credentials authorizing them to receive contributions and enroll members. These assistants will report monthly to the Lady Managers appointing them. The several Lady Managers will report monthly, also, to the Vice Regent, a complete list of names enrolled, and the amounts contributed, with such suggestions as they may deem proper. Monthly the Vice Regent will forward to the Regent, the sums received and a complete list of contributors, whose names will be recorded in volumes to be preserved at Mount Vernon, in perpetual memory of their tribute to this noble cause.

An Advisory Committee of Gentlemen has been selected, and their names are hereto appended.

Louis McLane is the Treasurer of the Association for this State.

Communications will be addressed: Mrs. Magdalen G. Blanding, Vice Regent Mount Vernon Association, and forwarded through Wells, Fargo & Company's Express, which has generously offered to convey them free of charge.

Office of the Association, No. 1, Lucas, Turner & Co.'s building, San Francisco.

MAGDALEN G. BLANDING,

Vice Regent for California.

We, the undersigned, take great pleasure in uniting with Mrs. Blanding in commending to our fellow citizens the cause which has been committed to her charge, and will gladly co-operate with her in securing its success.

Wm. Ingraham, Kip, M. H. McAllister, Harry I. Thornton, Ogden Hoffman, Belle Peyton, Louis McLane, Edward Stanley, T. W. Preston, E. D. Baker, Edward J. Pringle, F. P. Tracy, H. W. Halleck.

ADVISORY COMMITTEE.

His Excellency John B. Weller, Sacramento; Hon. Joseph Wilkey, do; Hon. W. C. Stratton, do; Hon. Stephen J. Field, do; Hon. M. H. McAllister, San Francisco; Hon. Ogden Hoffman, do; Hon. J. S. K. Ogler, Los Angeles; Right Rev. William Hall, San Francisco; Right Rev. Bishop Alleyman, do; Hon. John C. Fremont, Matipoa; Hon. Henry L. Thornton, San Francisco; Hon. Edward Stanley, do; Hon. Milton S. Latham, Sacramento; Hon. E. D. Baker, San Francisco; Hon. Belle Peyton, do; Edward J. Pringle, Esq., do; Henry W. Halleck, Esq., do; Wm. M. Lent, Esq., Santa Clara; Major E. D. Rusk, do; Hon. M. C. Blake, do; Hon. D. V. Freelon, do; F. P. Tracy, Esq., do; Hon. Ed. W. McKinstry, Napa; Hon. Benjamin Hayes, San Diego; Hon. Joaquin Carillo, San Luis Obispo; Hon. Samuel Bell McKee, Oakland; John P. Haynes, Crescent City; Hon. P. Dalgemard, Shasta; Hon. E. M. Bliss, Marysville; Hon. H. F. Myers, Auburn; Hon. Edward Norton, San Francisco; Hon. Charles M. Crocker, Stockton; Hon. Niles Searle, Downview; Hon. Warren T. Sexton, Oroville; Hon. Pablo de la Guerra, Santa Barbara.

## Hoops and Partridges.

Judge G., a jolly gentleman, and a bachelor of some forty years, an ex-Sheriff of the county of S., is as remarkable for his artistic knowledge and quick perception of all things pertaining to field sports, as for his innocence of familiarity with crinoline, hoops, or other female gear. In fact, it is told by his friends that the Judge would at any time rather meet a bevy of grizzled bears than one woman. The Judge occasionally, however, leaves his sports and his bachelor haunts, and comes to town. Yesterday being one of those days of penance, he was seen on D street, "hunting" with his friend Judge S. As usual, he was decanting upon the glories of quail (for which he has a wonderful gastronomic weakness), of the great abundance of that bird in S. county, and the facility of taking them in traps and nets. In the midst of his enthusiasm, Judge G. stopped short, gazed for a moment at the show window of one of the D street bazaars, walked in, and pointing to a splendidly proportioned and delicately ribbed hoop petticoat, asked, "how much?" The price was named, the goods handed over, and the money paid, before Judge S., who was looking on, wondering what on earth G. could be at, could interfere or ask an explanation. G. took the petticoat, and without a word from either, he and S. proceeded toward the next corner. Judge G., as they left the store door, held up the "machine" admiringly, and soliloquized, "except the color, it is perfect." S., thinking G. had become suddenly demented, or was about to commit matrimony, asked, "what are you going to do with that, G.?" "Do with it? Corral quail, of course," S., with a quiet smile, remarked. "Why, G., that is a woman's skirt, not a partridge net." G. looked around nervously, and a moment afterwards was sauntering round the corner, with his hands in his pockets, whistling, and studying the proportions of the wooden Indian at the door of a tobacco shop opposite. About the same time, an eight dollar hoop skirt was picked up on the sidewalk. Judge G., disgusted with small game, started last evening for a bear hunt. [Marysville Express.]

**WEARING FLANNEL.**—The very best thing that can be worn next the skin, in summer as well as in winter, is common woolen flannel. One color has no advantage over another, except that white is more agreeable to the sight, is more likely to "fall up" in washing; but this may be almost entirely prevented, if done properly. Pour boiling hot strong soapsuds on the garment in a tub, let it alone until the hand can bear the water, then pour off and add clean water, boiling hot, let this stand also as before; pour off and add more boiling clean water, and when cool enough, merely squeeze the garment with the hands—no wringing or rubbing. Stretch it immediately on a line in the hot sun, or before a hot fire, and as the water settles at the most dependent part of the garment, press it out with the hand, and be careful to stretch the fabric as soon as the water is squeezed out, aiming as much as possible to keep the flannel hot until it is dry. If woolen garments are treated literally as above, they will remain pliable and soft until worn out.

Recent scientific experiments, carefully conducted, prove the truth of the popular sentiment that flannel is the best fabric to be worn next the skin, as it absorbs more moisture from the body than any other material, and by so doing, keeps the body more perfectly dry. Cotton absorbs the least, hence the perspiration remains more on the skin, and being damp, the heat of the body is rapidly carried off by evaporation and suddenly cools when exercise ceases, the ill effects of which no intelligent mind needs to be reminded of. Hence it is that the common observation of all nations leads them to give their sailors woolen flannel shirts for all seasons and for all latitudes, as the best equalizers of the heat of the body. [Hall's Journal of Health.]

Says an astronomer to a bright-eyed girl, when talking of rainbows: "Did you ever see a lunar bow, miss?" "I have seen beaux by moonlight, if that is what you mean," was the sly rejoinder.

## THE CALIFORNIA FARMER.

## PROSPECTUS FOR VOLUME ELEVEN.

The CALIFORNIA FARMER has now entered upon the New Volume, numbering the Eleventh, and the highest attained by any weekly journal on the Pacific Coast, and while we do not arrogate to ourselves the honor of having been longer engaged in the publishing of a journal than any of our contemporaries, several having been longer before the public than our own—among which stands the venerable Alta California, the Golden Era, and the San Francisco Herald—we do claim to have been as long or longer steadily pursuing our calling, without change of the original founder, having now been five years pursuing, with an unflinching faith, the claims of an interest which we believe the greatest, noblest and best in our land.

As the founder and proprietor of the first Agricultural and Mechanical Journal on the Pacific, we believe we can claim with some degree of pride and satisfaction, a just share of support from the citizens of this State, for our steady advocacy and adherence to the great Industrial Interests of California. It is not necessary for us to enumerate all the good things we shall do in our New Volume, nor promise wonderful things, for we trust the character of the Farmer is too well known to require this at our hands. But this we do promise.

We mean the New Volume shall be superior to all its predecessors, and our aim shall be to make every Volume bear evidence of improvement. We mean the CALIFORNIA FARMER shall be the true and fearless advocate of the great interests of the Agriculturists of California; it shall also be the bold and zealous advocate of our "Home manufactures," and earnestly battle for Mechanic and Artisan, as the brethren of the Farmer. We shall ever advocate the cause of Agriculture, Mining, Manufactures, and the Mechanic Arts, as the basis of our wealth, prosperity and happiness. We shall advocate the cause of Education, as a means of perfecting our happiness. We shall, above all these, advocate the Blessedness of Home, Education for Home, Beautifying and Protecting Home and the Homestead. These are the principles that will guide us in our labors, and as the guiding star and great light of home is woman, so we shall ever plead for the education of woman as the sure way to elevate and purify the world.

These are the cardinal principles of our journal, and with these we desire to place it on every farm, in every workshop, manufactory, warehouse or place of business in our land, and we further desire, to have it in every family circle in our glorious State—it is there we would plead for the cause we advocate, there we hope to find our truest friends; to them we look, on them we rely for the continued success of the work in which we are engaged.

As we hope to have a large increase to our list with our New Volume, may we not now appeal to all our friends for their generous co-operation in our work. As we wish to offer a just return for any exertion made in our behalf, we will offer the following:

**BOUNTY TO NEW SUBSCRIBERS:**

Every single subscriber, with \$5, shall be entitled to Seeds we shall distribute in February, consisting of several thousands of packages. Each new subscriber to receive five packages.

Clubs of three subscribers and \$15, will receive the splendid colored plate of California Flora and a copy of the Little Pilgrim, for one year.

For five subscribers and \$25, we will send five copies of the Farmer, the Atlantic Monthly and Arthur's Home Magazine.

For ten subscribers and \$50, we will give ten copies of the Farmer, Atlantic Monthly, Arthur's Home Magazine, Harper's Monthly, the Little Pilgrim, and an extra copy of the Farmer mailed to any friend in the Eastern States.

By a little exertion, our friends may kindly favor us, and at the same time secure to themselves a valuable library of home literature, such as ten subscribers would secure to them.

We have made arrangements to receive the above publications for the Clubs that we hope to receive, and we now leave the work in the hands of our friends, with the grateful thanks for many favors in the past years of our FARMER.

WARREN & CO.

## HOLCOMBE BROTHERS,

**BOOTS, SHOES, AND GAITERS.**

Goods sold at this establishment are superior to any offered in this country, as regards their beauty, shape, workmanship and durability. The stock comprises Gents', Ladies', Misses', Youths', Boys', and Children's wear, Hunting Boots, English Shooting Shoes, etc. FRENCH BOOTS and SHOES, from the best houses in Paris. ## Cahoon's Seedling Pie-plant.

THIS SPLENDID VEGETABLE is now offered in its highest perfection by the undersigned, who procured his stock direct from the original Nursery and brought it to this State, and is now ready to offer it to the friends on the Pacific Coast.

The subscriber resided near Mr. Cahoon 15 years, and knows the value of this RHUBARB well; it is the finest in the world, and has won its title to this fame. The subscriber will offer the present autumn stock of this most valuable and useful vegetable, and he feels confident it will be appreciated. The description upon the cut is literally true, both in size and weight. Its character has been fully proved by the exhibition of the samples grown by the undersigned here. It has received Premiums at every Exhibition, both for its size and beauty.

PLANTS will be on sale at the Garden of the undersigned at Clinton, and by Col. Warren, sole agent for the same in San Francisco, where they can be seen.

Patent—Large Roots \$3 single, or \$5 for two; small and cut Plants \$12 per dozen.

JAMES BAILEY & NATHAN COOK, CLINTON, Alameda county.

## GREAT REDUCTION IN THE PRICE

..OF..

## DR. F. G. JOHNSON'S

PATENT SELF-REGULATING

## WINDMILL.

MANUFACTURED BY

D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF ALL; and being constructed all of Iron, is without doubt the most perfect and durable, as well as the most economical Windmill in the world.

The undersigned having purchased the Exclusive Right for the Manufacture of these Mills in this State, will manufacture and keep on hand the following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00.

No. 2—One to one and a quarter Horse-power.....130 00.

No. 3—One and a half to two Horse-power.....160 00.

No. 4—Two to two and a half Horse-power.....200 00.

No. 5—Two and a half to three and a half Horse-power.....230 00.

(This power is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

## DEPOT OF MANUFACTURE,

Nos. 90 and 92 Bush Street,

SAN FRANCISCO.

When any greater power is required, the prices will be pro rata as the power is increased. They are susceptible of being increased to 20 horse-power or more; and applied for any purpose where stationary power is needed and as manageable as a Steam Engine, with no risk or expense. To one anticipating using this cheap power (the Windmill), should not fail to examine THIS MILL; such examination will satisfy them of its adaptation, and ability to serve their purpose efficiently and fully. It is unlike other Windmills that are called self-regulating; they have stationary Fans and small reversing Fans, which are depended upon to graduate the speed of the mill; whereas, by Dr. F. G. Johnson's Patent the Fans revolve upon the axis and turn their edge to the wind when a gale or sudden gust strikes it, and again a child can stop it at once by turning the fan's edge to the wind, by the use of a lever pressed upon the stop-wheel, which is upon the shaft. These Mills can be used for any purpose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH STREET, San Francisco; where the Manufacturer will take pleasure in showing and explaining the mechanical principle upon which reliance is had for their superiority over all other Mills known, or of which we have knowledge.

D. VAN PELT.

## PAINTS, OILS, WINDOW GLASS,

&c., &c., &c.

OLIVER & BUCKLEY,

HAVE NOW LANDING AND IN STORE, AND FOR

sale at low rates:

3,000 kegs White Lead,

2,000 kegs snow white Zinc,

30,000 gallons Linseed Oil (boiled and raw),

10,000 gallons Spirits Turpentine,

2,500 gallons Alcohol (95 per cent) in tins,

2,000 gallons Varnish (English and American),

5,000 boxes Window Glass (assorted sizes),

## MUSIC, INSTRUMENTS, ETC.

## Pianofortes, Melodeons.

MESSRS. MILLAR & COURTAZ,

Manufacturers of PIANOFORTES and ME-

LODIONS, Boston, have established an

Agency for the Sale of their Instruments,

AT

MOORE'S PACIFIC FURNITURE WAREHOUSE,

No. 180 Montgomery Street, San Francisco.

Mr. COURTAZ will superintend the Fitting up and Tuning of the same. The above Instruments have been awarded the First Premium at the Fair of the Mechanics' Institute, held at Richmond, Va., 1877; and are not surpassed for tone or finish, by any Instruments of the kind in the United States, and will be offered at lower prices than ever before sold on the Pacific Coast.

All persons wishing to purchase Pianofortes or Melodeons, are particularly invited to examine those of Millar & Courtaaz, which are already in store at the above place, and are being received by nearly every ship from Boston, during the coming year.

No one will go away dissatisfied with the Instruments or prices.

CALL AND SEE THEM.

## PIANOS, MELODEONS,

Alexandre Organs, and Music!

Prices Greatly Reduced!

## HORACE WATERS,

No. 333 Broadway, New York,

AGENT FOR THE SALE OF THE best

Boston and New York Pianos and Melodeons.

The largest assortment of Music Merchandise in the United States. Pianos from five different

manufacturers, of every variety of style—from those in plain rosewood cases, for \$300, to those of the most elegant

finish for \$1000. No house in the Union can come in competition for the number, variety and celebrity of its instruments, nor the extremely low prices at which they are sold.

Horsewater's Modern Improved Pianos, with

or without iron frames, have in their new scale an improved

action, in power and compactness, tested for three years, and

the beauty and durability of the square Piano. The Press and

first Music-masters have justly pronounced them equal, if not

superior, to any other make. They are guaranteed to stand

the action of every climate.

Horsewater's Melodeons (tune the equal tempera-

ment) are in each case of superior quality. Can also furnish

Prince's, Carhart's, and Smith's Melodeons. Prices from \$45

to \$125; for two sets of reeds, \$150; two banks of keys, \$200;

organ pedal bass Melodeons, \$250, \$275 and \$300, less a liberal

discount. Each instrument warranted to give perfect satisfaction, or purchase money refunded.

Alexandre Organs, five stops, \$160; eight stops, \$180;

eight stops with percussion, \$225; ten stops, \$250; twelve

stops, \$275; twelve stops with percussion, \$300; fifteen

stops, etc., \$375.

Second-hand PIANOS, at great bargains, constantly in

store. Prices from \$30 to \$140.

Music.—One of the largest and best catalogues of Music

now published; all Music and Musical Works published in the

United States for sale by this House. Also, Martin's celebrated

Guitars; all kinds of Musical Instruments and Musical mer-

chandise, at the lowest prices. Music sent wherever ordered,

post paid. Catalogues sent by mail. A liberal discount

made to dealers, teachers, seminarians and clergymen.

TESTIMONIALS OF THE

Horsewater's Pianos and Melodeons.

"The Piano came to hand, and in first-rate order. It is a

Letter from Indiana, by the Overland Mail, Feb. 12, 1880.

EDITOR FARMER: Since my last we have had remarkably uniform weather: two changes a week, as regular as the week rolls round; Sunday, cold; Monday, moderating, with the wind from the south; Tuesday, mild, cloudy, and rain in evening; Wednesday, rain all day; Thursday, cloudy, but no rain; Friday, cool, with wind changeable; Saturday, decidedly "blue," thermometer indicating about 10° below zero in the morning, and rising after making out a programme, the clerk of the weather left on a visit to some distant place, to see how meteorological affairs are managed by his contemporaries. We are anxious for his return, as we want a change; a little snow would be very acceptable, as we have not had, really, any; a little in November, and a very little just now, melted off.

In consequence of soaking rains and immediate sharp freezing, wheat has been heaved out of the ground to rather an alarming extent. Clover, too, presents a very ragged appearance, standing out of the ground about two inches.

Although the winter has been very open, stock have made alarming inroads into sundry haymows, straw-stacks, etc. Had not rough feed been in great abundance, this would be a time of the greatest scarcity ever known amongst animals.

In a former correspondence I promised something concerning a certain street preacher. That man is Wm. Taylor, who preached some years in the streets of San Francisco (not Sacramento, as stated in the correspondence referred to). He passed through Ripley county, stopping a few days at Versailles, the county seat (one of the hard places), and preached up quite a revival; some thirty joined the church while he stayed, and since about forty. His legitimate object, I believe, was to sell books, two of which are by himself; and very creditable books too. The proceeds are to be applied to building a church in your city. We are getting our money's worth in the books, otherwise we would not be disposed to do much for you, away off there in the land of gold, while we are as much in need of churches as you can be.

The women of Indiana are "up and doing." On or about the 20th day of January, they, in convention assembled, memorialized the General Assembly, which met in joint convention to receive them. On presenting the petition Mrs. Mary P. Thompson delivered an address, as a correspondent was pleased to characterize it, "in the voice of a sick kitten, yet in the manner of a dying cat." To give you some idea, both of the manner and matter of this address, I will give an extract or two:

"All we claim for woman is the removal of the interdict—accept her as a citizen. Now she is denied the right of citizenship, and all the lumbering legislation of centuries will not adjust her relations harmoniously in the world until this injustice is removed. Woman cannot be protected fully until she is thus recognized. She cannot reach the true dignity of her being till she is invested with the sanctions and privileges of citizenship. If the exercise of this right is necessary to the perfect development of man's mind and whole being—if he feels himself dwarfed, intellectually, by being deprived of that right, will not the same argument apply to woman."

"But we do ask that no legal disabilities shall be attached to us as women, any more than to our brothers, in regard to political rights. If we aspire to them and prove ourselves incompetent, the world will readily learn the fact, just as it learns, eventually, to detect any incompetency in the other sex."

"But in all honesty and candor, we fully believe that the time has come for the women of Indiana to assert their rights as human beings."

"This political oppression is crushing woman, and we feel to repeat that the time has come when the women of Indiana should calmly and dispassionately assert their right to the elective franchise, and the privileges growing out of it, as the basis of all the other rights. Man will be benefited equally with woman. The true interests of the sexes are so intimately interwoven with each other, that one cannot suffer without the other suffering also."

"If taxes are laid upon us in any shape, without our having a legal representation where they are laid, we are reduced from the character of free subjects to the state of tributary slaves."

And here the argument was "rested," as the correspondent above referred to says, amid "coarse wit, vulgar sarcasm, and sickly sentimentality, which prevailed over wise deliberation and sound legislation." (1) Why were ladies treated in this way? Because they were surrounded by fools and not gentlemen. They were entitled to respect and courteous treatment, whatever the sentiment held with regard to the object of their visit. As a citizen of Indiana, I am truly sorry our representatives behaved so rudely. Would any set of men have been received and treated in this way, however fanatical their request? No; I know our representatives would not have dared to laugh in our faces. What insolence, then, to treat our mothers, sisters, and wives in the way they did.

Agricultural College.

On Feb. 7th the Senate passed the House bill for the establishment of an Agricultural College:

YEA—Allen, Ball, Broderick, Cameron, Chandler, Clarke, Clendenen, Dixon, Donnell, Durkee, Fessenden, Foster, Gwin, Hall, Harlan, Harlow, Kennedy, King, Leonard, Simmons, Thompson of Kentucky, Thompson of New Jersey, Trumbull, Wade, and Wilson—25.

NAY—Bayard, Brown, Chastant, Clay, Clingman, Davis, Fitzpatrick, Green, Hammond, Houston, Hunter, Jones, Mallory, Mason, Peck, Pugh, Reid, Rice, Sebastian, Shields, Sill, and Ward—22.

The bill was amended by the Senate, and would, therefore, have to go back to the House for concurrence.

TANNERY AT NORTH SAN JOAN.

The San Juan Press, in noticing the purchase of the Philadelphia Tannery, at that place, by T. W. Manchester, who will continue the business, says: The leather turned out at this yard has been of a uniformly superior character, and found ready sale at the best prices in Marysville and Sacramento. The net annual profits, when only two men were employed, amounted to \$1500. With proper energy the business of the yard can be very largely increased. Every facility exists for obtaining hides, bark, and water-power, and not even eastern importations can lessen the demands for native leather. The present owner has it in his power to convert all these advantages into a certain fortune within a comparatively short period.

Oregon Admitted as a State.

A DISPATCH from Washington dated Feb. 12 (received by the Overland Mail, which arrived here Wednesday night) says:

In the House the consideration of the admission of Oregon was resumed. Mr. Lane related the circumstances attending the formation of Oregon, and earnestly urged its admission. He said he had no doubt that its white population was over 63,000. Mr. Grow offered a substitute for the bill, defining the boundaries of Oregon and Kansas, and authorizing the citizens of the United States, who are legal voters and residents in each territory to take the necessary steps to establish a State Government, the respective constitutions being subject to the approval of the people. After some discussion it was laid on the table. Various amendments were offered and laid on the table. Mr. Washburn, of Illinois, moved to lay on the table the whole subject. Disagreed to—44 against 134.

After other amendments were offered and rejected, the question was then taken on the preamble to the bill, viz: Whereas, the people of Oregon, having formed, ratified, and adopted a Constitution and State Government, which is republican in form, and in conformity with the Constitution of the United States, and have applied for admission into the Union on an equal footing with the original States; therefore, resolved, etc., that she be admitted into the Union. Agreed to—113 against 95. The Oregon bill passed precisely as it came from the Senate, 114 against 103. The announcement of the result was greeted with applause, and much confusion prevailed, amidst which Mr. Stephens moved that the Representatives from Oregon be admitted to a seat. The Republicans mostly voted against the passage of the bill.

Mr. Gwin, from the Committee on Post Roads, reported an amendment on Mr. Broderick's bill for a Pacific Telegraph, which was referred.

It has leaked out that a private agent of the Queen of Spain has been in this country twelve months, and has had several private interviews with the President about the purchase of Cuba.

FROM MEXICO.—Yera Cruz dates to the 6th Feb. state that Zuloaga has abdicated in favor of Miramon, who was installed President. The latter arrested the political prisoners liberated by Robles, dismissed all the officers engaged in deposing Zuloaga, and suppressed Robles' paper. The French and English commanders had succeeded in enforcing their demands at Vera Cruz, and high rates were restored forthwith. Two-thirds of the revenue is secured to England and France. The American Consul promptly protested against such interference.

A bill abolishing and prohibiting slavery in the Territory, has passed the Kansas Legislature. Gov. Medary will doubtless veto it.

Wholesale Produce Report.

(Corrected by Loomis, Hall & Co., Commission Merchants, foot of Washington street, San Francisco.)

Table with 2 columns: Item and Price. Includes Wheat, Corn, Potatoes, etc.

Table with 2 columns: Item and Price. Includes Dry Hides, Common coarse wool, etc.

San Francisco Cattle Market.

There has been very little change in the market for the last week back. Cattle are coming in in just sufficient quantities to supply the market, and only very extra choice bring 13c. A large number of calves are offered, which has reduced the price of Veal to 12c. In the Cattle, no change to notice.

We quote slaughterer's prices, as follows: Beef—American, first quality, 13c; 2d quality, 12c; 3d quality, 11c; 4th quality, 10c; 5th quality, 9c; 6th quality, 8c; 7th quality, 7c; 8th quality, 6c; 9th quality, 5c; 10th quality, 4c; 11th quality, 3c; 12th quality, 2c; 13th quality, 1c; 14th quality, 10c; 15th quality, 11c; 16th quality, 12c; 17th quality, 13c; 18th quality, 14c; 19th quality, 15c; 20th quality, 16c; # CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MARCH 18, 1859.

NUMBER 7.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.

TERMS.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.

Advertisements and Subscriptions must be paid for in advance.

#### Pacific Railroad, State Policy.

We continue this week to present to our readers extracts from the late very able production of Col. Fitch, concerning the Pacific Railroad, and our State Policy. It is replete with sound and sensible views, touching the part California should take in the construction of this end of the road, and forms a striking contrast to the general terms and superficial manner of treating the subject heretofore. After presenting the outline of his plan, he shows what other States have done in aid of internal improvements, by way of proving the favor with which such projects have been regarded by other States. The manner of their aid of such enterprises is also presented for our consideration, as well to determine the precedents as to contrast the operation of his plan with that system pursued by older States, and to make still more apparent the excellence of his views. We put forth his views in his own bold and vigorous language, and hope our readers will examine attentively, and speedily determine to adopt his plans:

State aid of internal improvements is not a new idea. Who can compute the vast results which have sprung from the construction of the New York and Erie Canal, and the various railways through New York leading to the West? Have not those great enterprises made that State what it is proudly denominated—"the Empire State?" The railroad and canal debt of that State, in 1857, exceeded thirty-two millions of dollars; her contingent liability, \$70,000, on which there accrues annually nearly two millions of dollars interest. Resources—canals and railroad stock.

Pennsylvania has an actual indebtedness of about \$25,000,000, contracted in aid of internal improvements. Resources—canals and railroad stock. Her yearly subscription in aid of railroads, about one million and a half dollars; whilst the expense of the government is only \$425,000. Her contingent liability for guarantee of interest \$21,000.

Maryland has loaned her bonds in aid of internal improvements, to the amount of \$4,000,000.

Virginia has an outstanding debt in the shape of State bonds, of about \$28,000,000, besides a contingent fund of \$4,000,000, the last named being State guarantee of bonds of corporations constructing railroads within the State. The principal debt of the State arises, in great part, from its subscriptions for stock in railroads.

That State has an internal improvement fund, which does not exceed \$130,000, all told.

North Carolina loans railroad companies its bonds, and takes mortgage of the roads to secure. South Carolina takes stock in one road (over \$6,000,000); indorses the bonds of other railroad companies, having already contracted a contingent liability of the State exceeding \$3,000,000.

Nearly the entire debt of Georgia consists of bonds issued for construction of railways, becoming principal or entire owner.

Tennessee not only loans to, but indorses bonds of railroad companies. The State having now a contingent liability of \$10,000,000. The State has likewise subscribed liberally for stock in her railroads.

Minnesota—the people have voted to lend the credit (bonds) of the State to various railroad companies, to the amount of \$5,000,000.

The Constitution prohibits the contracting of more than \$250,000 of debt, except in the loan of bonds to railroad companies. It provides that "the State shall never contract any debt, for works of internal improvement, or be a party in carrying on such works, except in cases where grants of land, or other property shall have been made to the State, especially dedicated by the grant to specific purposes, and in such cases the State shall devote thereto the avails of such grants, and may pledge or appropriate the revenues derived from such works in aid of their completion." "The credit of the State shall never be given or loaned in aid of any individual or association, or corporation." Yet the people of Minnesota have voted to aid railroad companies to the extent of \$5,000,000.

Illinois issued bonds to the amount of about \$12,000,000, taking stock in railways. Without increasing the rate of taxation, the revenue from taxes upon the increased value of property, occasioned by these public improvements, has already enabled the State to cancel one-third of the debt, and it is believed that the remaining sum will be extinguished, from this sum alone, by 1866.

Missouri, at first, loaned its bonds to railroad companies—\$50,000, as often as the directors reported bona fide subscriptions for an equal sum. Later, loans have been made to railroads—\$200,000 bonds for every \$1000 reported bona fide individual subscription.

The State has loaned to the Pacific Railroad.....\$7,000,000  
S. W. Branch.....4,500,000  
Hannibal and St. Jo.....3,000,000  
North Missouri.....5,500,000  
Iron Mountain.....3,600,000  
Cairo and Fulton.....650,000  
Platte County.....700,000

\$24,950,000

This showing is quite sufficient to prove, not only that it has been, and continues to be the policy of State Governments to aid works of internal improvements, but that the progress and prosperity of these States, consequent on the prosecution of such enterprises, may justly excite our envy and engage an imitation. It must be remembered, however, that we do not cite the operations of these several States as an example to be followed in all respects, but rather, that we may exhibit the

SUTTER'S FORT, AS IT APPEARED WHEN GOLD WAS FIRST DISCOVERED IN CALIFORNIA, AND DURING THE YEARS 1848 AND 1849.

contrast between the plan herein proposed for the action of the State of California, and that system so generally adopted in the States referred to.

Take, for instance, the \$25,000,000 in bonds of the State of Missouri, loaned to her railroad corporations—bonds drawn payable in thirty years, bearing six per cent per annum interest, it assumes the actual standing of a debt of the State in that sum, and if the State be held for the principal, the accruing interest, say \$1,500,000 per annum, may also be added, which in thirty years (say nothing of compound rates) amounts to \$45,000,000, and that sum with the principal makes a sum equal to \$70,000,000. It is true, if Missouri has to pay this great sum, she has the roads for her resource, with the attendant evil of a multiplication of State employees too indifferent as to whether they run the cars off the track or the State to ruin.

Let us see what liability California would incur by the plan proposed, if she guaranteed the payment of five per cent per annum for twenty years on \$25,000,000. It would be one and one-quarter millions per annum; or all told \$25,000,000, leaving a difference in favor of California finance of \$45,000,000. Let us also compare the measure of security which would distinguish the two operations.

Missouri becomes liable in the sum of \$70,000,000, on any outlay and security of \$25,000,000, whilst California becomes liable in \$25,000,000 on an outlay and security of \$50,000,000. In other words, if California came in possession of the works she had so aided to construct, it would be as a purchaser of the works at half their cost, on payment of yearly installments of \$1,250,000 for twenty years without interest. Which event is more likely to occur than that Herschel will clash upon Hesperus.

The State of California does not want direct interest in any of her internal improvements. It is far better for the commonwealth to leave to private enterprise and capital the profits promised by such improvements. It may lend its aid by indorsements, and even by the payment of interest (on the presentation of proper securities), as any banking institution, having the money to put at interest, would do; but to become directly interested in her public improvements, after the manner of New York, Pennsylvania and other States, is impolitic, imprudent, and to be regarded as the error of a by-gone age.

Concerning the aid, which this plan proposes in behalf of the Pacific road, it being the first enterprise to which we ask the application of this principle, it may not be amiss to exhibit a plain statement of its operation.

Suppose the road from San Francisco to the State line to cost \$20,000,000. The company desirous of taking the contract, or secure franchise and aid for its construction, ask the State of California to lend them the bonds of the State, or indorse their own bonds, guaranteeing the payment of interest (which answers the same purpose to the company) to the extent of, and equal to, the half of the cost of the road.

Any of the States before named, would at once agree to a loan of the bonds, which would be, say ten millions of dollars, and the semi-annually accruing interest. Bonds being drawn to run twenty years, interest at five per cent per annum, would carry an interest account of \$500,000 per annum, making at the end of twenty years, an aggregate of principal and interest amounting to \$20,000,000—the entire cost of the road. By the indorsement of the bonds, simply guaranteeing the interest, California, by this new method, becomes only liable (if the railroad immediately after completion, be thrown upon the State) in the sum of \$10,000,000, with a decreasing liability each year. If it were a question of the purchase of the said road, to be completed and in running order, at a stipulated sum, say \$10,000,000, in payments of \$500,000 per annum, twenty years without interest, the State would be ready enough to make the purchase—indeed such a proposition would not be open long enough to reach the capitol of the State.

Such is the extent of risk which the State will have to run if it adopts this plan. It is usually to believe that any company employing \$20,000,000 equal in the construction of such a road, would then allow it to pass to the State, rather than pay five per cent per annum on one-half its cost. If the State have (by any mishap) to pay interest for one or two years, guaranteed on these bonds, it would hold an ample security, and be at no loss to raise the means. Surely, if other States become liable for principal and interest in aid of railroads, this State may safely contract a contingent liability for the payment of the interest alone, not only in aid of the westerly portion of the Pacific Railroad, but any other Railroad, within the limits of the State, whosoever capitalists shall deem it prudent to invest their means.

There is no subject more important to Californians than this of a Pacific Railroad, taken up and handled so practically by Col. Fitch. The interest

and the future welfare of every citizen depend on the immediate undertaking and completion of this great work. We shall follow up this question in such a manner that none can deny that the CALIFORNIA FARMER earnestly favors the construction of a Pacific Railroad, and Fitch's plans for the State aid thereof.

#### Cultivation of the Artichoke.

MILLESTON, February 22, 1859.

EDITOR FARMER: The business of raising swine having become quite a matter of interesting attention in this Fresno mountain region (a business of which the undersigned, your subscriber, takes a part), impels me, from interest, and the desire of my neighbors, to request of you the favor to place in your FARMER the proper mode of raising the Artichoke—a statement of the distance to plant them apart, and all the necessary items to their successful culture, and thereby very much oblige Yours &c., JAMES KEITH.

We are pleased to reply to our subscriber, and the best thing we can do is to give the origin, history, character, culture, and use of the article, and hope this may bring it into that notice which it truly deserves, especially as food for swine. We copy from the American Farmer's Encyclopedia the following in relation to the

#### JERUSALEM ARTICHOKE.

It flourishes most in a rich, light soil, with an open inclosure. Trees are particularly inimical to its growth. As it never ripens its seeds in England, the only mode of propagation is by planting the middle-sized tubers or cuttings of the large ones, one or two eyes being preserved in each. These are best planted towards the end of March, though it may be performed as early as February, or even in October, and continued as late as the beginning of April.

They are planted by the dibble, in rows, three feet by two feet apart, and four inches deep. They make their appearance above ground about the middle of May. The only attention necessary is to keep them free from weeds, and an occasional hoeing to loosen the surface, a little of the earth being drawn up about the stems. Some gardeners, at the close of July or early in August, cut the stems off about their middle, to admit more freely the air and light; in other respects it may be beneficial to the tubers.

The tubers may be taken up as wanted during September; and in October, or as soon as the stems have withered, entire, for preservation in sand, for winter's use. They should be raised as unbroken as possible, for the smallest piece of a tuber will vegetate, and appear in the spring; for which reason they are often allotted some remote corner of the garden; but their culinary merits certainly demand a more favorable treatment.

The Jerusalem Artichoke thrives well in the United States on soft, moist, and it is said even on peaty soils. This root is abundant in the English and French markets, where it sells for a little more than the price of Irish potatoes. The fibers of the stems may be separated by maceration similar to hemp, so as to be capable of being manufactured into cordage or cloth, as is practiced in some parts of Europe, where the plant is an object of field culture, especially on the poor and sandy soils. The artichoke will yield, with similar culture, 20 per cent more than the potato, and if the land be poor, they will yield at least double the quantity per acre that can be raised with the potato, and the expense of culture is no more. They are particularly adapted to the climate and soil of the Middle and Southern States, and being hardy, can be left during the fall and winter in the ground to be rooted up, by hogs, great numbers of which may be thus fattened at little expense. Or they may be taken up and given to all kinds of stock, for which purpose it is more requisite to steam them than potatoes. One of the chief objections urged against their culture is, that not being killed in winter by the frost, they grow among the crops which succeed them. But that is a comparatively trifling objection. The Jerusalem artichoke certainly deserves more attention from farmers than it now gets in the United States.

VALUABLE GRAINS.—Those who receive specimen seeds of grain and grasses, will please note them in their books, their growth and success, and report the same.

#### Sutter's Fort in 1849.

We present in this number the cut of this memorable fort, once formidable, and a proud and happy home, abounding with generous deeds from the proprietor, whose gates stood open to receive the stranger, to feed the hungry and shelter the wayfarer. Sutter's Fort no longer exists but in history; the walls are broken down, not a vestige remains save the main building, and that dilapidated; the ownership has passed into other hands, and its marks and bounds are lost, save where rank weeds grow luxuriantly on the old foundation. He who once stood at the portal-gate to welcome all, now lies ill. "Hope long deferred made his heart sick," and now, as the news comes of tardy justice, he turns his mind back o'er the past

"And scenes long past, of joy and pain,  
Come whirling o'er his aged brain."

And should kind Providence spare his life, that he may yet find some reward for past suffering, how will the old pioneer feel when he shall visit that old Fort, once so dear to him; and should he ask where is my once happy home, history will write:

"He tore away some weeds, 'tis true,  
But all the flowers were ravished too."

And memory shall sicken as the scenes are reviewed; but troops of gathering friends will now come, as fortune smiles, and they shall gather thickly, and with

"The power of words, and soothing sounds, appease  
The raging pain, and lessen the disease."

FLOWER AND GARDEN SEEDS.—As the greater portion of the best flower and garden seeds are lost by reason of neglect in the planting and early care, we have penned the following brief remarks: Fine and delicate seeds require fine and delicately prepared soil. This is easily done. Those for transplanting, such as asters, pinks of all kinds, coxcombs, stock gillies, balsams, and all small seeds, can be planted in small beds, at one side of the garden, in very finely prepared earth; dig deep, rake deeply and fine; upon this soil sift some fine sand, half an inch deep; sow the seeds in rows, and then sift fine loam over the seed, half or three-fourths of an inch deep. They will quickly vegetate at this season. If the weather is cold enough for frost, shield them at night; if the soil becomes dry, sprinkle the rows with a water-pot; when the plants have made three or four leaves, they should be planted in the borders where they are wanted to bloom. Among the pretty plants for a garden, none excel fine asters, balsams, amaranthus, stock gillies, pinks, picotees, carnations, sweet alyssum, mignonette, coxcombs, and all this class; they are all desirable as border flowers. Many pretty, and some very beautiful, climbing plants, such as Maurandya Barclayana, Ipomeas, Tropaeolums, Lophospermum, etc., may be cultivated in the same manner: these are desirable for pillars of flowers, or columns, near the dwelling. The cypress vine, scarlet and white, are both very beautiful for columns in a garden, bearing the most perfectly ornamental foliage of any vine known. The sweet pea forms a fine pyramid of flowers, their variegated blossoms making a good show.

All these plants and vines can be easily grown, and made to flower all the summer long, with good care. One of the most important things in a garden, is to keep the borders and the whole garden free of weeds and the ground finely cultivated; care should be taken not to over water such plants; cultivation is better than irrigation; showering at the evening hours is far better than heavy watering—it is more like Nature. All the climbing plants we have named can be grown on columns in the garden, and make a fine show; the border flowers be sown as we have named, at different periods of time, and fresh plants set out; thus keeping up a fresh stock of flowers the season through.

NEW YORK BULLETIN.—News about California, her true interests will now be regarded abroad. Read the letter of our correspondent from New York, signed B. Orders can be left at our office for the N. Y. Bulletin.

#### Apple-Tree Borers.

Now is the time when the apple and other fruit trees will begin to be affected with the various borers and insects which are among some of the little trials of the orchardist and gardener. As the season opens, and the sun sends forth his warm rays, the eggs of the insects begin to hatch, and the eyes of the cultivator should be kept wide awake to crush the intruders and strangle them in their early days. Every fair day, a few moments spent among the trees will show where the web of the caterpillar is being spread, and where the borer is commencing his work. To destroy the first is easy, by using the thumb and finger, and to entirely demolish its fine spun castle, a little tin pail with strong soap-suds and a sponge to wash over the limbs of the tree where the nest was forming, will end that work. The borer is found by his chips, which mark his path. They are found in two places. By drawing away the earth from the crown roots of the tree, it is easy to ascertain if there are any borers. When found, a piece of whalebone, sharpened to a point and passed into his hole, will reach him; the operator can feel when he has spitted him. Fill the orifice with moistened earth, and the work is done for that part of the tree. There will often be found a species of borer in the limbs and body of the tree; a blackened spot near the joints marks his operations. With a sharp knife remove the bark, and when found they can be destroyed in the same manner as the root borer. A plaster of fine-loam, the consistency of paste, over the wound, we find the best composition.

We received from W. H. Boyce, Esq., of Oakland, some branches of young pear tree, with the worm in them, and specimens of the same in a box. Their work showed what they were—the apple-tree borer, small species, differing in some respects from the root-borer. We shall make further investigation. We feel obliged to Mr. Boyce for the samples.

We would again urge all to examine their trees early; a few moments now may save valuable trees.

#### Cedar of Lebanon.

This variety is undoubtedly the most celebrated of all the cedrus tribe, and we wonder that our nurserymen do not plant this species in California and Oregon. It would be found to be a most valuable acquisition to our evergreen tree. It has a peculiar characteristic in the broad flat surface of its branches. Loudon says: "The general character of its shoot, even when the tree is young, is singularly bold and picturesque, and quite different from that of any other species of its tribe." By reference to the history of the cedars of Lebanon we learn that Maundrell, in his journey from Aleppo to Jerusalem in 1696, could reckon only sixteen large trees, though many small ones. One of the largest was twelve yards six inches in the spread of its boughs. The forests of Lebanon never seem to have recovered from the havoc made by Solomon's forty score thousand hewers, and, as Professor Martyn observes, there are probably more cedars in England than in Palestine. One of the distinctive features of England, in her taste for arboriculture, is the love for evergreen trees. At this time there is not an evergreen tree known to science that is not in a high state of cultivation in England. California oaks and pines are scattered through all the parks and gardens of the nobility of England, and in various parts of Europe. We remember well the very beautiful specimens we have seen in various parts of England, and also in France. There is a very large and showy Cedar of Lebanon growing within the inclosures of the Jardin des Plantes, at Paris. We have with us some curiously carved boxes made from that wood, purchased during our visit to Paris, in 1848. We most sincerely hope that nurserymen and amateurs will try the growing of this noble species. Accustomed to grow in cold mountainous regions it would thrive well in our mountain cities and in Oregon. There is no one tree known that is so picturesque to plant singly in lawns as the Cedar of Lebanon.

#### Roses! Bright Roses!

PLANT roses, ever and always; twine them about your door-posts; train them beneath and above your windows; let them stand as trees in your garden walks, so that their fragrance shall be scattered around and over you, whether you walk or sit, or stand, or sleep. We have been practicing as we preach, and we hope soon to be gratified with the delightful perfume of the pure white La-maque, the rosy crimson of Madame Laffay, the full perfume of the soft blushing Malmaison, or the gorgeous golden cupped Solitaire, and to bask in the queenly beauties of the peerless Safrano (this last only equaled in beauty and grandeur by the royal crimson Géant des batailles). Who does not worship the rose, the queen of flowers? Of all the grand and extensive collections we have ever seen, Monsieur Prevost of San José can present the premium assortment. His collections of budded standard roses are surpassingly fine, and now is a very appropriate season to order them. We hope everybody will want them. If they do, let them just drop into Graves & Williams, and look at the samples. They are agents of the famous gardens of Monsieur Prevost.

## Leaves of Trees and Plants.

In his work on the "Elements of Agricultural Chemistry," Sir Humphry Davy, speaking of the structure of plants, publishes the following results, being sustained by such minds as Linnaeus, De Candolle, Knight, and others. We quote:

"The leaves, the great sources of the permanent beauty of vegetation, though infinitely diversified in their forms, are in all cases similar in interior organization, and perform the same functions."

"The albumen spreads itself from the foot-stalks into the very extremity of the leaf; it retains its vascular system and its living powers; and its peculiar tubes, particularly the tracheae, may be distinctly seen in the leaf."

"The green membranous substances may be considered as an extension of the parenchyma, and the fine and thin covering as the epidermis. Thus the organization of the roots and branches may be traced into the leaves, which present, however, a more perfect, refined and minute structure."

"One great use of the leaves is for the exposure of the sap to the influence of the air, heat and light. Their surface is extensive, the tubes and cells very delicate, and their texture porous and transparent."

"In the leaves much of the water of the sap is evaporated; it is combined with new principles, and fitted for its organizing functions, and probably passes, in its prepared state, from the extreme tubes of the albumen into the ramifications of the cortical tubes, and then descends through the bark."

"On the upper surface of leaves, which is exposed to the sun, the epidermis is thick but transparent, and is composed of matter possessed of little organization, which is either principally earthy, or consists of some homogeneous chemical substance. In the grasses it is partly siliceous, in the laurel resinous, and in the maple and thorn it is principally constituted by a substance analogous to wax."

"By these arrangements any evaporation, except from the appropriated tubes, is prevented."

"On the lower surface of the epidermis is a thin transparent membrane full of cavities, and it is probably altogether by this surface that moisture and the principles of the atmosphere necessary to vegetation are absorbed."

"If a leaf be turned, so as to present its lower surface to the sun, its fibers will twist so as to bring it as much as possible into its original position; and all leaves elevate themselves on the foot-stalk during their exposure to the solar light, and as it were move towards the sun."

"This effect seems, in a great measure, dependent upon the mechanical and chemical agency of light and heat. Bonnet made artificial leaves, which when a moist sponge was held under the lower surface, and a heated iron above the upper surface, turned exactly in the same manner as the natural leaves. This, however, can be considered only as a very rude imitation of the natural process."

"What Linnaeus has called the sleep of the leaves, appears to depend wholly upon the suspension of the action of light and heat, and on the operation of moisture."

"This singular but constant phenomenon had never been scientifically observed, till the attention of the botanist of Upsal was fortunately directed to it. He was examining particularly a species of lotus, in which four flowers had appeared during the day, and he missed two in the evening; by accurate inspection, he soon discovered that these two were hidden by the leaves, which had closed round them. Such a circumstance could not be lost upon so acute an observer. He immediately took a lantern, went into his garden, and witnessed a series of curious facts before unknown. All the simple leaves of the plants he examined had an arrangement totally different from their arrangement in the day; and the greater number of them were seen closed or folded together."

"The sleep of leaves is, in some cases, capable of being produced artificially. De Candolle made this experiment on the sensitive plant. By confining it in a dark place in the day-time, the leaves soon closed; but on illuminating the chamber with many lamps, they again expanded. So sensible were they to the effects of light and radiant heat."

"In the greater number of plants the leaves annually decay, and are reproduced; their decay takes place either at the conclusion of the summer, as in very hot climates, when they are no longer supplied with sap, in consequence of the dryness of the soil and the evaporating powers of heat; or in the autumn, as in the northern climates, at the commencement of the frosts. The leaves preserve their functions, in common cases, no longer than there is a circulation of fluids through them. In the decay of the leaf, the color assumed seems to depend upon the nature of the chemical changes; and, as acids are generally developed, it is usually either reddish-brown or yellow; yet there are great varieties. Thus in the oak, it is bright brown; in the beech, orange; in the elm, yellow; in the vine, red; in the sycamore, dark brown; in the cornel tree, purple; and, in the woodbine, blue."

"The cause of the preservation of the leaves of evergreens through the winter is not accurately known. From the experiments of Hales, it appears that the force of the sap is much less in plants of this species, and probably there is a certain degree of motion in it, in warm days, even in winter; their juices are less watery than those of other plants, and probably less liable to be congealed by cold, and certainly not so easy of decomposition; and their vessels are defended by stronger coatings from the action of the elements."

"The production of the other parts of the plant takes place at the time the leaves are most vigorously performing their functions. If the leaves are stripped off from a tree in the spring, it uniformly dies; and when many of the leaves of forest trees are injured by blasts, or long-continued dryness, the trees always become stag-headed and unhealthy."

"The leaves are necessary for the existence of the individual tree; the flowers for the continuance of the species. Of all the parts of plants they are the most refined, the most beautiful in their structure, and appear as the master-work of nature in the vegetable kingdom. The elegance of their tints, the variety of their forms, the delicacy of their organization, and the adaptation of their parts, are all calculated to awaken our curiosity, and excite our admiration."

**VALUE OF A VIRGINIA STABLE.**—The Richmond Dispatch says it has from good authority, that the Messrs. Downell have been offered the sum of \$18,500 for their filly Fanny Washington, and their celebrated brood mare Nina and her three Revenue colts, Planet, Eschewer, and a yearling. Planet is estimated at \$8,000; Eschewer at \$3,000; the old mare and the yearling, at \$4,500; and Fanny made.

## Resources of Humboldt County.

The following valuable sketch of our resources we are happy to copy from our cotemporary; such sketches are creditable to the journal and beneficial to our State. The Northern Californian, published at Union, Humboldt county, says:

"In noticing the peculiar features and sources of wealth in this region, that which most prominently strikes the observer, is the immense belt of timber which skirts the base and ascends the slopes of the foot hills of the coast range. This belt, varying from four to twelve miles in breadth, extends through a large portion of Mendocino, and the whole of Humboldt, Klamath and Del Norte counties, to the State line. Owing, however, to the small number of accessible harbors, in convenient proximity to this immense mass of vegetable growth, but little has been done on any considerable scale in its manufacture and export, except at Mendocino mills, and Humboldt Bay. The prevailing varieties which are found in this county, are Redwood, red and white Fir and Spruce, and in a few localities, as on Mud river, are some noble specimens of white Cedar. Scattering specimens of white Ash and Maple and Bay are found in the wet swales and on the bottoms, but, not in sufficient quantities to form an article of trade. We can see no good reason, however, why the most valuable and durable kinds of Eastern timber for manufacturing purposes, such as white Oak, Hickory, and Locust, may not be raised by planting the seeds, nuts and acorns, on the farming lands of this county. The soil and climate here seem better adapted to their growth, than in more Southern portions of the State, and though he that plants may not cut the timber, the farm which possesses a plantation of this sort, will certainly fetch a price more than sufficiently increased, to reward the labor and expense of the effort. Every man with a family and a homestead farm should do it, for the benefit of his children, if not himself. He that plants a tree, it is truly said, is a benefactor of his kind. The black Locust (extremely valuable for many purposes, especially upon a farm) is of extremely rapid growth, averaging nearly three-fourths of an inch in diameter for every year's growth after the first year or two, and might be raised to great advantage in a separate field, without any special attention after the trees are once started. This timber is worth in the Eastern States, from ten to twelve cents per foot. If our farmers would devote a moderate share of attention to the planting of valuable timber trees, the day is not far distant, when the fruits of their labors will be visible, in making Humboldt Bay one of the most important shippers on the coast of California. It can now furnish all the available lumber for such purposes, that can be supplied at other points, and with the addition of a few imported sorts, might bid defiance to competition."

"The value of the belt of native timber of which we have spoken, can scarcely be estimated in figures. The quantity is inexhaustible for many years to come, and the annual product only depends upon the extent of the demand and the manufacturing appliances used for making it. At present there are ten saw mills in this county, in a greater or less state of activity, which, besides supplying what is wanted for home consumption, furnish freight for an average of about five coasting vessels weekly, the year round. Nine years since this vast forest was undisturbed by the axe of the woodman, and millions of feet of Eastern lumber, besides dwellings ready framed for erection, were shipped to California, and sold at fabulous prices. White pine boards brought \$800 per thousand, for a short period, until the arrival of several millions reduced the price to about \$100. Now lumber is sold at the mills on this Bay for about \$12 per thousand, and shipped to China and Australia, besides furnishing a part of the supply for the California market."

"Up to the present time, sawed boards, scantling, square timber, laths, and tongued-and-grooved flooring constitute the staple of the lumber exported from the Bay. In process of time, there will doubtless be factories for making ash, doors, blinds, etc., which will give employment to a much larger population, and retain in the hands of our own community the profits upon the manufactured article, which now go to swell the business of other places, possessed of greater capital. The lumber trade is destined to be a permanent and leading branch of business in this country for an indefinite period of time, and it behooves those who are embarked in it, to keep the inside track, by the introduction of valuable improvements in machinery, and the application of their superabundance of the raw material, to all those varieties of manufactured articles, for which it may be used with advantage and profit. The effects of a wise foresight in these matters, will not only put money in their own pockets, but add to the general prosperity of the country, by furnishing the farmer a large market for his products, the merchant for his wares, and infusing new life into every branch of industry."

"The days of great profits in California, and especially in the lumber business, have passed away forever, and must be compensated by the infusion of greater skill, activity, and economy in that and every other branch of trade, by quick sales and moderate gains."

## The Oregon Woolen Factory.

A writer in the Jackson Sentinel, who has visited the new and extensive Woolen Factory at Salem, makes the following mention of the same:

"The enterprising proprietors deserve great credit, and the country cannot but be benefited by this enterprise. The fact of tapping the Santiam River and diverting the water from the main channel through a thickly settled and farming district, affording water for irrigation without diminishing the quantity necessary to propel all the machinery for manufacturing purposes, is alone of great benefit to the surrounding country. The factory, under the control of the experienced Mr. Pratt, its Superintendent, cannot help but do well. The advantages of the enterprise are so many that the space of a letter almost forbids my entering upon the subject. Suffice it to say that the first quality of blankets, flannels, and woolen cloth, are being manufactured at prices far below that paid for foreign-manufactured woolen goods of the same class, in proportion to the quality and durability of the article. There can be no comparison in point of profit and advantage to the country, over those of a similar kind manufactured in the Atlantic States. The inducement to produce the wool is one of the great advantages resulting to the whole country, which is incalculable."

## Encourage Agriculture.

Upon this caption the Hydraulic Press, published at North San Juan, says:

"The mining interest of California has ever met with the most fostering and liberal treatment, and perhaps justice has even been strained in its favor by making it the paramount object of legislative care. This policy has resulted in filling our mountains with a vigorous, independent and enterprising population, whose intelligent labors have converted the mining districts into wealthy and permanent communities, around which are gradually springing up all the arts and amenities of advanced societies."

"The time has now arrived when the agricultural interest should receive a like generous encouragement. Without the special protection and privileges enjoyed by its rival, it has already become of very commanding importance, and is destined to ultimate preeminence. Despite of all the uncertainties of title, and the fascinating attraction of mining pursuits, the agricultural resources of the State have been developed to an extent which would not have been possible under the same retarding circumstances in any other part of the confederacy. The whole amount of land inclosed for all purposes is stated at 1,916,813 acres; of which 756,734 acres were cultivated last year, and produced upwards of ten and a quarter millions of bushels of wheat, barley and oats, in addition to which were large yields of corn, rye, buckwheat, beans, peas, potatoes, hay and vegetables. There are about three and a half millions of fruit-trees in the State, and some four millions of grape-vines, besides an immense number of other fruit-bearing vines and bushes. In connection with this exhibit may be mentioned the fact that the aggregate number of live stock and poultry is estimated at about two and a half millions, the sheep alone numbering nearly half a million and being rapidly on the increase. The State has actually become self-sustaining in all important particulars, owing to the steady unaided efforts of her agricultural citizens, to which she is also indebted for opening a source of immense future wealth in the grape culture, which alone, it has been not unreasonably estimated, will eventually exceed in value the entire gold yield."

"These facts, while they go to show the capacity of the agricultural interest to take care of itself, yet also prove that it is entitled to, and should hereafter receive, the most liberal encouragement and assistance. That man must be endowed with but little foresight who cannot discern that the real prosperity of the State depends upon the growth of this noble interest, together with the development of home manufactures. Agriculture in California exhibits many anomalous features, resulting from peculiarities of soil and climate. These need to be carefully observed, and such observation should not be left to chance, or to the not always enlightened attention of isolated individuals. The State wants a thorough agricultural system, based upon California experience, and aided by the application of scientific facts. To obtain this, there should be agricultural and horticultural associations in every county, in connection with the State Society, and Agricultural schools should be established, aided by the government, on the plan adopted with such encouraging results in other portions of the Union. In several States whose agricultural resources will never equal ours, these schools have been some time in operation, whilst in others they are about to be established; even Minnesota, the youngest sister in the confederacy, having made provision for one. Cannot California, with a yearly revenue of more than one million dollars and public lands at her disposal, afford to do as much?"

The above article is excellent. We rejoice to note the interest now felt by the press of our State to give their readers statistics of Agriculture; it will tell for the respective papers and for the State. The remarks of the Press relative to Agricultural Schools are identical with what our journal has urged for years, and must receive the attention of all parents and good citizens.

## Ranches in the Mines.

In the course of the discussion which has been going on in the papers, relative to selling the mineral lands, some writers have taken occasion to assail the mountain agriculturists, declaring that "ranches are a perfect nuisance in the mines." The Hydraulic Press of the 5th inst. devotes a column to the subject, in which it makes an able reply to the charge, and thinks "it can be nothing but the most selfish prejudice that would thus assail a class of citizens so numerous and useful as the farmers and gardeners of the mining regions;" and that there need be no conflict between the right of the miners and ranchers, if both will be governed in their actions towards one another by a spirit of fairness and justice.

It adds in conclusion: "That the mountain agriculturists are not nuisances, can be better demonstrated by a few facts than by mere general disclaimers. Their labors, conducted under many discouragements (such as uncertainty of possession and doubtfulness of adequate reward) have converted the former barren regions into scenes of attractive verdure, added largely to the comfort and health of the mining population, to the permanence of mining towns, and to the general welfare of the State. Last year there was under cultivation in the mining counties upwards of 140,000 acres of land, which produced 623,818 bushels of wheat, 789,422 bushels of barley, and 399,841 bushels of oats; besides smaller quantities of corn, rye, buckwheat, beans, peas, hay, and potatoes. These counties also produce, in many instances, sufficient supplies of vegetables for their own consumption, and considerable quantities of milk, butter, cheese, poultry and eggs. In the year 1857 there were about two million fruit trees in the State, about half a million of which were growing in the mining counties. This number has since been very largely increased, Nevada county alone containing in 1858 three hundred and twenty thousand five hundred. The greatest number of these are peach trees; but it is quite probable that the mountains will yet abound with apple orchards, and fairly rival Oregon in the production of this staple fruit."

"The mining counties bear also a prominent part in the grape culture. The number of vines growing in them last year was two hundred and fifty thousand, and every reliable account represents them as thriving well and yielding abundantly. One acre of seven hundred vines in Nevada county yielded over 21,000 pounds of luscious grapes. Encouraged by these facts several of the mining counties have commenced the planting of the vine on a larger scale, and have begun the manufacture of wine, in which important branch of industry they bid fair to rival eventually the older vineyards of Southern California."

"These few facts concerning 'ranches in the mines' become more significant when we reflect

that mountain agriculture is yet in its infancy. That it will ultimately equal in importance the mining interest, we hardly dare predict—though such an event is not impossible; but it is destined to become of considerable magnitude, and is already of too much value to the State, and to the mining regions, to be lightly estimated or stigmatized as 'a nuisance.'"

## California.

Eloquent pens have written and sung of Italy, the bright and glorious land where the luxuries of life spring forth almost spontaneously, and where the toil of the husbandman is but the compromise of idleness. Where nature is her own handmaid and fashions the vine and the fig tree, the olive and the orange, without exterior aids. Where the sunlight spreading over broad plains covered with golden grain, presents a sight such as the vivid fancy of the painter exhibits, or the poet tells us in Arcadian realms. Spain with her dreamy climate, her unrivaled productiveness of soil, her superior natural advantages over her less fortunate neighbors, has occupied the pen of an Irving, and it remains for some master lumner to tell us in the future the history of this our Golden State. Can she be as she is, both as to soil and climate, of producing almost every tropical fruit and flower; inhabited by the most energetic race on the face of the earth, who may venture a prediction as to her future prosperity and importance? In a few years the fig and the pomegranate will cease to be articles of import; the almond and the olive are now becoming as native to the soil as the willow or the oak. The different cultivated berries are becoming prodigies yearly, while triple crops of fruit in the same time are getting to be no longer an uncommon occurrence. A country where the fruit-trees blossom in the month of February, and the common garden vegetables grow and flourish all winter, is surely an anomaly and furnishes incontrovertible proof that were the golden treasure not in her hills, it would still be produced at the plow's point, and the prairies of California become the placers of unbounded wealth.—[Tehama Gazette.]

## Agricultural Society in Jacksonville, Oregon.

A MEETING of the citizens of Jackson county, was held at Jacksonville, pursuant to adjournment, on the 23d ult. A committee, previously appointed, reported a constitution, consisting of eighteen articles, which was adopted. The name adopted is the "Jackson County Agricultural Society." Some thirty citizens subscribed their names, and the following gentlemen were elected officers:

President—W. C. Myers. Vice President—John E. Ross. Secretary—Jesse Robinson. Corresponding Secretary—J. H. Reed. Treasurer—R. F. Maury. Directors—James Kilgore, Isaac Constant, and J. H. Walker.

The Fairs of the Society are to be held between the 25th day of September and the 25th day of October, annually.

**A NUT FOR HORTICULTURISTS.**—Lenox, of Vallejo Township, informs us that he has in his orchard three budded apples which present a singular feature. The buds were taken from a tree bearing a diminutive sized apple, and set into the trees while they were small. This year all three of the trees have produced fruit, and, strange to say, not only of a very much larger size than those produced by the tree from which the buds were taken, but also of an entirely different variety. One of the trees has on it about a dozen apples which average from fourteen and one-half to sixteen inches in circumference. Lenox is certain that he has made no mistake in the matter, and hence his surprise at the result.—[Petaluma Journal.]

The fact, simply, is this: the buds were taken from a tree, checked and stunted from some cause, and inserted in a vigorous stock, and the consequence was a return to their original beauty, like the progeny of some parents, by change of stock or climate. Will the Petaluma Journal think?

**NATURE THE FIRST INVENTOR.**—In the modes of propulsion adopted by aquatic animals may be found almost every plan which has been used by man with machinery. Thus water is ejected for propulsion by the cuttle fish and paper nautilus; sails are used by the pelicans and water birds; punting and towing by whorls and the lepidosiren; a folding paddle by the lobster, feathering paddles by ducks, and oblique surfaces by fish of all kinds. A screw-like appendage is found in the wings of an Australian fly, but it is supposed to be shaped thus only after death. There is, however, one remarkable animal which propels itself by a rotary movement, acting on the water by means very similar to those of the paddle wheel and screw propeller combined; this is the infusorial insect *Femecium*.—[Sci. American.]

**NOVEL SLUICING.**—The miners' plan of rushing off dirt by means of a stream of water, has been employed for the accomplishment of several other objects in this State than the original one. A portion of the grading of the Sacramento Valley Railroad was thus effected, the earth removed in this instance being auriferous and yielding gold sufficient to pay the contractor a handsome profit above the cost of labor. The citizens of Forest City cleared their main street of snow last winter, by the same economical means, everybody turning out with shovels and making sport of the work of cutting through the drifts a way for the flowing water. But the latest application of sluicing is to the cleaning of muddy streets. The Placervilleans lately hit upon this happy substitute for hoes, shovels, brooms, carts, and long bills against the city.—[Hydraulic Press.]

**DISTEMPER IN DOGS.**—A writer in Porter's Spirit, in regard to Distemper in Dogs, says: "I would suggest as an invaluable remedy, a simple and cheap one, in the use of table salt, fine being preferable. As soon as you perceive the dog is sick, throw down his throat a handful of salt three times a day, say during three or four days. The remedy has proved successful in more than thirty cases. I have cured this season a valuable Newfoundland dog and three hounds of the distemper, the same being my property. Excuse the liberty I take in writing, but knowing the interest you take in such matters, you will find on trial, without much cost, that the above recipe is accompanied with no danger whatever, and in all cases within my knowledge, has proved a safe cure."

**CULTIVATING TROUT.**—The San Andreas Independent says that at the San Antonio Ridge, in a basin some thirty feet in diameter and ten feet deep, which the Messrs. Chase have worked out by excavating in the gravel and bed-rock to a depth below the river surface, some live trout were thrown about three years since. They have nobly fulfilled their destiny by the laws of increase and multiplication. The hole is literally swarming with trout, and they are the most voracious little finsters in the world, biting savagely at worm, fly, grasshopper or any other bait. One was caught a few days since, weighing a pound and a half.

## The Buttes and the Avalanches.

About twelve miles from Downieville is a mountain, one of the highest in the State, turreted by immense perpendicular acclivities, called "the Buttes;" here, in time past, the accumulated masses of snow and ice, frequently becoming suddenly detached from the rocky pinnacles, rushed down the sides of the mountain, bearing away huge fragments of rock and cutting down trees as grass before the scythe, crushing and grinding to atoms all but the adamant hills themselves. Even with the then sparse population and infrequency of winter mountain travel, several times has the unwary stranger been swept out of existence by an avalanche of the Buttes. The snow on the north east side of the summit is perpetual. A friend, living in the vicinity, who ascended the height, on last Fourth of July, estimated the snow at two hundred feet in depth; he was convinced that the first that ever fell upon it is there yet. The comparative lightness of the winter storms since 1852 has superinduced a dangerous sense of security, and houses and mills have been built in ravines, so liable to form the directing course of the avalanche. This mountain contains some of the richest quartz lodes in California or the world; a number of mills for crushing the auriferous rock have been erected there, affording employment to a great many persons, all of whom reside in the immediate vicinity of the mills; and for this reason, the avalanche has suddenly become to us a word of fearful import.

The storms of the latter portion of the present winter have been unusually severe in the mountains. On Thursday, the 17th inst., the snow was falling for the twentieth successive day at the Buttes, and it fell all day and all night without intermission, accompanied by a perfect hurricane of wind. During the night of that day, there occurred six different avalanches; one of Reis' quartz mills and Thompson's mill were completely destroyed, but by a fortunate chance no one was in either of them at the moment, and we hear of no damage to life or limb; but at the Reynolds's mill, the catastrophe was attended with consequences deplorable. We are indebted to Messrs. King and Bowley, of the latter mill, who were of the party that came to Downieville for surgical assistance, for the following details, which, though they add but little to the substance of what we last week published, will not be found devoid of interest:

The dwelling of the Messrs. Reynolds and the cook-house were situated in the ravine about sixty feet from the mill; three other buildings, occupied by the workmen, being distant about a hundred paces and out of the course of the "slide." The night had been at work in the mill; R. Wright, the cook, and E. H. Murphy, were still in the cook-house; Wm. C. Reynolds was sitting in his house, in front of a large stove, the doors of which were open, reading; all the others, some sixteen or eighteen, were asleep in their beds; G. W. Reynolds, whose wife was absent in Downieville, occupied a room on the first floor, as did also James Phillips, who slept in the company's office; in the second story was Henry Eberhardt—H. F. Wood, one of the company, being luckily away from home. At fifteen minutes before ten o'clock at night, an avalanche, which had started in the ravine a mile and a-half above, rushed down through the dwelling of Reynolds, as a whirlwind, scattering it into thousands of fragments, many of which were borne with the resistless mass more than a mile below. No unusual sound gave to those who were up and awake the least token of its approach, or promontion of danger from such a source; it came with the stillness of death, and the velocity of a thunderbolt. How Phillips and the brothers Reynolds were saved, they themselves can have no conception, for it was the work of a fraction of a second. Wm. Reynolds, who was glancing that moment at the fire, insists that he was carried straight through the stove; he found himself lying by the side of an iron safe which had been kept in the office, at the bottom of the mill pit, thirty-five feet deep and sixty feet distant, somewhat bruised but able to walk; his brother George, though found at a distance lying in his bed, and still rolled up in his blankets with his watch under his pillow, was more seriously injured, but he is now considered out of danger. Mr. Phillips, who is one of the quartz company, was also thrown, with his bed, in the same direction, sixty feet, to the top of the mill pit, whence he leaped through the window into the mill; he was but slightly injured. A corner only of the cook-house was struck, and though it was completely crushed in by the weight of the snow that fell upon it, the inmates were enabled to make their escape through an aperture near the top. Of Eberhardt, nothing whatever has been discovered; fifty or sixty men were employed for several days in the search for his body, but without success, and the further attempt to recover it is, for the present, abandoned as utterly futile. The snow is seventy-five feet deep in the ravine, and so compressed by the force of the avalanche that horses might be driven over the top in safety. The loss of Mr. Eberhardt is deeply deplored by his employers and fellow-workmen, to whom he had endeared himself not more by his kindly and generous disposition than by his upright and honorable deportment; thus much, those who knew him best desire us to say of him. He had worked eighteen months at the mill, was thirty-two years of age, and a native of Germany; where he leaves a wife and three children to mourn their sad bereavement.

Everything in Reynolds' house was either buried up or carried off by the snow. A favorite watch dog, five dogs, four goats and a number of chickens were swept away. A couple of pigs emerged from the snow the next morning, about twenty feet from where they were penned, but walked with difficulty. Some one picked up a bandbox, lying bottom up half a mile below, and turning it over, a rat started out and ran toward the mill. Clothing, books, broken furniture, bedding, etc., were found scattered for a mile.

The mill, as we stated last week, was uninjured. The moving mass of snow was from seventy-five to a hundred feet deep and three hundred feet wide. At 12 o'clock on the night of the occurrence, a party of six volunteered to come to Downieville for surgical assistance; the snow they represent at from eight to twelve feet in depth. They encountered a blinding storm; there was no trail nor any crust, and they had no snow shoes; all night long, they toiled through the vast snow heaps, and at half-past nine o'clock, reached Kanaka Bar, a distance of six miles. Drs. Kibbe and Chase, immediately upon the arrival of the messengers, left here and reached the mill in a little less than six hours, having had the advantage of the trail broken by the party that morning. The extent of the injuries to G. W. Reynolds could not be clearly ascertained, as they were internal, but the physicians entertain no doubt of his final if not speedy recovery.

[We copy the above from the Sierra Citizen of the 26th ult., as a very interesting sketch for our Atlantic readers, that they may know the perils and dangers attendant on the life of the miners in California.]

## Miscellany.

[For the California Farmer.]  
OUR SAGES CRY!

BY CORNET QUILL.

For a hand of fire and a lightning pen,  
To trace upon the hearts of men;  
And home the Truth's convictions send  
Of the evils of the age.

I'd rouse them from lethargic sleep,  
In which their every sense is steeped;  
Until their hearts in blood should weep,  
O'er the world's darkened page.

Our sages cry "How we progress!"  
Aye—on to deeper wickedness;  
As down the awful precipice,  
Rushes Niagara's tide.

Religion is an empty form,  
Back to its pristine sources gone;  
Or taken the very devil's form,  
To please the hearts of men.

Cold Pride with jeers and cruel taunts,  
Laughs in the haggard face of Want;  
And naked Falsehood boldly vaunts  
Truth is at end.

Where is the glorious sense of Right?  
Cowed back in terror's wild affright,  
Before the universal blight  
Of giant Wrong.

The Golden Age has had its rule,  
And now comes on the age of Fools;  
Of Lucre and of Power the tools,  
To work in sin.

God at the hearts of mortals knocks,  
As with an earthquake's vivid shock;  
But still they on and heed him not,  
Nor let him in.

"We're on the road to Heaven" they say,  
And with His thunderbolts they play;  
As though there were no Judgment Day,  
Beyond the tomb.

Oh! mortal sorrow, learn to weep;  
Time to Eternity will sweep  
A record of the hours ye keep,  
In trace with Shame.

## LETTERS FROM HOME.

Ye that e'er dwell on a foreign shore,  
With the billows 'twixt you and the loved of yore,  
Did the heart ne'er beat with a joyous bound,  
As it echoed the words of that welcome sound:  
"Letters from home!"—Oh! full they come  
To the desolate heart of an exile on  
Like a fountain springing midst desert sands,  
Like a sunny ray on far northern lands,  
Like a gentle mate to a lonely dove,  
Bringing visions of hope, and joy, and love.

"Letters from home!"—did a doubt ne'er fall  
O'er the yearning heart like a funeral pall,  
Lest those love-bringing messengers yet might bear  
Tidings of ill from some loved one there?  
If with hope and joy these letters were fraught,  
So far o'er the foaming waters brought,  
Did the soul ne'er fill with a trembling joy,  
Did a thought ne'er come with its sad alloy,  
To the fluttering heart, an unwelcome guest,  
As the message of love to that heart was pressed?  
Didst thou never think, long ere those letters were read,  
That the writer might sleep with the silent dead?

"Letters from home!"—from the happy band,  
So far away in a distant land;  
From a father beloved, from a sister dear,  
Bringing words made dim by a mother's tear;  
Oh! welcome are ye, though a sigh will start  
From the inmost cell of the wanderer's heart,  
Yet welcome are ye, for with love ye come,  
From the friends of yore in their distant home.

## Grace Greenwood in Ohio.

The editress of the Little Pilgrim (that glorious little paper for children) has been creating quite a furor in Ohio, in delivering a series of lectures in behalf of the principles she advocates in her paper. Her soul is bound up in children; it is their happiness she labors to promote, and she is now exerting herself to arouse the public mind to the cause of children, their right education, and their happiness; and she is doing a world of good, as will be seen by the report of her first lecture, which we copy from the Ohio Farmer:

"When it was known that this favorite of the little pilgrim, and of the old folks too, was to lecture before the Library Association of Cleveland, the desire was general to see and hear her. And her subject, viz: 'The Children of To-Day, the Men and Women of the next Twenty Years,' was eminently attractive, and specially appropriate to this devoted friend of the young. Had there been a hall of twice the capacity of the Melodeon, it would, undoubtedly, have been filled; as it was, every part of the hall was packed an hour before the lady-lecturer made her appearance. Boys brought in chairs and rented them; getting from twenty-five to fifty cents for the use of them. The spacious platform or stage was crowded as it was never crowded before, leaving only space for the fair speaker to stand; she was embosomed in the throng. A more flattering reception, and a more cordial greeting, no person has ever received in our city. Would Grace Greenwood meet the expectations of her eager auditory? Would she repay those who had come two hours in advance to get a seat; and those who coming later, had given their half dollar for a chair; and those others who coming still later, could only stand? This was the question in many misgiving minds. All good writers are not good speakers; all popular editors do not prove, on trial, to be popular lecturers; all brilliant paragraphists cannot discourse well; and this applies especially to ladies. However gifted with the pen, and with the tongue too, conversationally, they are rarely endowed with oratorical abilities.

"The lecturer opened her theme admirably, and soon banished from the hall every apprehension of failure, and won the confidence of her hearers, putting everybody into a pleasant mood, and disarming criticism by her frank, cordial, artless manner, her cozy flap, her graphic style, her curt historical allusions, and her panoramic pictures, kept briskly passing in the vivid hues of life-like scenes. By charming episodes, facetious sallies, graceful fancies, and well selected and apt anecdotes, she threw an air of novelty about her familiar theme, and furnished her audience with an unusually entertaining lecture. What more hackneyed subject than the training of the rising generation? Yet genius and goodness can make the beaten highways of thought bloom with flowers and fruits. What more commonplace saying than this, 'that children are the hope of our country?' Yet all the sharpness and brightness of a new cologne were imparted to it by the felicitously pointed remark appended: 'but as I look into many American households, and observe the methods of training children, I am compelled to own that the hope is rather a forlorn one.' This caustic reflection introduced a telling exposure of the prevailing modern reversal of family government, in which the children rule, and the parents obey. 'Are not most families,' asked the lecturer, 'hydra-headed governments?' 'Well, what is a man to do?' The lecturer represented a wealthy father as exclaiming: 'Who wants to be fighting with the young ones?' A little boy, who was repeatedly bitten by his father, in the presence of a visitor, to shut a gate through which the three had passed, and who each time had answered, 'I shan't do it,' at length said impatiently, 'I told you three times I wouldn't shut the gate; you must be stupid.'"

"The audience, of course, were interested to learn the views of an earnest, sensible, and observant woman, touching domestic government and child-training; and they did learn them, for they were fully unfolded and abundantly illustrated. She treated of home management, of school discipline, and of religious influence; of physical, intellectual, social, esthetic and moral culture. She would early lead children into the great school of nature. She would acquaint them with the manifold forms of life, of beauty and of power. She would interest them in flowers, and in animals. She would open to them also the world of fancy, and the wonders of fairy-land. She would discipline their intellects, by providing entertaining studies. She would implant principles of reverence and obedience toward parents, by fostering filial love. She would secure a true religious life, by revealing to the young mind the love of God, and the loveliness of Christ. Children are only injured by catechisms and drillings in creeds and doctrines. Many religious papers and books designed for youth, are hurtful to them. The lecturer's views of educational and religious training do not quite correspond with the prevailing opinions and practices called evangelical. Discarding the notion that children are by nature prone to evil, she must differ widely from those who hold this idea, in her system of treatment. While they would affirm the necessity of a change of heart as the beginning of a religious life, she would trust to the natural faith and goodness of childhood for the development of early piety. Many of her hearers undoubtedly would deem her teachings on this topic unsatisfactory and unsound.

All, however, must have been impressed with the justness and nobleness of most of the sentiments embodied in the lecture, and delighted with the graceful bearing of the lecturer, and charmed with the beauties of her style, with the flashes of her delicate wit, and the variety of her stores gathered both from reading and observation. Grace Greenwood has endeared herself to the citizens of Cleveland, and won for herself a warm place in many families, where we hope her words and tones will be an abiding influence for good, and bear worthy fruit twenty years to come.

PARLORS have been fitted up in the basement of Rev. Dr. Aiken's Church, at Cleveland, Ohio, with a piano, sofas, etc., and social gatherings are held in them, for the promotion of a better acquaintance and more intimate sympathy among the members of the church and congregation. The papers attribute this movement to the suggestions of Dr. Hollan's lecture of Social Life in America.

CECIL made a crown of laurel to cover the defects of a bald head. Most crowns of gold cover greater defects of the head.

## NURSERY BUSINESS.

20,000

## FRUIT TREES,

..AT THE..

## HOPE NURSERY,

Between William and San Carlos streets,  
In the Eastern part of the  
CITY OF SAN JOSE.

D. T. ADAMS,

RESPECTFULLY INFORMS HIS FRIENDS AND  
the public that he has for sale a choice stock of  
APPLE AND PEAR TREES,

that are hardy, and have been grown with much care  
as to selectness of sort, extent of variety, size and vigor  
growth, to give entire satisfaction.

A SPECIAL PREMIUM was awarded to the proprietor  
by the California State Agricultural Society, at their Annual  
Fair, 1883, for the BEST APPLE NURSERY.

Parties desiring to purchase largely are especially solicited  
to call and examine for themselves.

10,000 Apple Trees, 2 years old, 100 varieties.  
6,000 do do 1 year old;  
2,000 Pear Trees, 1 year old;  
1,000 do do do on the trunk Broad-leaved Apples, Quince, 100 varieties.

Also—A good assortment of CURRANTS and GOOSE-  
BERRIES; California GRAPE-VINES.  
Sold at as low prices as Trees of the same size and quality  
can be purchased at any responsible Nursery in the State.

The large portion of this stock has been propagated from  
Trees that have borne Fruit in California.  
All orders for Trees must be accompanied with the Cash,  
and persons ordering Trees will please state explicitly by what  
conveyance they are to be sent.  
Trees packed in the most thorough manner, enabling them  
to endure any probable exposure, delay, or handling; for  
which a moderate charge will be made, barely sufficient to  
pay the cost of material and labor. All packages delivered at  
the landing, Alviso, for the steamer, free of charge.  
213m D. T. ADAMS, San Jose.

Fruit and Ornamental  
TREES AND SHRUBS,  
Roses, Vines, and Exotic Plants.

## PARSONS &amp; CO.,

Flushing, - - - - - near New York,  
INVITE attention to their fine  
stock of HARDY and EXOTIC TREES,  
and PLANTS constantly enriched by  
their collections in America and by importations  
from abroad.

Their EXOTIC DEPARTMENT, occupying a  
number of houses, is full of rare and valuable Plants and is  
worthy the inspection of visitors. The varieties of EXOTIC  
GRAPES are kept genuine by constant propagation from  
fruit-bearing vines, to which two-thirds are devoted.

Their ROSE department contains a large assort-  
ment of all the finest varieties, and the best standard sort  
are cultivated in very large quantities and sold at reduced  
rates, for massing and for dealers. They do not bud their  
Roses and cannot therefore sell them to compete with those  
who have adopted that mode of cultivation. No stock upon  
which to bud has yet been found that will not sucker up and  
destroy the variety worked upon it.

In the OPEN GROUND DEPARTMENT they  
offer a large stock of well grown and thrifty FRUIT TREES,  
suitable either for the amateur or the dealer, including the  
finest kinds of STANDARD and DWARF PEARS, CHER-  
RIES, PLUMS, PEACHES, APPLES, &c. These are now  
offered at reduced rates.

In the HARDY ORNAMENTAL DEPART-  
MENT will be found a large quantity and variety of DECID-  
UOUS and EVERGREEN TREES and SHRUBS, for the  
avenue, lawn, or garden. Of these, some fine varieties are  
cultivated in very large quantities and sold at a great reduc-  
tion from the usual rates.

Among them are  
Spiræas, Lilacs, Forsythias, Weigelas,  
Stuartias, Andromedas, Pyrus Japonica,  
Norway Spruce, Deciduous Cypress,  
Larch, Ash, Maples, Beech, Linden,  
and others.

They have made the RHODODENDRON a  
specialty, and have cultivated it in so large quantities that  
they can offer it at greatly reduced rates. The beauty and  
richness of the foliage and flowers of this valuable shrub can-  
not be too highly appreciated. A new feature of their estab-  
lishment is the extensive propagation of the RARE evergreens,  
the cost of importing which has hitherto placed them beyond  
the reach of any but the wealthy.

They can also offer at moderate rates the fine sorts, as  
Podocarpus, Retinospermum, Cephalotaxus,  
Thujiopsis, Taxus erecta,  
and others.

For Hedges, they would call attention to the  
JERBERIA ARBORESCENS, which is far more valuable than  
the AMERICAN, in that it bears transplanting well, is very  
close and compact in its habit, requires no trimming, and is  
not affected by the coldest winter.

A General or Trade Catalogue will be sent on application.  
Careful attention is given to PACKING and FORWARD-  
ING.

WE, THE UNDERSIGNED, RESPECT-  
fully inform our friends and the public, that  
we are the Agents of A. H. Myers' Pioneer  
Nursery, Alameda county; L. Prevost, San  
Jose Nursery, Santa Clara; E. W. Case's Nursery,  
Santa Clara; and are prepared to fill orders, large  
or small, for Fruit Trees, Ornamental Trees, Grape  
Vines, Shrubs, Plants, &c, of every variety and  
description, at the shortest notice and on the most favorable  
terms.

We are also the sole Agents of Rumford and Bro., Contra  
Costa county, for the sale of their large crop of Sweet  
Potatoes, raised from genuine Carolina Seed of the Red Variety.  
Messrs. Rumford & Bro. received the First Premium for  
their Potatoes at the late Mechanics' Fair held in this city, and  
at the Santa Clara County Fair, held in San Jose during the  
past autumn.

We are also the sole Agents of Daniel L. Perkins, of Alameda  
county, who is the Pioneer Seed Grower of California,  
and who is giving his undivided attention to the raising and  
preparing Garden Seeds for this market.

We are also Agents for the Nurseries of D. T. Adams and  
Joseph Lee, San Jose.

Farmers and Gardeners desiring fresh and genuine Garden  
Seeds, which can be warranted true to label, will do well to  
examine our stock before buying elsewhere.

OFFICE AND DEPOT FOR TRE

## The Season

Various communications come to us relative to the season. In some places the season is very backward, but all information goes to show promise of a very fruitful season and an abundant harvest. From Marysville one subscriber and a large fruit-grower writes under date of March 13: "Our apricot and almond trees are in full bloom, and the prospect good for a great crop of fruit this season." Another writes from Sacramento: "We are never had so promising a season for everything. Trees are beginning to blossom finely and very full. We shall have abundance of fruit. Grain never looked better."

Our only object in our remarks was simply a defence of our own climate and its ability to raise all fruit, and also to preserve the *nursery trade* to our own citizens, just the same as our cotemporary of the Oregon Farmer would have done in our place. But it seems he thinks we would under-value Oregon fruit. Oh no, Brother Walling. We admit that Oregon has shown us handsome fruit of the world ever saw, and we mean to equal you if possible, and beat you, too. We are pleased to notice that the Oregon Farmer admits the fact we stated: that Oregon fruit is injured in transportation, by reason of being heated, and bad management. This is so; and they raising it in such

enormous quantities can fill our market, while our  
 fruit, so fresh and fair, is readily sold. Heretofore  
 we have not grown enough, perhaps, to have its  
 peeping qualities generally known. Our neighbor  
 must not say we are jealous of Oregon or Oregon  
 fruit, or unwilling to do her justice, for it has al-  
 ways been our highest pleasure to speak well of  
 that good State, and copy her example in all that  
 she has done well. To prove this, we need only  
 refer to the words we uttered in a memorial which  
 she had the honor to present to Congress, in 1854,  
 on behalf of Agriculture. We give the words  
 uttered then as the exponents of the sentiments we  
 have ever cherished for Oregon :

"In all our remarks applying to the great interests of the Pacific, as connected with California, we desire to be understood, as embracing with equal interest and care the vast and fruitful territory of Oregon."

Do these sentiments come up to your standard, Brother Walling? Any jealousy there, neighbor?

**California Wine.**  
 "Good wine needs no bush."  
 We have ever believed that California would  
 make her mark as a wine growing country; for  
 years we have urged attention to this all-important

subject, and most heartily rejoice to see our citizens turning their attention to it. We were pleased to receive a call from one of our subscribers at Napa, John Patchett, Esq., and to learn that he had been very successful the past year in growing the vine and making wine. He kindly brought us a sample of his own wine, and informs us that he has now about twenty-six acres of vines, and they are doing well. They are principally the Mission Grape, although he has some ten varieties of foreign grapes, all doing well.

The wine brought us by Mr. Patchett was a fine White Wine, of very superior character in flavor, much resembling the Hock Wine. Most earnestly do we commend the enterprise to every

man having land; when such wines can be produced so easily and cheaply, why should we send our gold abroad for wines. We know we can equal, if not surpass, the best light wines of France. Why will not our Legislature look to this subject, and offer some special bounty and exempt from taxation, in order to stimulate so great an enterprise.

**THE BACKWARDNESS OF THE SEASON.**—The long season of wet weather, and the consequent cold weather which has followed, has retarded the usual bright appearance of Spring. This cold weather may be expected for some time, as the mountains are covered with an unusual depth of snow; and, from their icy crests, we shall feel a sharp wind for a long time.

This cold weather will prove beneficial to vegetation, for the earth will feel the warmth of the sun, and the roots of grain, grasses and plants will thrive, while the blades of grain and grasses, and the buds and blossoms of trees and plants, will be held in check; thus strengthening the power by which that feeds and sustains them for the crop there are to yield.

Immediately follow upon the amount of moisture in the earth, the whole strength of the plant would be drawn up into the top before it was well rooted: thus, without strong roots to sustain it, a light or worthless crop would be the result. We therefore look upon the present cool weather, and backward appearance of the plants, as only an indication of a prosperous future.

By the late mails from Washington we have the gratifying news that Congress has devoted six millions of acres of public lands to the different States, to be divided among them according to their representative numbers. This will be a glorious gift, provided the charge of selecting and locating the lands be intrusted to proper hands, and they be put under rent or use for a period of years, to increase their value, during the time necessary to prepare, locate and build the Colleges. If such a gift should be rightly improved, it would prove a princely gift; and the income would be sufficient to build, establish and sustain a College, in each State, of a very high order. It is most singular that our Government has been so tardy, when it is known that the monarchical and despotic Governments of Europe have had, for many years, splendidly endowed Agricultural Colleges.

We trust that, before our Legislature adjourns, some measure will be adopted in reference to the subject, in case of the final and immediate grant by Congress of such lands. Considerable anxiety is manifested lest the President should veto the bill. We believe, however, that he will most heartily approve the measure.

The farmers throughout this section of country are in fine spirits, in consequence of the unexpected quantity of rain which has fallen this winter. Crops promise a better yield than they have done for four or five years. Grass is also unusually good; in short, an impetus has been given to matters and things generally which nothing but the rain was capable of doing. I have not enlarged my orchard much this spring, only about 200 trees. Those I got from you are looking very well indeed, and some of them will be in bearing this season. When you come to see me again, I wish to be able to claim a reward (in acknowledgments at least) of being rather a better gardener than when you visited us last summer, when, as I told you, I was improving the growth of hog-weed, and careless, as a means of propitiating the wrath of the grasshopper, and for the philosophy of which you were pleased to express a very virtuous indignation. Don't you think, upon reflection, I was right? I think I was, for those aforesaid grasshoppers are not very dainty in the choice of their feed. But this year we will endeavor to dispense with those nimble gentlemen we will not, as a matter of course, test the experiment of raising weeds to feed them upon. They destroyed nearly one half of my vines last year. I have set out this spring, about 1500 more. So, you see, in process of time, we will be able, no preventing providence, to offer our friends a sip of our own wine. Our entire valley has demonstrated its fine adaptation to the culture of the grape. We have good soil and unusual facilities for irrigation, if we will only avail ourselves of that."

Thus we have the gratifying information of the success attending the culture of the vine in nearly every county of the State.

To show the difference in forwardness of the various localities: At Placerville, the first of the week, we learn from a resident, the Peach was just unning to blossom; at Folsom, lower down the foot hills, the Peach was in full bloom, while at Sacramento, twenty miles further into the valley, it is a little behind Folsom.

In this city, the Pear is now in full bloom, and Plum just opening.

**The Hesperian.**

"Let come what will, I mean to bear it out,  
And either live with glorious victory,  
Or die with fame renowned for chivalry.  
It is not worthy of the honeycomb,  
That shuns the hive because the bees have stings."

The first number of this new Magazine has been laid upon our table, and if ever the words of the Lord of Avon were applicable to a person or cause they will apply to the lady by whose spirit of determination and unyielding energy this work has been conceived, designed, executed, and presented to the public. Number One of the Hesperian is indeed a splendid Magazine, and we trust such a proof of appreciation of a worthy enterprise, ably conducted, will be given as will enable the lady to maintain the same high tone and style that dignifies and embellishes the opening number. The Hesperian is embellished with a beautiful title page, illustrative of the name of the Magazine, gathered from mythological history, being three beautiful maidens, plucking golden apples from the tree, emblematical of the golden literature which is to come from the Pacific shores, and also emblematical, we hope, of the golden favors and golden rewards which shall flow in upon the able Editors, and

opriety of the work. An engraved portrait of George C. Yount, Esq., the brave and good owner of Napa county, of the year 1831, and one of the finest likenesses we ever saw, is the first illustration. An admirable sketch of Mr. Yount, by the pen of the editor, is the opening article. A superb colored engraving of two charming birds, the Crimson-Necked or House Finch, sketched in life by A. J. Grayson, Esq., the Ornithologist of the Pacific, forms the second embellishment. Usable and interesting articles and poetic writings from C. B. McDonald, Old Block, Frank Hale, Caxton, Dr. Veatch, Mrs. V. E. Howard, and C. H. Fader, G. T. Sproat, S. H. Lloyd, and Wadsworth. The entire Magazine is replete with worth and beauty; the artistic beauties by Phil Brothers, Nagel, and Bradley, and the chastely neat typographical execution by Frank Eastman, mark it as most excellent. We have thus seen the Hesperian that extended notice which it fully deserves. We need only say, everybody should go forthwith and subscribe for it. It presents all the features of a magazine worthy the literature of the present day, worthy the times and the times it portrays, worthy the name and honor of our country's magazine, worthy California. May Heaven bless it with the breath of special favor, and make it a perennial plant that shall scatter its fragrant blossoms and golden fruit for many a long year.

**A DAIRY DEPOT, KEARNEY STREET.**—We feel that to do a good service to families by inviting their attention to the new depot recently opened on Kearney street in this city for the sale of milk, butter, and eggs. Milk is a great staple in the family circle, and they should use plenty of it. We want that families will be pleased to know they can be supplied with *pure milk*, at low prices, and of the freshest quality. Butter is sold in bulk, at very fresh and cheap, and eggs as low as they can be *laid* down. Messrs. Staples & Brown's card will be found in our columns. They now furnish one-gallon cans of milk for seventy-five cents, or two-gallon do. for \$1., butter, 37½ to 50 cents a pound; and eggs, 40 to 50 cents a dozen, and we feel sure we can most heartily commend all to call and patronize them.

**Splendid Horses.**

SCATTERED over our State are now, at this present time, some as fine breeding horses as can be found in any country. Napa has, at the stables of Mr. Coombs, very fine horses. Sonoma, Benicia, Sacramento and other places, can show the present season splendid stock horses. The Black Hawk Stable in this city can show Black Hawk and Comet. These horses will be hard to beat. Wellfounded, a most splendid animal, is now in this city; a large, perfectly formed and most magnificent animal, as a draught horse; and we don't believe he can be beaten in the State; weighing near fifteen hundred pounds.

When at Clinton recently, we saw a very fine feature, Peacock, owned by L. B. Huff, Esq., of that place. Peacock will make as handsome a feature as can be found.

Opposite San Leandro, in the hills, at the stable William Souther, Esq., we saw two excellent animals. One, the youngest, a perfect beauty; and to beat in the State, of Kentucky stock; we all name him Ashland, in honor of a spot dear to all who honor the patriot and statesman. The other, we will call Sir Henry, as very appropriate.

John Kerr, the great sire of powerful draught horses. This animal weighs near sixteen hundred pounds, so reported. John Kerr is owned by T. J. Leptford, Esq., and stands at San Leandro. Messenger stands at the Messenger Ranch, and is owned by V. Vibbard, Esq.

Belmont, another excellent horse, owned by W. Williams, Esq. This is an admirable animal. There are many other horses over the State, which we shall go and see and note them.

We believe owners of *Stock Horses* will find their interest greatly promoted by placing an advertisement in our columns.

**The Great Scotch Horse.**  
The largest entire horse ever imported into California, came by the John L. Stephens. J. M. Wiley, Esq., they owner of "Glyde," came with his monster horse, and from him we received the following, relative thereto:

"Clyde" was imported into Montreal some years since. The following is an extract from a letter recently received from J. Dodds, Esq., of Montreal, who imported him :

Olyde was bred by Mr. Skirving of East Lo-  
nan, Scotland, of the pure Clydesdale breed,  
imported when one year old; is rising nine years.  
He has been entered five times for competition, twice  
for the county and district of Montreal. Also,  
at the first Provincial Exhibition. Upon every  
occasion he has had awarded him the first prize.  
His stock are all turning out splendid horses, pos-  
sessed of great bone and action. As colts, have  
carried off all the first prizes in our county for  
several years past, as they also did at the two Pro-  
vincial Exhibitions. At Quebec, last year, the  
premium colt got by him, was sold for \$550, and  
sent to Nova Scotia. I sold one of his colts at  
the same age for \$500, to be taken to New Brun-  
swick. He is a remarkably sure foal-getter."

Clayde" stand over seventeen hands high, and weighed, when he left New York 1940 pounds. He is a horse of fine symmetry and good action; a jet, glossy black, and capable of great endurance. A son should see him to appreciate him. He is of character of horse used in London, and known as the famous brewery horses, that, when harnessed in a team, loom up like a team of elephants. Clayde stands for the present at Fish's Black-rye Stable, Pine street, but will soon be taken to Stanislaus county, where he will remain as a leader of draught stock, for which he will be celebrated. Every one interested should see

TO CORRESPONDENTS.—By the last steamer we received a valuable letter from our esteemed correspondent Mrs. E. W. Farnham, which will appear in our next. We have also a sketch from Sallie: "aching at shadows;" a brief sketch but a charming gem.

## DOMESTIC SUMMARY.

A new brick African Church is being erected in Stockton. It will be neat and plain, one story, about 40 feet square, and cost \$1500.

At the upper reservoir of the Murphy's ditch, some thirty-five miles southeast of the Big Trees, the snow is reported to be twenty-one feet deep on the average.

A beautiful specimen of pure gold was taken out of Masser & Co.'s claim, at Yankee Hill, 11th inst, says the Tuolumne Courier, weighing five and a half ounces, worth about one hundred dollars.

CONTINUED.—Chapter five of our intensely uninteresting storm story, says the Sierra Citizen of the 12th inst, brings us nearly through an entire week of morose but not desperate weather, culminating in a prospect of a thaw, with a rainy climax.

A boat or steamer to be run on a new principle, which the inventor keeps to himself, but which he expects will triumph over any other applied, is being built at Stockton by Mr. Raun, says the Republican. The boat is over thirty feet in length, and of proportionate width.

VISALIA and vicinity give many evident signs of prosperity, as we learn from the Mariposa Star of the 15th inst. The recent rains have been of incalculable service to the farmers and stock-raisers in that region, and broken an era of uncommon prosperity during the coming summer.

We had nearly forgot there was such a place as Crescent City, when this week we received all at once some half-dozen numbers of the Crescent City Herald. The mails only drop in there [not semi-] occasionally, and there is some heavy growling. We concur.

THE Southern Vineyard says the mountain sides of the mining counties, are equal, and it is generally believed superior to its (Los Angeles) and the adjoining counties, for the profitable cultivation of the vine. Sick a pin there for the benefit of somebody up this way.

THE San Diego Herald thinks if the Legislature wish to prohibit the Chinese from working the mines, they can be sent down south, where their labor "vigorously applied in reclaiming the present worthless desert, by means of artesian wells and water ditches, would make it blossom and bloom like the rose." Let them go.

LOS ANGELES is on the improve. The Vineyard says Mr. J. Temple is to erect for the city a City Hall and Market-house, at a cost with the lot, of \$30,000. They are preparing to borrow \$200,000 for other improvements. It is contemplated to introduce water into the city, and upon the valuable lands now useless, to the south and west of the city.

AT Red Bluff the business men are making every preparation for a brisk business season on the opening of spring. The season says many new firms have opened there recently, and thinks the town will continue to improve, so long as it is the shipping point for Northern California and the citizens evince their usual energy.

A rich quartz lead has been discovered on Widow Ripley's, between Kinkade Flat and Algonie, says the Columbia News. Some of the quartz had been crushed and yielded \$250 to the ton. The claim is situated in a small gulch or ravine which has been worked for the last four years as a placer claim, without the owners being aware of the treasure which lay within their grasp.

THE muscle of the mountains is a self-protector; it will carry itself out of all difficulties: so thinks the Sierra Citizen when it records the fact that the severity of the winter compelled many miners to "pack grub" through places impassable to all but stout men and winged creatures. Think of a miner wading through twelve feet of snow with ninety-six pounds of freight on his back! Rayther fat-l-guing?

VARY FAIR, says the Sacramento Bee, is the proposition of some of the owners of the Sutter title, who are, and have cause to be, rejoiced at its final confirmation; that they will dispose of their property on easy terms to the sellers who may be on it; and if the terms cannot be agreed upon, leave it to arbitrators, to be chosen by each party. The Bee thinks nothing can be fairer, and hopes a like spirit may animate all parties.

NEVADA.—Owing to the continued cold weather, but but little mining has lately been done in the upper parts of the country. The snow is gradually settling, but ditches are still frozen up, and water cannot be obtained. A gentleman recently down from Eureka reports that the snow is fifteen feet deep at the head of Lake Company's ditches. The miners will not be able to commence active operations until late, but there is every prospect that the mining season will continue this year much later than usual.

SAN DIEGO.—The Herald of the 5th inst says: The growing crops in this county promise an abundant yield. The refreshing showers which have fallen all through the month of February have had a happy effect in mellowing the soil and expanding the power of cultivation. Our valleys will soon float with the golden waving grain. The grass is springing up luxuriantly, affording excellent pasturage for horses and cattle. Our whole-fishers in the bay have been extremely fortunate lately. A week or so ago, they captured five whales in the space of five days, that will average thirty-five or forty barrels of oil. One hundred men might find profitable employment at whaling in our bay.

MECHANICS' INSTITUTE.—This Association is in a flourishing condition. The library has been considerably augmented lately, and a large number of standard works are now on the way around Cape Horn, for its shelves. Recently the Mineralogical Cabinet has been enriched by the purchase of the collection of Mr. James N. Olney, whose cabinet was one of the best private ones in the State.

THE P. M. S. S. John L. Stephens, Capt. Whiting, arrived yesterday, at noon, bringing New York papers to the 21st, and New Orleans dates to the 27th February, via Tehuantepec. The steamer brings 482 passengers, and 300 tons of merchandise on freight. The John L. Stephens leaves on Monday, the 21st, for Panama.

THE GREAT OVERLAND MAIL continues to arrive regularly twice a week. The stage which left St. Louis February 21st, reached this city on Wednesday morning, at 7 o'clock and 20 minutes, having made the trip in 22 days, 22 hours and 20 minutes. The stage which left St. Louis February 24th, arrived in this city this afternoon, at 3 o'clock and 45 minutes—having made the trip through in 22 days 6 hours and 45 minutes.

U. S. COINAGE MINT.—The amount of coinage last week, ending March 11th, was \$107,400, in double eagles, the amount deposited in gold dust, was \$175,000. It is stated that orders have been received from the proper department by the Superintendent of the Mint, to proceed to the coinage of dollars, dimes and half dimes.

## Books Received.

We have received by the last steamer, from friends, contributors, authors, and publishers, the following works: The Annual Report of the Massachusetts Board of Agriculture, together with the Report of the Committees appointed to visit the several counties, with Statistical Tables, containing the Report of the Finances of the several counties, from C. L. Flint, Esq., the able and energetic Secretary of the Board, by whose interest and zeal for agriculture so many valuable reports have been fully prepared. We have also Transactions of the Massachusetts Society for the promotion of Agriculture, number one, new series—a valuable work, containing the Act of Incorporation, dating back to the year 1792; also, an account of the first Cattle Show held at Brighton in 1816 (the first in New England), with other reports of great interest. This work was kindly sent us by C. L. Flint, Esq.

We received, from the same source, the Transactions of the Essex Agricultural Society, an interesting document of 225 pages; it contains Reports of Exhibitions and Addresses before that Society, with names of contributors and premiums awarded.

Milk Cows and Dairy Farming, is the title of a handsome work of over 400 pages, received from the author. This book is handsomely bound, full of plates illustrating all the various breeds of stock for the dairy, and showing the anatomy of the cow, as well as everything that will aid the dairyman in the breeds and management of his stock, the mode of selecting good cows, their food, diseases, the culture of forage-plants, and a valuable fund of knowledge, that should be made familiar to every dairyman; and this book will do it. It is only necessary to say this book has been prepared by C. L. Flint, Esq., the able Secretary of the Massachusetts Board of Agriculture, to establish for it a fame and secure it a ready sale.

We are indebted to Hon. C. L. Scott, our Representative at Washington, for sealed tins of Cork-oak Acorns, for which he has our thanks; also, for copies of Patent Office Reports for 1857. The issue of this year has marks of progress in all the various departments, and in the matter reported upon.

Dr. C. F. Winslow, formerly a citizen of this city, and known to science, kindly sent us the Statistics of American Agriculture, being the Introductory Address of John Jay, Esq., before the American Geographical and Statistical Society, delivered at New York, on the organization of the society. This volume of eighty pages is full of most valuable statistics not before compiled or made known; and we esteem ourselves fortunate in being thus early in possession of such a work.

From all the above works we shall lay before our readers much valuable information, and feel confident we can deeply interest them.

Our supply of periodicals—Harper's, Atlantic Monthly, Home Magazine, and Little Pilgrim, having arrived, our clubs will be supplied forthwith. By referring to our prospectus, our friends can see the offer we make them. Now is the time to secure them.

The Democratic Age is a new monthly received by us from the publishers at New York. A very promising debut is made by the Age, and from the contributors we see no reason why it should not live an age. It is edited by C. Edwards Lester, Esq., and published by R. Edwards & Co., Park Row, at \$2 50 per annum.

CALIFORNIA PAIL AND TUB FACTORY.—The California Factory for Tubs and Pails is now in very successful operation, and is winning golden opinions, not only from merchants and purchasers themselves, but from those families that use them. One great fact in their favor is, that they are fresh and light and fit for immediate use; whereas, imported stock is obliged to be put in order, by soaking, before using. In fact, the stock is not so good, nor are they so well made. Does any one doubt this, let them go down to the Factory and see them made. The process is very interesting; and it would be a most pleasant and instructive sight for children, to see them manufactured, or call at the warehouse, on Battery street, and look at the products of the Factory. Another prominent and important fact, is the brass-hooped pails can be sold, at wholesale, for eight dollars per dozen; while the imported article costs twelve dollars, and they are not so good. Other qualities of excellent pails are furnished at five dollars per dozen. The great desideratum of every good citizen should be, how shall I sustain home manufactures? While our legislators should ask themselves, is it just and right that our mechanics should be taxed; should be obliged to take out a license to make, and another to sell, their own manufactured wares? We believe it to be an unconstitutional law for this county to enforce; and we hope some good mechanic, in our present Legislature, will attend to this matter at once. Where is Banks?

GRAVES AND WILLIAMS.—In looking into the large tree sales-room of Messrs. Graves & Williams, on Merchant street, we could not but notice that large quantities had been sold. From Messrs. G. & W. we learned that their sales had nearly closed their trees out. They tell us they have about five hundred trees, of really valuable sorts, which they will dispose of at very low rates. Now is your time and G. & W.'s place.

HOW TO DO GOOD AND GET PAID FOR IT.—Take an Agency for our Publications. The terms are such, there can be no possibility of loss. Every Family will be glad to obtain some of them. For particulars, address FOWLER & WELLS, No. 308 Broadway, New York.

BOY FOR A FARMER.—A place is wanted with some good Farmer, for an active and intelligent BOY, about nine years of age. Any person that would like to adopt such a Boy, can learn of an opportunity, by applying at the Farmer Office.

We are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerrotypes. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "oro."

My Ambrotypes were not exhibited at the last Fair in this city. Please call and see the celebrated Premium Ambrotypes which my neighbor brings so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poor article.

R. H. VANCE, Cor. e. Montgomery and Sacramento streets.

## University of the Pacific.

We have received a pamphlet, styled the "Announcement of the Medical Department of the University of the Pacific," giving the list of the Board of Trustees, with the course of Medical Lectures and by whom to be given. The regular course before the Institute commences on the first Monday in May, and continues eighteen weeks.

One of the Professors of this Institute delivered a Lecture in the Assembly Hall, at Sacramento, and we feel it our duty to copy, from the Sacramento journals, what is said in behalf of the College; and, when we reflect upon the importance of the subject upon which the lecturer spoke, we know we shall be approved for urging, all in our power, the development of the resources of our State in the way urged by the lecturer. We copy the following notice of the Medical Department from the Bee:

"The Medical Department of the University of the Pacific has been recently started in San Francisco, with a full corps of professors; and it is but right that California, in accordance with the custom of Eastern States, should encourage this first effort to build up a Medical College, where persons can secure the advantages of a thorough course of lectures and a degree, without the expense of a visit to the East."

With regard to the lecture of Professor Rowell, the Standard has the following:

"The Hall of the Assembly was well filled to listen to the lecture, and we express but the universal sentiment when we say that Professor Rowell acquitted himself in a masterly manner. The lecture occupied one hour, and at its close he was warmly applauded. The subject was chemistry applied to the development of the resources of California. The lecturer took a rapid survey of the resources of our State—mineral and vegetable, agricultural and mining. He showed the necessity of analyzing the medicinal plants on the earth's surface, and the air and water. He also showed the danger arising from the adulterations of medicines, liquors, milk and bread, and the importance of chemical knowledge to mining, agriculture, manufactures and the mechanic arts. Much valuable information was given upon the minerals of California, especially those which are comparatively undeveloped. We have seldom listened to a lecture more useful and entertaining than that of Dr. Rowell; and the attention with which he was listened to by the legislators, throughout its entire delivery, was a deserved tribute to the ability and eloquence of the speaker."

IMMENSE GRAIN CROP.—From all the information we can gather from various portions of the State we have reason to believe that there will be an increase of the number of acres in wheat, the present season, of nearly or quite fifty per cent. We do not think we shall need to import forty thousand barrels of flour another year.

## AGRICULTURAL STORE.

J. D. ARTHUR. W. N. ARTHUR.

## J. D. ARTHUR &amp; SON,

IMPORTERS AND JOBBERS OF

## AGRICULTURAL IMPLEMENTS

Washington Street, near Davis,

HAVE JUST RECEIVED by late arrivals from the East, and will continue to receive

A LARGE AND VARIED ASSORTMENT OF

## AGRICULTURAL GOODS,

Among which are the following, which will be sold at the

## LOWEST MARKET RATES.

## Reapers &amp; Combined Machines,

OF ALL THE VARIOUS STYLES:

The Celebrated New York Reaper, cutting from 6 1/2 to 7 1/2 feet swath.

Burrall's, Manny's, Beloit's, Atkins', and all the various styles.

## Pitt's Thrashers, Hall's Thrashers, etc., etc.

The subscribers having purchased and made arrangements for a full supply of Agricultural Implements in New York and Eastern, they will be

In Constant Receipt of Fresh Goods,

well adapted to this market, by clipper ships arriving during the season, which we can afford, and

WILL SELL ON AS FAVORABLE TERMS,

As any other similar establishment on the Pacific Coast.

Farmers and dealers will find it to their interest to call and see the subscribers, at their Agricultural Warehouses.

JOHN D. ARTHUR & SON,

No. 3, 4 and 5 Washington Street, between Front and Davis, San Francisco.

## WOOL, HIDES, and SKINS,

## Purchased

AT THE HIGHEST MARKET RATES,

## LONING &amp; FUERSTEIN,

50 FRONT STREET.

WE ARE ALSO PREPARED to make liberal Cash Advances on WOOL shipped to our friends in New York. Every lot of Wool entrusted to us, under advances, will be shipped under a separate mark. For further information, apply to us as soon as possible.

## CALIFORNIA TUBS,

AND

## California Pails!

## CALIFORNIA WINES,

AND

## California Ales!

## COLLINS WADHAMS,

WOULD SAY to those interested in the welfare of California, which is no more than self-interest, to call at

112 Battery Street,

SAN FRANCISCO,

And see what "can be done in California," before sending their millions to some far-off country, never to return.

CALIFORNIA BUTTER and CALIFORNIA PAIRS are better and cheaper, in the end. Consider it well.

SLEEP! SLEEP! SLEEP!

"To each and all, a fair good night, And rosy dreams and slumbers light."

Sleep! Sleep! Sleep! Rest! Rest! Rest!

Who is the man who doth keep A mattress the finest and best

Sleep! Sleep! Sleep! Rest that refreshes most true!

The rest that, while sleeping, our health doth renew, Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep! Rest! Rest! Rest!

Economy tells us to buy and to keep The mattress that is cheapest and best.

Sleep! Sleep! Sleep! On the mattress from JACOB SCHRIEBER!

If bachelors live single, then life will not jingle Till they are married and purchase one wider!

So come to J. SCHRIEBER'S, they go, where, where, Those famous mattresses made out of PULU!

J. SCHRIEBER, Jackson street, near Hotel International.

## THE HOME OF BEAUTY.

"Creative Genius! from thy hand What shapes of order, beauty, rise, When waves thy potent, mystic wand To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle, And here our gods; But they are mortal.

Around these footsteps halls The good, the great, the living and the dead, And yet they speak—speak all:

"We cannot meet the speaking eye, But we are known, and, knowing, Pain would hold sweet converse!"

But as we gaze upon their closed life, We know that they are silent While they speak, and gaze on us.

Creative Genius! raise thy wand And gather round us where we stand Within these halls, a living throng: That we may raise a glorious song To all who set the noble part, And tribute give to every art.

Creative Genius! here's thy home! And here shall wordings thousands come; Here spend a season free from care, To worship the beautiful, good, and fair, For it is not a freeman's duty, To worship at the shrine of Beauty!

Behold these flowers that gem the land, These little children in groups they stand, While here and there, like angels, see They're smiling on their mother's knee.

Men, in their prime, each like a brother, Joined hand in hand they're linked together, Here, too, the aged, the noblest show, They, hand in hand, together go.

Young men and maidens, free from care, Single or plighted, like jewels rare, Are gathered round this gorgeous Hall, This Home of Beauty, in truth we call.

Creative Genius, raise thy wand! We now would ask, O let him stand Before us; him who all this beauty planned. Behold, cries Genius, quickly glance! Enough! the artist, R. H. VANCE!

Daguerrean Gallery, Corner Sacramento and Montgomery streets.

THE Oxygentated Bitters.—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Costive-ness, loss of Appetite, Fever and Ague, Heart Burn, Water Brash, Acidity, Sea Sickness, Scoury, Nausea, Headache, Enu-riety, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the only safe, certain and sovereign specific for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and in their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no poison—no noxious drug; in their nature tonic, not stimulating; retaining their virtues in any climate; they are a "combination and a form of medicine" which knows no rival in exterminating disease and restoring the system to its pristine vigor and health. No matter of how long standing, or however induced or chronic in its character, the disease may be; no matter that it has baffled the skill of the physician, and resisted the efforts of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land.

For sale by—BARNES MORRILL, HENRY JOHNSON & Co., and DRUGGISTS & Co., San Francisco; CHAS. MORRILL and H. H. MEDICINE & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.

For sale by—BARNES MORRILL, HENRY JOHNSON & Co., and DRUGGISTS & Co., San Francisco; CHAS. MORRILL and H. H. MEDICINE & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere.

GREYHOUNDS.

SEVERAL FINE FULL-BLOOD GREYHOUND PUPS for sale. Apply at Farmer office, 130 Washington street (opposite).

## HOTEL INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the Attention of the Travelling Public, and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present Lessee and Managers,

A. S. HALEY, JNO. J. HALEY, and E. R. ROBINSON,

with a delicious and not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT, THE PRINCIPAL THOROUGFARES, THE FASHIONABLE PROMENADES, AND STRAIGHT LANDING; thus rendering it at all times the most

DESIRABLE STOPPING-PLACE For Families or Single Gentlemen, during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, Lessee.

ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

BANKERS, ETC.

MARK BRUMAGIM & CO., BANKERS,

No. 100 Montgomery street, SAN FRANCISCO.....CALIFORNIA.

Sight Bills

Bank of Commerce, - - - - Boston.

SIGHT AND TIME BILLS

American Exchange Bank, New York,

Available in the Principal Cities of the Union and the Canadas.

One-half per cent per Month Interest Allowed on our Certificates of Deposit, payable at five days' notice.

Parties desiring to bring funds to California can do so to advantage by depositing to our credit with the American Exchange Bank, New York, for which a certificate will be given for their credit with us in San Francisco. We will pay the same on presentation, together with the two per cent premium.

A. L. EDWARDS & CO., NEW STOCK OF CHOICE

GROCERIES,

a fine assortment of

Choice Family Groceries,

which they offer at the lowest rates:

FLOUR—Superior brands of domestic.

CORN-MEAL—Fresh, in 10, 25 and 50-lb sacks.

BUCKWHEAT-MEAL—Hominy, coarse and fine, Corn-starch

## Ladies' Department.

MINNIE WALDON.

At her window, Minnie Waldon,  
As the dying day declines,  
Pushes back her silken tresses,  
And divides the leafy vines:

And she gazes down the pathway,  
Through the clover in the lane,  
And she watches, and she listens,  
For the coming of her swain.

"For he promised, ah! he promised!"  
Murm'ring thus she list'ning stands,  
While the sun is sinking slowly  
Into her golden hands.

"For he promised, ah! he promised!"  
He would meet me here again,  
And I've nightly watched and listened  
For his footstep in the lane;

"He will come; they need not tell me  
He was false and full of crimes;  
For he told me that he loved me,  
And he kissed me many times;

"And he said that he would meet me  
At the holy hour of even,  
When the August sun was sinking  
On his crimson couch of heaven;

"Thus we parted; it was yonder  
By that spreading sycamore,"  
And the summer waned and wasted,  
But he came not—nevermore!

Pale and wan, but very lovely,  
In the waning golden light,  
She prolongs her faithful vigils  
Far into the August night.

And as oft as summer cometh,  
With her rich luxuriant train,  
Leafy trees and forest flowers,  
And ripe fields of golden grain,

Minnie Waldon, at her window  
As the dying day declines,  
Pushes back her silken tresses  
And divides the leafy vines,

And repeats the scene of parting  
Near the spreading sycamore,  
While she watches, and she listens,  
But he came not—nevermore!

[Mountain Messenger.]

## Pictures—Living Pictures.

[Artists are not all alike; all have not the same eye for beauty; no two see alike. All do not use the same materials, or paint with the same brush or pencil. It is a great art to draw or paint well. Some artists bring the figures in their pictures to the foreground boldly; while others, having an eye to perspective, view them at a distance, or so paint that far distant scenes are brought near at hand. Our correspondent "Irene" is an artist. There are many fine points in the following. Pictures of truth, feeling, and beauty are blended. We hope Irene will often send us "pictures." They shall have a setting, and form a part in the collections of the fine galleries of the Farmer.]

PICTURES everywhere! light and shade moving through the earth; now in unison, now startling by their contrast, as with unequal pen they gild a scene "most passing fair," or shade it dark as night. Mysteriously beautiful are these variations, springing beneath the artistic touch that first from "chaos bade creation rise," and breathed itself in subtle meaning through the work. Nature, animate, inanimate; above, around, beneath; living tableaux d'operey set alone upon eternal plates; joyous innocence, hollow-eyed wail, or rotten crime, alike developed. Pen or imagination have not equaled the reality.

I have looked upon one, lovely in her christian womanhood, dignified in manner, quiet in love, patient and hopeful in endurance; words of kindness were upon her lips, and harshness found no dwelling in her heart; fair children clustered around her knee, and gently she strove to lead them in the "paths of righteousness" and to the "green pastures," and beside the "still waters" of eternal peace. Years passed, and she was calmly laid away to rest; the little group scattered to go forth into the world, a sacred memory in their hearts instigating to high resolves and noble purposes; all save one, upon whom the mother's eyes had rested most earnestly and tenderly, and of whom the heart had often said, in yearning tones, "my proud boy!" Dark were the stains that marred his life. The dust, mold and rubbish of impurity were gathered upon his heart covering, hiding the holy image, too deeply laid, too angelic in its beauty, to be obliterated. Occasionally the summer breeze disturbed the refuse about it, and the strong man looked to bow his heart in anguish, as contrasted pictures met his gaze. I saw a bride, fair as her own dreams that Love's young lips had whispered, and hope had almost verified, led to the altar by one to whom she had trusted all her heart's affection; noble he seemed, manly, and proud, and the thought of clouds seemed mockery; yet every thought was all of earth; no incense-loving homage rose from the created to the Creator.

A brief happiness ensued, and then coldness and neglect succeeded kindness and affection. Desolation came to the hearth; want and penury took the place of plenty; wasting disease preyed upon her, and welcoming death as a glad relief, at last it came. A shade of life!

Again I listened to words of truth, as they fell from the lips of an aged man. His hair had whitened by time; lines of thought and wisdom were upon his brow; God's light and love beamed from his eyes, and Heaven's calmness was penciled about his mouth. Wherever he went, they blessed him; children hailed him as their friend; the poor watched for his coming with gratitude, and all revered him as their father. And now, as he stood before us, and in deep, tremulous tones, and soul-engrossing earnestness spoke of the depth, the breadth, the richness and fulness of God's love, I followed him in silent awe, and when with clasped hands and a child's simplicity he prayed, "Our Father which art in Heaven," fools quaked and atheists believed. His whole being bore the impress of God, so plainly delineated that none who saw could doubt of the soul-elevating principles which actuated him. It is thus, then, I said, that amid the pros and cons of life we rule our destiny.

This noble intellect, disciplined in wisdom and truth; the heart schooled in self-control, and generous feeling, both beautified and adorned by the presence of hope and purity, and all made subservient to the interests of a lofty purpose, is the highest perfection of a human nature. Such, were it our aim to be, might lessen the darkness of many a deeply shaded background. IRENE.

## Conscience.

[We feel certain our readers will hail with much real pleasure the voice of our gifted correspondent Edith. Her very graphic and truthful figures will be quickly recognized as "great truths," and we hope her present communication will call out others of our noble band, who will urge home the principles presented in this glowing picture. Although the snows and ice of a severe winter may surround the home of Edith, light and truth will ever keep her heart warm and her hand and pen ready to kindle a fire in aid of every good work. P. S. We hope now that Spring has returned, and the snows and ice are melting away in the mountains. We shall hear often from Edith. We have the promise.]

Conscience is, to the world, what the sense of feeling is to the body, a sentinel to warn us against the dangers of breaking those moral laws which would endanger or destroy our peace and happiness, as the feelings warn, and restrain us from violating the physical laws by which the life and health of the body are preserved. Conscience sits as judge among the moral faculties, while the reasoning powers act as counselors at the bar of the understanding, and as these are often found arguing on the wrong side as well as on the right, the conscience is sometimes bewildered and may become so perverted that its decisions are not only erroneous, but dangerous and pernicious.

Mankind, as if the simple laws of God were not enough for their guidance, have ever been heaping upon themselves burdens too great to be borne, and rendering their moral duties vague and obscure. As this life is but the first stage of man's existence, the Creator has enjoined upon him but few moral laws, founded in his very nature, for the promotion of his happiness here, and to assist in the development of his spiritual nature, of which, Conscience is the "Urim and Thummim;" and if consulted in the spirit of truth, it will prove a sure guide to the paths of wisdom and virtue. The question should not be, what will the world say? but, what saith the spirit? For many have thus tortured themselves with a spurious conscience, which did not accuse them before God or to their own souls, but only in sight of their fellow men; and by this criterion may the false be known from the true. Many, like the Pharisees of old, have so warped and distorted this principle within them, that they think to do God service by acts which are contrary to right, reason, and the Divine commands.

Conscience, being the most susceptible faculty of the soul, has been so overburdened with different doctrines and religious creeds, that were it not born anew and unsullied in the bosom of every one that comes into the world, it would long since have ceased to be the umpire of right and wrong. Freedom of conscience has been the prize contended for, in the great struggle between might and right, and that of mind and matter, in which both the souls and bodies of men have been called to fight and to suffer; and although right and mind may now be said to be triumphant, yet, some of the holiest feelings and emotions of the soul are still kept down and chained by a worldly, spurious Conscience, caused by the false reasoning of little minds, and the fountains of the heart which should send forth gladdening streams over the desert of life, are forced to become stagnant pools, producing too often but poisonous weeds and noxious vapors.

There is a wealth of affection in the human heart, found most abundantly in those who possess least of this world's goods, and, having no gold to give, the worldly-minded charitable turn away, nor ask if they have ought else to bestow, when there is a hunger of the heart as well as body. But the time will come when a smile, a tear, a kind word, will be prized above gold, "and the blessing of those ready to perish," a reward above price.

Whenever the conscience is made to suffer wrong by the unjust judgments and opinions of others, the reason seeks to justify wrong acts as a just retaliation upon those who have set up the false standard of greatness or morals. So long as the power and influence of men are estimated by their wealth, just so long will there be found those who will resort to dishonest and even criminal means to obtain it; and it is this unjustifiable estimate of the value of riches that tempts men to commit those outrages of theft and robberies, which they would not have done, if in their poverty they had been looked upon as the equal of the rich man; and the murderer is emboldened to commit crimes of deepest dye, since he knows that gold can turn the sword of justice aside, though it may fall with redoubled weight upon the less guilty, but poor and friendless victim.

The instinct of human nature is as unerring as that of the inferior animals, nor can the false logic of reason swerve it from its purpose, which by the light and power of truth will guide us back to God, and obedience to the laws of harmony. How long shall false opinions and false greatness enslave man's best nature? When shall the soul cease to bow down to sordid dust, "the greater to the less?" When will there be a standard of true worth that shall call forth the exercise of man's moral powers to obtain, instead of being a temptation to his evil passions? O, ye, that sit in judgment upon the acts of your fellow men, reflect, if you yourselves have not cast a stumbling stone in the way of your erring brother; or, seeing it there, have refused to lift your hand in removing it from his path.

Let us have faith in humanity, and exercise charity towards all, for there is no human being but has a germ of goodness within him, and this should be fostered and nourished into vigorous growth, and not, as is too often the case, trampled upon and crushed out of the heart, by those no better by nature, but whose wealth and influence have shielded them from censure when they may have erred, and who never felt the bitter

pangs of poverty made bitter still by the cold and scornful looks the poor man meets on every hand. There will be a time—not far distant—when truth and goodness will be the standard of man's real greatness, and wealth will be looked upon only as the means of increasing his power of doing good to others, and Conscience will then lay aside its chastening rod and smile approvingly upon man's noble and generous deeds, and the dove of peace will fold its soft wings in his bosom and there remain forever. EDITH MONTRESSOR.

March 1st, 1859.

## Education of Women.

[From Gov. Wimer's Message to the Legislature of Michigan for 1859.]

"There is one subject, however, connected with our system of public instruction, that I cannot pass by in silence. It is the great inequality of the workings of this system as applied to the women of our State. We allow them to attend our primary schools and our normal school. This, practically, is the extent. Although the portals of our University at Ann Arbor are not by law closed against them, yet no female has ever been admitted as a pupil within its walls. Practically, they are excluded, and it makes but little difference whether this exclusion arises from legislative enactment, or from the construction of society; the effect in either case is the same. We think it necessary to bestow upon our brothers and our sons a high order of instruction, while our sisters and our daughters must be content with such an one as can be obtained from a primary school. This is all wrong. Our educational fund is the common property of both sexes, and both should share alike in its exercise. The State has a deep interest in the intellectual improvement of her daughters.

"The mother moulds the mind of her child and shapes its destinies by the teachings bestowed upon its youthful intellect. How important, then, for the welfare of our State, that our daughters should be prepared by education to perform well their part upon the stage of life. They are, intellectually, our equals. There was a time when the world looked upon them as 'man's inferior,' but that day has long since passed. It is your duty to give to them the same means of obtaining a high order of education that you have already bestowed upon the sterner sex, and this boon should be presented in the most acceptable form. I therefore recommend, that you take such steps as your wisdom may dictate, towards the establishment of a separate female department of learning at Ann Arbor, connected with and under the control of the University, wherein the daughters of our citizens may be educated in all the higher branches of learning. In order to more effectually accomplish this great object, it may become necessary to erect a new edifice, disconnected from any of the present University buildings."

There has been much discussion during the past year or two about the propriety of admitting women as pupils on an equality with men in our higher institutions of learning (remarks the Michigan Farmer), and we are glad that our incoming Executive has thought it a matter of sufficient importance to recommend it for legislative action. No reasonable objection, that we are aware of, has ever been urged against receiving women into Universities and Colleges, and the most strenuously advocated unreasonable one seems to be "that they are not fit places for young ladies to be in." The only sensible reply that can be given to such an objection is, "make them fit." And this we doubt not they soon will be, if the doors are once opened. The order, harmony and complete success of the higher order of Union Schools, and especially of the State Normal School, are evidences that boys and girls can go hand in hand, with safety and credit to themselves and honor to their teachers, till they get at least half-way up the hill of science. Why may they not go further? Why not to the top, if they have strength and power to climb so high? There is no good reason why they may not, and no reason why they have not, except that it has been customary for them to stop at certain points, and such slaves to custom are we that nothing less than an earthquake shock can startle us out of the old paths, or turn our eyes to the new ones opening before us. As a class, woman's progress has always been slower than man's; whether owing to her oppression or her lack of ambition, or both together, we will not now attempt to say. It is very evident, however, that during the past quarter of a century a great change has been going on; and, in spite of all the froth and foam and ridiculous ranting of some of the excited leaders, a sure and permanent good is growing out of it. There was need of some unusual demonstrations, a Snow-storm of cold, cutting truths now and then, or something of the like, to draw public attention, to force people to open their eyes and ears, and to think. They have been looking around and seeing, hearing, and thinking; and now they begin to act about working. Women, finding out that they are good for something besides playthings, are asking for work, for places in business, for room in the ranks of scientific minds, for professorships, for all honorable and elevating employments suited to their sex and nature. And men, seeing that women can take part in the active duties of life, are beginning also to see the necessity of giving them such qualifications as they find needful for themselves. This is fair and right, and we hope the daughters of Michigan may have cause to thank the Executive for this move in their behalf, and that, if the opening should be made, they may prove themselves capable of profiting by the advantages offered.

**FEMALE POPULARITY.**—If a woman wishes to be a general favorite with her female acquaintances, she has only to permit them to outdress her. The more intent they are on the gossamer and the decorations they totally disregard them. Let any look amongst his or her friends, and see if she who is most beloved, is not one of less pretension to fancy than those around her.

A lady was taken by surprise in Mississippi, the other day, says the Revue. At least we judge so from the fact that John A. Surridge was married to Sallie A. Stock. They will probably have little Surridge occasionally, to keep up the Stock.

**HOLLOWAY'S OINTMENT.**—For all the external injuries to which mechanics and working-men, travelers and engineers, and others are liable, Holloway's Ointment is the surest and most rapid remedy. It relieves pain and reduces outward inflammation when all other means fail.

Sold at the manufactory, No. 80 Maiden Lane, New York, and by all druggists, at 25c, 50c, and \$1 per box.

**HAVE YOU A COUGH, Cold, pain in the Chest, or some of the "incurable" symptoms of Consumption?** Know that relief is at hand in Wistar's Balsam of Wild Cherry.

Buy none unless it has the written signature of "J. B. Wistar" on the wrapper.

## POLAR OIL.

30,000 GALLONS

REFINED POLAR OIL,

In Barrels and Cases,

23-3m San Francisco

## APPEAL OF THE

Ladies' Mount Vernon Association,

TO THE PEOPLE OF THE STATE OF CALIFORNIA.

A recent appointment by Miss Ann Pamela Cunningham, Regent of the "Mount Vernon Ladies' Association of the Union," has placed on the undersigned, the duty and the privilege of delivering before the people of this State, the purposes of the Association.

An Act of Incorporation from the State of Virginia authorizes the Association "to purchase, hold, and improve two hundred acres of Mount Vernon, including the mansion as well as the tomb of George Washington," and to receive a deed in fee simple, and to exercise full power over the use and management of the same.

Under this charter, a constitution has been adopted, which vests the power of management in a Regent and Vice Regent, selected one from each State of the Union.

In April, 1858, under the advice of legal gentlemen, a contract was executed for the purchase of Mount Vernon for \$300,000, of which \$18,000 was to be paid cash, \$57,000 on the 1st January, 1859, and the balance in three equal instalments of \$41,566 66 each, with interest from the date of the contract, payable on 23d February, 1860, 1861, 1862.

Until payment in full, the proprietor is to retain possession, but such payment may be made at any time.

The cash payment was made, and the gratifying intelligence has lately reached us, that the instalment of \$57,000 was duly met; thus securing the contract, which allows payments to be made, in sums of not less than \$5000, as soon as collected, thereby arresting the accrual of interest. All efforts, therefore, are now turned to the collection of funds for the payment of the deferred instalments at the earliest possible day, thereby saving a large amount of interest, and realizing the cherished hope of at once obtaining possession of Mount Vernon.

To this noble cause, the Women of the Union, deserting for a season the seclusion of domestic life, have brought their talents and all their energies. Amidst the discord of sectional strife, they bid us gather around the tomb of Washington as children of a common heritage, there recall his moderation of spirit and pure patriotism, and lay to heart the solemn warnings of his last public words. They know, that standing on that hallowed spot, the pilgrims gathered from the wide expanse of the Republic, can feel but one sentiment—reverence for his teachings, and devotion to the Union he so loved.

Men of high station and intellect (among whom Everett stands preeminent) are lending their influence and their eloquence to the cause. In twenty-one States of the Union, the good work goes bravely on, and California is now invited to do her part. Youngest of her sisters, she yields to none in reverence for the name of Washington and devotion to the Union. Animated then by these sentiments and by a just State pride, let her people bring their offerings to this common altar of patriotism. Shall the gold of her glittering soil be poured alone into the lap of Commerce, and none be devoted to preserve and guard with sacred care the Groves of Mount Vernon? Let all then with generous rivalry, to show that California lacks not the heart to sympathize, nor the hand to help in this work of patriotism.

To the Women of California, this appeal is especially made. Your Sisters of the East have assumed this honorable duty, and claim your zealous cooperation. Our State will do her part liberally, if you resolutely take the matter in hand. And you, therefore, will it depend whether she shall respond to the call.

Although contributions to any amount are solicited, yet the price of membership is but One Dollar. Concerted and systematic action, therefore, must be adopted to canvass the State from the Sierras to the Pacific. The duty of each organization devolves on the Vice Regent, and she proposes the following plan as simple and also effective, if seconded by your hearty cooperation.

Lady Managers will be selected, one or more, for each city, town, village, and mining camp in the State, who will appoint Assistant, issue to them Credentials authorizing them to receive contributions and enroll members. These assistants will report monthly to the Lady Managers appointing them. The Vice Regent will complete a list of names enrolled, and the amounts received, and submit the same to the Regent, who will properly. Monthly the Vice Regent will forward to the Regent, the sums received and a complete list of contributors, whose names will be recorded in volumes to be preserved at Mount Vernon, in perpetual memory of their tribute to this noble cause.

An Advisory Committee of Gentlemen has been selected, and their names are hereto appended.

Local Managers will be addressed: Mrs. Magdalen G. Blanding, Vice Regent for California, and forwarded through Wells, Fargo & Company's Express, which has generously offered to convey them free of charge. Office of the Association, No. 1, Lucas, Turner & Co's building, San Francisco.

## MAGDALEN G. BLANDING,

Vice Regent for California.

We, the undersigned, take great pleasure in uniting with Mrs. Blanding in commending to our fellow citizens the cause which has been committed to her charge, and will gladly cooperate with her in securing its success.

Wm. Ingraham, R. M. H. McAllister, Harry I. Thornton, Ogden Hoffman, Belle Peyton, Louis Melane, Edward Stanley, T. W. Freedom, E. D. Baker, Edward J. Fringle, F. P. Tracy, H. W. Hallack.

## ADVISORY COMMITTEE.

His Excellency John R. Weller, Governor; Hon. Joseph W. Walker, do; Hon. W. C. Stratton, do; Hon. Stephen J. Field, do; Hon. M. H. McAllister, San Francisco; Hon. Oden Hoffman, do; Hon. S. K. Ogler, Los Angeles; Right Rev. Bishop Rip, San Francisco; Right Rev. Bishop Altemeyer, do; Hon. John C. Fremont, Mariposa; Hon. Henry I. Thornton, San Francisco; Hon. Edward Stanley, do; Hon. GOOD RELIABLE SEEDS, at as low a price as they

would have to pay for worthless trash.

Have also on hand and for sale, a very desirable

## Southern Story.

Twenty years ago, it was the custom in north-western Georgia, as indeed it was throughout the southwest, for dry-goods dealers to keep a barrel of "spirits" in the back room, and to treat liberal customers to a glass whenever desired.

Fillins & Dewberry were such dealers in one of the small towns indicated; and they had for a customer a clever, rollicking old fellow, named Joe Denny, who drank whisky in preference to water always, and whose wife was "flesh of his flesh" in that particular. The old couple would come in town to trade frequently, and quite freely imbibe the spirits in the back room of the dealers who have named.

On one occasion both the old man and old woman continued their potations inordinately; and as Fillins observed that his goods went better the drunker the old woman became, he pressed her to drink.

At last she refused, unless he would sweeten it with a little "store sugar." Fillins indulged her, and when the old man could scarcely mount his horse, and the good wife had actually been lifted and placed on the pillow behind him. Happily she learned one way and her husband the other, so that the gravitating point was between them; and she clung to him instinctively and passed out of the village safely.

Before reaching their home, however, they had to cross a small creek, and when the horse stepped in to drink, the old lady having reached unconsciousness, released her hold and quietly lapsed into the stream below.

Occupied with his thoughts the old man did not perceive his loss, but jogged slowly homeward. Arrived there the children inquired anxiously for "mammy," but the old man could only say that she had been on the "critter," and the critter hadn't kicked up any time; so he couldn't say where she must be, and threw himself stupid on the bed. Girls and boys flew along the road the old man had come, yelling "mammy! mammy!" but of course no mammy responded.

When they arrived at the creek the oldest girl shouted.

"Yonder she is, sitting down in the creek!" And there she was seated comfortably in the water, which came nearly up to her mouth. As she swayed back and forth, now yielding to the impetuosity of the stream, and now resisting it with some success, the muddy fluid occasionally wet her lips, and each time it did so she would faintly exclaim, with a grim effort to smile, "Not a drop more, Mr. Fillins, 'thout it's sweetened."

And it is to this romantic little incident in the life of the venerable Mrs. Joe Denny, that we are indebted for one of our most popular colloquial phrases.

The Joy of Expression.—It is pleasant to hear our own thought leaping forth from the silent caverns of the soul, and asserting its vitality to many auditors. The sensitive and modest feel a thrill of exultation on such an occasion, for they are sure of sympathy, and their secret thought becomes valuable to them the instant it finds expression. It lived in their minds before, molding and influencing the character; but, like the lovely conception of the painter or the sculptor, it needed to be bodied forth—it must glow in the warm life of the one, or stand out a palpable presence like the marble forms of the other, ere it could command sympathy and wield external power. Language is truly the magician's spell, that can summon from the still retreats of the soul all her sentiments, emotions and ideas, like "spirits from the vasty deep;" that can send them on their subtle mission from mind to mind, and from heart to heart, connecting all minds and hearts by the spiral electricity of thought, whose vibrations extend through the past and "wander through eternity."—[Hydraulic Press.

Society.—How beautiful it is ordered that, as many thousands work for one, so must every individual bring his labor to make the whole! The highest is not to despise the lowest, nor the lowest to envy the highest; each must live in all, and by all. Who will not work, neither shall he eat. So God has ordered that men, being in need of each other, should learn to love each other and bear each other's burthens.

A Country Editor, speaking of a member of the New York Assembly, says: "The first year he was so conscientious as to utterly refuse his allotment of stealings, in the shape of books and stationery. The next year he did not hesitate, but came home unable to tell the truth under the most favorable circumstances."

A German paper says the quickest rate of locomotion, after the electric spark, light, sound, and a cannon ball, is ascertained to be the flight of a swallow. One of these birds, liberated at Ghent, made its way to its nest at Antwerp, in twelve and a-half minutes, going at the rate of four and a-half miles in a minute.

"Tuff, why am you like de cedar?" "I gub's it up, Sam, I can't tell you." "Caze you stays green both summer and winter?"

**McLAUGHLIN & DAKIN,**  
Purchasing and Forwarding  
**COMMISSION AGENTS,**  
FOR  
Purchasing and Forwarding Goods and Merchandise,  
OF EVERY DESCRIPTION,  
To all Parties residing in the interior of California,  
and Oregon and Washington Territories.

HAVING LIVED AND CARRIED ON BUSINESS IN the Mountains of California for the last seven years, and learning the necessity of every business man having an Agent in San Francisco, through whom, in one order, he may readily procure any articles he might want, at less expense and trouble than the present facilities afford; therefore, we have now established a Commission Agency, and hold ourselves in readiness to attend to and fill all orders that may be sent to us with promptness and great care, and at as low rates as the times and the market will allow.

We propose purchasing and forwarding all kinds of Merchandise, To Blacksmiths: Coal, Iron, Steel, etc. To Wheelwrights: Hardwood Plank, Sashes, Hubs, Felloes, and all their different kinds of Stock. To Farmers: Tools, Trunks, Provisions, etc. To the Miner: Machinery, Tools, and Implements. To the Trader: All the different kinds of Goods he may require.

Mechanics and others may forward their orders, and have any kind of Machine-work done at short notice, and at reasonable prices.

COMMISSIONS: For all sums less than \$500, five per cent. For all sums over \$500, at one time, three and a-half per cent. Please send your orders, with cash, through Wells, Fargo & Co., or otherwise, stating plainly what marks to put upon them, to whose care on the way, and how to send them—by steamer, rail-road, stage, or express.

We shall send the bill with the goods, at all times, that parties may understand all about them, keeping our accounts so that all parties may see at a glance how we stand.

Having a general understanding of our business, being mechanics ourselves, and applying our capacities to your wants, we hope to secure a liberal patronage.

For business capacity and honesty of purpose, we refer you to the following persons:

Tracy, H. Selby, Haywood & Hump, San Francisco.  
Geo. W. Dent, Sacramento.  
C. Cooper, Downsville.  
Geo. M. Taylor, Colusa.  
D. M. Locke, Knights.  
E. Bassett, Peru.

Looking Glasses!  
A large lot of Gilded and Ornamental  
Pier, Mantle, and Oval, Looking Glasses,

## GREAT REDUCTION IN THE PRICE

## DR. F. G. JOHNSON'S

## PATENT SELF-REGULATING

## WINDMILL.

MANUFACTURED BY  
D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF  
ALL, and being constructed all of iron, is without  
doubt the most perfect and durable, as well as the most  
economical Windmill in the world.

The undersigned having purchased the EXCLUSIVE  
RIGHT for the MANUFACTURE of these Mills in  
this STATE, will manufacture and keep on hand the  
following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00.  
No. 2—One to one and a-quarter Horse-power.....130 00.  
No. 3—One and a-half to two Horse-power.....162 00.  
No. 4—Two to two and a-half Horse-power.....200 00.  
No. 5—Two and a-half to three and a-half Horse-power.....230 00.  
(This power is estimated for a fair, strong breeze.)  
The above prices include everything ready to erect.

When any greater power is required, the prices will be  
pro rata as the power is increased. They are susceptible of  
being increased to 20 horse-power or more; and applied  
for any purpose where stationary power is needed and  
as manageable as a Steam Engine, with no risk or ex-  
pense. To see and appreciate this cheap power (the  
Windmill), should not fail to examine THIS MILL;  
such examination will satisfy them of its adaptation and  
ability to serve their purpose efficiently and fully. It is  
unlike other Windmills that are called self regulating;  
they have stationary Fans and small reversing Fans,  
which are depended upon to graduate the speed of the  
mill; whereas, by Dr. F. G. Johnson's Patent the Fans  
revolve upon the arms and turn their edge to the wind  
when a gale or sudden storm strikes it; and again, a child  
can stop it at once by turning the fan's edge to the wind,  
by the use of a lever pressed upon the stop-wheel, which  
is upon the shaft. These Mills can be used for any pur-  
pose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH  
STREET, San Francisco; where the Manufacturer will  
take pleasure in showing and explaining the mechanical  
principles upon which reliance is had for their superiority  
over all other Mills known, or of which we have knowl-  
edge.

WE ALSO HAVE ON HAND,  
Camphine, Spermin Oil, Polar Oil, Tanners' Oil,  
Lard Oil, and Solar Oil.

In lots to suit,  
At 86 and 88 Washington street,  
And 87 and 89 Oregon street. (13m)

## MUSIC, INSTRUMENTS, ETC.

PIANOS, MELODEONS,  
Alexandre Organs, and Music!

Prices Greatly Reduced!

## HORACE WATERS,

No. 333 Broadway, New York.

AGENT FOR THE SALE of the best  
Boston and New York Pianos and Melodeons.  
The largest assortment of Music Merchandise  
in the United States. Pianos from five differ-  
ent manufacturers, of every variety of style, from those in  
plain rosewood cases, for \$275, to those of the most elegant  
and rich for \$1,000. No house in the Union can come in competi-  
tion for the number, variety and celebrity of its instruments,  
nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with  
ornate iron frames, have in their new scale an improved  
action, in power and compass of tone equaling the grand, with  
the beauty and durability of the square Piano. The Press and  
first Musicmasters have justly pronounced them equal, if not  
superior, to any other make. They are guaranteed to stand  
the action

## Letter from New York.

EDITOR FARMER, I broke on my last letter very suddenly indeed, promising if I mistake not, that I would finish it by the next steamer. This is the next steamer, but I find myself like the Paddy who could not find the end of his rope, for he believed by his own that some one had cut it off for spite, just, nor can I remember where the end of the letter really was, or is now, so I will have to begin anew.

I have some good news for your readers. By the next mail I hope to send to you "The New York Bulletin," the first number of which will probably appear this week. I commence the paper without the promise of a single subscriber, identifying its prosperity with that of California. California interests will form the prominent feature of the paper for the readers on this side. That it may become an interesting sheet for those residing in the Golden State, I intend to exchange with every paper published in America and Europe, if possible, and to glean from all, items of news from every State, county and town of any note in the world; so that those living in California from every part of the world may hear something from their own State, country-town and village, the little items of news that will always be fresh, and of deeply absorbing interest to them. As soon as the exchanges begin to come in, they will be able to hear from their old homes or their immediate vicinity.

Now I do not mean to forsake the FARMER, at all, but wish through its columns, with your permission, to make the following proposition to your readers: If they will send you two dollars to forward to me for the New York Bulletin for one year, they may skip over all articles signed B. from your New York correspondent.

I have long seen with pain that the true state of matters in your State cannot be gleaned from the press, as it is now often conducted; for the faults, crimes, and casualties are paraded before the public, with the gold yield, while that which is really meritorious, fair, lovely, and of good report, is left out, conveying the impression that the best side of the picture is but too dark and desolate. I have no time now to say more, but hope to receive a generous support from Californians, that I may keep them posted in all matters of interest and importance to them and the world at large. It is intended that the Bulletin shall be one of the best papers in the country. How near it may come to this mark, the public must judge, when its numbers are spread abroad in the land.

Now if this is not good news to your readers, to know that they need not read the long yarns of B., about Steamships, Immigration Societies, Railroads, Digger Indians, and other matters and things in general, then I would like to know what is, that's all.

## Eastern Items.

The Hannibal and St. Joseph Railroad is stated to be now finished and cars running between the two places, and cars also running from St. Louis to St. Joseph. This event has infused the greatest enthusiasm into the people of the north-western part of Missouri.

The health of Gen. Cass is becoming very feeble, and strong fears are entertained that he will be soon obliged to resign his office of Secretary of State. Speculations are already rife as to his successor.

The Queen of Spain has granted the Cross of Knight Commander of the Royal American Order of Isabel the Catholic, to Mr. Morse, inventor of the electric telegraph. Her Majesty, wishing to reward the grace more complete, has ordered the insignia to be transmitted to the grantee.

At Lord Napier's ball, 17th February, the room was handsomely decorated with the flags of all nations. At the end of the room full length portraits of Victoria and Gen. Washington were suspended. Twelve hundred people were present.

The Board of Agriculture of the State of Maine have adopted a resolve, urging the Legislature to prosecute a geological and agricultural survey immediately. The agricultural produce of Maine is \$70,000,000, and it can be multiplied by ten if its capacities are developed. This survey ought to be had, but such is the financial condition of the State, it may not be done this year. Another request made by the Board is, that the entire industrial products of the State may be annually ascertained and published.

SEATING.—Yesterday, says the Boston Transcript of Feb. 23, was a complete carnival day for the skaters. Every other person, male or female, child or man, met in the streets, appeared to have a pair of skates in hand. Cars, omnibuses and private vehicles were filled with skaters and skaters, bound for the Skating Park on Harrison avenue, the Common, the Public Garden, the Back Bay, Jamaica Pond, Fresh Pond, Woburn, Dedham, or other localities, where ice could be found. It may safely be inferred that every person who owned a pair of skates could borrow a pair, or whose credit was good for three dollars and fifty cents, was mounted yesterday upon steel runners. By fair estimate, twenty thousand persons were in full play upon the ice during the day. The Back Bay was literally covered with persons of all grades, from the miss of six years to the octogenarian, and Jamaica Pond was one beehive of humanity on steel. A large part of the remainder of our population visited the theater to witness the "Catastrophe of the Ganges," water not frozen.

FROM SALT LAKE.—By the arrival of the Central Overland Mail at Placerville, dates have been received from Salt Lake to the 23d ult. The Deseret News of that date, encourages the cultivation of Russian hemp, and a correspondent of that paper remarks as follows on the subject: I have seen as good samples of hemp grown in this Territory, as was ever cut from the lands of Kentucky or Missouri. A proper selection of ground is all that is required to insure a good crop of hemp. This is easily done by all who are acquainted with raising corn, as that kind of land which will yield the heaviest crop of corn will also produce the best quality and largest amount of hemp, the culture of which is no more expensive than that of a crop of wheat or oats.

The Valley Tan estimates the number of cattle now in the Territory destined for California, at about 3,000. The last California mail arrived three days inside of schedule time, and the trip before it was here about four days inside of its time, making the trip inside of eleven days. From the best information gathered, it is said that between four and five thousand persons will leave the Territory for the States and Territories, en route for the Church. Late arrivals represent the snow storms in the South Pass as still severe.

The following is said to be the correct pronunciation of these geographical names, which are frequently mentioned: Mohave, Mo-ha-vee; Tejon, Tay-oh-jon; Albuquerque, Al-bur-que; Tulare, Tu-lay-er; San Joaquin, San-jo-ah-kin; Rio Grande, Reo Grandy; Del Norte, Del Nor-ty; Santa Fe, San-ta-Fay.

## California Land Cases Decided.

The Washington Globe publishes the following as a report of a part of the proceedings of the U. S. Supreme Court on the 14th of February:

No. 35.—The United States, appellants, vs. John A. Sutter. Appeal from the District Court of the United States for the Northern District of California. Mr. Justice Campbell delivered the opinion of the Court, affirming so much of the decree of the said Court as confirms the grant to John A. Sutter for eleven square leagues of land of 18th June, 1841, by Gov. Alvarado; and annulling so much of said decree as confirms a grant to said John A. Sutter for twenty-two leagues of land, purporting to have been made by Gov. Micheltoreno, 6th February, 1845, and remanding the cause for further proceedings in conformity to the opinions of this Court.

No. 40.—The United States, appellants, vs. Michael C. Nye. Appeal from the District Court of the United States for the Northern District of California. Mr. Justice Campbell delivered the opinion of the Court, reversing the decree of the said District Court, and remanding the cause, with directions to dismiss the petition of the claimant.

No. 43.—The United States, appellants, vs. Nathaniel Bassett. Appeal from the District Court of the United States for the Northern District of California. Mr. Justice Campbell delivered the opinion of the Court, reversing the decree of the said District Court, and remanding the cause, with directions to dismiss the petition of the claimant.

In regard to the case of Michael C. Nye, the Sacramento Standard remarks, that the effect of this decision will be to reject many of the claims to land in the Sacramento Valley that rest upon what is known as the "General Title," granted by Micheltoreno to those whose petitions were favorably reported upon by General Sutter before a certain day. Among these claims are those of William Renitz, to the rancho of Bressang, five leagues, on the Sacramento river; of Samuel Neal, to rancho in Butte county, five leagues; of Samuel J. Hensley, to Aguas Nuevas; of Claude Chana, to Nemahias, four leagues, on Bear creek, in Yuba county; of Nathaniel Bassett, to Las Colinas, four leagues, in Butte county; of Michael C. Nye, to Willy, four leagues, in Butte county; and possibly of other claimants.

## San Francisco Cattle Market.

March 16.  
With the exception of Beef and Mutton, which have declined, the market considerably, there is no change to notice in the cattle market.  
We quote slaughterer's prices, as follows:  
Beef—American, first quality, 12c; 2d quality, 10c; 3d quality, 8c; 4th quality, 6c; 5th quality, 4c; 6th quality, 3c; 7th quality, 2c; 8th quality, 1c; 9th quality, 1/2c; 10th quality, 1/4c.  
Mutton—1st quality, 12c; 2d quality, 10c; 3d quality, 8c; 4th quality, 6c; 5th quality, 4c; 6th quality, 3c; 7th quality, 2c; 8th quality, 1c; 9th quality, 1/2c; 10th quality, 1/4c.  
Veal—1st quality, 12c; 2d quality, 10c; 3d quality, 8c; 4th quality, 6c; 5th quality, 4c; 6th quality, 3c; 7th quality, 2c; 8th quality, 1c; 9th quality, 1/2c; 10th quality, 1/4c.

## THE CALIFORNIA FARMER.

## PROSPECTUS FOR VOLUME ELEVEN.

THE CALIFORNIA FARMER has now entered upon the New Volume, numbering the Eleventh, and the highest attained by any weekly journal on the Pacific Coast, and while we do not arrogate to ourselves the honor of having been longer engaged in the publishing of a journal than any of our contemporaries, several having been longer before the public than our own—among which stand the venerable Alta California, the Golden Era, and the San Francisco Herald—we do claim to have been a long or longer steadily pursuing our calling, without change of the original founder; having now been five years pursuing, with an unflinching faith, the claims of an interest which we believe the greatest, noblest and best in our land.

The founder and proprietor of the first Agricultural and Mechanical Journal on the Pacific, we believe we can claim with some degree of pride and satisfaction, a just share of support from the citizens of this State, for our steady advocacy and adherence to the great Industrial Interests of California. It is not necessary for us to enumerate all the good things we shall do in our New Volume, nor promise wonderful things, for we trust the character of the FARMER is too well known to require this at our hands. But this we do promise:

We mean the New Volume shall be superior to all its predecessors, and our aim shall be to make every Volume bear evidence of improvement. We mean the CALIFORNIA FARMER shall be the true and fearless advocate of the great interests of the Agriculturists of California; it shall also be the bold and zealous advocate of our "home manufacturers," and earnestly battle for Mechanics and Artisans, as the brethren of the FARMER. We shall ever advocate the cause of Agriculture, Mining, Manufactures, and the Mechanic Arts, as the basis of our wealth, prosperity and happiness. We shall advocate the cause of Education, as a means of perfecting our happiness. We shall, above all things, advocate the Blessings of Home, Education for Boys, Beneficence and Protecting Home and the Homestead. These are the principles that will guide us in our labors, and as the guiding star and great light of home is woman, so we shall ever plead for the education of woman as the sure way to elevate and purify the world.

These are the cardinal principles of our journal, and with these we desire to place it on every farm, in every workshop, manufactory, warehouse or place of business in our land; and we further desire, to have it in every family circle in our glorious State—it is there we would plead for the cause we advocate, there we hope to find our truest friends; to them we look, on them we rely for the continued success of the work in which we are engaged.

As we hope to have a large increase to our list with our New Volume, may we not appeal to all our friends for their generous co-operation in this work. As we wish to offer a just return for any exertion made in our behalf, we will offer the following:

Every single subscriber, with \$5, shall be entitled to receive a copy of the FARMER, for one year, consisting of several thousands of packages. Each new subscriber to receive five packages.  
Clubs of three subscribers and \$15, will receive the splendid colored plate of California Fruits and a copy of the Little Pilgrim, for one year.  
For five subscribers and \$25, we will send five copies of the FARMER, the Atlantic Monthly and Arthur's Home Magazine.  
For ten subscribers and \$50, we will give ten copies of the FARMER, Atlantic Monthly, Arthur's Home Magazine, Harper's Monthly, the Little Pilgrim, and an extra copy of the FARMER mailed to any friend in the Eastern States.

Thus, by a little exertion, our friends may kindly favor us, and at the same time secure to themselves a valuable library of home literature, such as ten subscribers would secure to them.

We have made arrangements to receive the above publications for the Clubs that we hope to receive, and we now leave the work in the hands of our friends, with the grateful thanks for many favors in the past years of the FARMER.

WARREN & CO.

SAMUEL PILLSBURY,  
DEALER IN

# CALIFORNIA FARMER

## JOURNAL OF USEFUL SCIENCES

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MARCH 25, 1859.

NUMBER 8.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 170 Washington street (up stairs), San Francisco.

TERMS.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.

Advertisements and Subscriptions must be paid for in advance.

#### The Pacific Railroad and State Internal Improvement Policy.

We continue to present to the readers of the FARMER, extracts from a series of articles on this important subject, written by Col. Fitch, and appearing in the columns of the Alta California. We find it difficult to determine what part of numbers four and five of the series will least interest our readers, and therefore copy nearly entire. It will be observed that we present his views concerning the dedication of lands to the proposed fund, "suggestions of what should be done at once by our Legislature, the results to be anticipated (if his plans become operative), and a conclusion of the series." We shall feel greatly disappointed if our readers are not instructed as well as entertained by the efforts of one so zealously laboring to promote the true interests of California.

There are belonging to the State about 5,000,000 acres of swamp and overflowed lands, at this time, in no manner producing revenue. Belonging to the State, it is neither taxable or likely to improve in value. Disposed of by the State, especially in the manner herein proposed, and it becomes a source of revenue—contributes vastly to the attainment of great enterprises—forms an inducement to thousands to emigrate to these shores, and avail themselves, not only of the favorable terms on which these lands may be purchased, but of the advantages arising from a scheme which is destined to carry forward works of great moment, add to the value of property and the prosperity of every class of our citizens.

On the terms proposed, the swamp and overflowed lands can be sold—every acre—within five years, and, if Government grant to this State 10,000,000 acres out of the fifty or sixty million acres which it claims the right to sell, that amount, likewise, can be disposed of within ten years following, upon the same terms, and result in giving in that time to the Internal Improvement Fund from thirty to fifty millions dollars—the interest on which sum, at six per cent per annum, will be sufficient to aid every scheme of internal improvement found practicable within the State.

The inauguration of a scheme, on the basis and of the magnitude proposed, would arouse our people to a sense of the advantages which must speedily follow in the wake of such promising events, and who could doubt that it would give us a railroad sooner than by any other means yet conceived? Who can doubt the propriety, or the practicability of turning the proceeds of the State lands to such ends? Who can deny that it would infuse a new energy and more active purpose in the hearts of every citizen? There is not a laboring man in the State who could not, if he desired, avail himself of the advantages of this credit, and provide for himself a farm. So far as the State is concerned, a credit thus given to her citizens, on the payment of the yearly interest, would be as safe and far more advantageous than investment in the most approved Government stocks.

Another advantage of this system is, that any advance in the value of these lands held by the State, would result in advantage to the State and not to the railroad companies.

How different, and how much more advantageous to the State and to the people, would be the operation of this plan from that pursued by Missouri and Illinois. Large grants of land were made to those States by the General Government, and they in turn granted the same away to various railroad corporations, without other consideration than the construction of the roads; having, besides, to aid those corporations by loans of State bonds, etc., etc. The lands granted to these corporations are held at a high figure, and only sold when they have attained their highest value, thereby retarding the progress and improvement of the State, and operating to make a few corporations, greatly to enrich themselves at the expense of the mass.

California should, on the other hand, pursue a more wise and benevolent policy: ask and obtain grants of lands to the Internal Improvement Fund of the State, and authorize their sale upon such liberal terms as to enable the great mass of laborers to acquire homes for themselves, and, besides, realize to their own advantage the advancement in the value resulting from the construction of railroads or any other causes whatever, and the proceeds of these lands to go into the State Treasury finally, and not into the pockets of a railroad corporation.

If the condition of those States, having millions of dollars indebtedness, be still regarded with favor, what may be said of California, if this plan becomes operative? With a fund arising from the sale of fifteen millions of acres of land, bearing ten per cent interest per annum, paid annually by the holders of those lands, or six per cent, per annum, when invested in United States Bonds, or others equally approved, accumulating interest upon interest for twenty-five years. It cannot be denied, that, under this system of finance and internal improvement policy, the State would emerge from its misty and mischievous torpidity into the light of glorious progress and prosperity, and that its people would arise from their skeptical, puzzled, and irresolute condition, and that this distant State would become the envy and exemplar of every commonwealth in the confederation.

The establishment of a State Internal Improvement Fund, dedicating the land belonging, and which may hereafter be donated, to this State, in aid of internal improvements, and the conditions to the act declaring its purpose and the only manner of its use, presupposes a grant of State aid in the manner desired, and a readiness of the people to offer its interest, even to a modification of the Constitution. The policy of passing such an act at once is apparent.

If it be done, and afterwards followed by an act

granting aid, as proposed, to the railroad company, and said act of aid in no wise conflicts with the Constitution, the means will be accumulating in anticipation of its use. And if the act granting aid be declared unconstitutional, the accumulated fund may be invested in approved bonds, and, therefore, continue to increase, until its use shall be duly and legally authorized.

In any event, the State is benefited by the operation of the act establishing a State Internal Improvement Fund, and the disposition of the lands thereto dedicated, in the manner before stipulated. These resources of the State should be brought into activity for its benefit as speedily as possible.

There are those, who, to a deep interest in the affairs of the State, unite a thorough comprehension of its necessities, and the course to be pursued, to secure to it an illimitable prosperity.

We are mistaken if those elements cannot be found in respectable force within the halls of our State Capitol. The action of that body will very soon determine whether we are to rest under a burdensome vassalage, which has neither the hope of recompense or limit of duration—whether this people lend themselves to a servitude, oppressive in its demands upon their energies, and blasting to their future prospects, or whether they are to look forward to a day of improvement, when they shall joyfully arise in the full armor of free men and strike out for a higher destiny.

The encouragement of enterprise, and a steady cooperation in such schemes, as give employment to the laboring arms of the country, and invite the investment of capital, will do more to attain the object desired, than all things else. To set about this work, then, let us commence in order:

First. Enact a law establishing a State Internal Improvement Fund, dedicating the State lands and those hereafter donated to the State, to said fund; and condition for their sale, etc., etc., as before mentioned. There are no constitutional difficulties in the way of making such a law immediately operative.

Second. Enact a law granting the right of way, and the aid of the State indorsement of the Pacific Railroad Company's bonds (guaranteeing interest), representing one-half the cost of road within this State; interest to be paid (if called upon to do so) from said fund, arising from proceeds of the sales of land. It is believed that such an act would be in accordance with the provisions of the eighth article of the Constitution.

Third. If there shall be found other clauses in the constitution which operate to prevent the use of the State resources in aid of this enterprise, or any other within this State, in the manner proposed, set about its change or modification by the most speedy course.

Having the means at hand, and neglecting a prompt and proper application of them to the end desired, will surely be regarded by many in Congress, as a sign of actual indifference to a measure which our declarations have held to be of paramount importance.

Immediate action on this measure is of incalculable importance to this State. If the Legislature grant the desired aid to said railroad company now, it will have done no more than will in any event be required of it, if the road be built.

We cannot ask, nor need we expect from the General Government, anything more in aid of this work, than a liberal grant of lands, and it is fair to presume that such donations will be sooner made, when it is seen that this State has committed itself to the undertaking. We are reluctant to believe that those in Congress who have done us the service of a foe, will continue in such ill doing, if our own State now take this measure in hand.

If our national Congress has become so degraded—If it has fallen from that proud eminence which surveys the whole interest of the Republic, and which gave the first rank to liberty, and illumined its altars with a blaze of patriotic fervor—if luxurious licentiousness, individual preference, and narrow local interest, has become its incessant motive, then may patriots wall a sad prelude to the inevitable desolation of our national character, and the aspiring hopes of those God-like men who founded the Republic.

Let this people turn an eye upon affairs in which they are legitimately expected to take part, and trust that the future action of Congress may prove

more consonant to their desires. Take up this plan, examine it without prejudice—see if it is dictated by plain reason, and founded on that just principle which should characterize the concerns of the State.

Look to it, and see if the means support the end, without sacrifice—if the end is attained without hazard to the State—if it will secure to us safety, tranquility and dignity; see if it will not quicken the acknowledgment of our resources—add confidence in our institutions, and make us strong at home and respected abroad. See if it will not raise us from a state of morbid imbecility and general distress, to a height of sovereign capacity and active independence. See if it be not one of the remedies to employ in healing those disorders which have, for so long a time, disfigured the annals of our State.

Will not this scheme, vigorously adopted, form solid and weighty inducements to Congress, to pass, at its next session, a bill authorizing the construction of a road in continuation, across the Territories?

Will it not become a further inducement to Congress to donate to this State a liberal allowance of the public lands, in aid of our State internal improvements?

Will it not make this State the friend and patron of industrious energy and enterprise?

Will it not turn a lamenting multitude into more cheerful ways of thought and action?

Will it not tend to instill into our mind a more just appreciation of the principles of civil liberty?

Will it not result in placing this State more speedily in a condition to repel the aggressive steps of any foe, which our known national policy may, perchance, array against us?

Will it not unite our people in sympathy and social concern, and bless them with a free participation in the benefits of active, onward progress?

Will it not help to excite those nobler motives, which should influence an enlightened people?

Will it not gain for us a more respectful consideration of our claims in the Federal capital?

Will it not refute the inglorious and scandalous sophisms of that haberdasher class of demagogues, who have so recently recorded their vote against us?

Will it not enlarge our orbit—improve our system—make us revolve in a more elaborate and dignified sphere, as a State?

Will it not hasten the day when our growth shall justify a sending forth of OTHER CONSTELLATIONS, with their COLLATERAL FORCES, and thereby augment the representative influence of this Coast?

Will it not prove a simple, safe, and solid method for the future guidance of the State in all its internal concerns?

Will it not bush those complaints (too often heard) against railroad monopoly of land?

Will it not meet the exigencies of the time in such a manner as shall revive the faith of our people and put them in a line of success?

Will not the execution of this plan rear one of the most stupendous internal improvement fabrics on this continent?

Will it not help to blot out that huge lie in common ethics, which declares that all gold-producing countries must become degenerate in taste, enfeebled in government, socially disorganized, and tumbled in anarchy?

Again, we say, look to this subject, citizens of California—see if it be not worthy the mature consideration of every prudent and honest man in the State. Contemplate it in all its attitudes, and trace it to all its consequences, and learn to your advantage, that this plan (although new) is not a refinement of erroneous theory, nor an airy phantom born of a disordered mind.

If it be regarded as impolitic and useless, cast it aside. If it be defective, improve it. If it be complete and suitable to the aim desired, adopt it, and henceforth take courage (for the days and years of our sad retrogradation shall have passed away), and believe that a brighter future invites us to renewed action, and a higher destiny.

These suggestions come from one who has experienced those trying vicissitudes which Federal neglect and a dormant State policy combined to inflict upon this country, and who has observed for years the ill-assorted condition of affairs in the commonwealth, and felt the exceeding necessity

for action upon some basis more promising of good results than the past has shown, with a solicitude which seems to justify this unusual diversion from a less pretending course.

Will public opinion tolerate an independent origination of a plan, having only for its object the public good?

#### Complaints against the Awards of the State Ag. Society at Marysville.

LETTER NUMBER ONE.

SACRAMENTO, March 23, 1859.

EDITOR FARMER: Having heard a great many complaints in regard to the way the Agricultural Society conducted the State Fair at Marysville last fall, and supposing you might be posted in its affairs, I would like to ask you a few questions in regard to the disposition of awards then made by the Society. Now if I understand the object of the Society it is to encourage home manufacture and industry. We were induced by our friends, last fall, to exhibit an article of our own manufacture at the fair; we went to some considerable trouble and expense to get up an article that would do credit to ourselves and to Sacramento mechanics, and took it to the fair. The committee awarded us a First-Class Gold Medal for our workmanship. About four weeks after, I called on the most worthy Secretary for it. I was handed a sealed package, and, supposing it to be all right, I left the office. When I got home we opened it, when lo! to our surprise, it was a third-class silver medal of the value of about four bits, with no inscription upon it informing us where it came from, or what it was for. Supposing it to be a mistake I took it back. I told Mr. Wheeler there was a mistake; that we were awarded a First-Class Gold Medal. He said he knew nothing about it; it was all there was for us.

Now, being personally acquainted with part of the committee (they telling us, at the time, we were awarded a First-Class Gold Medal), you can judge of our surprise in getting such a thing in place of it. After having some conversation with the Secretary, I came to the conclusion there was some hocus pocus about it. I declined accepting the one he chose to give me, and left the office in disgust.

I was informed, by one of the committee, that a gentleman of Marysville was awarded a book for an article he had on exhibition, but by the published list of the Executive Committee I see he was awarded a Gold Medal.

Now, Mr. Editor, if you can tell us how these things are; how it is that a young lady is awarded one hundred dollars, or its value, for riding round a race-track, once or twice, while a mechanic, who toils for weeks to complete a piece of mechanical work, is awarded a third-class silver medal, you will confer a favor on the Mechanics of Sacramento.

Yours, etc., A MECHANIC.

LETTER NUMBER TWO.

SACRAMENTO, March 23, 1859.

COL. WARREN.—Sir: Through inducements held out by an advertisement in your paper, under the head of "Premiums to be awarded at the State Agricultural Fair to be held at Marysville, in 1858," etc., we, at considerable expense and labor, prepared work and exhibited, and were awarded the First Premium for our work. That, according to schedule, was a Gold Medal, valued at \$50. Judge our surprise, when, instead of receiving that, which would have been a credit to the Society in conferring and an honor to the recipient in re-

ceiving, we received a "gold medal weighing just \$6 50."

Now, sir, I wish to ask you a few simple questions. Was that advertisement put in your paper for buncombe? If not, who receives the profits?

Is the State Agricultural Society a "joking institution to take in greenies?"

What do they intend should be understood, when they award third-size gold medals for First Premium work? Is it to say to the world, and that indorsed by the "State Agricultural Society" of California, that there is nothing better than third-class work done in this State?

I should like very much (if you possess the information) to hear of one Exhibitor who is satisfied with the course pursued by the Managers of the Fair of 1858; for I have not found that individual in my travels.

Please answer the above, and oblige

—EXHIBITOR.

Being the avowed friend of the Mechanic as well as the Farmer, we are constrained to open our columns to the wrongs complained of by the letters above. These are only two of many in our hands, for publication; duty demands that we give them. They come from highly respectable and very responsible sources, and are only precursors of what is coming. The Premiums offered in our columns, the past year, were published as an advertisement of the Society, and the Society must bear the responsibility of not fulfilling them. We have several orders for Premiums on our hands, which those who won them have as yet failed to obtain, and the impositions which the contributors say they have suffered so effectually disgusts them, that they aver they will not again contribute to the Society until a public meeting of the members is called and the doings thoroughly overhauled. We are compelled, by letters of inquiry to us, to ask the following questions of the late Executive Board:

Where are the profits that were made upon the Medals, Plate, and Diplomas? Where are the bills of purchase of these articles, and what is the difference in value from their cost, and the price they were awarded—and where is that balance? Who claims the difference? The Treasury of the Society, or the Executive Board?

We have the authority of members requesting us to ask of the Legislative Committee to examine into this matter closely, and if there is no "hocus pocus," then have it so declared.

In making these demands we only fulfill the duty enjoined upon us as the friend of the cause of Agriculture and of the Mechanic Arts.

#### Blackberries.

We find in the copy of "Advance Sheets" of the Mass. Hort. Society Reports for 1858, the following upon the Lawton and Dorchester Blackberries, which will be of interest to our readers, as this delicious fruit is to be shown largely the present year. The report says:

"The exhibition of blackberries the past year has been confined to the Dorchester, and the Lawton or New Rochelle; indeed, these are the only ones at present known that are worthy of cultivation. The show of this fruit the past year was very fine, and the premiums offered by the Society excited a spirited competition. In size and beauty the berries of both varieties that were exhibited were probably never surpassed. In one instance, thirty-two berries of the Lawton entirely covered the top of the box in which this fruit is usually shown, and twenty-five of the berries weighed six and one-sixteenth ounces; while twenty-five berries of the Dorchester weighed five and eleven-sixteenths ounces. Still larger berries of the Dorchester were, however, subsequently exhibited, though not weighed. Cultivators in this vicinity esteem the Dorchester decidedly superior to the Lawton; it is much sweeter, and therefore more generally acceptable; besides, that while the Dorchester, upon being gathered, retains its deep lustrous black color, the Lawton soon becomes of a deep reddish brown or bronze color, and therefore less saleable. Notwithstanding this, the Lawton, when thoroughly ripe, is, though rather acid, a rich, high flavored berry, and it is thought has hardly had justice done to it. It bears to the Dorchester a relation somewhat similar to that borne by the fruit of the common bramble to the high bush blackberry; both are valuable varieties, and leave scarcely anything further to be desired in this species of fruit."

CALIFORNIA NUTMEG TREE.—Notwithstanding it has often been stated, says the Yreka Chronicle, that a genuine and superior species of the nutmeg tree grows in the mountains of this State, and bears fruit in great profusion, there are many who do not give credit to it. We have seen them growing in the mountains above Georgetown, El Dorado county, and can attest to the beauty of the tree, and to the superiority of the fruit. The tree, in appearance of foliage, is divided between the cedar and arbutus, with a bark of a darker and more rough exterior.

THE YANKEE CLOCK-MAKER DEAD.—The original Yankee clock manufacturer has gone hence. Seth Thomas died at Plymouth Hollow, on the 29th of January, at the age of seventy-five years. He was the originator of the cheap Connecticut clock, which, in its early day, was considered the great invention of the age.

### The Importance and Value of the Statistics of a Nation or State.

AND THEIR INFLUENCE IN DIRECTING TO A WISE LEGISLATION.

Jay's address, recently published, thus speaks: "Most of the Governments of Europe have been greatly in advance of us in their appreciation of the value of statistics. England, France, Belgium, and Austria, have, for some years past applied themselves earnestly to statistical investigation; and in those countries the truth is becoming generally recognized, that the world at large has an interest in the statistics of every nation, as tending to develop natural laws of universal concern to mankind."

"In England, the labors of the Statistical Society whose elaborate and most valuable publications enrich our Library, through the courtesy of the British Government, have aroused the attention of the people and of Parliament to the truth that the science of politics finds in the statistical element its most solid foundation."

"Statistics," remarks M. Le Ray (the author of a recent valuable work on the occupation of domestic life and moral character of the working classes of Europe), 'are to politics and to the art of governing, what anatomy is to physiology in the study of the human body; the observation of the stars to astronomy; the study of the species of animals, plants, and minerals to the natural history of the globe; the analysis of the body to chemistry; experimental physics to natural physics. The statesman who pretends to govern, without knowing the important facts which interest society, makes a more fruitless attempt, than the philosopher who should propose to make a general classification of the beings which compose the three kingdoms of nature, without knowing the essential characteristics of them.'

"The French Minister, in his opening address at the International Statistical Congress at Paris, in 1855, thus touched upon the Philosophy of Statistical Science:

"Whether Statistics prove the development of population, its increase or its decrease, its riches or its misery, or whether it registers the elements of production and of consumption among nations, it tends always (and that is its chief merit) to discover and develop all the general laws which may assist to render men better and happier."

"This remark, although predicated of Statistical Science generally, is equally applicable to that part of it which pertains to Agriculture, and which has been hitherto so singularly neglected."

"Commerce and Manufactures, by their 'consolidation of power and concentration of wealth,' have commanded to a far greater extent the attention of government. But the Census shows beyond the possibility of error, that even now, and without reference to its future developments, Agriculture is the largest national interest of this Republic, involving more than any other branch of industry, the wealth and the welfare of the country, and the labor and the happiness of the greatest number."

"It is natural that such an interest should in every enlightened community establish among its members a common ground of thought and action, however otherwise they may be divided."

"Thus we see in England and in the United States, amid scenes of party excitement, the warmest political opponents meeting cordially on the same platform at Agricultural Exhibitions, and in France at the grand Exposition of 1855, the same pleasing spectacle was exhibited."

"The French Minister of Agriculture, in distributing the prizes, remarked that the catalogue, in addition to its Agricultural value, had a great political significance; and he then added: 'Have you not remarked, that names the most separated by civil dissensions, have come together at this peaceful tournament? The reason is that Agriculture has its rewards for every legitimate ambition; that all parties have an equally powerful interest in it; and that the beauty of the productions of Agriculture, gives the measure, and in certain respects the degree, of civilization.'

"Looking at the employment of the free male population of the United States over fifteen years of age, we find that in 1850 the population engaged in Agricultural pursuits, was twenty-four hundred thousand, or forty-four (44.69) percent; while the total number engaged in commerce, trade, manufactures, mechanics, arts, and mining, was only sixteen hundred thousand (1,596,265) or about thirty percent (29.72)."

"[What class of men build up the nation? Who pay the taxes? Where does the wealth and capital originate? What said that great statesman Webster, upon the influence of Agriculture upon the world? Read from the Address of Jay, on Statistics:]

"Agriculture, by its products, adds to the wealth of the country some sixteen hundred millions per annum, and in the State of New York, where the assessed value of the real estate is eleven hundred millions (1,107,272,715) notwithstanding the enormous wealth of the metropolis, the Agricultural interest pays four-fifths of the taxes."

"Prof. J. F. W. Johnston in his Lectures on Agricultural Chemistry, says, that nine-tenths of the fixed capital of all civilized nations is embarked in Agriculture."

"With these figures before us of the comparative population and wealth devoted to Agriculture, we can appreciate without effort the truth of the remark made by Mr. Webster, in his well-known Agricultural Address at Boston, on his return from England:

"No man in England is so high as to be independent of this great interest, no man so low as to be affected by its prosperity or its decline. The same is true, eminently, emphatically, true with us. Agriculture feeds, to great extent it clothes us; without it, we should not have manufactures, we should not have commerce. They all stand together like pillars in a cluster, the largest in the centre and that largest is Agriculture."

THE POPULATION OF THE UNITED STATES IS NOW GREATER THAN THAT OF GREAT BRITAIN.

We would call the attention of our readers to the important fact, that at the present time the population of the United States exceeds that of Great Britain; and its present rapid increase should awaken deep thought in the mind of every patriot and statesman, as he asks himself, what is the future destiny of our country.

We present important statistics which were collected by Jay in his valuable Address on Sta-

istics; and we call the attention of the reader to the density of population of nations and countries, and to the contrast of Europe, Asia, and Africa, with America, and especially California and Texas. Texas is rapidly increasing in population and wealth, and so is California; but we hold that our own State, if wisely developed in her resources, can outstrip all other States in the Union, by her majestic strides, in the next ten years. Shall it be so?

"The aggregate population of the United States has increased from about four millions (3,929,827) in 1790, to twenty-three millions (23,191,876) in 1850. The estimated population for the present year, 1858, is a little over twenty-nine millions, now for the first exceeding the population of Great Britain, which in 1851 was about twenty-seven and a half millions. According to the ratio of increase from 1840 to 1850, the population in 1860 would be one hundred and seven millions. The annual increase from 1790 has been four times as great as Russia, six times as much as Great Britain, nine times as much as Austria, and ten times as much as France."

"The population of England in 1851, was 27,475,271; of Austria, 36,514,397; of France, 35,783,170; of Russia, in 1850, 62,088,000; of Prussia (1849), 16,331,187; of Turkey in Europe (1844), 15,500; of Spain (1834), 12,232,194."

"It is stated that Herr Dietrich, of the University of Berlin, estimates the population of the world as follows: Europe, 371,000,000; Asia, 730,000,000; America, 200,000,000; Africa, 80,000,000; Australia, &c., 2,000,000; making a total of one thousand two hundred and eighty-three millions; of which the population of the United States, estimating it at thirty millions, is about one forty-second part."

"In 1850, the density of population for the existing territory of the United States, was about eight (7.90) persons to the square mile. In the New England States, the density was forty-two (41.94) to the square mile. In the middle States fifty-eight (57.79), while California and Texas together had less than one person to the square mile. When the increase of our native and foreign population shall invest with the density of New England the whole territory of the United States, its population will amount to one hundred and twenty-three millions. With the density of the Middle States, of fifty-eight (57.79) to the square mile, it would amount to one hundred and seventy millions."

"Whether Statistics prove the development of population, its increase or its decrease, its riches or its misery, or whether it registers the elements of production and of consumption among nations, it tends always (and that is its chief merit) to discover and develop all the general laws which may assist to render men better and happier."

"This remark, although predicated of Statistical Science generally, is equally applicable to that part of it which pertains to Agriculture, and which has been hitherto so singularly neglected."

"Commerce and Manufactures, by their 'consolidation of power and concentration of wealth,' have commanded to a far greater extent the attention of government. But the Census shows beyond the possibility of error, that even now, and without reference to its future developments, Agriculture is the largest national interest of this Republic, involving more than any other branch of industry, the wealth and the welfare of the country, and the labor and the happiness of the greatest number."

"It is natural that such an interest should in every enlightened community establish among its members a common ground of thought and action, however otherwise they may be divided."

"Thus we see in England and in the United States, amid scenes of party excitement, the warmest political opponents meeting cordially on the same platform at Agricultural Exhibitions, and in France at the grand Exposition of 1855, the same pleasing spectacle was exhibited."

"The French Minister of Agriculture, in distributing the prizes, remarked that the catalogue, in addition to its Agricultural value, had a great political significance; and he then added: 'Have you not remarked, that names the most separated by civil dissensions, have come together at this peaceful tournament? The reason is that Agriculture has its rewards for every legitimate ambition; that all parties have an equally powerful interest in it; and that the beauty of the productions of Agriculture, gives the measure, and in certain respects the degree, of civilization.'

"Looking at the employment of the free male population of the United States over fifteen years of age, we find that in 1850 the population engaged in Agricultural pursuits, was twenty-four hundred thousand, or forty-four (44.69) percent; while the total number engaged in commerce, trade, manufactures, mechanics, arts, and mining, was only sixteen hundred thousand (1,596,265) or about thirty percent (29.72)."

"[What class of men build up the nation? Who pay the taxes? Where does the wealth and capital originate? What said that great statesman Webster, upon the influence of Agriculture upon the world? Read from the Address of Jay, on Statistics:]

"Agriculture, by its products, adds to the wealth of the country some sixteen hundred millions per annum, and in the State of New York, where the assessed value of the real estate is eleven hundred millions (1,107,272,715) notwithstanding the enormous wealth of the metropolis, the Agricultural interest pays four-fifths of the taxes."

"Prof. J. F. W. Johnston in his Lectures on Agricultural Chemistry, says, that nine-tenths of the fixed capital of all civilized nations is embarked in Agriculture."

"With these figures before us of the comparative population and wealth devoted to Agriculture, we can appreciate without effort the truth of the remark made by Mr. Webster, in his well-known Agricultural Address at Boston, on his return from England:

"No man in England is so high as to be independent of this great interest, no man so low as to be affected by its prosperity or its decline. The same is true, eminently, emphatically, true with us. Agriculture feeds, to great extent it clothes us; without it, we should not have manufactures, we should not have commerce. They all stand together like pillars in a cluster, the largest in the centre and that largest is Agriculture."

THE POPULATION OF THE UNITED STATES IS NOW GREATER THAN THAT OF GREAT BRITAIN.

We would call the attention of our readers to the important fact, that at the present time the population of the United States exceeds that of Great Britain; and its present rapid increase should awaken deep thought in the mind of every patriot and statesman, as he asks himself, what is the future destiny of our country.

We present important statistics which were collected by Jay in his valuable Address on Sta-

tics; and we call the attention of the reader to the density of population of nations and countries, and to the contrast of Europe, Asia, and Africa, with America, and especially California and Texas. Texas is rapidly increasing in population and wealth, and so is California; but we hold that our own State, if wisely developed in her resources, can outstrip all other States in the Union, by her majestic strides, in the next ten years. Shall it be so?

"The aggregate population of the United States has increased from about four millions (3,929,827) in 1790, to twenty-three millions (23,191,876) in 1850. The estimated population for the present year, 1858, is a little over twenty-nine millions, now for the first exceeding the population of Great Britain, which in 1851 was about twenty-seven and a half millions. According to the ratio of increase from 1840 to 1850, the population in 1860 would be one hundred and seven millions. The annual increase from 1790 has been four times as great as Russia, six times as much as Great Britain, nine times as much as Austria, and ten times as much as France."

"The population of England in 1851, was 27,475,271; of Austria, 36,514,397; of France, 35,783,170; of Russia, in 1850, 62,088,000; of Prussia (1849), 16,331,187; of Turkey in Europe (1844), 15,500; of Spain (1834), 12,232,194."

"It is stated that Herr Dietrich, of the University of Berlin, estimates the population of the world as follows: Europe, 371,000,000; Asia, 730,000,000; America, 200,000,000; Africa, 80,000,000; Australia, &c., 2,000,000; making a total of one thousand two hundred and eighty-three millions; of which the population of the United States, estimating it at thirty millions, is about one forty-second part."

"In 1850, the density of population for the existing territory of the United States, was about eight (7.90) persons to the square mile. In the New England States, the density was forty-two (41.94) to the square mile. In the middle States fifty-eight (57.79), while California and Texas together had less than one person to the square mile. When the increase of our native and foreign population shall invest with the density of New England the whole territory of the United States, its population will amount to one hundred and twenty-three millions. With the density of the Middle States, of fifty-eight (57.79) to the square mile, it would amount to one hundred and seventy millions."

"Whether Statistics prove the development of population, its increase or its decrease, its riches or its misery, or whether it registers the elements of production and of consumption among nations, it tends always (and that is its chief merit) to discover and develop all the general laws which may assist to render men better and happier."

"This remark, although predicated of Statistical Science generally, is equally applicable to that part of it which pertains to Agriculture, and which has been hitherto so singularly neglected."

or Glauber's salts, according to the size and condition of the animal, should be given, dissolved in a quart of boiling water; and, when dissolved, add pulv. red pepper a quarter of an ounce, caraway and ginger each same; mix, and add a gill of molasses, and give lukewarm. If this medicine does not act on the bowels, the quantity of ginger, capsicum, and caraway, must be doubled. The insensible stomach must be roused. When purging in an early stage is begun, the fever will more readily subside. After the operation of the medicine, sedatives may be given, if necessary."

"The digestive function first fails, when the secondary or low state of fever comes on. The food undischarged ferments; the stomach and intestines are inflated with gas, and swell rapidly. The nervous system is also attacked, and the poor beast staggers. The hind extremities show the weakness; the cow falls and cannot rise; her head is turned on one side, where it rests; her limbs are palsied. The treatment in this stage must depend on the existence and degree of fever. The pulse will be the only true guide. If it is weak, watering, and irregular, we must avoid depleting, purgative agents. The blood flows through the arteries, impelled by the action of the heart, and its pulsations can be very distinctly felt by pressing the finger upon almost any of these arteries that is not too thickly covered by fat or the cellular tissues of the skin, especially where it can be pressed upon some hard or bony substance beneath it. The most convenient place is directly at the back part of the lower jaw, where a large artery passes over the edge of the jaw-bone to ramify on the face. The natural pulse of a full-grown ox will vary from about forty-eight to fifty-five beats a minute; that of a cow is rather quicker, especially near the time of calving; and that of a calf is quicker than that of a cow. But a very much quicker rate than that indicated will show a feverish state, or inflammation; and a much slower pulsation indicates debility of some kind."

"Next in importance, as we have already stated, is the phlegm. The bowels must be opened, or the animal will fall a victim to the disease. All medicines should be of an active character, and in sufficient quantity; and stimulants should be added to the purgative medicines, to insure their operation. Ginger, gentian, caraway, or red pepper in powder, may be given with each dose of physic. Some give a powerful purgative, by means of Epsom salts one pound, four of sulphur four ounces, powdered ginger a quarter of an ounce, all dissolved in a quart of cold water, and one-half given twice a day till the bowels are opened. The digestive organs are deranged in most forms of milk fever, and the third stomach is loaded with hard, indigestible food. When the medicine has operated, and the fever is subdued, little is required but good nursing to restore the patient."

No powerful medicines should be used without discretion; for in the milder forms of the disease, as the simple palsy of the hind extremities, the treatment, though of a similar character, should be less powerful, and every effort should be made for the comfort of the cow, by providing a thick bed of straw, and raising the fore quarters to assist the efforts of nature, while all filth should be promptly and carefully removed. She may be covered with a warm cloth, and warm gruel should be frequently offered to her, and light mashes. An attempt should be made several times a day to bring milk from the teats. The return of milk is an indication of speedy recovery."

"Milk cows in too high condition appear to have a constitutional tendency to this complaint, and one attack of it predisposes them to another."

SIMPLE FEVER.

This may be considered as increased arterial action, with or without any local affection; or it may be the consequence of the sympathy of the system with the morbid condition of some particular part. The first is pure or idiopathic fever; the other, symptomatic fever. Pure fever is of frequent occurrence in cattle. Symptoms as follows: muzzle dry; rumination slow or entirely suspended; respiration slightly accelerated; the horn at the root hot, and its other extremity frequently cold; pulse quick; bowels constipated; coat staring, and the cow is usually seen separated from the rest of the herd. In slight attacks, a cathartic of salts, sulphur, and ginger, is sufficient. But, if the common fever is neglected, or improperly treated, it may assume, after a time, a local determination, as pleurisy, or inflammation of the lungs or bowels. In such cases the above remedy would be insufficient, and a veterinary surgeon, to manage the case, would be necessary. Symptomatic fever is more dangerous, and is commonly the result of injury, the neighboring parts sympathizing with the injured part. Cattle become unwell, are stunted in their feed, have a dose of physic, and in a few days are well; still, a fever may terminate in some local affection. But in both cases pure fever is the primary disease."

A more dangerous form of fever is that known as symptomatic. As we have said, cattle are not only subject to fever of common intensity, but to symptomatic fever, and thousands die annually from its effects. But the young and the most thriving are its victims. It often appears without any previous indications of illness. This animal stands with her neck extended, her eyes protruding and red, muzzle dry, nostrils expanded, breath hot, mouth open, pulse full, breathing quick. She is often moaning; rumination and appetite are changed; she soon becomes more uneasy, and changes her position often. Unless these symptoms are speedily removed, she dies in a few hours. The name of the ailment, inflammatory or symptomatic fever, shows the treatment necessary, which must commence with purging. Salts here, as in most inflammatory diseases, are the most reliable. From a pound to a pound and a half, of ginger and sulphur, is a dose, dissolved in warm water or thin gruel. If this does not operate in twelve hours, give half the dose, and repeat once in twelve hours, until the bowels are freed. After the operation of the medicine the animal is relieved. Then sedative medicines may be given. Sal ammoniac one drachm, powdered nitre two drachms, should be administered in thin gruel, two or three times a day, if required."

Typhus fever, common in some countries, is little known here among cattle."

Sometimes follows intense inflammatory action, and is considered the second stage of it. This form of fever is usually attended with diarrhea. It is a debilitating complaint, and is sometimes followed by diseases known as black leg, black leg, or quarter-evil. The cause of typhoid fever is involved in obscurity. It may be proper to say that copious drinks of oat-meal gruel, with tincture of red pepper, a diet of bran, warmth to the body, and pure air, are great essentials in the treatment of this disease."

The barbarous practices of boring the horns, cutting the tail, and others equally absurd, should at once and forever be discarded by every farmer and dairyman. Alternate heat or coldness of the horn is only a symptom of this and other fevers, and has nothing to do with their cause. The horns

are not diseased any further than a determination of blood to the head causes a sympathetic heat, while an unnatural distribution of blood, from exposure or other cause, may make them cold."

In all cases of this kind, if anything is done, it should be an effort to assist nature to regulate the animal system, by rousing the digestive organs to their natural action, by a light food, or, if necessary, a mild purgative medicine, followed by light stimulants."

The principal purgative medicines in use for neat cattle are Epsom salts, linseed-oil, and sulphur. A pound of salts will ordinarily be sufficient to purge a full-grown cow."

A slight purgative drink is often very useful for cows soon after calving, particularly if feverish, and in cases of over-feeding, when the animal will often appear dull and feverish; but when the surfeiting is attended by loss of appetite, it can generally be cured by withholding food at first, and then feeding but slightly till the system is renovated by dieting."

Purgative drinks will often cure cases of red water, if taken in season."

A purgative is often necessary for cows after being turned into a fresh and luxuriant pasture, when they are apt to become bound from over-feeding; but constipation does not so often follow a change from dry to green food in spring, as from a poor pasture in summer to one where they obtain much better feed."

Premium Reports on the Dairy.

We feel desirous of giving all the information to those interested in the Dairy business in California, and we here present the Reports of some of the competitors for Premiums on Butter and Cheese at the Essex Agricultural Society in Massachusetts. This plan of making Reports of the process, by each contributor, is excellent, and should be insisted on in every Society. We give five reports on Butter, three by women, and three of Cheese, all by women, also. Thus, six out of eight competitors and winners of prizes are from "housewives" of the right sort. The Reports will be found of interest and value:

SARAH HOLT'S STATEMENT.

I present for inspection fifteen pounds of September Butter.

Process of Making.—The milk is strained into tin pans well scalded, and allowed to stand thirty-six hours in a cool cellar, when it is skimmed into stone pots and stirred twice a day. I churn twice a week. The butter is then washed with cold water and salted with rock salt, one ounce to a pound; it is then set in a cool place from eight to ten hours, when it is well worked over. The next morning it is worked over again, and then made into balls for the market, without any ornament or coloring.

ANDOVER, Sept. 23, 1853.

SARAH L. RIDGWAY'S STATEMENT.

I present for your inspection fifteen pounds of September Butter, made by the following process:

The milk was strained into tin pans, and allowed to remain on shelves in a well ventilated cellar thirty-six hours, when it was skimmed into tin pails, and stirred as often as more cream was added to it; churned once in about three days; the butter was thoroughly washed in cold water, and left in the cellar ten or twelve hours, when it was well worked with the hands and made into balls as presented.

WEST NEWBURY, Sept. 27, 1853.

J. ALBERT DAY'S STATEMENT.

I present for inspection a box of Sept. Butter.

Process of Making.—The milk is strained into tin pans, and set in a cellar prepared for the purpose, and stands from thirty-six to forty-eight hours, according to the weather, but the cream is not allowed to remain on the milk after the milk becomes sour. (This butter is made from the milk of fourteen cows.) I churn every other day. The butter-milk is worked out by hand; salted to the taste with the best of rock salt. Salting butter by weight does not make butter equally salt, as there is a difference in the strength of salt.

Boxford, Sept. 23, 1853.

CARRIE M. MOULTON'S STATEMENT.

I enter for premium a pot of September Butter.

Process of Making.—The milk is strained into tin pans and placed in a cool cellar prepared for the purpose; and allowed to stand from thirty-six to forty-eight hours, according to the weather. The cream was put in tin pails, stirred daily, and churned once a week. The butter was slightly worked with the hands when taken from the churn to free it from buttermilk, and salted with one ounce of rock salt to the pound. Then left in a cool place for about twenty-four hours, when it is again thoroughly worked and stamped for market.

WEST NEWBURY, Sept. 23, 1853.

MRS. PAUL TITCOMB'S STATEMENT.

I offer for premium three new-milk Cheeses, made the middle of July, consequently are not so thoroughly dry as those made in the middle of June. My method of making is as follows:

Strain the evening milk, add rennet of sufficient strength to form a curd in thirty minutes, but avoid breaking it until it has stood one hour; then place it to drain until morning; repeat this process with the morning milk, then scald the curds with whey, drain thoroughly, chop fine, salt, and press twenty-four hours.

BYFIELD, Sept. 23, 1853.

MRS. STEPHEN E. NOYES'S STATEMENT.

I present for your examination more than fifty weight of Cheese, made in the month of July, being a sample of some sixty cheeses that I have made the present season in the following manner:

At night the milk was strained into a tub, to which the rennet was added—the definite quality of which I will not state, as it greatly depends upon the quality which brings it to a curd.

The morning's milk is prepared in the same manner; but the curds are kept separate until the time of scalding, when they are put together; afterwards it is chopped fine, and salted with about eight ounces of salt to twenty pounds of cheese. It is then pressed twenty-four hours, afterwards put in a safe and turned and rubbed every day.

WEST NEWBURY, Sept. 23, 1853.

HARRIET D. SAWYER'S STATEMENT.

I enter for premium four new milk Cheeses, weighing fifty-three pounds. Each cheese contains the milk of two days. The evening milk is strained into a tub and rennet added immediately. The rennet should be of sufficient strength to form the curd in thirty minutes, and should not be broken up under one hour or more. After being carefully broken, it is dipped off and left to drain until morning. The same process is repeated with the morning's milk. After that is broken the evening's curd is skimmed into it. The whole is then scalded with whey dipped from it, then thoroughly drain, chop fine, salt, and press twenty-four hours. Salt with Liverpool salt, one table spoonful to a pail of milk. The cheeses are then dried in a dark room, turned and rubbed daily. Late in the fall they are removed to a cool cellar, packed in straw and occasionally rubbed and repacked. Two of these cheeses are sage. The night previous to making them I pound the sage and soak it in milk until morning. I then strain the liquor into the milk judgment as to quantity, varying it as to the size of the cheese.

WEST NEWBURY, Sept. 23, 1853.

### Legislative Aid.

"The susceptibility of California for the cultivation of the vine to its highest degree of excellence and utility, is not confined to this county, or to the valleys or plains, but is only bounded by the limits of the State. The mountain sides of the mining counties are equal, and it is generally believed superior to this and the adjoining counties for the profitable cultivation of the vine. The great impediment to the rapid conversion of the millions of acres of now unproductive land into promising vineyards, is the reluctance of the people to invest their means and their labor in a business from which no returns are made, no dividends or profits received, until the lapse of half a decade. There are but few men in California who, having the means of planting an extensive vineyard, have the patience to wait four or five years for the first fruits of their capital and labor. The expense of fencing, preparing the ground and planting twenty thousand vines, is no inconsiderable sum. Add to this, the annual cost of tending and cultivating the same for four or five years without any product, and we have a sufficient reason for the reluctance of individuals to engage in this business. When the capitalist requires the interest upon his money to be paid monthly, it is not to be supposed that men can be found who are willing to wait five years for the first dividend on their investments. When we add to all these hindrances another, and perhaps still greater one, the taxation levied upon this species of property, we wonder that a man can be found who will embark in this business. If the Legislature would exempt vineyards from taxation, from the time they are planted until they become productive, it would give an impulse to this branch of industry that would in ten years repay the treasury more than a thousand fold. It would foster and encourage an industrial pursuit which will give California a prominence and a position, which, if the calamity of a disruption of the Union should take place, even in the present generation, would enable her to take a high rank among nations. We can conceive of no solid objection to this action by the Legislature. The benefit will be sown broadcast over the entire State. No part will be exempt from its beneficial and wealth-producing influences, while it will rapidly augment the taxable property and return a rich and permanent harvest into the coffers of the State. Tens of thousands of acres of land, which are now, and will continue to remain, unassessed, or, if assessed, only at a nominal sum, would be covered with vines which, in five years, would have a value of millions of dollars from which to derive revenue. The subject is one of great moment, and we would urge upon the Legislature the importance of adopting this policy, whether with a view to the increase of the financial resources or to the political power and rank which it will give the State."

Most happy are we to reiterate every word of the above, from our Los Angeles cotemporary, the Southern Vineyard. This is the right ground to take, and we say amen—amen, with all our heart. Such legislation, as is proposed in the above extract, carries on the very face of it a proof of its excellence and of its wisdom, to those legislators who look forward to the future prosperity of our State. We venture the assertion, that if the present Legislature should, at the present session, pass a law to exempt all the vineyards of our State from taxation for five years, the increased value of the buildings that would be erected and of the improvements in other real property, would add to the taxable property as five to one in amount. Such has been the result everywhere where this kind of legislation has been tried. The remarks of our cotemporary relative to the unwillingness of capitalists to invest, is too true; but, if they were wise, they could count more certain returns, and a greater per cent. by investments in vineyards and stock-raising than on any other kind of investment now offered in our State; in both cases their interest is compounding while they sleep.

We are highly pleased to see the press, everywhere, taking hold in earnest of the resources of the State, and heralding them to the world. The friends of agriculture rejoice at this, and none more than ourselves.

### How Coffee came to be Used.

At the time Columbus discovered America, coffee had never been known or used. It only grew in Arabia and Upper Ethiopia. The discovery of its use as a drink is ascribed to the superior of a monastery in Arabia, who, desirous of preventing the monks from sleeping at their nocturnal services, made them drink the infusion of coffee, upon the report of some shepherds, who observed that their flocks were more lively after browsing on the fruit of that plant. Its reputation rapidly spread through the adjacent countries, and in about two hundred years it reached Paris. A single plant, brought there in 1614, became the parent stock of all the coffee plantations in the West Indies. The extent of consumption can now hardly be realized. The United States alone annually consume at the cost of its landing, from fourteen to fifteen millions of dollars. You may know the Arabia or Mocha, the best coffee, by its small bean and dark color. The Java and East India, the next in quality, is a larger bean and of a pale yellow color. The West India Rio has a blue, greenish grey tint.

A FLEA UNDER A MICROSCOPE.—As many persons have a feeling for Fleas, we publish the following:

When a flea is made to appear as large as an elephant, we can see all the wonderful parts of its formation, and are astonished to find that it has a coat of armor much more complete than ever warrior wore, and composed of strong polished plates, fitted over each other, each plate covered like a tortoise shell, and where they meet hundreds of strong quills projecting like those on the back of the porcupine or hedgehog. There are the arched neck, the bright eyes, the transparent cases, piercers to puncture the skin, a sucker to draw away the blood, six long-jointed legs, four of which are folded on the breast, all ready, at any moment, to be thrown out with tremendous force for that jump which bothers one when they want to catch him, and at the end of each leg hooked claws, to enable him to cling to whatever he alights upon. A flea can jump a hundred times his own length, which is the same as if a man jumped to the height of six hundred feet; and he can draw a load two hundred times his own weight.

FLOWERS.—Many a bright-eyed girl to-day, who works worsted and dances divinely, does not know that a moss-rose is a first cousin to a French turnip, and the mangel-wurtzel a poor relation in the poppy family. Flowers are not trifles, as one might know, if he would only think how much pains God has taken with them everywhere; not one unfinished; not one bearing the marks of brush or pencil. Fringing the eternal borders of mountain winters; gracing the pulseless breast of the old gray granite; everywhere they are humanizing. Murderers do not ordinarily wear roses in their button holes. Villains seldom train vines over cottage doors.—[B. F. Taylor.

## The California Farmer.

SAN FRANCISCO: FRIDAY, MARCH 25, 1859.

**BILLS SENT.**—Will those who receive bills from our Office, have the kindness to attend to this little matter promptly. It will help us accomplish more for them and our enterprise. A little more thought on their part, will prompt them to do so, we know.

## California the Grain Depot of the World.

A careful observer of the progress of nations in their industrial relations, can easily tell where the balance of power will be in years to come, in all that relates to the principal articles of manufacture, mechanic arts, or the productions of the earth in their crude state.

In the years past, the bleached cottons and printed calicoes used in the United States, were principally imported from India, Great Britain, or France. Who holds that great power now? Not many years since, almost all the cutlery, mechanic's tools, and such goods, were imported from Sheffield, Manchester, and Leeds, England. What manufactures bore off the prizes at the World's Fair in England, lately?

Until lately, all the wines used in the United States came from France and Germany, and the Islands. Who are now the competitors in wine-making? Are not the eyes of the world looking to California? And what is now the whole tone of the European Press? Already they are there heralding facts, showing that the whole Eastern Continent is increasing in population beyond their power of production; and already there is an alarm spread whenever the least danger touches any of their great staples of food. A reader of the European Press can detect the fear, whenever danger touches the potato crop or the vine. Already, in all Europe, the amount of consumption has vastly increased beyond their capacity to produce; and in England, France, Belgium, Holland and Germany, the food question is the great question, and all eyes turn to the West for a supply.

The West! the West! the West! New York, Ohio, Illinois, Michigan, Missouri: these are not now the great West, only the great watchword. Onward and westward *Empire* shall have sway; and California and Oregon and their sister States will soon send their cargoes of grain, wine, and oil to the commercial marts of the world. California holds a mighty opportunity in her hands. If the Pope of Rome holds the keys of St. Peter, California holds the trident over the waters of the Golden Gate; and if the cultivators of the soil of our State would read the future, and if our legislators would act with reference to that future, and give due encouragement to the agriculture of our State, California would become the great granary of the world; and her cargoes of grain would take precedence over all other grain offered; for it is admitted that it has every advantage of soil and season to cure it for shipment to other countries; and California can lay down grain in the European markets at a lower price than it can be done from the new great market of Chicago.

Europe looks to the United States for their supply, and that great talisman of the grain markets of Europe, the Mark Lane Gazette, says: "One fact is clear, that it is to Western America that we must in future look for the large amount of our cereal produce."

Shall the Press of Europe herald this truth to us and we not hear? Where is Western America if not California? Who can raise better grain than California? Who can raise more to the acre than Californians? Who can raise it cheaper? We hold, that with the right kind of cultivation, and true and wise plans, we can raise and supply Europe with millions of bushels of grain annually, with profit to ourselves. The present year will give to California a harvest beyond all precedent. Where is the market for it? Now is the time to think.

## Southdown Sheep for California.

This proof of success in sheep raising is daily becoming more and more apparent, from the facts that are being made known. The splendid Merino sheep imported by Messrs. Searle & Wynn, from the flock of J. D. Patterson, Esq., have not only maintained their high character; but their progeny, both the full blood and the crosses, have most materially improved in all points. The Southdowns, from J. C. Taylor's stock, imported and exhibited the last year by Messrs. Carroll & Stanwood, show evidently a wonderful result. The cross of these Southdowns, young lambs of only two months old, weigh fully fifty pounds, and, in form and beauty, give promise of appearing almost equal to full bloods. With such results, will not our Legislature encourage and protect enterprises that promise to make our State the most renowned and prosperous among all others?

The exhibition of stock the present year will be grand, if the Managers of the State Fair repudiate partiality and select Committees that know their duty, and award premiums according to the value of the stock exhibited and their relative merits.

## Encouragement to Vine-Growers.

We rejoice to herald the news that our Legislature is awaking to the true interests of California. Mr. Hancock, of Los Angeles (all honor to him), has introduced a bill for the encouragement of the vine-grower. The purpose of the bill is to exempt vineyards now planted or planted, from taxation for the next four years. Also, in same bill, to exempt the olive for six years. This is right. Go on legislators in this noble, wise, and generous system.

Look next to the stock-raiser—do not forget them. We want in California the best blood stock of the world; and it costs a vast sum of money to import such animals. Such as are now imported cost (of the different kinds, sheep, horned-stock, and horses) from \$100 to \$5000 each; and shall not such a business be encouraged? Why not exempt all blood stock of a pure character from taxation also for four or five years? Such legislation would add tens of thousands of dollars in time to the treasury of the State. Surely this should be done—let it be done.

## State Fair—New Buildings.

The citizens of Sacramento county are awake to the importance of the State Fair, to be held this fall at Sacramento; and a very general good feeling, and a strong desire to have a good and satisfactory Show in September, pervades all classes of the people. There is so much dissatisfaction expressed at the disposition of the awards of the last year, that the Executive Board see the necessity of acting wisely the coming year, and preparing some plan that will win back, if possible, those who are dissatisfied, and those who have refused to take any part in the coming Fair—and they count by hundreds. That there is a bad feeling, can no longer be disguised; and that the doing of the longer be disguised, is so apparent, that all last Board need reviewing, is so apparent, that all the best friends of the Society demand it at the hands of the new Board; for if they pass it over, and leave it in its present state, it will be the same as endorsing those things that have met with such universal condemnation.

There never was a time when so grand a display of stock, productions, and manufactures could be exhibited, as the present year. To secure the full cooperation of exhibitors, the new Board must wash their hands of all the speculations and favoritisms and partisan actions which have stamped the doings of the past. The public feel that there have been many things done in secret that should be revealed. It is evident that there were large profits made upon the plate, medals and diplomas; and they desire to know where this profit has gone.

The Committee to whom is committed the selection of the grounds for the county buildings, are at work. Various proposals are made from owners of real estate, both within the city and in the outskirts. In conversation with many of the citizens and men of property and influence, we believe it is the wish of the majority of the people of the county to have the county building for the Fair so far out as to secure ground enough for the cattle ground, trial ground of horses, stock yard, and buildings for all the purposes of a Fair, similar to the fine grounds of the Ohio State Agricultural Society, a fine engraving of which hangs in the Society's rooms at Sacramento.

Place the main building on the high ground, near the ridge. Property owners will be liberal. Already owners have tendered two blocks without cost, and others will give, and others sell at fair rates. At such a place, on the line of the railroad, stock and contributions of all kinds, and visitors, can, as they land at the Levee, take the cars and go quickly and safely to the Fair grounds, saving cost, labor, injury, dust, and fatigue. We believe that place for the grounds decidedly the best; and the Trustees, with a little reflection, if they look to future years, when the property of county and State shall be quadrupled, will feel it to be so. We sincerely hope a careful consideration will be given to this important subject, and the Committee act with reference to the future as well as the present.

## State Agricultural Monthly.

This curious document, purporting to be a Monthly of the State Agricultural Society, fell into our hands, and its curious introductory editorial (!) [Who is the conductor?] excited some interest. If this document is the Society's Monthly, they are responsible for its contents and its reports. Having called upon the President and several of the Board named therein, we cannot find any one that will father it; in fact, some with whom we have conversed, deny its authority and repudiate its publications. It seems to be an illegitimate thing; and it will need to be baptized before it can be fathered; some reverend person must baptize it; for, if the Society intend to father all such documents, they will find they will weigh like the nether mill-stone—it will drag them down.

A State Society Monthly should first receive the sanction of the entire Board; no one sentence should be published that casts a reflection upon an individual, sect, party or locality. This Monthly has published a statement which cannot be maintained. We regret very much that such a Monthly should appear prematurely. A good Monthly from the Society, would be a valuable work; but the present one, in its present spirit, is an abortion. Its origin and parentage is known. Who receives the money for advertisements?

## Home-made Beef, Pork, Bacon, Lard, etc.

We have often spoken of the progressive work of our active and energetic citizen of Sacramento, Mr. George Cooper, who has been largely engaged in the salmon fisheries, and now and for some time on the curing of beef, pork, bacon, lard, etc. We feel that enterprises of this kind should receive more public notice and attention, as well as encouragement. Mr. Cooper has established an extensive slaughter yard, on the Yolo side; and has prepared, at much cost, packing-houses for provisions of all kinds, so as to offer California produce of the highest merit; and this is not mere boasting of what is to be done—it is already done; and, in proof of it, go to his fine Market, 147 J street, and there see all the samples of corned beef, pork, hams, bacon sides, lard, etc., and then ask each and every one of himself and his neighbor, *Shall I not give my preference to Home Producers?* Mr. Cooper's Market is an extensive and truly handsome Market, a pattern for all to copy. Butter, cheese and eggs of home-make and production can also be found here; and we hope the most liberal support will be given to Mr. C. in his enterprise. In the same building, is a fine market for beef, mutton, game, vegetables, etc., etc. This is CALIFORNIA represented by her own productions, equal to any market in the world.

**BRANDS OF STOCK.**—In our last issue we published some facts relative to the organization of a society of stock raisers in Alameda county, and requested of stock raisers all over the country to forward us the form of their brands. We would also desire of them the origin and particulars of each brand, wherever it may illustrate any matter of moment. Some brands we know represent locations, events, and names, and are the autographs or coat of arms of the parties; and the origin of such may be found of interest.

## How Shall I Aid the State?

This is the great question now; Congress chokes off the Pacific Railroad; attempts have been made to check the great and noble enterprise of the age; Overland Mail—the greatest enterprise of the age; plans are constantly devised to throw obstructions in the way of successfully opening new routes across the ocean and increasing facilities for rapid communication between this and the older States; and now, as the hopes of thousands had been raised that the Nicaragua route had been opened and established permanently, and disappointment likely to follow, another difficulty arises; a new cloud appears, and hundreds are crossed in their plans and hopes; while hundreds too have expended, or lost, sums of money they could not easily spare, by reason of these uncertainties at our traveling facilities; while the permanent well being of the State requires our modes of transit should be of the most reliable kind—equal, if not superior, to other States.

And why is this? It is because the people sit down supinely, and permit those who are interested in selfish schemes, to control all the great elements of prosperity. Politicians and designing men, parties and cliques, control all the great avenues to our State's permanent progress, laying their plans to enrich and aggrandize themselves at the expense of the great mass of those who do the labor and lay the foundation of the permanency of the State; we mean the great body of the WORKING MEN, who could control all these matters if they would. There never was a State that contained the elements of so much greatness, or such unbounded wealth; never a Commonwealth that had within its bounds so many means of prosperity and happiness for the people as California, if the people themselves would take the matter in hand and look to these interests—elect such men to offices of honor and trust only as would encourage, foster and draw out their abundant resources, and diffuse them among the people; this done, a sure foundation is laid for the prosperity of the people.

California now needs to have her abilities and her resources known abroad, so as to draw to her borders those active minds that are scattered over the earth's surface (men, women and children), that were born to live in just such a State as this. We want more population, and we want it of the right kind; and we never shall get such, unless the people and the government of the State take measures to spread abroad to the world the vast resources of this State and unbounded means of support to a large population.

California should publish and send forth to the world millions of pamphlets, reports on agriculture and the mechanic arts, and show to the world what our resources are and our condition at the present time. It is well known that newspapers abroad are not willing to publish the bright side of California, lest it take away their population; they will publish anything derogatory to her, but are slow to make known her wonderful glories.

California must herald her own fame; and this she can do by flooding the Atlantic States with such pamphlets, periodicals and reports, the cost of living, etc., as would convey to "the million" the information they are so greedy to obtain. And this work should be done by the State and by Emigration Societies, founded by the people for the purpose.

## The Honey Bee.

The wonderful success which has attended the introduction of the Honey Bee into California, and the value of Hives of Bees at the present date (\$100 per hive), has led many parties to make the attempt to import hives across the Isthmus. We have watched with much anxiety the result of these importations, and thus far they have been attended with considerable loss; for out of thirteen trials, only one importation but has resulted in a loss—several being total or nearly so.

There have been thirteen importations, amounting to nine hundred and fifty-six hives across the Isthmus, of which only two hundred and eight hives reached here with live bees, and quite a number of these were small hives and swarms, and many were sickly. We have the names of each importer, the number purchased and shipped, and the number that reached here; among them all there was only one importation that did at all well, and this lost half the hives. One lot took 104 on board, of which only five have arrived in order, and out of the 959, only 208 were alive. Thus we see that it is a losing experiment to import Bees.

We are convinced that it is far better to pay our own apiarists \$100 each, than it is to pay \$7 for them in New York. Those raised here are healthy, while in those imported, the chances are five to one against them. Several parties have started with fifty hives, and only five, eight or ten would reach here, and those sickly. Hereafter buy California raised Bees—they are the best and cheapest. We shall soon be able to give notice of all who have Bees for sale.

## The Rise of Waters.

At Sacramento the river has risen some thirteen to fifteen feet; at Marysville it has risen very high and is rising still, and fears are justly felt for the lower part of that city. Every information that comes from the up-country, tells of immense quantities of snow and of its still increasing quantity; and, although it would require a rise of twenty-two feet to flood Sacramento, yet should a warm spell come immediately, or a warm rain set in and last a few days, and the waters come from the several streams at once upon Sacramento, they would inevitably have a demand for pleasure boats in the plan to notice the weather and the rise of water, would not be losing anything, if they should examine the condition of the Levee at this time. "An ounce of prevention is worth a pound of cure."

**CONK OAK.**—The Hon. C. L. Scott has very thoughtfully sent to various parts of our State, parcels of the Acorns of this singular tree. They were enclosed in tin for preservation. By this act he will accomplish much good. It is to be hoped that all who plant will keep a record of the same, and report their success. We shall take good care of those received from Mr. S.

## Sacramento.

There is every appearance of a growing prosperity now resting upon this city, although business is dull and the city quiet at this time, by reason of the bad state of the roads and the swollen rivers and streams. We have never seen a city more beautifully surrounded: the large number of gardens and orchards; the fragrance from the opening blossoms; the beautiful cottages and mansions—all tend to give this city a commanding appearance. The business men and residents generally own the stores and dwellings they occupy, and take pleasure in improving and beautifying them; and this gives a character and tone of permanency, for every one will protect his own.

Visitors should always ride out to "Smith's Gardens." It is the place for passing a most agreeable and instructive hour. The Legislature, now in session, should receive a visit. The State Library should be seen; few have any idea of the extent and value of its literary stores.

J street and K street, as the great business thoroughfares, show a steady improvement in buildings, old wooden ones giving place to permanent brick or stone buildings. Front street, or *The Levee*, as it is properly called, presents the great busy mart: the cars now centering there; the steamers' whistle for the departure of the morning boats, up river; the ringing of bells for the railroad train; the bustle and noise attending the leaving of the down river steamers of the Navigation Company; the immense piles of freight that is landed every morning from the San Francisco boats, to be sent up river by steamers and into the country by railroad and wagons, makes a busy scene, and presents a view of the magnitude of the trade of the Sacramento Valley.

Grain-growers should visit the different Flouring Mills, and learn valuable facts from the millers, relative to the care they should bestow upon their grain in harvest time; much money could be saved, if the grain were properly cleaned. Sacramento has a number of Flouring Mills, of most excellent character, and the flour manufactured stands very high. In fact, all over our State we have flour as good as can be made. We wonder why we need import any; if grain-growers were wise, we should not.

Farmers and gardeners should visit the agricultural stores on J street: Charles Zeitler & Co. have a very fine establishment, and are a most reliable firm to trade with; and we take pleasure in recommending them. Smith's Seed-Store and Green-House can supply seeds and plants, and his ground trees and plants, in any quantity; and the reputation of Mr. Smith, as a nurseryman, is known far and wide. Mr. Ray has a fine store; seeds, trees, plants, books, birds, baskets, etc., can be had in any quantity. Wilson Flint has an office and a large collection of trees, plants and vines. Mr. Strong also has a collection of trees, plants, vines and seeds. Purchasers have an opportunity to visit each of the above places, all on J street.

The new bridge should receive attention; a walk across will prove pleasant; and, by all means, visitors should go over and see the fine collection of *Bees* of the Messrs. Hoag. And, ere you pass the bridge, call at the water-works. There is much more that we have not time to name; of which, if our readers will take a carriage, or a saddle-horse, which is far better, and ride out upon the beautiful prairies beyond the city, and enjoy the glories there, they will be happy, and they can write us what they see, and thus do a double good.

## What Must Be Done?

We conclude this week a synopsis of the important plans of policy advanced by Col. Fitch for the benefit of the State; and we cannot better recommend them, at this time, than in copying from the Alta the following portion of an article on the subject: "Thousands have come to California dependent on labor for their gains; they have tried the mines, as many will do at Pike's Peak, and have found their rewards irregular and uncertain; and it is exceedingly discouraging when they turn from mining, to find employment elsewhere in California. The limited demand for the productions of the farmer, makes that branch of industry appear equally hazardous to those occupied, and may seem to offer but little, if any, more certain employment of labor. There are no public works going on, offering a steady and remunerative employment of laboring arms; and hence the complaint against California. Herein do we fail to offer inducement sufficient to bring to our shores the thousands who look with care to the cost of such a journey."

"What a different state of things will appear on the inauguration of these new plans—the establishment of a State Internal Improvement Fund on the basis proposed, not only gives promise of the designs of the State concerning public works, which in itself affords a great inducement to laborers to turn hither, but it offers great advantages to those who desire to engage in agricultural pursuits, and to be benefited by the purchase, improvement and increasing value of lands."

"The donation of a large amount of land to this State, to be disposed of on the terms proposed by Col. Fitch, we believe to be a great feature, and many thousands would look forward to such an act with great hope of advantage. Especially so, if the State undertake to aid the construction of a railroad upon the liberal and wise provisions delineated in these plain and statesmanlike propositions. Each part has such an intimate relation to the other, touching these various springs which induce immigration, purchase, settlement, and improvement of lands, the prosperity of our people, the proud and onward progress of the State, and the general restoration of confidence, that we cannot conceive that any man having the least pretension to intelligence, the least regard for justice, or the least desire to see an improvement in our affairs, can withhold from these measures his support."

**SLATE FORMATION.**—The Amador Ledger, says: In one portion of Septon's Hill is a deposit of most beautiful coal mixed with sand, quartz and sulphurets of iron. Another place affords "bone slate," as the boys call it, which resembles calcined bone, and but for its large quantity would be mistaken for bone. It is probably the polishing slate of commerce. In another place is found a fine sandstone, of a delicate pink hue, and easily quarried, which would make excellent caps and sills for windows. Some enterprising individual who furnished us the above items, also gave us specimens of the coal, slate, etc., found in the hill. It is our intention to forward them to the Society of Natural History, at Stockton.

## BUSINESS DIRECTORY.

**SACRAMENTO.**  
Blood stock, J. D. Patterson, Westfield, Chatsauque Co., N. Y. Books, etc., etc., J. D. Patterson, Westfield, Chatsauque Co., N. Y. Parsons & Co., stores, shrobes, etc., 110 Montgomery. Pianos, organs, etc., Horace Waters, 333 Broadway, N. Y. Waters, Horace, music books, instruments, 333 Broadway, N. Y. Wistar's Balsam Wild Cherry, S. W. Fowler & Co., Boston, Mass.

Taylor & Post, paper bags wanted, pig's paper, 25 California. Thurnauer, W., baskets, willow-ware, toys, etc., 92 Battery. Type for sale, new and second hand, Bourgeois, Farmer Office. Walker, W., Golden Gate Nursery, cor. Fourth and Folson. Wool, hides and skins for sale, valuable, Sam'l. Brannan. Worthington Pump for sale, valuable, 116 California. Wool purchased, George H. Jones & Co., 155 Sansome. Wheeler & Wilson sewing machines, H. C. Hayden, Montgomery. Windmill, Dr. F. G. Johnson's patent, D. Van Pelt, 90-92 Bush.  
**MISCELLANEOUS.**  
Self-adjusting Post driver, Hyde & Houghton, Vallejo. Nursery Business.  
Cahoon's seedling plant, J. Bailey & N. Cook, Clinton. Golden Gate Nursery, Golden Gate Nursery, San Francisco. Hope Nursery, D. Adams, 115 Clay. Harashty, A., grape-vines and fruit-trees, 50 Sansome. Mountain View Garden Nursery, Wm O'Donnell, San Jose. Smith's Pomological Garden and Nursery, Sacramento. San Jose Nursery, L. Prevost, trees, roses, etc., San Jose.

## Books Received.

We have received from H. H. Bancroft & Co. the two new works from the pen of Rev. Dr. Scott, just issued, *Sampson, or the Hebrew Hercules*, and *Esther, the Hebrew-Persian Queen*. These works, like all others from the pen of this distinguished divine, are full of earnest and beautiful truths, well enforced by Biblical authorities. The author has thrown around the history of Sampson, the "strongest man," an interest truly absorbing, and every reader will find wonderful and curious illustrations touching "The Giant." The work should have a large sale. "Esther" must be in the hands of every woman in our State. This work is dedicated to the mothers and daughters of the Pacific; and one line in the dedication contains a truth that should be felt and understood better: "She who rocks the Cradle rules the world." The Persian Queen should be in every family, for it contains matters of Biblical History, explained so clearly and with so much interest, that the minds of all will be instructed thereby. It is a most excellent work. We have received the pamphlet containing the proceedings of the Meeting at Musical Hall on the *Morlar Abduction*; together with the *Sermon on Religious Intolerance*, by Rev. Mr. Cutler. There is a peculiar interest in this case, for it lies at the foundation of religious liberty.

**LOOK OUT FOR GRASSHOPPERS.**—We have heard it suggested that we shall have this plague the present year. We think not; from the fact of the great quantity of rain, which would tend to the destruction of their eggs in the ground. We have received a glass jar, from a friend at Petaluma (we regret he did not leave his name), containing two varieties of the grasshopper, collected near Petaluma in 1858. One variety, green winged, was found on the top of the Chinese sugar-cane in bloom, in 1858; the other was brown, and found in the fields. We truly thank our friend for these samples.

**ITALIAN PAPER.**—L'Eco Della Patria is the name of a new weekly paper, published in Italian, which made its appearance in this city yesterday—Federico Biesti, editor. The Italians of San Francisco form a large and intelligent class of our citizens. For the number and variety of newspapers printed in foreign languages, San Francisco is only second to New York.

**THE BRIG JACOBS,** which arrived this week from San Blas, brought up a great quantity of silver, as follows: To Parrot & Co., \$200,000; Alsop & Co., \$70,000; B. Vischer, \$55,500; Sanjurjo, \$36,000; Davidson & May, \$81,944; Faulkner & Bell, \$31,850; T. L. Moser, \$184,405; A. Loganho, \$428. Total, \$653,128.

At Columbia, we have great pleasure to state, says the News of the 17th ult, that the weather having become more pleasant and agreeable, the busy hum of business is once again heard in every direction, around our beautiful city. During the past week the weather has been delightful by day, but rather too cold by night.

**HONEY BEES.**—A sale of Honey Bees at auction took place last Tuesday. The original invoice was eighty-five hives, but only forty-nine were offered and sold. The best hives brought \$72 50, and then ranged from that down to \$16 a hive.

The shipment of Treasure, by the steamer John L. Stephens, which left on Monday last, amounted to \$1,581,929 74. The number of passengers, four hundred and seventy-five; of these, fifty-one via Tehuantepec.

**THE PATENT OFFICE REPORTS.**—We have frequent inquiries from our readers for the Patent Office Reports. We anticipate a lot for distribution soon, and have selected the names of those who have applied and shall at the earliest moment answer their wishes.

## DOMESTIC SUMMARY.

The Salmon Fishery in the Sacramento has been interrupted by the late rise in the river, and operations will not again commence until the river falls.

Mr. REDMAN has introduced into the Senate an Act authorizing the counties and incorporated cities of this State to become stockholders in Railroad Companies.

Capt. W. M. JOHNSON and E. D. Bache, Esq., have commenced operations surveying the harbor of San Pedro and its approaches.

On Tuesday the Senate adopted a resolution instructing the Attorney General to sue the sureties of S. A. McMeans, late State Treasurer, for the deficit in his account of \$108,000.

The Murphy and Stockton Stage was washed away in Calaveras creek, 224 inst, involving the loss of two horses, says the San Joaquin Republican. The passengers and freight were saved.

The Sixth Chapter of the Sierra Citizen's storm story, "continued" the 15th inst, "brings us through several days of pleasant weather, to the commencement of what appears to be long warm rain." Glad to hear it.

The Princess arrived this morning, says the Sacramento Bee of Thursday, and with the Queen City, departed at 2 o'clock, carrying passengers at twenty-five cents. Who wouldn't travel at those rates?

The election for city officers of Marysville, on Monday last, resulted in the Douglas party electing their candidates for Mayor, Recorder, Treasurer, Assessor, and seven Aldermen. The Administration men elected the Marshal, Clerk, and five Aldermen.

A member of the Stockton Turn-Verein, is said to have raised two twenty-five-pound weights 3,600 times in the space of one hour. This would make an aggregate weight raised of 90,000 pounds, or 1500 pounds a minute. He must be the champion of heavy weights.

For the past week, says the San Andreas Independent of the 19th inst, we have, on realizing the delights of early spring. Under the influence of an unclouded sky and the soft warm sunshine, hill, wood, and valley, are arraying themselves in green.

At Stockton the water in the slough rose about eighteen inches Wednesday, with a gradual upward tendency. The Republican says, we may expect to see it many feet higher, in the course of a few days, as the San Joaquin and its principal tributaries have been greatly swollen by the late heavy rains.

The Odd-Fellows of Calaveras county are to celebrate the Fortieth Anniversary of the Order in the United States, on the 26th of April, in San Andreas, by a Procession, Oration, and Ball. Similar proceedings will take place in various portions of the State, and the day will be held as a general Festival Day by the Order.

Spring, glorious spring, has come at last, says the Placerville Observer of Wednesday. The chilling storm-clouds which so long draped the heavens in funeral weeds, have all vanished before the life-giving sunlight of spring. The hills and valleys are already donning their gaudy summer gear, and all nature is portentous of a protracted season of pleasantness and prosperity.

At Placerville, the storm of Monday night, says the Observer, was the most violent demonstration of the kind which has visited this region for years. The rain came driving down in an incessant deluge, and the wind roared through the hills like a young tornado. Main street was flooded with water for hours, and presented more the appearance of a turbid river than a street. We learned from a gentleman whom we met in Sacramento, just in from Nevada, that the storm was severe in that section. The wind, accompanied with rain and snow was terrific, and the roads are almost impassable.

THE CAUSE.—The Placerville Observer accounts as follows for the sudden death of one of the Digger tribe, who recently departed from the land of acorns and grasshoppers for the spirit-land of Diggerdom:

Perished thus the luckless Digger,  
Perished, too, from drinking whiskey,  
Strychnine whiskey, sharp as lightning,  
Rain-blue and Minnie-ride—  
Knock 'em stiff and flaming red-eyes—  
Such as kills 'em at the counter,  
Forty rods or a little distance,  
Perished thus the wretched Injin  
By inebriating strychnine whiskey  
Sold by some confounded hummer  
At a bit a glass, or cheaper—  
Strychnine whiskey—whiskey strychnine.

The Obsequies are noticed by the same paper as follows: On Friday last, near Culver's Mill, the mortal Diggers performed the last sad rites over the mortal part of some defunct huck-muck-muck Injin. The body was placed upon a big pile of dry sticks, and amid the wallings of disconsolate relatives, set on fire and broiled to a turn.

From La Porte, Sierra county, a correspondent in the San Jose Tribune writes: I think we will be blessed with a good run of water this season, for the snow now lies on the ground, I think, from ten to twelve feet deep, and is still falling. Here are many habitations of men which are entirely covered with snow, nothing visible but the store-pipe from a little distance; and to get into the houses, one has to go down the marble-white steps of snow. But the cold is not severe. We are now working every fair day, and have been all winter, without inconvenience. The long, sled-runner, Norwegian snow-shoes are used here by nearly all. I have seen the ladies floating about, wheeling and soaring around, with as much grace and ease of motion as swans on the bosom of a placid lake, or eagles in the sunlit air. Above this place, I understand, the ladies generally turn out on snow-shoes.

A sudden rise in the river at Sacramento occurred on Tuesday. The Union says the American river came "tumbling down" in a heavy column about four o'clock in the morning, bringing with it an unusual quantity of logs, timber, boards, etc., and creating among the timid the idea that the city would certainly be swamped. The water ran into the slough rapidly. A number of boats were engaged in catching timber, etc., at the mouth of the American and on the city front. On Sunday the Sacramento stood at 7 feet 10 inches above low-water mark; at 7 a.m. Tuesday, at 10 feet; at 4 p.m. at 13 feet; at 7 p.m. at 13 1/2 feet. The rise thus noted was consequent on the heavy contribution from the American. During the night the water was running freely into the slough, and the Sacramento itself was coming down in increased volumes. In view of the fact that the river must rise some 22 feet above low-water mark before the city can be flooded, and that meantime the country far and wide must be inundated before any damage can be done to the city, the Union thinks there need be no fears of serious disaster. On Wednesday the river stood at 14 feet 8 inches above low-water mark; and at 4 p.m. at 14 feet, showing a decline of 8 inches. Last year the maximum height was 19 feet, attained on 24th of February. On Monday night last the American

river, at Brighton, rose 12 feet within a few hours, and on Tuesday night fell 10 feet. The wholesale receipt of drift-wood has been suspended for the present, although there is sufficient coming down to keep the Chinese population on the qui vive.

The Los Angeles Star of the 19th inst says: We saw this week some bunches of wheat, pulled from Judge Scott's field, fully four feet high, an average of the crop, having been taken at random. We hope it may continue as prosperous until maturity.

A letter from San Bernardino, March 13, in the Star, says: The weather here of late has been most delightful. Peach trees are in full blossom, and are beginning to unfold their mantle of green. The wheat and barley crops look fine and give promise of a plentiful harvest. All of this gives to our lovely "vale" the beauty and life of early spring.

We are informed by a gentleman who visited the Buena Vista Ranch, three miles above Grass Valley, where the heavy and disastrous slide took place lately, which extended down the valley from above Buena Vista, that it almost destroyed this fine Ranch, uprooting trees and sweeping away everything before it. This avalanche left upon the lower part of the land some eight to ten feet of sand. A large number of persons had gone to see this slide, as it was one of the most curious and remarkable occurrences that has taken place in this part of the country for a long time.

Wages in the Mines within the last six months, says the Grass Valley National, have fallen considerably. Three dollars a day for a good hand is what most of the large mining companies pay, and any number may be employed at that rate. The prices for all sorts of work in the mines has fallen proportionally, and hence, leads which six months ago would have ruined their proprietors, will now pay handsome profits. The prices for all sorts of labor, and for all means in the production of gold, are growing less and less, and the profits to the proprietors of the mines necessarily increase. Whether this is beneficial to the country, it is left for political economists to discuss. The subject of wages is one of importance, and many discussions are now held upon it by all classes of California.

OAKLAND EXPRESS.—While traveling on the Contra Costa side recently, we heard frequently of the great inconvenience experienced all along that section for the want of an express that would carry letters at a reasonable rate. A letter from San Leandro to San Antonio, to San Francisco, costs twenty-five cents. We had occasion to send letters; and even from San Antonio to Oakland, the distance of some two miles, the fee was twenty-five cents. This is beyond reason; and this exorbitant rate makes the business small; for the people won't stand it. Bamber & Co. had the only express line till very recently; now, we are pleased to know, that a new Express has been started from 138 Kearny street, and letters can be sent over for one bit. Office in San Francisco: Milk Depot, 138 Kearny street. Notice cards will soon make it known. We are glad to herald it.

NAPA SPRINGS TO BE OPENED.—Great preparations are being planned and carried out, to secure a large visitation to this beautiful and healthful resort the coming season. We learn that the Messrs. Taft design, in connection with other parties, to put on a new steamer from this city to Napa; the price of passage to be about two dollars—connection to be had with the stage line; by which tickets at low rates can be had, through from this city. This is important, for travelers even for pleasure like to sit down and count the cost, and where it is low, the greater the travel.

We learn also of a New Ferry, from Vallejo to Contra Costa. This is well. All the inter-communications we can have from place to place, and the more and greater facilities, the better for everybody.

RECORDED INFORMATION ABOUT VINEYARDS.—We desire to make a record of all the vineyards of our State, up to the opening of 1860, and shall be very grateful if every person who has vines planted would favor us with a statement of the number of their vines, the different varieties, and when planted. By furnishing us with this information, they will confer a favor which shall redound to their own good. Address Editor California Farmer.

GRAND MILITARY BALL.—Sacramento, ever famous, as we have said, for a happy gathering, will be the scene of a grand Ball of the "Sutter Rifles," and gives promise of being a very grand affair. The Sutters always do up these things in good shape, and we shall expect this Ball on the 31st, will eclipse all the military balls that have preceded it.

PRESCOTT.—The accident which deprived Prescott, the historian, of the use of one eye (says the Salem Register), and, subsequently, so impaired the power of vision in the other, was occasioned by a blow from a crust of bread, thrown across the room by a fellow-student in Commons Hall, near the close of his College career. This seeming calamity changed the whole current of his life, which he intended to devote to legal pursuits, and finally led him into that brilliant career as a historian, in which he has achieved a world-renowned honor for himself and country.

THE EARLY DAYS OF SIR JOSEPH PAXTON.—Sir J. Paxton's first employment was that of errand boy to Lord Hardwick, at Tittenhanger House, near London Colney; Sir Joseph's elder brother being at that time bailiff and gardener in the same service. The writer tells a good story, showing the ready resources of the future knight, for occupying the effects of a severe whipping for loitering on his errands. Sir Joseph stuffed a quantity of hay under his jacket, to break the effects of a good thrashing that he expected to receive, and did receive it, in earnest, from his incensed brother.

BEST AGE OF SHEEP FOR MUTTON.—A late English writer, in remarking on this subject, says: "A sheep to be in high order for the palate of the epicure, should not be killed earlier than when five years old, at which age the mutton will be rich and succulent; of a dark color, and full of the richest gravy; whereas if only two years old, it is flabby, pale and flavorless."

A MONSTER OF A HORSE.—A gentleman who was at Zanesville, Ohio, lately, gives a description of a monster sorrel horse, raised in Pennsylvania, and purchased by a resident of Zanesville. He is "pony built," measures twenty hands high, and weighs 2400 pounds. The price was \$1000. He will probably be exhibited at the State Fair at Zanesville.

FROM SONORA.—We have obtained from Mr. Holman (says the Los Angeles Star), who has just returned from the State of Sonora, a few particulars respecting that country:

The city of Guaymas contains a population of about 4000 persons. Business is pretty lively, although it is confined to a few large importing houses; the principal of which is Robinson & Co. There are several other American houses in the wholesale business. At sight, the town is not calculated to impress one favorably, as it is situated in a valley, surrounded by barren, rocky mountains; but it is the entrepot for the commerce of a vast extent of country, and will yet be a city of great importance.

Captain Stone's party is at Guaymas, not doing anything, however. There is great prejudice against their operations, as the people of Sonora are opposed to any interference in their affairs by speculating capitalists or government functionaries in the city of Mexico. There are rows of fine brick houses standing unfinished, as if commenced in anticipation of "the good time coming."

Guaymas is distant from Tucson about 500 miles and Hermosillo 400 miles; the road through the valley is perfectly level. At present, peace prevails in the State, Pasqueira having gone to Sinaloa. Cattle and horses are scarce and dear, bringing as high prices as in this market. Mules can scarcely be obtained. With the greatest difficulty, Mr. Dent procured a train of forty mules; prices very high. Sheep are abundant, and bring about \$1.50.

The city of Alamos, southeast from Hermosillo, is in the richest part of the State. It is said to be a beautiful city; the country around abounding in silver mines, which are being successfully worked. The lands on the Yaqui river, towards the mouth, are reported to be very rich and productive. The plain is annually overflowed; the Indians plant their corn when the waters recede, by making a hole with a stick and dropping in the corn. No further operations necessary. The lands of the Mayo river are said to be also very fertile.

THE CASH AND CREDIT SYSTEM.—The Sierra Citizen, in a sound and philosophical article under the above caption, broaches the question of repaying all laws for the collection of debt, and shows by very clear reasoning that the honor of a debtor should be the only guarantee of payment; or, in other words, that all debts shall be debts of honor; and that the adoption of such a system would operate healthfully for the State and prove beneficial to all parties concerned.

The above notice we copy from the Petaluma Journal, and, though we have not seen the article alluded to, we have no doubt it is all the Journal gives it credit for. Our convictions are in exact accordance with the opinions advanced, and we feel certain that the doing away with all laws for the collection of debt would prove beneficial to the community.

THE TRUE DOCTRINE.—The New York Tribune, referring to the President's special message asking Congress to clothe him with authority to send, when he shall see fit, an army into Mexico, Nicaragua and New Granada, to protect the Isthmus routes, says: "We thank the President for his unintended impetus to the Pacific Railroad. Who does not see that all our Isthmus troubles, past, present and prospective, grow out of our use and presumed need of one or more of the Isthmus routes, in passing from our Atlantic to our Pacific territories? Give us the Pacific Railroad, and we need not violate nor subvert the Constitution to provide for the protection of any transit; for our Pacific mails, passengers and traffic will pass entirely through the heart of our own country, in less than half the time now required for their conveyance by way of the Isthmus. We believe it true economy to press through that road forthwith."

A DIVORCE IN CINCINNATI.—A divorce case is now on the legal tapis in Cincinnati between two parties, both young and married but three years, whose disagreement arises out of a night-cap, which the wife insists upon wearing, in spite of her husband's wishes, petitions, threats, tears, oaths, commands.

HOW TO DO GOOD AND GET PAID FOR IT.—Take as Agency for our Publications. The terms are such, there can be no possibility of loss. Every Family will be glad to obtain some of them. For particulars, address FOWLER & WELLS, No. 308 Broadway, New York.

BOY FOR A FARMER.—A place is wanted with some good Farmer, for an active and intelligent boy, about nine years of age. Any person that would like to adopt such a boy, can learn of an opportunity, by applying at the Farmer Office.

WE are ahead of the world in Ambrotypes; we are ahead of the world in Photographs; we are ahead of the world in Daguerotypes. We have documents to prove it, the whitewashing of an unprincipled committee at Marysville, notwithstanding; the palms of whose hands, I presume, were peculiarly sensitive to the touch of "ars."

My Ambrotypes were not exhibited at the last Fair in this city.

Please call and see the celebrated Premium Ambrotypes that my neighbor brags so much about, and it will be seen that the committee at the State Fair reversed the order of things, awarding First Premiums to the poorest articles.

R. H. VANCE,

Corner Montgomery and Sacramento streets.

## ST. GEORGE HOTEL!

Corner of Fourth and J Streets, SACRAMENTO.

THIS HOTEL, HAVING BEEN THOROUGHLY RENOVATED, RE-FITTED AND RE-FURNISHED, IS NOW OPEN FOR THE RECEPTION OF THE PUBLIC.

C. I. HUTCHINSON, Proprietor.

## WOOL WANTED.

THE SUBSCRIBER WILL PAY CASH FOR WOOL, THE ENSUING SEASON.

THOSE HAVING WOOL TO SELL WILL FIND it to their advantage to call on the Subscriber, before making sales. Inquire at OFFICE, on J Street, between Front and Second, Or, at City Market; Sacramento.

N. D. STANWOOD.

## SPECIAL NOTICES.

Now Ready. SENT POST-PAID ON RECEIPT OF THE PRICE.

### NEW ILLUSTRATED RURAL MANUALS!

These volumes are devoted to a popular exposition of the more important branches of Rural Economy and Rural Art; thus promoting public taste, enhancing domestic comfort, and diminishing the expenses and increasing the profits of Rural Life and Industry. They are adapted to all sections—Southern as well as Northern interests being faithfully represented therein. The series comprises:

#### THE HOUSE:

A Pocket Manual of Rural Architecture; or, How to Build Houses, Barns, and other Out-Buildings, with many original Designs. Price, in paper covers, 30 cents; in muslin, 50 cents.

Rest! Rest! Rest!

Economy tells us to buy and to keep The mattress that is cheapest and best.

Sleep! Sleep! Sleep!

On the mattress from JACOB SCHRIEBER!

If bachelors like single, then life will not jingle Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go where, where, Those famous mattresses made out of PULU!

J. SCHRIEBER,

Jackson street, near Hotel International.

#### THE HOME OF BEAUTY.

"Creative Genius! from thy hand What shapes of order, beauty, rise, When waves thy potent, mystic wand To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle, And here our gods; But they are mortal. Around these festooned halls The good, the great, the living and the dead, And yet they speak—speak all: "We cannot meet the speaking eye, But we are known, and, knowing, Pain would hold sweet converse."

But as we gaze upon their closed life, We know that they are silent While they speak, and gaze on us.

Creative Genius! raise thy wand And gather round us where we stand Within these halls, a living throng: That we may raise a glorious song To all who act the noble part, And tribute give to every art.

Creative Genius! here's thy home! And here shall wondrous things come; Here speed a season free from care, To worship the beautiful, good, and fair, For is it not a freeman's duty, To worship at the shrine of Beauty?

Behold these flowers that gem the land, These little children in groups they stand, While here and there, like angels, see They're smiling on their mother's knee. Men, in their prime, each like a brother, Joined hand in hand they're linked together; Here, too, the aged, the noblest show, They, hand in hand, together go.

Young men and maidens, free from care, Single or plighted, like jewels rare, Are gathered round this gorgeous Hall, This Home of Beauty, in truth we call.

Creative Genius, raise thy wand! We now would ask, O let him stand Before us; him who all this beauty planned. Behold, cries Genius, quickly glance! Enough! the artist, R. H. VANCE!

Daguerreian Gallery,

Corner Sacramento and Montgomery streets.

Dr. Whistler's Balsam of Wild Cherry.—Where the labor preparation is known, it is so well established as an infallible remedy for the cure of Coughs, Colds, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Croup, Whooping Cough, and every form of PULMONARY COMPLAINT, that it were a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly appreciating in public favor, until its use and its reputation are alike universal; and it is now known and cherished by all (and their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED! The whole history of this Medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cold or a Consumed Consumption, and its power as a safe, certain, speedy, pleasant and efficient remedy cannot be equalled.

CAUTION! Purchase none unless it has the WRITTEN signature of "J. B. W." on the wrapper, as well as the printed name of the proprietor.

BETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.

For sale by—HARRIS MORRILL, HENRY JOHNSON & Co., and RICHARDSON & Co., San Francisco; CHAS. MORRILL, and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere.

## THE STRANGER'S OBSEQUES.

"LET ME KISS HIM FOR HIS MOTHER."

He was dead and stranger faces  
Only looked upon him there;  
Listened to the song funeral  
And the low-toned, fervent prayer.

In the East his loving kindred  
Dreamed of him whose happy tone  
Had to them been sweetest music;  
When responsive to their own.

Oh, how little, Oh, how little  
Can the mortal mind discern;  
If the distant were not hidden  
Low the fires of hope would burn!

There he lay; youth with its glory  
Crowned the beauty of the dead,  
Half concealing that the spirit  
Homeward to its God had fled.

When they silently would bear him,  
From the stranger through away,  
One approached, and bending o'er him,  
Very low they heard her say,

"Let me kiss him for his mother!"—  
Gently, fearfully, 'twas said,  
And they wept who saw her bending  
Thus in love above the dead.

If an earnest, pure desire  
Reaches God like wafted prayer,  
He will bless the stricken mother,  
For the sake of her who there

Thought of those who, mayhap, waited  
Even then, his tones to hear,  
As she bent so gently o'er him,  
As she shed the parting tear!

[Carrie Calderwood.]

## Letter from E. W. F.

[We are happy to welcome again to our columns our able correspondent, and we know our readers will be gratified. The following letter from her eloquent pen will amply repay perusal. We hope often to hear from her.]

*The World in the East—Publishing Business—Buckley's History of Civilization—Carlyle and Emerson—Rev. Theodore Parker—Symbols of the Capital—Women in America, etc.*

EDITOR FARMER: The world in the East is slowly wearing back into its old grooves, out of which it was somewhat rudely shaken by the memorable panic of last year. There is a manifest growth in gaiety from last winter, and all the branches of business which express the high phases of civilization are awaking as from a brief sleep. Foremost among these, with as reading people, is the Publishing business. Since January, 1857, there have not been so many books published in New York as, for several years before, there often were in three months. The old, firm houses let go, in nautical phrase, their bower anchors in the fall of '57, and they are for the most part well content to have held their ground through the storm that has swept away not a few young aspirants for success in this uncertain business. One benefit attendant upon this suspension has been the suppression of large numbers of trashy books, which in ordinary times would have taxed the pockets and time of indiscriminating readers. They will now, in all probability, continue to slumber the inoffensive sleep of peace in their authors' desks, and more wisely chosen works will take their place in the careful and limited issues of the next year or two.

There have been a few noble books published in this time of dearth. Among these I may mention, for the benefit of some of your readers who may not otherwise hear of them, *Buckley's History of Civilization*, of which the Appletons have published the two volumes which are completed. It is an English book, and one which is destined, it would seem, to introduce an era among historical scholars and writers, by its original, comprehensive, and unique method of treatment of its subject. The Reviews have the usual differences of judgment which they so infallibly exhibit when a book which is well worth a careful and critical judgment appears, to challenge them. One pronounces it clear, able, comprehensive, original, bold; in short, great in every sense; another declares it narrow, partial, unjust, pedantic, illogical, and inconsequent. So one learns that to judge for oneself is, after all, wisest and safest.

Carlyle has spoken to us once more also, in this almost dumb year. I have not yet had the opportunity to read his *Frederick the Great*, and some of our journals make unpromising notices of it, but a failure of his, supposing such a thing possible, would so far exceed the highest productions of men whom they praise, that I should not fear to set their judgment aside, and take the grand old Scotchman as frankly into my heart, as a master, as ever I did. The age has produced but one Carlyle, though there are men pressing him hard up the shining ascent whither his glorious march has led for the last thirty years. Of these, among the men who discuss life, its opportunities, uses, and predestinated aspects, our own Mr. Emerson is probably foremost. His own and Carlyle's work lies in the opposing departments of analysis and synthesis. Given a human nature of which you would have the elements, be it individual or national, and if you can lodge it in the laboratory of that great, keen Scotch brain, you will shortly have it analyzed, and its constituents laid conveniently apart, for your inspection; whereby it will be of your own dullness that you do not ever after know that man or that character as a single thought. But, on the other hand, given the jagged, disproportionate elements of a nature however angular, and if you can effect like lodgement of them in the calm brain of the Concord Sage, you will have a man or a character turned out to you in due time which will bear the Emersonian stamp as ineffaceably as History bears the stamp of Time, or rational argument the impress of Thought. They are a glorious pair. May they live long, and do much work.

And this wish, which is beautiful, brings to mind the painful loss which the cause of religious freedom in this country, and the world, is suffering at present from the constrained inactivity of the

leader, whom few will expect soon to see replaced: Rev. Theodore Parker. It is mournful to see such a man waste his power by irrational use of it, in overwork, continued year after year. Mournful, because it robs us of what we need and feel we have a right to—the rare power, and Godlike uses of such a life; and because, also, it proves how a great heart, a true soul, and a wise head may fail to save their possessor from wasting himself in the zeal which cannot temper itself by restraint. It is barely a twelvemonth since I wrote Mr. Parker, in view of his impaired health, urging him to go to California; to abandon all labor, except such as would flow easily out of his mind, working under the new stimulus of that peerless climate and unmatchable country, and take to outdoor life on horseback there. Had the counsel been followed, he would not now have been sailing over the seas to those dreadful tropical islands, in pursuit of health, which he will no more find there, than the thousands have who have preceded him in that sad search. It is lamentable to see how men are advised and continue to do, the things that have been done, no matter with what issue. Mr. Parker, with a constitution exhausted by years of excessive labor, predisposed to pulmonary affections, worn out by that villainous climate of the New England seaboard, needing to have his system, therefore, acted upon by an equable and bracing temperature, which should not still further relax the tissues and organs that are already giving way, is sent to melt the little power he has left quite out, somewhere in the West Indies, and when that proves a failure, he will go somewhere else, doubtless, where people in like condition have always gone, and always failed to find the object of their pursuit. Men are great and wise on all other points except that of preserving themselves, and when they are fairly entered within the field of labor, they seem to become blind to all consideration of how the life that is enriched by so much study, by such clearness of vision, such unflinching strength of purpose for the right, may be husbanded for the greatest good it is capable of. Mr. Parker, in reply to the reasons I urged upon him, says: "I am now so well that I need little relaxation. I husband my resources better than before, and hope to live a long time yet. But I cannot leave Boston. There is no place on this continent where I can work to so great an advantage. I have been here long enough to have become somewhat known in the town, and to understand its good and ill. I know California has a great future. There will be an Anglo-Saxon Pacific Republic there one day. I hope a noble one."

It is, as I said, but little more than a year since these lines were written, and already the "husbanded resources" are overdrawn, and there is too much reason to fear that we shall long have cause to lament the devotion which held him to the town where he had lived long enough to have become somewhat known. May health and strength come to him once more.

To return to books, to which I proposed, at first, to confine myself in this letter. Permit me to pass over the excellent ones which I have not room left to name here, and commend to yourselves and your readers a pleasant new book, published by Thatcher & Hutchinson, of which Rev. A. D. Mayo of Albany is the author. It is entitled *Symbols of the Capital*, and Trials of New York and its Institutions as Representative of American Civilization. Mr. Mayo is an ardent humanitarian and Christian of the liberal sort, and his words flow from the life of a soul warm and throbbing with divine hopes of his race. He is an eloquent speaker and able writer; a man who shrinks from no position or truth because it happens to be unpopular, and one who believes that life is proved by its fruits. I can give you but one extract from his book to prove the justness of the claim as to his merit as a writer and a man. None but a clear and true soul utters itself in such thoughts as these, from his Chapter on *Women in America*:

"There is no hindrance to the development of woman in America, but woman's freedom must be won everywhere. The gracious Creator offers woman America—an ocean of republican possibility—for her inheritance. She receives as much as she can dip in her cup. If she can only catch a teacup or a thimble full, or scoop in her trembling hand a little that runs through her fingers, it is her misfortune, but nobody's sin so much as hers. If she will go on with a brave heart, using what she has, she can be herself, and occupy every position for which she is qualified, according to the same law by which man succeeds: unflinching toil in the acquisition and eternal vigilance in the preservation of Freedom."

"But such an effort can only come from a deep inspiration of religious obligation. Not the superstition which makes woman the slave of a masculine priesthood, but the religion which is the new birth of the soul into love and freedom can give her power even to aspire to her destiny. The sentiment of freedom must be purified, widened, deepened by religion to a controlling principle in the souls of our young countrywomen, before the victory will be won. For that woman's war of independence is no seven years' conflict that can be fought through with a great effort; but a series of petty skirmishes daily renewed, lengthening out through many generations. Her foes are not armies in the field, forts and navies on coast and seaboard, not even the restless throng of men; she cannot fight her father, brother, husband; but a thousand social gnats and musketoes, a swarm of domestic flies, little weaknesses that never take form, little selfishnesses that secretly spoil motives and conduct of elevation, little jealousies, mean hopes, cunning plans and degrading half fears, that tie an invisible cord around every limb. She marches to her battle, not over ditches and up mounds, where volleying cannon shake the ground and hissing bombs flame through the smoking air; but along a field of spiders' webs, through forests interlaced with flowing vines and thickets where thorns lurk under blossoming roses. Through perpetual irritations does she gain her freedom. A half drunken soldier can run like a screeching demon up the road to the parapet, swept by its storm of fire and iron, against a rampart of pointed steel; but only a religious

woman can keep her nerves strong and her spirit high against the maddening vexations that, like mocking spirits, switch her with hairs and prick her with needles, and throw flower dust in her eyes along the path of social freedom. But she who endures unto the end shall be saved; and as the fire burns deeper and calmer in her soul, shall a new vigor move her hands and feet, and a new grace hover about her form, and a lovelier halo of victorious womanhood encircle her brow, as she goes to her destiny like a queen to her coronation."

I observe in one of your last numbers some pungent strictures upon a report by the State Medical Society, involving, in some way, the character of California women. As I reckon myself of the number, and have not seen the document you allude to, I shall esteem it an especial favor if you will kindly forward me one by the first mail after receipt of this. There are some things done and said, occasionally, that one cannot afford to lose, and, if I understand you aright, this is one.

Yours, truly, E. W. F.

New York, February 20, 1859.

## Catching at Shadows.

[Had we the engraver's skill we would place the truths of Sallie, like the handwriting upon the wall, before those who are in the habit of thoughtlessly passing a hasty judgment upon their neighbors and friends; but Sallie has so well portrayed in her truthful sketch, what really occurred, that we need only urge home to all, her pictures, and say, from sacred writ, "Judge not by appearances, but judge righteous judgment."]

Catching at shadows, recalling to life  
The tenants of mouldering tombs.  
"She speaketh yet though dead."

I was carelessly chatting with a companion, and after listening to some recital concerning a mutual friend, I replied, "Oh I dare say it is true; it sounds quite probable."

My grandmother dropped her knitting and quietly laid aside her spectacles. "Sallie," she said, addressing me, "I will tell you a short story, if you will give it attention. When I was a young girl my father lived in one of the numerous little villages scattered upon Long Island. I had many associates as gay and thoughtless as myself, and one among them, a sweet and winsome girl, was my chosen friend and companion. She became the repository of all my hopes and aspirations, my joys and sorrows, and when my noble husband sought me as his bride, I confided all my happiness in her."

"But previous to my marriage I was called away from home to visit an aged relative, and as the means of communication with absent friends was far more difficult then, than now, our intercourse entirely ceased. Amid new scenes, and surrounded by kind friends, a year flew swiftly by, and I returned to spend a few short weeks beneath my father's roof, ere leaving it forever. One after another my friends dropped in to see me and express their joy at my return, but Agnes Fay came not. I inquired if she was ill, and received the information that she had been daily seen in another part of the village. At last I came to doubt her constancy to me, and in the presence of a venerable old man, our minister, I exclaimed, 'oh! I dare say she is false and has forgotten me, I will think of her no more.'

"Margaret," exclaimed my pastor, gravely, 'never dare say anything unless you know it to be true.'

"I felt rebuked, and seized my bonnet with a determination to proceed at once to Agnes and learn the real cause of her apparent neglect. She spied me from a window as I entered upon the path which led to her peaceful home, and came bounding forth to meet me. 'Dear good Margaret,' she whispered amid her kisses, 'how happy you have made me.' But Agnes, I replied, 'your negligence has greatly grieved me. I thought your love for me had fled forever.'

"Did they not tell you then the reason of my absence? You doubtless remember the poor English lady, who with her sweet little daughter, lives in a cottage at the foot of your green knoll. She has been very ill, so sick the Doctor thought she must die, and poor little Anne could do nothing but cry from morning till night; so whenever my tasks were over at home, I ran in to comfort and nurse her. The mother is slowly recovering now, and I was this morning preparing to go and explain all, and welcome back my own darling Margaret! This, dear Sallie," continued my Grandmother, 'is a lesson I have never forgotten. Whenever tempted to speak or even think unkindly of another, I remember the tears which sparkled in the beautiful eyes of Agnes, and the smile which so glowingly expressed her entire and free forgiveness.'

The tremulous voice ceased, and I saw by looking into her kind, grave face, that the heart of my Grandmother was revealing among green but olden memories, so I silently kissed her and turned away. Two weeks later I saw her shrouded in pure habiliments, and wrapped in a dreamless slumber—the last long sleep of death. But as long as this heart of mine shall throb, the remembrance of her gentle presence must ever abide with me, and the lessons of truth, brightness and universal kindness, so practically enforced in her life and example, shall constantly guide and direct me. O how much misery, how many contentions and tears, what misgivings, and doubts and crime, would be lifted from the hearts of the multitude, if none dared ever to utter what was not known to be true.

SALLIE.

IN-DOOR EXERCISE.—Females much confined within-doors, often suffer ill-health from the want of exercise. Nature demands it, and health cannot exist without it. The skipping rope, dumb-bells, batte-dore and shuttlecock, etc., are all aids to the required end. Frequently, however, these exercises are regarded as childish; it is overlooked that from women, as well as girls, nature demands the fulfillment of the same laws, and there is no healthy development of the future woman, than between the ages of fifteen and twenty-one. Ladies who are not above superintending their own household affairs—who look upon the rubricarpet, as necessary but pleasant helps to the preservation of sound health, are less in need of artificial aids to exercise, than those whose most energetic labors are confined to the performance of a set of quadrilles upon the piano, or an occasional promenade in the walks of fashionable life. [Heartstitch.]

WHEELER & WILSON  
MANUFACTURING COMPANY'S  
SEWING MACHINES.343 Broadway, New York.  
Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857. Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

SEE THE FIRST PREMIUM  
SEWING MACHINES.

WHEELER & WILSON'S SEWING MACHINES took the FIRST PREMIUM at the Mechanics' Fair, Sept. 1855.

Wheeler & Wilson's Sewing Machines Were recommended the HIGHEST PREMIUM at the State Fair, Maryland, August, 1858.

Wheeler & Wilson's Sewing Machines Were recommended as the BEST FOR FAMILY USE, at the San Jose Fair, Sept. 1859.

Wheeler & Wilson's Sewing Machines ARE SIMPLE, not liable to get out of order, make a stitch alike on both sides of the fabric sewed, turn the hem, use the cotton from an original spool, by use of a NEW TENSION, and are capable of sewing the FINEST AND COARSEST fabrics, LEATHER INCLUDED.

All goods sold in the city, put up by experienced workmen, and warranted.

THOMAS DAY, 188 Montgomery street (near Jackson street), San Francisco.

APPEAL OF THE  
Ladies' Mount Vernon Association,

TO THE PEOPLE OF THE STATE OF CALIFORNIA.

A recent appointment by Miss Ann Pamela Cunningham, Regent of the "Mount Vernon Ladies' Association of the Union," has devolved on the undersigned, the duty and the privilege of placing before the people of this State, the purposes of the Association.

An Act of Incorporation from the State of Virginia authorizes the Association "to purchase, hold, and improve two hundred acres of Mount Vernon, including the mansion as well as the tomb of George Washington," and to receive a deed in fee simple, and to exercise full power over the use and management of the same.

Under this charter, a constitution has been adopted, which vests the power of management in a Regent and Vice Regents, selected one from each State of the Union.

In April, 1858, under the advice of legal gentlemen, a contract was executed for the purchase of Mount Vernon for \$200,000, of which \$18,000 was to be paid cash, \$57,000 on the 1st January, 1859, and the balance in three equal instalments of \$41,500 66 each, with interest from the date of the contract, payable on 23d February, 1860, 1861, 1862.

Until payment in full, the proprietor is to retain possession, but such payment may be made at any time.

The cash payment was made, and the gratifying intelligence has lately reached us, that the instalment of \$57,000 was duly met; thus securing the contract, which allows payments to be made, in sums of not less than \$5000, as soon as collected, thereby arresting the accrual of interest. All efforts, therefore, are now turned to the collection of funds for the payment of the deferred instalments at the earliest possible day, thereby saving a large amount of interest, and realising the cherished hope of at once obtaining possession of Mount Vernon.

To this noble cause, the Women of the Union, deserting for a season the seclusion of domestic life, have brought their talents and all their energies. Amidst the discord of sectional strife, they bid us gather around the tomb of Washington as children of a common heritage, recall his moderation of spirit and pure patriotism, and lay to heart the solemn warnings of his last public words. They know, that standing on that hallowed spot, the pilgrims gathered from the wide expanse of the Republic, can feel but one sentiment—reverence for his teachings, and devotion to the Union he so loved.

Men of high station and intellect (among whom Everett stands pre-eminent) are lending their influence and their eloquence to the cause. In twenty-one States of the Union, the good work goes bravely on, and California is now invited to do her part. Youngest of her sisters, she yields to none in reverence for the name of Washington and devotion to the Union. Animated then by these sentiments and by a just State pride, let her people bring their offerings to the common altar of patriotism. Shall the gold of her glittering soil be poured alone into the lap of Commerce, and none be devoted to preserve and guard with sacred care the Groves of Mount Vernon? Let all then, who are generous and brave, to show that California lacks not the heart, sympathy, nor the hand to help in this work of patriotism.

To the Women of California, this appeal is especially made. Sisters of the East have assumed this honorable duty, and claim your zealous cooperation. Our State will do her part liberally, if you resolve to do the matter in hand. On you, therefore, will it depend whether she shall respond to the call.

Although contributions to any amount are solicited, yet the price of membership is but One Dollar. Concerted and systematic action, therefore, must be adopted to canvass the State from the Sierras to the Pacific. The duty of such organization devolves on the Vice Regent, and she proposes the following plan as simple and also effective, if seconded by your hearty cooperation.

Lady Managers will be selected, one or more, for each city, town, village, and mining camp in the State, who will appoint Associates, leave to them Credentials authorizing them to receive contributions and enroll members. These Associates will report monthly to the Lady Managers, apportioning them the several Lady Managers will report monthly, also, to the Vice Regent, a complete list of names enrolled and the amounts received, with such suggestions as they may deem proper. Monthly the Vice Regent will forward to the Regent, the sums received and a complete list of contributors, whose names will be recorded in volumes to be preserved at Mount Vernon, in perpetual memory of their tribute to this noble cause.

An Advisory Committee of Gentlemen has been selected, and their names are hereto appended.

Louis McLane is the Treasurer of the Association for this State.

Communications will be addressed: Mrs. Magdalen G. Blanding, Vice Regent Mount Vernon Association, and forwarded through Wells, Fargo & Company's Express, which has generously offered to convey them free of charge.

Direct of the Association, No. 1, Lucas, Turner & Co.'s building, San Francisco.

MAGDALEN G. BLANDING, Vice Regent for California.

We, the undersigned, take great pleasure in uniting with Mrs. Blanding in commending to our fellow citizens the cause which has been committed to her charge, and will gladly cooperate with her in securing its success.

Wm. Ingraham Rip, M. H. McAllister, Harry L. Thornton, Ogden Hoffman, Balle Peyton, Louis McLane, Edward Stanley, T. W. Freelon, E. D. Baker, Edward J. Pringle, F. P. Tracy, H. W. Halleck.

ADVISORY COMMITTEE.

His Excellency John B. Wells, Sacramento; Hon. Joseph Walker, do; Hon. W. O. Stratton, do; Hon. Stephen J. Field, do; Hon. M. H. McAllister, San Francisco; Hon. Orden Hoffman, do; Hon. J. S. K. Oiler, Los Angeles; Right Rev. Bishop Kip, San Francisco; Right Rev. Bishop Alleyman, do; Hon. John C. Fremont, Mariposa; Hon. Henry I. Thornton, San Francisco; Hon. Edward Stanley, do; Hon. Milton S. Balle Peyton, do; Hon. F. D. Baker, San Francisco; Hon. H. Halleck, Esq., do; Wm. M. Lusk, Esq., do; Henry W. Freelon, do; F. P. Tracy, Esq., do; Hon. Ed. W. McKinty, do; Hon. Benjamin Hayes, San Diego; Hon. Josiah Carrillo, San Luis Obispo; Hon. Samuel Bell McKee, Oakland; Hon. F. M. Bliss, Marysville; Hon. B. F. Myres, Au-Greener, Stockton; Hon. Niles Sears, Downville; Hon. Warren T. Sexton, Oroville; Hon. Pablo de la Guerra, Santa Barbara.

## The Game of Tehuantepec.

Mr. H. S. Stevens, of Cleveland, Ohio, has been for some time on the Isthmus of Tehuantepec, engaged in the company's transportation department. We have published portions of his letters from the Isthmus to the Cleveland Herald, and the following summary in that paper, from his notes, of the game features of the Isthmus will be read with interest. Mr. Stevens says:

"Besides the pheasant (that noisy disturber of the peace of our barn-yards, whose shrill 'pot-rack, pot-rack,' in its continuance and monotony, is so grating to the auricular nerves), the legitimate Guinea hen is here found in its wild state; and though timid, quick-scented, and difficult to approach, is a rich prize when brought down at a long shot. Whether this fowl is an aboriginal, or owes its introduction on the Isthmus to the early Spanish, or the latter French settlers, cannot be ascertained until we are better acquainted with the history of the country than we are now.

"It is not improbable that the French colonists, who made an unsuccessful effort many years ago to settle and cultivate this country, introduced the various domestic animals.

"The royal pheasant to which we refer, is, *svi generis*, 'native and to the manor born.' There is no other pheasant on this Continent. The pheasant proper does not exist in the United States, the bird usually called by that name being in fact the partridge. The latter bird, and his diminutive, the quail, also abound on the Isthmus. Wild ducks swarm in all the lakes, and fairly blacken the glistening surface of the rivers. Of these there is a large species, resembling our muscovy duck, nearly as large as a brant, which is said to be of very fine flavor.

"Deer may be seen frequently, fitting the dark forests, or quietly sipping the cool water from the mountain streams. On our passage down the Coastacalcos, we counted a flock of a dozen on the river bank, that were quietly surveying our party, and exhibited no alarm until they were fired at with revolvers. They then fled into the woods.

"There, too, loping through the woods and up the mountain sides, is a little animal which is not to be found in these States, that can not be too highly estimated as a dainty for the table and a prize for the hunter. It is the legitimate French hare (*le lièvre*), probably introduced by the emigrants; a larger animal than our rabbit and hare, with habits somewhat different, and a meat of far richer and juicier flavor. The French epicure desires no greater dainty than a fat *lièvre*.

"For those who prefer more royal and martial sport, El Tigre, the Lion of America, an animal of the leopard species, of great agility, ferocity, and remarkable beauty of form and color, will be found a foe man worthy of their steel." Gordon Cumming himself could not desire rarer or more dangerous game. The savage growl of El Tigre may be frequently heard, commanding and enforcing the silence of those perpetually chattering disturbers of the quiet repose of the forest—the monkey tribe, now and then may be seen skulking in a sinister manner along the highway, with unmistakable carnal appetites. For him Sharpe's rifle, or the yager with hard bullets, is needed. When bagged, his hide will be found a beautiful prize for a rug, a saddle-cloth and other useful or ornamental purposes.

"But how about these ubiquitous caricatures and mockeries of humanity, the monkeys, who dog your steps whithersoever you may go, exhibiting, in the most expressive way, their utter contempt for you, pelting you with sticks, coconuts and green fruit, and at the same time offending your *amour propre* by the most ridiculous mimicry of all your actions; what is to be done with them? They are the sportsman's direst enemy. They are the *avant couriers* of the animal world, announcing the approach and signaling the march of the hunter. They shout, bellow, scream and howl to all the world of the forest, in a manner and tone clear to even human comprehension, 'that an intruder, of dangerous, mysterious power and agencies, is coming among them; one whose purposes and aspects are more than suspicious; a sort of insane and desperately wicked monkey-giant, who has been, for his sins, deprived of the chief ornament of the monkey race, and reduced to that badge of disgrace and infamy, an *ou corryu*.'

"How will you resent these insults and punish these aggressions? Pop one of them over. With a heavy, swinging, crashing sound, he drops from the limbs of the tree, and falls on the ground before you, a melancholy proof of your sanguinary instincts. You experience the remorse of Cain, the guilt of the homicide. In a moment, all the terrors of a court, a jury, an indictment, sentence, the jail, the gallows, flit through your affrighted imagination. You have murdered a human being, or at least the next thing to one. Ingenious counsel, in view of the aggravating conduct of the deceased, and of your hot blood, may mitigate your crime to manslaughter. But your conscience is not easy after that 'deed without a name.' 'The damned spot will not out!' You remember, too, Gabriel Ravel and poor Jocko, and you feel that you are a villain. And yet, so hardened do men sometimes become, by constant indulgence of their passions and indifference to the claims of humanity, that there are those who will outrage all their finer feelings, the nerves of your conscience and your stomach, by the cannibalistic suggestion that the remains of your victim are very good material for a rambo. Just think of your horror, after partaking heartily of a rich soup, to fish up from the residue the grinning skeleton of the unfortunate victim of your passions and violence! Well may you venture, thereafter, never to eat soup on the Isthmus, unless you witness the composition of it.

"Apropos of gumbo and soup, the meat of the iguana is said to possess all the qualities of the turtle for soup purposes. This animal is as common as the lizard in our woods. It is poor sport to shoot the heavy, stupid, repulsive-looking beast, as he lies on the branches of a tree, sunning himself, and enticing flies and other insects into his goitered throat, but the meat is good, nutritious and palatable. The Saxon stomach, however, is slow to appreciate such delicacies. There is no reason in the world why our small lizard should not be as good to eat as this huge one, but no one has been found enterprising enough to try the experiment."

Dr. H. E. Howell, of New York, says that the most efficient remedy to improve the tone and energy of the stomach is the Oxygenated Bitters. For Dyspepsia and Indigestion these Bitters are unparalleled, as testify numerous cures.

HOLLOWAY'S OINTMENT AND PILLS.—Talk of annexation, indeed! These remedies have peacefully annexed all nations, tribes, communities, and commonwealths of the human race. They are the one sole rallying point in favor of which mankind are unanimous.

Sold at the manufactory, No. 80 Maiden Lane, New York, and by all druggists, at 25c., 50c., and \$1 per pot or box.

## J. L. POLHEMUS

DRUGGIST

190

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since

the ever glorious FORTY-NINE, have suffered with

you in three fires and three floods, and intend to live

among you with my family during the term of my natural

life, if not longer. I return you my most sincere thanks

for your unfaltering patronage and support, which has

enabled me to pay One Hundred Cents on the Dollar

through all my adverse fortune. I would also give you

a few reasons for your continued patronage, and inducements

to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate

Druggist in this City.

Persons in this connection will please observe that there

is as much difference between a DOCTOR and a DRUG-

GIST as there is between a Doctor and a Dealer, and

rather more so between those who have picked up the

Drug Business and those who have devoted their whole

lives to it. To this latter class I have the honor to belong,

having learned my business in the Atlantic States, and

been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people

wish to know where they can get the prescriptions filled

with safety, I will hereafter fill them for

Half the Price Usually Charged.

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE

BEST place in California to obtain everything, NEW,

OLD and STRANGE in the Drug line, and especially to

make it the most extensive depot for every valuable

Patent Medicine, Drug and Chemical. We invite

proprietors of valuable and reliable Patent Medicines to send

them along. We have a large and thoroughly fire-proof

Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time

FIFTHLY.

We will furnish those in indigent circumstances with

MEDICINES AT COST! the same being attested by two

or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS

ONLY. The amounts we have lost heretofore by credit-

ing we intend to distribute equally among our patrons, in

the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable

articles:

Dr. Carl Warburg's Tincture. This article is particularly

recommended for Ague and Fever, when every other

article fails to cure. Budd's Nerve and Bone Liniment,

warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numer-

ous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know

how to import them, and how to sell them to satisfy the

public as to price and quality. At all events, give us a

call, and WE WILL TRY.

## DR. F. G. JOHNSON'S

No. 186 Montgomery Street, San Francisco.

PATENT SELF-REGULATING

## WINDMILL.

MANUFACTURED BY D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF ALL, and being constructed all of iron, is without doubt the most perfect and durable, as well as the most economical Windmill in the world.

The undersigned having purchased the EXCLUSIVE RIGHT FOR THE MANUFACTURE OF THESE MILLS IN THIS STATE, will manufacture and keep on hand the following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00.  
No. 2—One to one and a quarter Horse-power.....130 00.  
No. 3—One and a third to one and two-thirds Horse-power.....160 00.  
No. 4—Two to two and a half Horse-power.....200 00.  
No. 5—Two and two-thirds to three and a half Horse-power.....230 00.  
(This list is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

## DEPOT OF MANUFACTURE,

Nos. 90 and 92 Bush Street, SAN FRANCISCO.

When any greater power is required, the price will be pro rata as the power is increased. They are susceptible of being increased to 20 Horse-power or more; and applied for any purpose where stationary power is needed and as manageable as a Steam Engine, with no risk or expense. Those anticipating using this cheap power (the Windmill), should not fail to examine THIS MILL; such examination will satisfy them of its adaptation and ability to serve their purpose efficiently and fully. It is unlike other Windmills that are called self-regulating; they have stationary Fans and small reversing Fans, which are dependent upon to graduate the speed of the mill; whereas, by Dr. F. G. Johnson's Patent the Fans revolve upon the arms and turn their edge to the wind when a gale or sudden gust strikes it; and again, a child can stop it at once by turning the fan's edge to the wind by the use of a lever pressed upon the stop-wheel, which is upon the shaft. These Mills can be used for any purpose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH STREET, San Francisco; where the Manufacturer will take pleasure in showing and explaining the mechanical principle upon which reliance is had for their superiority over all other Mills known, or of which we have knowledge.

D. VAN PELT.

and social life. Mr. Sickles is a prominent politician, and a "self-made man" of much ability and force of character. He was elected to Congress last fall. The New York Post says that the private character of Mr. Sickles was bad, and that the ruin of his wife may be primarily attributed to his example.

**A QUARTZ MILL.**—In 1864, two ingenious mechanics, piano-forte makers, commenced the erection of a quartz mill which, to us, says the Amador Ledger, at least, is a novelty. It is located on the Mokelumne river, some three hundred yards above the Big Bar bridge, and in this country. The quartz is first calcined and then run through a machine made on the principle and in the style of a bark mill; it is there reduced to a coarse sand. From this mill it passes into another which is the same as an ordinary mill for making flour, except the stones, which are of granite and faced with steel plates. This mill reduces the rock to an impalpable powder, much finer than the common stamps, and at the rate of from six to ten tons per day, two men attending. The machinery is cheap, durable, and not liable to get out of repair. The Kearsings, the inventors and proprietors, say that they can make money where quartz will pay ten dollars per ton. They have constructed two other mills on the same plan, both of which are working admirably.

## BUTTER! BUTTER!! BUTTER!!!

I HAVE IN STORE, AND FOR SALE, AT GREATLY REDUCED PRICES:

300 Ekins Choice TABLE BUTTER,  
100 Ekins Cooking BUTTER.

Also:

Bacon, Clear and Mess Pork;  
Lard, in kegs and cases;  
Hams, Crushed Sugar;  
New Orleans Sugar, China Sugar,  
Coffee, Tea, Candles, Soap, Dried Apples, etc.,  
And all other goods usually found in a Grocery Store.

The trade of grocers, families, boarding-house keepers, and farmers, is respectfully solicited.

My goods are generally bought at forced sales; consequently I am enabled to sell at prices to suit the times.

## SAMUEL PILLSBURY,

DEALER IN

BUTTER, CHEESE, EGGS,

HAMS, Bacon, Lard,

APPLES, CRANBERRIES,

And all other kinds of FRUITS in their season.

No. 48 Washington Market,

SAN FRANCISCO.

TO DAIRYMEN AND FRUIT GROWERS.

Consignments respectfully solicited.

## IMPORTER AND BREEDER OF

## French Merino Sheep and

## Thorough-bred Durham Cattle.

Can supply the California market with Animals of SUPERIOR EXCELLENCE, and at prices as low as the SAME QUALITY can be obtained, either in America or Europe. The Lamb now on hand are a cross of the Bakewell.

All Stock sold by him will be delivered in New York Free of Charge.

COL. WARREN, Editor of the California Farmer, San Francisco, is authorized to act as Agent for the sale of my STOCK in California, of whom Circulars and further information can be obtained.

JOHN D. PATTERSON,

12 WESTFIELD, Chautauque county, NEW YORK.

## Large Flock of Sheep For Sale.

WE HAVE JUST NOW, 11 applied for immediately, A LARGE AND FULL FLOCK OF SHEEP, that can be offered at a bargain, viz:

350 good WETHERS, one to two years old.

1150 good American EWES, three-quarter cross.

Some 500 YOUNG LAMBS, and a promise of 300 or 400 more. The Lambs now on hand are a cross of the Bakewell.

Those in prospect are American cross.

This is a rare chance, and purchasers will do well to call immediately.

Apply to COL. WARREN, Farmer Office.

## Southdown Sheep.

WE OFFER FOR SALE, splendid Southdown Sheep, of the noted Webb blood of England. These Sheep we now offer from the collection of J. C. Taylor, Esq., from whom we have selected the best of the flock, and which we are now offering at a bargain.

The first Southdown Sheep on the Pacific coast. These two Sheep are now owned by Messrs. J. H. CARROLL & CO., and are with their flocks at Colusa, N. D. Stanwood, Esq., is one of the principal owners.

Persons in want of good Sheep of this breed, are invited to call on us and examine our schedules, before making their purchases.

WARREN & CO.

## Sheep Wanted.

AMERICAN EWES, of the best quality, wanted immediately. One lot of 400 Ewes, of two and three years old. Another lot of 700 Ewes, of same age.

Persons having Sheep for sale, will do well to consult us, as we can always post them up in the stock for sale, and supply them with the best in the market.

WARREN & CO.,

Farmer Office.

## Domestic Fowls.

PERSONS desiring to purchase splendid GAME FOWLS, and the best HENS for laying, can be supplied by calling at the Farmer Office. A few of extra kinds for sale. They are a cross of the CALIFORNIA, POTRA, and of very superior kinds, valued at \$40 to \$50 per pair.

## McGLOUFLIN &amp; DAKIN,

## Purchasing and Forwarding

## COMMISSION AGENTS,

FOR

Purchasing and Forwarding Goods and Merchandise,

OF EVERY DESCRIPTION,

To all Parties residing in the interior of California,

and Oregon and Washington Territories.

HAVING LIVED AND CARRIED ON BUSINESS in the Mountains of California for the last seven years, and learning the necessity of every business man having an Agent in San Francisco, through whom, in one order, he may readily procure any articles he might want, at less expense and trouble than he could procure them elsewhere; therefore, we have now established a Commission Agency, and hold ourselves in readiness to attend to and fill all orders that may be sent to us with promptness and great care, and at as low rates as the times and the market will allow.

We propose purchasing and forwarding all kinds of Merchandise, to Blacksmiths, Coal, Iron, Steel, and all their different kinds of Stock. To Farmers: Tools, Seeds, Trees, Provisions, etc. To the Miner: Machinery, Tools, and Groceries. To the Trader: All the different kinds of Goods that may require.

Mechanics and others may forward their orders, and have any kind of Machine-work done at short notice, and at reasonable prices.

COMMISSIONS: For all sums less than \$500, five per cent. For all sums over \$500, at one time, three and a half per cent.

Please send your orders, with cash, through Wells, Fargo & Co., or otherwise, stating plainly what marks to put upon them, to whose care on the way, and how to send them—by steamer, rail-road, stage, or express.

We shall send the bills with the goods, at all times, that parties may understand all about them, keeping our accounts so that all parties may see at a glance how we stand.

Having a general understanding of our business, being mechanics ourselves, and applying our capacities to your wants, we hope to secure a liberal patronage.

For business capacity and honesty of purpose, we refer you to the following persons:

Thos. H. Selby, A. N. Fisher & Co.,

Haywood & Hiram, G. S. Ladd & Bros.,

Hon. G. W. Dent, Sacramento, Dr. E. G. Mook, Nevada,

C. Cooper, Downieville, Wm. Rufeson, Sonora,

Geo. B. Taylor, Columbia, James McGowan, Murphy's,

D. M. Locke, Knights Ferry, Robert McCulloch, Chinise,

E. Bannister, Petaluma.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 139 Washington street (op stairs), San Francisco.

TERMS.—For one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis.

Advertisements and Subscriptions must be paid for in advance.

#### Remedy for Smut.

[We are pleased to receive the following, in support of what we lately published on the Smut question; and we commend it to our readers for the valuable experience given with this preventive, and also for the other important ideas advanced by the writer.]

Ma. BROWN: I see in number six of the Farmer, March 11th, an article giving the views of a Napa farmer on the Smut question. His remedy, I know from experience, is right. Blue-stone may answer the purpose; but I will give you my experience in the use of brine and lime in Michigan; and I don't see any reason why it will not work well here. Soon after the Black Hawk war, I purchased a quarter section of heavily timbered land; and, being a carpenter by trade, I then thought the heavier the better; and commenced making an opening—chopped, say five acres through the winter; logged it up in the summer; made pot-ash from the burnt logs; (Colonel, that is the first crop) hauled my rails on the section line; hitched my oxen to the plow. But, O, Colonel, was not that plowing! pulling the plow back from under the roots, as fast as the oxen drew it in; say every six feet, on an average. But it went very well, for we didn't know any better way, down there on the Huron river. Well, I liked to forget the Smut.

The first crop of wheat I raised was chess; the second crop, wheat and chess; the third crop, wheat, chess and smut. Then, Colonel, I would have put for Illinois or Iowa, if I had known there had been such regions in the world. But, Smut I believe we are after. Well, I will agree to put all the Smut in my eye that you can raise from cracked grain. Smut comes from green grain, that is cut before it is dead ripe. Our best farmers, in Michigan, let a certain corner of a wheat field stand for seed, till it is dead ripe; then cut and mow it away, and thresh it with horses or machine. I never heard a farmer complain of Smut, that sowed ripe seed. Well, when I found Smut I commenced applying the remedy of our Napa friend—brine and lime. At night I would fill a few barrels with wheat; what I wanted to sow next day; and then pour on brine, strong enough to bear a potato. In the morning I drained it off, through baskets, and emptied it on the barn-floor, shoveled and worked in newly slacked lime, till it was dry; then sowed it. I never had any more Smut.

Now, Colonel, I will give you some more of my experience in regard to brine and lime to prevent Chess. We have no Chess in this county, but I am told there is Chess in some parts of California. When I commenced brine and lime, I found I had but little Chess; what I had, was evenly scattered on high and low ground alike. It struck me that brine and lime would prevent wheat turning to Chess; by the way, I am a strong believer in that doctrine, if the wheat is not ripe. After clearing a certain five acre lot, that had a swale running through about the middle, I plowed and sowed it to wheat, prepared with brine and lime; and then cut a ditch, two and a half feet wide and eighteen inches deep, and threw up the dirt on each side. My son Henry, who is here with me now, said he would raise a good swath of wheat on each bank of that ditch. He took the wheat out of the same bin dry, no brine or lime, sowed and raked it in. It came up and grew finely; and, at harvest time, I cut two as fine swaths of Chess as you ever saw grow. I don't think there were wheat heads enough to make a pint of wheat in the two swaths on the banks of the ditch; while the grain on either side, prepared with brine and lime, had no more Chess than what I sowed. The Rochester Rural and the Michigan Farmer have said so much on the Chess question, that I must dry up.

When I get settled in the Hills, you may hear from me again.

Yours,

A. C. CLARK.

ALVARADO, Alameda county, March 25, 1859.

[Good! Let us hear from you often; and may your example induce others to do likewise; give us their experience for the general good, and all be benefited. In a multitude of counsels there is wisdom.]

#### To Destroy Gophers.

Take a potato or carrot, or anything that they will eat; run a quill into it and make a hole, into which insert strychnine and plug it up again; put the potato or carrot on the end of a limber stick and run it into their holes as far as possible, with the end that contains the poison down.

Wm. B. WHITESIDE.

SACRAMENTO CITY, March 25, 1859.

In Shasta, it is said, they are setting out the California Nutmeg or Bay Tree, as an ornament. There are a great number of them on Sulter Creek, north of Pine Grove, in that county.

#### Sonoma County Agricultural Fair.

Most gladly do we give the announcement of the gathering of the farmers of this prosperous county, and we rejoice to notice the earnest manner in which they have taken hold of the work; it shows they mean to awaken a due interest in their own affairs, and we hope every county in our State will see the need of thus coming together and conferring one with the other in all things relative to their own business.

Sonoma county has within her borders vast resources yet unrevealed. Sonoma county can show some of the finest Stock in the State; she can well boast of *Dairies* and her *Vineyards*, and the wine made there will compare with any in our State. Her Farms, too, are an honor to the craft; to these we can say, happier or most hospitable homes are not to be found beneath the blue dome of heaven. We shall look for a truly grand Exhibition this autumn, in Sonoma. We wish them unbounded success. All that is needed to secure it, is a union for the good of the whole, and a generous strife for excellence.

PURSUANT to a call by public notification, a large number of the subscribers to the Sonoma County Agricultural Fair, met in Masonic Hall at Healdsburg, on Thursday evening, March 24th, to devise the necessary "ways and means" of carrying out the enterprise. A temporary organization being deemed advisable and the meeting being called to order, Hon. Washington P. Ewing was, on motion of Dr. Ormsby, called to the Chair. The Chairman briefly alluded to the object of the meeting, the eminent success which has characterized the movement so far, and the certainty of being able to complete all the arrangements necessary to a most successful consummation; that the one list which had been circulated for a few days in the town of Healdsburg, had at the present time, over one thousand dollars subscribed; and that if the other portions of the County equally interested in the movement, would respond to the call in the same proportion, there would be over nine thousand dollars to distribute in prizes. This will, however, overreach the most sanguine hopes of the members, as they only desire to raise between three and five thousand dollars.

On motion of Dr. Ormsby, James B. Boggs was elected Secretary, and James A. Reynolds, Corresponding Secretary.

On motion, a committee of two residents of each township in the County was elected, to solicit further subscriptions to the Fair. The committee composed as follows: Wm. McP. Hill and H. I. Clayton, Sonoma; J. Thompson Huie and Stephen Payran, Vallejo; Frank W. Shattuck and Hon. Uriah Edwards, Petaluma; Judge J. Morin and Col. L. Lyman, Annals; Hon. Jasper O'Farrell and Samuel Potter, Jr., Bodega; William Hood and Winfield Wright, Santa Rosa; Capt. Finckley and H. Poole, Russian River; Washington R. Ewing and C. V. W. Hooper, Mendocino; Hon. Richard Harrison and Wm. H. Sanbury, Washington.

On motion, a committee of five was appointed to draft and report a code of rules and regulations to govern the further proceedings of the Fair, consisting of Messrs. Macy, Ormsby, Mathewson, Norton and Reynolds.

Dr. Ormsby being loudly called upon, addressed the meeting, and in elegant and logical arguments set forth the advantages that would accrue to Sonoma county by Annual Fairs of this kind, the necessity of encouraging the breeding and raising of the finest stock of every description, and more fully developing the immense agricultural resources of this, the banner county of California.

Dr. Ormsby was followed by Messrs. Mathewson, Macy and Norton, who could only reiterate the Doctor's sentiments.

On motion, the meeting requested that the proceedings be published in the Democrat, the Journal, and the CALIFORNIA FARMER; and that the Secretary forward to each of those offices the request with a copy of the proceedings.

The meeting then adjourned to meet at Concert Hall, in Healdsburg, on Tuesday evening, April 12th, 1859, at 7, p.m.; at which time all the subscribers are requested to attend.

J. B. BOGGS, Secretary.

**GIVE HORSES LIGHT.**—Some farmers, with singular disregard of their own interests, imprison their horses in dark, badly ventilated, cellar-like stables. It would seem as though common sense would teach a man that no animal can be healthy in such places. Close and confined stables are the frequent cause of that violent disease called glanders. A few years since great ravages were committed among the cavalry horses of France by this disease, but it is now almost unknown in that country. This result has been brought about by making large stables, doubling the size of the stalls, and securing good ventilation. In proportion to their bulk, horses need more fresh air than men, in order to perform the function of respiration, yet they are commonly cooped up in narrow stalls, which are not large enough to keep a dormouse's lungs at work. During the winter season, when owing to inclement weather, horses must be more confined in-doors, those who possess such animals should devote some attention to provide them with stables suitable to their nature and wants, and by so doing, they will greatly increase their health and longevity.

#### The Caloric Engine.

THE friends of science and genius will be pleased to learn, no less than the toiling millions whose drudgery it will so sensibly diminish and alleviate, says the Boston Transcript, that Capt. Ericsson has at length succeeded in developing the principle of the Caloric Engine in practical machines, abundantly adequate to do all the pumping, printing, and hoisting of the country,—as well as to grind all its corn, and gin all its cotton. The inventor commenced the practical introduction of engines of six and eight-inch cylinders more than a year ago. They were simple domestic motors. He then introduced the 12-inch engine, which was an excellent pumper, and could do light rotary work. The eighteen-inch cylinder engine followed—which could drive two or three printing-presses. This was succeeded by the twenty-four-inch cylinder, sufficiently powerful for most hoisting purposes, and exhibiting more than a proportionate increase of power, with a diminished proportionate consumption of fuel. Still more recently, he has brought out the engine of 32-inch cylinder, which has been erected in one of the government warehouses in New York for hoisting purposes, and has exhibited a power which demonstrates that up to a certain limit not yet ascertained, caloric is capable of animating an available and most efficient motor.

We say the limit is "not yet ascertained," because the principle has thus far worked more advantageously with every increase of the cylinder of the machine; and no practical reason is known which should induce the inventor to believe that he has attained the maximum of beneficial increase. There is, on the contrary, every reason to believe that an engine of forty-eight-inch cylinder will exhibit an increase of power over the thirty-two inch corresponding to that of the latter over the engine of eighteen-inch cylinder.

The advantage of the Caloric Engine over the Steam Engine is found in its safety, economy, and the ease with which it may be managed. It cannot explode, it consumes but about twenty per cent of the fuel required by a steam engine of similar power, and it calls for the services of no engineer. A child may tend, feed and operate it.

What reason have we for believing, say the incredulous, that such a boon has been really bestowed upon mankind by the eminent man who has devoted more than thirty years of a most laborious lifetime to the accomplishment of this result—and hitherto without success. The reply is at hand. We have a commercial reason, as well as a mechanical. More than seventy of these machines are at this moment pumping, printing, hoisting, and grinding, in New York, Baltimore, Schenectady, Philadelphia, and at several railroad stations in many States. So much for the mechanical demonstration. Now for the no less commercial evidence. We understand that every one of these engines has been bought and paid for, and that several engineering establishments of large wealth and high standing are now engaged on their own account in the manufacture and sale of these engines, under licenses from Captain Ericsson. Among these we may mention the Newark Machine Company, Clute Brothers of Schenectady, Delamatz of New York, Messrs. T. P. Morris & Co. of Philadelphia, and the Massachusetts Caloric Engine Company of South Groton, represented in this city by the world-known dealers in agricultural implements, Messrs. Noxon & Co. Engines have also been ordered and sent to France, Sweden, Egypt, and Cuba.

A popular writer recently gave a description of the Boston truck, so complete and graphic as to lead us to wish that he would try his hand on the machine to which we have devoted this paragraph. If Mr. Cary, one of the patentees, could prevail on him to take a trip to South Groton, or place an engine at his disposal at some more convenient point, where he might study the marvelous operation of this breathing machine, the same writer could produce a paper that would electrify the world. But it might be too bold an undertaking. The truck is an institution, and may be described with safety. The caloric engine is a novelty, which it is not altogether prudent for responsible men to admit as a possibility. And in illustration of this we may mention an anecdote. At a recent meeting of a learned society in New York, a distinguished *savant* read a paper on the applicability of motors to a grand philanthropic scheme—the extinction of slavery. In this paper he discoursed of all inanimate motors—of windmills, and water-mills, and more particularly of steam-engines; but though there had been two score caloric engines in operation under his very nose in the city of New York for several months, our *savant* did not consider it safe to allude to it as a practical existence.

**THAT VOLCANO IN SHASTA COUNTY.**—The editor of the Shasta Republican, in reference to the story of a mysterious volcano somewhere in Shasta county, says: "We have lived in Shasta county more than seven years, and our acquaintance with the county and Dr. Wescroft (one of the authors of the story) leads us to the conclusion that the doctor's imagination is far more active than any volcano in our county or State. In fact, in its activity, we are inclined to think it would compete with Vesuvius in a state of eruption. The 'burning mountain,' in a 'secluded portion of Shasta county,' which has been subjected to a 'distant inspection,' has never been heard of in this portion of the State. The doctor seems determined to keep his name before the people. If he can't find passes across the mountains, or build railroads, he will accept 'burning mountains' or some other imaginary word."

#### Floral Festival.

YOUNG MEN'S CHRISTIAN ASSOCIATION.

We have been informed of a plan, now in a state of preparation, for a Festival under the auspices of the "Young Men's Christian Association" of this city, to take place in May and last four days, 24th, 25th, 26th and 27th. This Festival will be held at Musical Hall. One of the brightest features of this scene will be the union of Christian young men, of all the different Churches, to meet together as *brethren* of the Great Church of God. Such a scene will indeed call down a blessing from Heaven.

The plan of the Festival is to make it a *floral scene*. The Hall is to be decorated with the most beautiful flowers: floral altars, pyramids and temples will be erected; arbors of beauty will be built by fair hands, within which those fair buds and blossoms of earth will dwell; and, as these young men shall meet together, actuated by all those kind and generous impulses which true religion inspires, the fair hands of earth's angels shall reach forth to these bright flowers as emblems of that "union of hearts and union of hands," which, when felt and acknowledged of Heaven above, will even make on Earth a Heaven below.

The "Young Men's Christian Association" adopt this plan with the hope that such a Festival will meet the approbation of all the citizens of our city, and be worthy their aid and sanction. The proceeds of this Festival will be devoted to a fund, now being raised, to secure a building lot and to erect a building for this Association. It is well known that they have done much good already, in their plans of aid to deserving young men in sickness and the various trials incident to young men in this country; and it is now felt to be a desirable object to build and own a Hall and have a home, and strive to become more and more useful.

We give this notice thus early, with the hope that the various gardeners and florists in this city and county will aid so noble and deserving a plan, by liberal contributions of flowers, and their personal labor if needed; and our floral friends in the neighboring counties, we know we can speak for, will aid in such a work. We have already assurance from Messrs. Prevost, O'Donnell, and others, of San Jose, and we guarantee Smith, of Sacramento; Myers and others, of Alameda, and the Mission florists, will do their part; for, remembering, that "Freely as ye give, freely ye shall receive."

We shall keep this Festival before the people, for we look upon this union of young Christians as one of the most glorious signs of the times. What a scene for an artist will be this gathering! Young Christians grouped together in kindly labors for each others good, and aided in their work by woman, and the bright and beautiful flowers of earth breathing their sweetest fragrance upon them! It will indeed be a scene for the poet and the painter; and who shall most truthfully describe, in the visions of the present, the glories of the future? For each heart will say:

"Let mutual joy our mutual trust combine,  
And love, and love-born confidence be thine!"

**ABOUT QUARTZ.**—A writer in the Placerville Observer says: Having seen a specimen of a quartz tree, of which notice has appeared in your paper, I thought I would give you a small article on quartz in general, and of that tree in particular: First, then, the specimen is not quartz, but simply silicified wood; and, although the substance is essentially siliceous, yet it does not come under the head of quartz. Quartz is, or has been, formed in the great laboratory of Nature, without any nucleus or foreign matter, animal or vegetable; and when pure and transparent is silex, and nothing else. But it has many modifications, constituting seven varieties, as follows: aventurin, green quartz (prase), milky, rose, violet (amethyst), yellow (citrine), brown, ferruginous, iridescent, stalactical, pseudomorphous, feild, spongy, granular, smoky, cat's-eye, and opal, for even that mineral is composed of ninety per cent. silex. This substance, silex, is capable of solution in clear water, in a very high state of temperature, and, when thus in solution, enters the pores of wood when buried in the earth, and there concretes, and as the woody fibres slowly decay it usurps their place, till the whole mass becomes a stone. Lime, soda and iron operate in the same manner, and the product is termed petrification. The formation of quartz veins is another process altogether; but as it would take too much space to enter upon that subject, I shall not attempt it at present.

The new building material reported by the Tehama Gazette as found among the rolling hills, near the Coast Range, is doubtless the same material of which a description was first given in THE FARMER, a year or two since, and extensively copied. As near as we remember, without referring, the following description is materially the same:

"An article of stone or concrete, which answers for building material equally as well as fire-brick. A chimney built of it, the fire appeared to have no more effect upon it than if it were composed of the above material. It varies in color according to the location. At the Indian Reservation, where it has been applied to building purposes, it has the appearance of Peach Orchard coal, a sort of grayish pink; in other places, almost clear white, the grain being of the very finest description. When first taken from the quarry it is quite soft, and can be dressed with the same facility as soap-stone. When exposed to the air it becomes hard and durable as marble. The density of the substance is about equal to that of chalk."

#### Food Cure.

It is a well established fact, that quite a number of ordinary ailments may be removed by the judicious employment of the contents of a properly furnished larder, and with this great advantage—the cures are more permanent. Besides this, the object is accomplished without any shock to the system, and without danger of killing the patient by mistaking the quantity, or quality, or name of the dose. Ripe fruits and berries, slightly acid, will remove the ordinary diarrheas of early summer.

Common rice, parched brown like coffee, and then boiled and eaten in the ordinary way, without any other food, is, with perfect quietude of the body, one of the most effective remedies for troublesome looseness of the bowels. Some of the severest forms of that distressing ailment called dysentery; that is, when the bowels pass blood, with constant desire (yet vain efforts) to evacuate the bowels, are sometimes entirely cured by eating raw beef, cut up very fine, a table-spoonful at a time, and repeat at intervals of four hours until cured, eating and drinking nothing else in the meantime.

If a person swallows poison, or has convulsions from having overloaded the stomach, an instantaneous remedy, more efficient and applicable in a larger number of cases, than any half-dozen medicines we can now think of, is a heaping teaspoon of common salt and another of ground mustard, stirred rapidly in a teaspoon of water, and swallowed instantly. It is scarcely down before it begins to come up, bringing with it the contents of the stomach; and, lest there be any remnant of poison, however small, let the white of an egg, or teaspoon of strong coffee, be swallowed as soon as the stomach is quiet; because these very common articles nullify a larger number of virulent poisons than any medicines in the shops.

In case of scalding or burning the body, immersing the part in cold water gives instantaneous and entire relief; meanwhile, get some common wheat flour, and immediately on taking the injured part from the water, sprinkle on dry flour till the place is covered an inch thick, or more. A ginger box, or common flour sprinkler, will assist in getting the flour on evenly. The flour may be kept in place by a thin bandage. Do nothing else. Drink nothing but water, and, until improvement commences, eat nothing except some dry toast or a crust of bread, moistened in milk or weak tea. Cures of frightful burnings have been performed in this way, as wonderful as they are painless.—[Hall's Journal of Health.]

**VETO OF THE AGRICULTURAL COLLEGE BILL.**—Mr. Buchanan, on the 27th of February, sent to the House a veto of the bill granting public lands to the several States and Territories providing colleges for the benefit of agriculture and the promotion of arts. As reasons he says that, according to the Report of the Interior Department, over 6,000,000 acres will be required, which, at the minimum price, is equal to \$7,575,000. This bill passed at a period of great financial embarrassment, and should it become a law, the Treasury would be deprived of nearly all of its income, which, for the next year, is estimated at five millions, from that source—should the thirty-three States enter into it. Furthermore, so much land precipitated on the market would benefit speculators to the injury of actual cultivators. He also expressed Constitutional objections. Mr. Merrill, a warm advocate of the bill, said that the President had made an effort to strike down the only measure proposed by Congress for the benefit of agriculture. In his opinion the President had committed a serious blunder, if not a crime. On a motion to pass the bill over the veto, the vote stood—ayes 195, noes 96. Not being a two-thirds vote, it was lost.

**PIKE'S PEAK.**—A writer who has visited this now much talked of locality, expresses his opinion as follows, in the Pacific Methodist: "I now think that it will pay many to go there from the Atlantic States. But at the same time I am fully satisfied that if any one should leave California to migrate thither with a view of ameliorating his condition, that he will be sadly disappointed. California is, beyond a doubt, the greatest gold country in the world, and the man who has spent his hopes in this country will only add trouble to despair to exchange for a new El Dorado. Thousands would to-day have been in easy circumstances, happy and comfortably situated, had they not experimented in the Fraser River mines last year, and now at the opening of spring is a great time for a new excitement. All those liable to take the Pike's Peak fever ought to beware—use the preventive indicated, lest they shall fall under the fatal influence."

**SHEEP IN THE MOUNTAINS.**—We noticed recently, says the San Andreas Independent, a flock of near fifteen hundred sheep in an enclosure on Willow Creek, two miles east of San Andreas. They appeared to be in very good plight, having wintered in the immediate neighborhood. For the information of all parties interested in this business, we would state that the grass at this time is sufficiently advanced in growth to sustain cattle, horses or sheep among the mountains hereabouts.

**SALE OF CHOICE STOCK.**—The Massachusetts State Board of Agriculture has sold to John Merryman, President of the Maryland Agricultural Society, two cows and a two year old heifer, of the Hereford breed, for \$500. The oldest cow, "Milton," was imported from England, in 1852, and took the first premium for Hereford cows at the United States Fair, held in Boston, in 1855. The next youngest cow, "Cora," and the heifer, "Promise," are daughters of "Milton," and were raised on the State farm.

A recent letter from La Rochelle, France, says, that the yield of the grape has been more abundant than drinkable water. Coopers were employed night and day, but being unable to supply the demand for casks, the wine had to be converted into brandy.

## Prize Essay on Fairs.

BY ALLEN W. DODGE, OF HAMILTON, MASS.

[We lay before our readers a most truly interesting, important, and valuable Essay upon Agricultural Fairs, published as the Prize Essay on this subject, and delivered before the Massachusetts Society for Promoting Agriculture in that State. There are so many points of interest, that we desire they may be considered by our readers, and we think they will be gratified at the able manner in which the subject has been handled by the author.]

Is offering its prize for the best essay on the advantages to be derived from establishing regular fairs or market-days throughout the State, for the sale and exchange of agricultural products, it is presumed that the Society did not mean to consider the question as settled in favor of such fairs; but wished rather to elicit inquiry into their merits as compared with the prevailing modes of disposing of the products of the farm; and if, upon a careful and candid consideration of the question, it should be found that there were sufficient and weighty reasons for the establishing of such fairs, that then some practical plan should be proposed for this purpose.

These fairs or market-days, which in fact are nothing more than a periodical concourse of people at a stated place for selling and buying agricultural commodities and for hiring laborers, have long been in successful operation in Great Britain. To the farmers there they are of great importance, constituting their chief, or perhaps their only, opportunities of effecting profitable sales or purchases of stock. The different breeds of neat-stock, of horses, and of sheep and of swine, are exposed to sale, often in large numbers and of great excellence, at the local fairs in the quarter where they are raised; and they attract to them dealers from a distance, with the certainty that they can find just the description of animals they are in want of. This, with the local attendance, usually insures a brisk business. And so great is the convenience of a market-day considered to be to the neighborhood in which it is held, that new fairs are constantly springing up, the only limitation to their number being the amount of business which may be controlled by them.

Resides live-stock, fruit, vegetables and grains find purchasers at these fairs, and they are offered for sale either in bulk or by sample, the latter being the more usual way of disposing of large quantities of any commodity. Most of these fairs, too, have a well-known and specific character, and are noted, some for the superior quality of one kind of stock or of produce, and others for that of another kind. And they often receive their name from the predominant article exposed to sale, as, for example, a fair at which large quantities of cherries are presented, is called the Cherry Fair, and one of which sheep is the characteristic feature is called a Sheep Fair.

But in this country, or at least in New England, we have nothing answering to these fairs or market-days. The nearest approach to them are the cattle markets established in the immediate vicinity of our largest cities, and mainly for the supply of the meat for their consumption, as those held weekly at Brighton and Cambridge, in our own Commonwealth, and which are the only markets of any extent for the sale of live-stock, within her borders. These, however, differ in some important particulars from the fairs proposed for consideration. They are exclusively for the sale and purchase of live-stock, and that stock is mostly brought from a distance, sometimes even from the far West. They afford a good opportunity for farmers in the surrounding country to purchase such animals as they stand in need of, and they are resorted to very generally by them for this object. But they are not intended to encourage the sale of stock by these farmers, for the very obvious reason that but little or no stock is raised by them. They are also very inconveniently located, being at one extremity of the State, and therefore can be attended by the larger part of the farming population only at great expense.

What, then, would be some of the benefits of regular fairs or market-days, established throughout the State, for the sale and exchange of agricultural products—benefits that might reasonably be expected from them? In the first place, they would offer to every enterprising farmer in their neighborhood a home market, or a market near at hand and easy of access. Studded all over as Massachusetts is, especially on her eastern borders, with cities and large towns and manufacturing villages, it might be thought that the farmers are amply supplied with good markets and at their very doors. To some extent this is indeed true, but it is equally true that very many farmers—a majority perhaps—are obliged to travel eight or twelve miles and sometimes more, in order to reach their nearest market town. The loss of time in thus traveling to and from market, and the wear and tear of horse and vehicle, are no inconsiderable items of expense to the farmer who is placed in this unfavorable position in regard to markets. Suppose that he follows the market weekly for two-thirds of the year, there are then thirty-five days to be deducted from the working-days of the year, and if in the fall he goes to market two or more times in a week, the number would be increased fully to fifty days, including the occasional days in winter devoted to this object.

But the establishing of regular market-days in towns near to these farmers, would prevent very materially this heavy loss of time and the expense, to which they are now subjected. If there were twelve such market-days in a year, that is, monthly markets, where they would be sure of finding purchasers, they would save the difference between twelve and fifty days of time, which they then would have to spend on the farm in increasing its productions, besides making a corresponding saving in the service of horse and wagon. This saving to the farmer may perhaps be more sensibly measured and appreciated, by considering what has been so justly stated by Henry C. Carey, in the *Plow, Loom and Anvil*, for September, 1851, in respect of labor.

"The first of all the taxes to be paid by labor is that of transportation. It takes precedence even of the claims of government, for the man who has labor to sell or exchange must take it to the place

at which it can be sold. If the market be so far distant that it will occupy so large a portion of his time in going to and returning from his work, as to leave him insufficient to purchase food enough to preserve life, he will perish of starvation. If it be somewhat less distant, he may obtain a small amount of food. If brought near, he may be well fed. Still nearer, he may be well fed, and poorly clothed. Brought to his door, so as to make a market for all his time, he will be well fed, well clothed, well housed, and he will be able to feed, clothe, lodge, and educate his children."

What is here said of labor, applies with equal force to the products of labor, the nearer the market the more perfect is the power to exchange them, and the higher is their price. True as is Franklin's proverb, it is not the less true, that "time is money." And yet our New England farmers, trained as they are to habits of thrift and economy in other particulars, and certainly not wanting in any of the essential qualifications for trade, seem, too many of them, in this important matter of marketing their produce, to set scarcely any value at all upon time. But if their time be worth to them anything at all, if it will yield any return when skillfully employed, it surely ought not to be thus mispent, not to say squandered in a reckless and shameful manner.

In the second place, market-days, by bringing the purchaser to the producer, or rather by creating a half-way place and common ground of meeting for business, instead of the producer being obliged, as is now most frequently the case, to go to the purchaser with his commodities, would tend to make better prices and quicker and more certain sales for them. As at present managed, the farmer takes on to his nearest market town such things as he has to dispose of, and unless he has a regular set of customers, he may be put to much trouble and inconvenience to find a purchaser, and must then often sell to a disadvantage. If, on the other hand, there is collected a large number of buyers at a stated time and place, and there are assembled such products of the farm as all are desirous of purchasing, it is clear that there will be more or less competition, and that sales will be readily effected at remunerating prices.

The tendency of trade in this country is to centralization. The large manufacturers of cotton and woolen goods and of boots and shoes, instead of selling at their factories, have their places for making sales in the metropolis. And where the manufacturer and the salesman are united in the same person, it makes but little difference whether the factory and the shop are in one and the same place or at a distance from each other. But where the manufacturer sells his goods to the merchant, who buys to sell again—as is the case with boots and shoes—then it makes oftentimes all the difference to the manufacturer, of a living profit by the sale of his goods, or no profit at all, whether the purchaser comes to the manufacturer, or the manufacturer goes to the purchaser. The scripture adage—"It is naught says the buyer"—will operate in the former case with unretarded vigor, while in the latter it will fail of its object to depreciate the price of that which it is known is wanted by the purchaser.

In the third place, no small advantage would accrue to the farmer by the establishing of regular market-days, from their tendency to equalize the prices of agricultural products. At present, prices are left to depend too much upon caprice and accident, and but little difference is made between different qualities of the same article. An inferior article often brings as much as, or more than, a superior one; so that the sale of agricultural products resembles more a lottery than a fair and equitable traffic. "What luck to-day?" is the usual interrogatory put to the farmer on his return from market, meaning thereby not whether a sale was effected of his produce, but at what rates. And as a consequence of this uncertainty in prices, there is but little inducement to prepare for the market any commodity—such as butter or cheese—of a superior quality, when it is well understood that as a matter of dollars and cents, an inferior one, requiring less time and labor in its production, will pay much better. The advantage of an open market where products of a similar kind are exposed to sale side by side, is that a standard of prices is readily fixed, each takes its place according to its merit and commands the price to which it is fairly entitled. And this advantage inures to the buyer as well as the seller, and gives character and stimulus to the market.

In the fourth place, in connection with this benefit and closely allied to it, is the healthy emulation which is excited by bringing different specimens of the same products into comparison with one another. Competition of the right kind at once springs up—a competition to excel in the quality of the article produced and not merely in the price obtained for it. The man who has been contented to produce an ordinary article, because he has generally obtained a good price for it, or because he has never seen anything superior to it, is stimulated by the success of his neighbor, both as to the quality and price of his products, to produce a better; whilst the other to maintain his advantage and to avoid the mortification of being surpassed by his competitor, increases his skill and pains-taking. It is thus that progress in all the arts is effected, and it is only thus that progress in the important art of agriculture is to be achieved.

Besides this beneficial result, these fairs would tend to diffuse information, just as our cattle shows do, by promoting intercourse between men engaged in a common pursuit, and bringing their minds into contact on subjects connected with it. Inquiry into the different processes by which results are obtained in the various branches of husbandry is thus excited, and the why and the wherefore of each are freely discussed. It cannot be otherwise than that the farmer must return from these fairs a wiser man, or if he thought that all wisdom would die with him, that this conceit must be rubbed out of him by the friction to which he has there been subjected. It often happens, for want of this intercourse among farmers, this interchange of opinions and mutual comparison of skill and intelligence, that individuals exhibit an overweening pride in respect of certain processes or products, which is not warranted by facts and is simply ridiculous. One of these self-sufficient farmers, who had always in his own estimation the best of everything, was heard to utter the boast, when speaking of the prospects for a hay crop, "that he should have had the best in the county, if his hay seed had only caught!"

There is no denying that as a class our farmers are *ret* in their opinions, whether well or ill-founded, and this arises as much from their living comparatively by themselves, as from that independence of character, which springs from their occupation. The commercial intercourse of these fairs would supply just what is wanting to many of our farmers; it would liberalize their views and enlarge the consequence agricultural knowledge would be advanced. Indeed these fairs would become a school for the young farmer, and for all farmers who were not too old to learn. The various breeds of their peculiar marks of excellence ascertained, and regard to them gained. Trained in such a school, our farmers would become much better judges than they now are, of farm stock. And will any one

pretend that it is not vital to the interests of the farmer to be able to judge of a good cow or of a good pair of working cattle, so as to be seldom disappointed in making his purchases? Should he not here as in other transactions be able to think for himself, and if need be to give a reason for his opinion? Will he not at least have more self-respect and command better the respect of others, than by a blind and hap-hazard way of doing his business?

The farmer needs to be well versed in the knowledge of buying and selling, and this knowledge can be acquired only by observation and the exercise of his own faculties. Many farmers fail here—raise good crops and they harvest them in time they are at fault; they are either too early or too late in making sales, and have usually the worst end of the bargain. Now why is this? Mainly for want of practical experience in trade. The narrow round of their customers gives no opportunity for them to learn, and they go through life with but little skill in this financial department of husbandry. The establishing of market-days, by collecting large numbers of buyers at one place, and by the competition excited thereby, would give to the farmer more tact in trading than it is possible for him now to acquire.

In the last place, these market-days or fairs would tend to concentrate New England farming upon fewer products, by making near and certain markets for them. As it is now, our farm products are too varied—we raise a little of everything, and not enough of any one thing to make it profitable, from the expense of disposing of them. Of many articles raised on the farm, the little surplus over what is wanted for home consumption is taken to market. As a consequence, sales are uncertain and the proceeds come in by dribbles. And there is at present little inducement to go largely into any one production. But create a fixed market near at hand, and our farming would take on shape itself accordingly. One farmer would take to neat stock, another to sheep, and another to pigs, and they would all aim to have the best breeds, and the best animals to take to the market. Quick sales, too, would be had for them, if it was known, as it would be, when and where they were to be offered for sale. At the same market the farmer could buy what he is now forced to raise or to purchase at great disadvantage. The farmer who went into stock raising, would not be likely to raise all other farm products, as he could find them at hand, on market-day, much cheaper. There would thus be a division of agricultural labor that would be for the common good. Few farmers in this State think of raising their own wheat, as they can buy flour much cheaper; and so it will be of many other farm products, when these markets are once established.

We have dwelt thus at length on the general advantages of regular fairs or market-days, if established throughout the State; let us now consider some of the particular benefits to be derived from them. Every farmer wishes, more or less times in the year, to purchase live-stock, either young animals to keep over winter, stores to fat, milch cows to recruit his dairy, or working oxen, or a bull, or a horse, or swine, sheep, or poultry. Some of these are sure to be needed by him, and he must either ride round among the surrounding farmers, or he must go to Brighton or Cambridge, to make his purchases. The former course is attended with much loss of time and vast uncertainty of finding the precise animals wanted. The latter involves much expense, and the inconvenience of making the desired purchase at a distance from home, which distance must be traveled by the animals as well as himself, to reach home.

Now, if there were a cattle fair held monthly or quarterly in his neighborhood, he might at a trifling expense resort to it with the certainty or high probability of making his purchases, and he can return with them the same day to his farm. Or suppose that he has an ox which he wishes to mate, he can drive him to the fair, and he may there meet with another farmer similarly situated, and thus the two are brought into a position to make some sort of a trade, which may be mutually advantageous. Now these men might have ridden about a week or more, exploring barnyards and fields for an old ox—and what farmer's experience does not illustrate the supposed case?—and perhaps be unsuccessful at last.

Again, many farmers wish to purchase in the fall young stock to keep over winter, generally heifers expected to calve in the spring. Heretofore, when cattle traveled on foot in droves to the Brighton market, they came so near their doors as to present a good opportunity for such farmers to make their purchases. But now, live-stock is mostly transported to the large markets by the rail cars, and there is hardly any alternative for the farmer to make his purchases, but at these distant markets. Were local fairs or market-days established, then there would doubtless be droves of cattle purchased at the large markets at Cambridge and Brighton, and driven down to such fairs to supply the demand there. The farmer could then have his choice of such stock and at a price that while it would leave a fair profit to the drovers, would be less than he could afford to pay at a distant market. This would occur only in districts where there were not young animals enough raised, to supply the local demand.

[TO BE CONTINUED.]

## Peach Borer Plastered Up.

A remedy for borers in peach trees is thus given by a writer in the *N. E. Farmer*: Having in my garden a very vigorous peach tree, and observing that it was much affected by borers, especially in the forks of the limbs, I began to cut them out. Still I was afraid that this operation (to be performed in many places) might injure the tree; and as I had some very fine, almost pure white clay prepared, I plastered the limbs of the tree with it, and closed (when the plastering cracked in becoming dry) the cracks by rubbing them over with a painter's brush, dipped in water. The plastering became hard enough to withstand the effects of rain for several weeks, after the lapse of which all the borers were dead. The wounds caused by them healed quickly over, and the tree is as healthy as it can be. [How would this remedy do for the pear tree?]

To DISTINGUISH GOOD EGGS FOR SITTING.—All those having sitting hens would do well to take notice of the following remarks (says the *Farmer and Planter*, of Columbia, S. C.), and they will have a chicken for every egg they set: Take eggs not more than three or four days old, and have a candle or lamp; hold the egg in one hand, with the broad end upwards, close to the candle; place the edge of the other hand on the top of the egg, and you will immediately perceive the incubation end. Some people can tell a pullet from a rooster, lengthwise. Another way, is to place your tongue strong heat if fresh and good, and the less heat if old and doubtful. Eggs put up for hatching should never be placed in a very damp cellar, as the dampness destroys this heat.

PAON. Agassiz and other scientific celebrities, are making a movement to establish an extensive Museum of Natural History at Cambridge, designed to be the most perfect in the world.

## The Fig Tree.

The fig tree is evidently a native of that part of Asia where the Garden of Eden is generally said to have been situated, as it is the only tree particularly named in those passages of the Bible which relate to the creation and fall of man. "And they sewed fig leaves together and made themselves aprons." It is a fruit that appears to have been highly esteemed by the Israelites, who brought figs out of the land of Canaan, when they were sent by Moses to ascertain the produce of that country.

The fig tree is often mentioned both in the Old and the New Testament, in a manner to induce us to conclude that it formed a principal part of the food of the Syrian nation. In the twenty-fifth chapter of the first book of Samuel, we read that when Abigail went to meet David, to appease him for the affront given by Nabal her husband, she took with her, among other provisions, a present of two hundred cakes of figs.

When Lycurgus banished luxury from Sparta, and obliged the Spartan men to dine in one common hall, to enforce the practice of temperance and sobriety, every one was obliged to send thither his provisions monthly, which consisted of about one bushel of flour, eight measures of wine, five pounds of cheese and two pounds and a half of figs.

The Athenians were so choice of their figs, that it was forbidden to export them out of Attica. Those who gave information of this fruit being sold contrary to law were called *sykophantai*, from two Greek words signifying the discoverers of figs; and, as they sometimes gave malicious information, the term was afterwards applied to all informers, parasites, liars, flatterers, impostors, etc., from whence the word *sykophant* is derived.

The story of Romulus and Remus being suckled by a wolf under a fig tree, proves that this fruit must have been early known in Italy.

The Egyptians and Greeks held this fruit in great estimation; it was their custom to carry a basket of figs next to the vessel of wine used in the *Dionysia*, or festivals in honor of Bacchus; and it is related to have been the favorite fruit of Cleopatra, who was the most luxurious queen the world ever produced. The asp, with which she terminated her life, was conveyed to her in a basket of figs.

Saturn, one of the Roman deities, was represented crowned with new figs; he being supposed to have first taught the use of agriculture in Italy. There was a temple in Rome dedicated to this god, before which grew a large fig tree. The vestals, when they removed this tree in order to build a chapel on the spot, offered a propitiatory sacrifice. This happened about two hundred and sixty-eight years after the foundation of the city.

The fig was a fruit much admired by the Romans, who brought it from most of the countries they conquered, and had so increased the varieties in Italy, by the commencement of the Christian era, that Pliny has furnished us with a description of twenty-nine sorts that were familiar to him. He says: "Figs are restorative, and the best food that can be taken by those who are brought low by long sickness and are on the recovery." He adds, "that figs increase the strength of young people, preserve the elderly in better health and make them look younger and with fewer wrinkles. They are so nutritive as to cause corpulence and strength; for this cause," continues he, "professed wrestlers and champions were in times past fed with figs."

This naturalist mentions the African figs as being much admired; but says, "it is not long since they began to grow figs in Africa." These appear to have been of an early kind; for we find when Cato wished to stimulate the Senators to declare war against Carthage, he took an early African fig in his hand, and then addressing the assembly, he said, "I would demand of you how long it is since this fig was gathered from the tree?" and when they all agreed that it was freshly gathered; "yes," answered Cato, "it is not yet three days since this fig was gathered at Carthage; and by it, see how near to the walls of our city we have a mortal enemy." With this argument he prevailed upon them to begin the third Punic war, in which Carthage, that had so long been a rival to Rome, was utterly destroyed. "The Lydian figs," says Pliny, "are of a reddish-purple color; the Rhodian, of a blackish hue; as is the Tiburtine, which ripens before the others. The white figs were from Heracleum, Albicrate and Aratium; the Chalcidian figs are the latest, and ripen against the winter; some bear twice a year, and some of the Chalcidian kind bear three times a year." The Romans had figs from Chalcis and Chios, and many of their varieties, it appears, were named from those who first introduced or cultivated them in Italy. The Lydian fig was so named after Lydia, wife to the Emperor Augustus, who, it is said, made an unnatural use of it to poison her husband.

The fig tree is a low shrub, naturalized in Italy and the south of France, and enduring the open air in the mildest parts of Great Britain and the United States. This tree, in France and Italy, grows as large as our apple trees, but in England and the Atlantic States seldom exceeds two yards in height; the trunk is about the thickness of a human arm; the wood is porous and spongy; the bark ash-colored; the branches smooth, with oblong white dots; the leaves annual in the temperate zones, but perennial within the tropics, cordate, ovate, three or five lobed, thick and the size of the hand. The fruit is a berry, turbinate, and hollow within; produced chiefly on the upper part of the shoots of the former year, in the axils of the leaves, on small, round peduncles. The flowers are produced within the fruit; what is considered as the male flowers are few, and inserted near the opening in the extremity of the receptacle, or fruit; the female flowers are very numerous, and fill the rest of the hollow space within. The greater part prove abortive, both with and without the process of *caprifig*. The fig tree is distinguished from all other trees, with which we are acquainted, by its bearing two successive and distinct crops of fruit in the same year, each crop being produced on a distinct set of shoots; but this climate rarely allows the second crop to come to maturity, except where they are forced by hot-house culture.

[Of course this refers to the Atlantic States; for, in most portions of California, the fig grows to perfection, as well it may in this land of the olive and the vine.]

The *caprifig* of figs was practised by the ancients in the same manner as it is now attended to by the inhabitants of the Archipelago, and it is described by Theophrastus, Plutarch, Pliny and other authors of antiquity. It is too curious a circumstance in the history of the fig tree to be omitted, as it furnishes a convincing proof of the reality of the sexes of plants. In the cultivated fig, the receptacles are found to contain only female

flowers, that are fecundated by means of a kind of gnat (*Culex L.*) bred in the fruit of the wild fig trees, which pierces that of the cultivated, in order to deposit its eggs within, at the same time diffusing within the receptacle the farina of the male flowers; without this operation, the fruit may ripen, but no effective seeds are produced. Hence it is, that we can raise no fig trees from the fruit of our gardens, having no wild figs to assist the seed. They are consequently raised by cuttings, layers, suckers, roots, and by ingrafting; the most general method is by layers or cuttings, which come into bearing the second, and even the first year.

In many parts of the Grecian Islands, the inhabitants pay such attention to the *caprifig* of the cultivated figs, that they attend daily, for three months in the year, to gather these little flies from the wild fig trees in their gardens, by which means they not only get finer fruit, but from ten to twelve times the quantity. Thus, one of the most minute insects is, by the attention of man, made a principal cultivator of fruit.

It is a curious fact, that freshly-killed venison, or any other animal food, being hung up in a fig tree for a single night, will become as tender, and as ready for dressing, as if kept for many days or weeks in the common manner. We are told of a gentleman who made the experiment of suspending a haunch of venison, which had lately been killed, in a fig tree when it was in full foliage, at about ten o'clock in the evening and was removed in the morning before sunrise, when it was found in a perfect state for cooking; and he adds, that in a few hours more, it would have been in a state of putrefaction.

We import the best dried figs from Turkey, Italy, Spain and Provence. In the south of France, they are prepared by dipping them in scalding-hot lye, made of the ashes of the fig tree, and then dried in the sun.

The most suitable kind to raise in Great Britain, or the Northern part of the United States, is the Brunswick fig, (*Ficus indica*). In a southeast corner, trained against a wall, it ripens in England by the middle of August, and about a month later in New England. It is necessary however, in this country, to secure it from the frosts during the winter, and to remove it as early in the Spring as the season will admit. The leaves are very deeply five-lobed, the lobes narrow, and of nearly equal width. The fruit is very large, obovate, fleshy, with an unusually oblique apex; the eye is rather depressed; the stalk short and thick; the skin pale green on the shaded side, with a tinge of yellow; next the sun, dull, brownish red, sprinkled with small, pale brown specks; the flesh is pinkish in the interior, nearly white towards the skin, but chiefly semi-transparent reddish brown, extremely rich, sweet and highly flavored.

The fig is cultivated in Great Britain and in this country entirely for the dessert, but in fig countries it is eaten green or dried, fried or stewed, and in various ways, with or without bread or meat, as food. Abroad, the fig is introduced during the dinner as well as at the dessert. In common with the melon, it is presented after soup; and the person who cuts a fig, holds it by the small end, takes a thin circular slice off the larger end, and then peels down the thick skin of the fruit in flakes, making a single *bonne bouche* of the soft interior part. For medical purposes, figs are chiefly used as emollient cataplasms and pectoral decoctions.

The wood of the fig tree is of a spongy texture, and, when charged with oil and emery, is much used in France by locksmiths, gunsmiths and other artificers in iron and steel, to polish their work. This wood is considered almost indestructible, and on that account was formerly used in Egypt and other Eastern countries for embalming bodies. The milky sap of this tree may be used as rennet, and for destroying warts.

We shall conclude our account of the fig tree by the well known story of Timon of Athens, who was called *Misanthropos*, for his aversion to mankind and to all society. He once went into the public place, where his appearance as an orator soon collected a large assembly, when he addressed his countrymen by informing them that he had a fig tree in his garden, on which many of the citizens had ended their lives with a halter; and that, as he was going to cut it down, he advised all those that were inclined to leave the world to hasten to his garden and hang themselves.—[The Naturalist.]

## Where Can I Find a Garden?

THIS is one of the first questions a man asks, when he retires from a mercantile pursuit to look for and build up a home among the rural scenes of a country life. We clip the following from one of our Eastern exchanges, being an extract from an Essay on Landscape Gardening, by H. W. S. Cleveland, Esq. The extract which follows will be found to contain a great many truths, which we trust will well repay our readers for the perusal:

"Gardeners, by the way, may as a general thing be ranked among the difficulties incident to the pursuit of rural felicity. On estates where the garden arrangements are elaborate, one or more gardeners are of course required. If the proprietor knows enough to appreciate the worth of a really good gardener, he may be able to secure one whose intelligence will add greatly to his own interest in the subject, while the man himself will perform his duties with the more energy and fidelity, that he feels that his efforts will be appreciated. If, however, the proprietor knows nothing of the matter, and thinks it economy to stint the gardener's wages, the chances are that he may be imposed upon by an ignorant man, who tells him that he was once gardener to some Grand Duke of Red Morocco; and, between the meanness of the master, the conceit of the man, and the ignorance of both, the garden will become only a source of vexation, possessing little to excite the interest of the owner or the admiration of his friends. On small estates, unless the proprietor is familiar with gardening, the most satisfactory course is to employ only an intelligent laborer, and attempt nothing at first beyond the simplest operations. If he employs a professional gardener, the natural dislike of showing his own ignorance and awkwardness will prevent his applying his own hand to the work; but, in the other case, having no fear of being laughed at behind his back, his interest in the subject, being the result of his own studies and experiments, will become continually more absorbing. Of the pleasures incidentally connected with the garden, the power of making presents of the fruit of one's own labors is certainly one of the highest. A rare bouquet to one who can appreciate its loveliness, a dish of blushing fruit, or a basket of choice vegetables, contributed on some special occasion to a friend's bill of fare; or, a rich cluster of grapes to bless the fading sight of some poor consumptive, to whose parched lips they seem almost a foretaste of heaven—affords a degree of satisfaction to the giver from being the result of his own skillful labor, which can be but faintly realized by him whose gifts involve only a demand upon his purse."

CURE FOR HUNGERS.—The following can be relied on: Equal preparations of oil of spike, British oil, and turpentine, mixed, with an infusion of liquid vitriol sufficient for fomentation, to be applied immediately; and repeated and applied every other morning, for three successive times; after which, soft oil of some kind should be used to suspend the cauterizing effect.—[Farmer and Planter.]

## Miscellany.

## TWILIGHT MUSINGS—No. 3.

HOME.  
BY M. A. SABLES.

[We know we shall but reiterate the opinion of all who can recall the days of childhood, or can remember that best spot of earth, which is so truthfully pictured below, when we say those thoughts and words are beautiful.]

Tax petted babe with laughing eye,  
Whose sinless love is full of joy,  
Will try to lip when Ma is nigh,  
The golden words without alloy,  
Sweet Home.

The prattling child with merry heart,  
Whose lips but spell the sad word care,  
Who from its parents dreads to part,  
Already knows without compare  
Is Home.

In hopeful youth when all is new,  
When first we're pilots on life's stream,  
When castles rise in skies all blue,  
Amid the glitter of we dream  
Of Home.

In manhood when one's hopes have fled,  
And memory is a constant friend,  
When those we love are lost, or dead,  
How eagerly our footsteps wend,  
Towards Home.

When old age finds us weak and worn,  
With often naught on earth to love,  
When for the past we vainly mourn,  
Our Heavenly Father points above,  
To Home.

## Observations in the Tulare Region.

A correspondent of the Pacific Methodist gives some interesting descriptions of the country in Fresno and Tulare counties, and scenes met with. We copy as follows:

Leaving Snelling's on the 4th of March, I crossed the prairie along the road which is the dividing line between Merced and Mariposa counties. This road leads through the foot-hills bordering on the San Joaquin Valley, and of course, it is somewhat rough. On the 7th, I reached Millerton, the capital of Fresno county. It is situated on the San Joaquin river, just where it emerges from the mountains, and it is a small town. To avoid fire; however, many of the houses are built of brick or adobe. I was informed by Mr. Stallo, an intelligent resident of the place, that some of the claims here would pay well, and that the country near it afforded excellent grazing for stock.

It is a vast prairie from Millerton to the crossing of King's River, which is called Scottsburg, from the present gentlemanly sheriff of Fresno county. The country is so thinly settled that only one house is passed for a distance of twenty-five miles. Multitudes of cattle might be grazed here. The lands on King River are good, and I never saw better pasturage. The people have the chills and fever here sometimes, and the crops have failed occasionally. The late Indian troubles on this river which resulted in the death of one white man and several Indians, are variously accounted for. Some charge the whole disturbance to the mismanagement of the Agent, while others contend that it grew out of the cupidity of some who wanted the acorns that were eaten by the Indians, for their hogs.

On the prairie, between King's River and the beautiful and thriving town of Visalia (the county-seat of Tulare), I witnessed a phenomenon that is doubtless familiar to most persons that have crossed the plains. I refer to the fact that objects in certain positions and at certain distances, by reflection, appear greatly magnified. Looking just before me I saw what seemed a number of covered wagons, and I supposed I was meeting a train of immigrants. But it was only a few cows and calves thus magnified. Again, looking southward, I saw what at first appeared to be an immense forest, but it soon changed and took the likeness of a countless army of giants, with huge, shadowy horsemen dashing among them, as officers. Had Don Quixote seen them, before whipping out his whinyard, he would doubtless have taken a double portion of *fic a bras* to prepare him for the onslaught, while the very spurs of Sancho Panza would have quaked on his heels. But the seeming army of giants presently dwindled into a herd of horned cattle, while the Brobdingnagian spectral horsemen were transformed into some *vaqueros* engaged in a *redow*.

These plains, in places, contain large quantities of alkali, so much so, that in spots, vegetation is sometimes wanting. But the herds of fat cattle, and droves of fatter hogs, attest that it is a good grazing country, and that must be abundant. A single oak is said to produce from ten to twenty bushels of acorns. Altogether it is very beautiful—the vast prairie blooming with flowers, literally of every hue, so that the ground seems, as an old gentleman naturally remarked, "to be covered with calico," on the one hand; while on the other, the snow-covered Sierras loom up into the clouds, forming a scene of grandeur and loveliness not often gazed upon. Surely, God loves the beautiful. The taste for flowers ought to be cultivated. It is God-like.

SEND YOUR PAPER HOME.—It is characteristic of Californians to be thoughtless in regard to many things; and not the least of all, is not sending home to their friends the local newspaper. And as the greater portion of the population of California is somewhat restless, friends at home often become anxious of their whereabouts, because they never write or send papers. Yes, they are anxious of your whereabouts—stray sheep from the fold of home; they wonder what has become of you; if you are still in California, or even in the land of the living. The day of the mail's departure arrives; you delay writing until the last moment; then, finally, give up the idea of communicating to the dear ones altogether. You send no proof of your vitality at all. You little imagine the pang of bitter disappointment which comes over them, as they turn away from the careless crowd at the Post-office, on the arrival of the California mail, finding no word of remembrance there from you. By sending your local paper, you may relieve them at least of the idea that you have forgotten them.

"Daw," in the Tuolumne Courier, is perfectly right; and, if he had only said, "Send home the CALIFORNIA FARMER," it would have "Daw"-ned upon our minds more brilliantly. But, we are not selfish by any means, we wish the citizens of every county would send the papers that speak of the resources of the country where they reside, and send THE FARMER too.

A CORRESPONDENT of the Homestead gives the following: "It would do to laugh at Connecticut any longer for wooden nutmegs. New Hampshire has better, and must be the banner State for rogues. I see in the newspapers that the Legislature of that State has been obliged to repeal the law offering a bounty for the destruction of crows, in consequence of the practice which has prevailed of procuring crows' eggs and hatching them under hens, and bringing forward the brood for the bounty."

## SMITH'S POMOLOGICAL GARDEN AND NURSERY, SACRAMENTO.

On the American River, 24 miles from the City.

OFFICE AND DEPOT FOR TREES,  
44 J street, between Second and Third streets.

The Trees offered from the above establishments this season are more than usually fine, and in the NUMBER OF VARIETIES, of each kind of fruit, we possess the

LARGEST COLLECTION IN THE STATE

our catalogue embracing

Over Nine Hundred Varieties,

as follows:

APPLES, 245 varieties;

PEARS, 276 varieties;

PLUMS, 100 varieties;

CHERRIES, 90 varieties;

PEACHES, 75 varieties;

NECTARINES, 20 varieties;

APRICOTS, 12 varieties;

GRAPES, 90 varieties.

We hesitate not in saying that our

PEAR AND CHERRY TREES

Are the Finest Ever Offered

for sale in this State, of all sizes, being from 6 feet to 12

and 14 feet high. The greater portion being not

only of very large size, but also handsomely

shaped, are elegantly adapted to planting

near residences, affording the double

ADVANTAGE OF SHADE AND FRUIT.

Of the above two fine Fruits we offer

25,000 TREES FOR SALE,

of different sizes and prices, and as low as good Trees

can be bought at any first-class Nursery in the State.

Many persons have had but poor success with Cherry Trees

in this State. We state for their information that

Our Cherry Trees are grown upon the true im-

ported Mazzard stock, and not upon com-

mon Native or Oregon stock of this Coast,

the former being the only stock fit to grow them on.

We have also a very fine stock of the following, viz:

APPLE, PLUM, PEACH, NECTARINE,

Apricots, Grapes, Figs, Almonds.

Besides a Miscellaneous collec-

tion of other and small fruits.

Particular regard has been paid to the growing of the

Trees in GOOD SHAPE, and purchasers of our

Two-year-old Trees will find that they have

been well "cut back," and are now

firm, symmetrically shaped Trees.

We guarantee no finer or healthier Trees will be found

in the market this season.

We also offer a superior assortment of

Shade and Ornamental Trees,

Shrubs, Roses, and

Greenhouse Plants.

Embracing all the old and well known popular varieties,

as well as a great many others both good and new.

Also a very fine lot, of different sizes, of that very popu-

lar shade tree, so full of reminiscences of home, the

GOOD OLD-FASHIONED ELM TREE

of many varieties, but most of the American and Scotch

Elms, which are of good size, and when well estab-

lished in the soil, they are of very rapid growth.

..ALSO..

LOCUST,

LABURNUM, or GOLDEN CHAIN,

MAPLE, in variety,

LINDEN, European and American,

CATALPA,

CHINA, and other Trees.

We call particular attention to our collection of

THE CAMELLIA,

which has become so well acclimated that we have them

growing finely in our open grounds, and blooming as

elegantly out of doors here as they possibly could

with the tenderest care in a conservatory.

It is no longer a house plant, but one of

The Gems of the Pleasure Grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY

TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &amp;c.,

see CATALOGUES, which will be sent by mail to all

applicants.

We invite attention to our very large and general

assortment of

VEGETABLE SEED,

THE CROP OF THIS YEAR.

which is very fine and large, and we are now prepared

to supply THE TRADE in quantities to suit, and at

Lower Prices than can be found

at any other establishment in the State.

We have now been growing SEED for a number of

years, and have given universal satisfaction. We are

now prepared to supply large quantities of GOOD FRESH

SEED at very low rates. These seeds will be done up

handsomely in packages, for Wholesale or Retail Trade

and will always be in readiness at our Garden, and at

CITY OFFICE—44 J street—SACRAMENTO.

Our Trees and Shrubs will be sold for CASH ONLY, and

Orders must be accompanied with the Cash to insure attention.

15

## SEED, PLANTS, &amp;c.

SEEDS! SEEDS!!  
Crop of 1858.Just Received by Express, on the steam  
John L. Stephens,A FULL ASSORTMENT OF SEEDS,  
Selected by Hon. Marshall P. Wilder, President  
of the Massachusetts State Horticultural Society,  
from responsible Growers, and warranted to be  
CROP OF 1858.

## TAKE NOTICE,

The undersigned being desirous of establishing a reputation  
and being aware of the imposition that has been practiced  
Farmers, thinks proper to state, that he has not an OLD Se  
in the Store. All Seeds sold warranted true to name.  
Planters and Traders will find it to their interest to sec  
GOOD, RELIABLE SEEDS, at as low a price as th  
would have to pay for worthless trash.Have also on hand and for sale, a very desira  
assortment of

Foreign and Fancy Grape Roots,

Peach and Cherry Trees,

Together with a full and complete assortment of

AGRICULTURAL IMPLEMENTS.

For sale by

J. L. PANGBURN,

85 Washington street,  
12m Between Front and Battery streets, San Francisco.

## SEEDS! SEEDS!!

## DUTCH BULBOUS ROOTS.

Double Hyacinths,  
Narcissus, Anemones,  
Crown Imperial,  
Dahlias,Ranunculus,  
Tulips, Tuberoses,  
Crocus, Iris,  
Gladioli,

Also, a full collection of all kinds of FIELD, FRUIT,

GARDEN, and FLOWER SEEDS; all of which we can

Sold wholesale and retail, in quantities to suit pur-

chasers, at our Seed Store. Also, Pruning Shears, Bud-

ding and Pruning Knives, etc.

N. B.—All orders forwarded to J. P. SWEENEY &amp; CO.,

Seedmen and Florists, will meet with immediate at-

tention.

J. P. SWEENEY &amp; CO.,

108 California street, San Francisco.

## New-York Seed Warehouse.

## ALFALFA,

## New Crop;

## HUNGARIAN GRASS;

## Garden, Flower, Field and Tree Seeds.

THE extensive Variety of SEEDS we offer,

are grown by experienced Cultivators in the

Atlantic States and Europe, and we have

taken the greatest pains to secure only the Purest and

best Stocks, and have no doubt they will give the utmost

satisfaction.

## Agricultural and Scientific Books,

## WHOLESALE AND RETAIL

FLOWER SEEDS, and Collections of Flower Seeds,

put up in neat packages, with directions for cultivation.

Goods securely packed, to go to any distance.

All orders by mail or otherwise (with remittances),

will be attended to with exactness and promptitude.

Light kinds of Seeds can be forwarded through

the mail (postage paid).

O. L. KELLOGG &amp; CO.,

111 SANBORN STREET.

## 7000 LBS ALFALFA OR CHILE CLOVER

SEED, crop of 1858;

25,000 lbs. SEED CORN (choice varieties);

1,000 lbs. SHARPS HERBS and HERB SEEDS;

10,000 lbs. SEED PEAS;

10,000 lbs. SEED BEANS, choice varieties;

100,000 CHOICE FRUIT and SHADE TREES;

## Garden Seeds, &amp;c.

500 lbs. Orange Seed; 20 bush. Kentucky Blue Grass

400 lbs. Yellow Dutch Onion seed; 50 bush. Timothy;

300 lbs. French Sugar-beet seed; 25 do. Mixed Lawn Grass;

300 lbs. Turnip seed, assorted; 20 do. Rye Grass;

100 lbs. Yellow Danvers Onion seed; 20 do. Hungarian Grass;

100 lbs. Red Onion seed; 20 do. Mesquit Grass;

150 lbs. Radish seed; 20 do. Ladpole Grass;

100 lbs. Cabbage seed, astd; 5000 lbs. White and Red Clo-

300 lbs. Carrot, astd; 2000 lbs. Millet;

1000 lbs. Canary;

1000 lbs. Rape;

1000 lbs. Hemp;

Top Onions, Jerusalem Artichokes,

HYACINTHS, TULIPS, LILIES, UROCOS,

JAPONICAS,

And a variety of other Bulbous Roots.

## NURSERY BUSINESS.

20,000  
FRUIT TREES,

AT THE..

HOPE NURSERY,  
Between William and San Carlos streets,  
In the Eastern part of the  
CITY OF SAN JOSE.

D. T. ADAMS,

RESPECTFULLY INFORMS HIS FRIENDS AND

the public that he has for sale a choice stock of

APPLE AND PEAR TREES,

that are hardy, and have been grown with much care

as to selection of sorts, extent of variety, size and vig-

orous growth, to give entire satisfaction.

A SPECIAL PREMIUM was awarded to the proprietor

by the California State Agricultural Society, at their Annual

Fair, 1858, for the BEST APPLE NURSERY.

Parties desiring to purchase largely are especially solicited

to call and examine for themselves.

10,000 Apple Trees, 2 years old, 100 varieties.

6,000 do 1 year old, 100 varieties.

2,000 Pear Trees, 1 year old;

1,000 do do on the TATE Broad-

leaved Angers Quince; 100 varieties.

Also—a good assortment of CURRANTS and GOOSE-

BERRIES; California GRAPE VINES.

Sold at as low prices as Trees of the same size and quality

can be purchased at any responsible Nursery in the State.

The larger portion of this stock has been propagated from

Trees that have borne Fruit in California.

All orders to be accompanied with the Cash,

and persons ordering Trees will please state explicitly by what

conveyance they are to be sent.

Trees packed in the most thorough manner, enabling them

to endure any probable exposure, delay, or handling; for

which a moderate charge will be made, barely sufficient to

TRAGICAL AFFAIR AT SAN JOSE.—From the San Jose Telegraph Extra, of 29th ult., we copy the following account of the death of S. J. Crosby and L. Pose Ferguson: On Monday, the District Court of San Clara county commenced, the Hon. S. B. McKee presiding. The case of the People vs. Thor. Seal and Alo. Rob, indicted for the murder of Paul C. Shore, was set for trial on Tuesday, at 2 p. m., and the Sheriff was directed to summon a panel of 48 jurors in the case. It is known that this case has excited a deep feeling in the community, and the action of a majority of the Grand Jury at the last term of the Court of Sessions in failing to find a bill against S. J. Crosby, believed by a large majority of the community to be guilty with the persons indicted, aroused public feeling to a high pitch of indignation, and made all feel a sense of insecurity under the law. Crosby for several weeks has not been seen in our streets; but to-day he re-appeared with the design of testifying on behalf of Seal and Robbs. During this morning, the tragical event occurred in front of the Courthouse. Crosby, with a man named William M. Bevans, who was a witness for Seal, proceeded from the Courthouse toward the corner of Mr. Bodley's building on San Fernando street, when the firing commenced. The testimony of the witnesses is conflicting. Most of nearly all who saw the beginning of the affair swear that Crosby fired the first shot. Joseph Payburn states that Crosby met Thor. Shore, Jr., halted a few steps from him and fired; that, he says, was the first shot fired. Schuyler B. Davis says the first pistol-shot came from Crosby; that he saw him present his pistol and fire. There were other witnesses who saw part of the affray, but not its commencement. All swore as above except Bevans, the man with Crosby, whose testimony was in all particulars totally at variance with that given by half a dozen or more respectable citizens. He swore that three or four shots were fired at Crosby before the latter drew his pistol and fired; and swore, too, that the ball from Crosby's pistol could not have entered the Courthouse, while all the other witnesses before the Coroner's inquest concurred in saying that it was Crosby fire that passed through the wall of the Courthouse, and killed Mr. Ferguson, and that the shots from the parties engaged passed in a wholly different direction. The Coroner found that Crosby came to his death from pistol-shot fired by Shore, Jr., or Richard Shore; and that they believe Ferguson was killed by a ball fired by Crosby at persons in front of the Courthouse, which passed through the wall of the building and entered the body of Ferguson, producing death. Ferguson was a miner from Grass Valley. He came here to accompany an old friend homo to his relations, near New Madrid, Missouri.

**HORRIBLE CRUELTY ON SHIPBOARD.**—The American bark Sarah Park, Capt. Ephraim Pendleton, arrived at this port on Wednesday, from Cardiff, Wales. The next day Capt. Pendleton made a complaint against two of his men for petit larceny, and they were arrested. But this act told more against the Captain than against the men, for the latter presented a horrible appearance, their backs showing heavy punishment with the cane and their sunken eyes and emaciated forms indicated severe suffering and shocking cruelty endured. These men are named John Thompson and William Johnson. They stated that having been put on short allowance and being induced by hunger they stole some biscuits, and for this they were most inhumanly treated, dogged and ironed. It further appears that another of the crew has been driven to folly by starvation and cruelty, and still another was killed outright by severe punishment, and thrown overboard during the voyage. The Captain was arrested and brought before the U. S. Commissioner to answer upon five charges of cruel and unusual punishment, and pending the decision upon the question of bail, he was arrested on the charge of murder, and it is hoped he will get his deserts. The three seamen were conveyed to the hospital. Captain Pendleton is said to be a native of Camden, Maine; a man of middle age, and has been master of a ship for nearly twenty years. The charges appear to be fully sustained by the testimony of not only the crew but the officers of the bark, and there seems no chance of escape this time for a brutal captain from the punishment he richly merits. Humanity shudders at the revelation of this cruelty, and the imagination is at loss to conceive the motive for such fiend-like barbarity. May such another monster never be heard of!

can bark Sarah Park, Capt. Ephraim Pendleton, arrived at this port on Wednesday, from Cardiff, Wales. The next day Capt. Pendleton made a complaint against two of his men for petit larceny, and they were arrested. But this act told more to the Captain than against the men, for the latter presented a horrible appearance, their backs showing heavy punishment with the cane and their sunken eyes and emaciated forms indicated severe suffering and shocking cruelty endured. These men are named John Thompson and William Johnson. They stated that having been put on short allowance and being induced by hunger they stole some biscuits and for this they were most inhumanly treated, dogged and flogged. It further appears that another of the crew has been driven to idleness by starvation and cruelty and still another was killed outright by severe punishment, and thrown overboard during the voyage. The Captain was arrested and brought before the U. S. Commissioner to answer upon five charges of cruel and unusual punishment, and pending the decision upon the question of bail, he was arrested on the charge of murder, and it is hoped he will get his deserts. The three seamen were conveyed to the hospital. Captain Pendleton is said to be a native of Camden, Maine; a man of middle age, and has been master of a ship for nearly twenty years. The charges appear to be fully sustained by the testimony of not only the crew but the officers of the bark, and there seems no chance of escape this time for a brutal captain from the punishment he richly merits. Humanity shudders at the revolting cruelty, and the imagination is at loss to conceive the motive for such fiend-like barbarity. May such another monster never be heard of!

Humanity shudders at the revolting cruelty, and the imagination is at loss to conceive the motive for such fiend-like barbarity. May such another monster never be heard of!

monster never be heard of!

## DOMESTIC SUMMARY.

A Post Office has been established at San Antonio, Monterey county. Francis Sylvester, Postmaster.

A Festival will be held in the City Hall, at San Jose, on the 14th of April, in aid of the Mount Vernon Fund. Great preparations are being made for the occasion.

From Watsonville, a friend writes: We had a very heavy rain, March 21. Our seedling is mostly done, and grain is looking well generally. Peach and Pear trees are in blossom, and Cherry trees begin to bloom.

Messrs. Cole and Dodge, extensive farmers in San Joaquin county, disposed, says the Stockton Republican, a few days since, of one hundred and seventy tons of wheat, in one lot. Sperry, Burdett & Co. were the purchasers, and the price paid 24 cents.

The Marysville Democrat notices a mushroom, obtained from a Digger Indian, which measured eight and a-half inches in diameter. The stem was seven and a-half inches in circumference. The height was six inches, and weight six pounds.

A calf at Mr. Sim's place, Washington township, is noticed by the editor of the Alameda Gazette as the finest specimen he has ever seen. The calf is about ten weeks old, and measures, in length four feet eleven inches, height three feet seven inches, girth four feet seven inches. He is a cross of the Durham and Devonshire.

The Mail Stage from Kansas City arrived at Stockton on the 23d ult., and was to start out again to-day. The mail party eight in number, cut off by the Indians at the Mojave, had not been heard from. It is supposed they arrived at the Colorado Crossing shortly after the dragons under Col. Hoffman retreated from there, and were murdered by the Indians.

SAN BERNARDINO WINE made last season by Dr. Barton, has been received by the editor of the Los Angeles Star, who says of it: This is the first we have known manufactured in that locality, and speaks well for the soil on which the grapes were grown, as also for careful handling. It is a strong-bodied, full-flavored wine, with a fine aroma, and we have no doubt would command a ready sale, if offered in the market.

The Stanislaus River Flaming and Mining Company at Six-mile Bar, have completed the grading for their dam, and have contracted for 200,000 feet of lumber for its construction. From the well known business character of the managers of the enterprise, says the Columbia News, we are certain that the works of the company will be completed with all possible expedition and economy. The shares of the company's stock are selling at fifty dollars premium.

MAY-DAY PARTIES are being thought of in Alameda county. Mr. Brier, Superintendent of schools, has appointed committees to make arrangements for three School Picnics, on Saturday, April 30; one at "Fruit Vale," near San Antonio; another at Hughes' Gem Valley, and another at Alameda Creek, above Vallejo's Mill. The Gazette thinks the plan is a most judicious one, and needs only the aid of persons interested to make the occasions of great interest in the several localities.

A DESTRUCTIVE flood is reported by the San Joaquin Republican, of the 27th ult., on the Calaveras river, which was higher than it has been since 1852. All the bottom lands on either side of the stream were overflowed, injuring the cereal crops to a considerable extent. The wheat crop on many of the ranches, located immediately on the river banks, is entirely destroyed. The gophers, however, had a bad time of it, which will be some benefit, as they are the greatest pest in the agricultural districts.

Ice of home production is to be supplied to the citizens of Los Angeles the coming summer. It is brought from the mountains, fifty miles distant from the city. The ice this year is of excellent quality, says the Star, and has been obtained in sufficient quantities to supply the demand of the city. The conductors of the enterprise have a train of thirty or forty mules packing the ice down the cañon where it has been collected, to where wagons can reach it; it is then loaded on them and brought to town. The ice is cut in cubes, each of which is estimated to weigh one hundred pounds.

The Alameda Quartz Mining Company, at their claim situated about two miles from Jamestown, have erected a new five-stamp quartz mill. The quartz thus far, says the Columbia News of the 24th ult., has yielded from fifty to one hundred and fifty dollars to the ton, and as there is plenty of it, and the mill crushing from six to ten tons during the twenty-four hours, we may safely venture to state that a large quantity of the "metal" will be obtained by the company during the ensuing summer. The Rough & Ready Tunnel company at the Table Mountains took out 365 ounces last week, for one week's working. The New York Tunnel Company, in the same locality, is also paying exceedingly well.

The brig Ellen H. Wood, Captain Leeds, hence for Mendocino, when off that place at 2 A. M., 27th ult., sprung a leak, and made water so fast that the crew were unable to keep her free. About 6 A. M. she bore away for this port, and ran till 1:30 A. M., when she became unmanageable. Being close to the land, an attempt was made to run her ashore, but when hauling her up to do so, she capsized, and about half an hour after she struck on a rocky point about four miles northwest of Salt Point. The captain and four of the crew succeeded in getting on shore from the wreck. The following were lost: Mr. Bissam, passenger; Mr. Williams, First Officer; a seaman and the cook, names unknown.

The White Sulphur Springs Hotel, in Napa county, owned by Messrs. Taft & Brewster, was destroyed by fire Thursday. The hotel was the largest and finest in the State, and would compare favorably with the celebrated resorts at Newport, Saratoga, and other watering places. The building was in charge of competent persons, and it is supposed the fire was the result of accident. Its remote situation precluded the possibility of any help being obtained to extinguish the flames. Loss, \$65,000, which is covered by an insurance for \$50,000; distributed as follows: Haven & Johnson, \$26,000; Jonathan Hunt, \$21,000; Falkner, Bell & Co., \$5000. The loss of this fine hotel is a public calamity, and we are pleased to learn that it will be immediately rebuilt.

A Plan is said to be on foot to drain the Tule Lands west of the Sacramento river, which extend from the mouth of Cache Creek to Suisun Bay. The Union says the plan is to carry the water of Cache Creek into the Sacramento by means of a heavy levee extending from the mouth of the creek to the river, a distance of about five miles. By raising the levee five feet above the level of the river bank, the projector thinks he can turn all the water which may come in above it, either from the creek or the river, into the latter. The theory is that the tule land is formed by the waters of Cache and Tule creeks. The water of the latter, it is proposed to carry into the river by means of two large levees, about 600 feet apart, which will run to the river diagonally across the tule. It is believed that if the waters of those two

creeks are prevented from accumulating in the tule, it can be so thoroughly drained as to make the best grass land in the State. At present the tule is a great nuisance, and the land under it useless.

The recent cold weather has blighted many of the fruit blossoms in localities where the trees were exposed, says the Sacramento Standard. Wednesday night was particularly severe, and had not a high wind fortunately prevailed, there is no telling what amount of damage would have been done to the peaches.

Of wages in Sierra county, the La Porte Messenger says: Although the price of labor does not decline rapidly in this as in other sections of the State, it is with much regret we mark its diminishing reward elsewhere. The lessening of wages for any class of service, in any community, generally tends to make the poor poorer, and the rich richer.

A severe frost is said to have occurred in Santa Clara county on Monday night last, and it is feared the peach crop has been seriously injured. This we hope is not the case, as the frost frequently does more good than harm, by thinning out the fruit, so that it is larger and of better quality, and the quantity nearly the same.

A MASS meeting of the settlers in Sonoma county was held in Petaluma, on the 19th inst., to take steps for contesting fraudulent grants. A County League was formed, and Wm. Faught elected President; L. Waugh, Vice President; Jos. J. Pennybacker, Recording Secretary, and George Campbell, Corresponding Secretary. A number of resolutions were adopted and among others that "We recommend to Settlers throughout the State, to co-operate with us in petitioning Congress to pass a 'Bill of Review,' granting all parties aggrieved a space of at least twelve years, in which to disprove the validity of all grants within this State which are believed to have been confirmed in fraud of the rights and property of the United States."

## Eastern News.

We give the following summary of Atlantic news, by steamer Golden Gate, which arrived on Tuesday:

Congress continued in session until 12 o'clock, noon, March 4th, when it expired by limitation, after being constantly at work during the last sitting for twenty-five hours. The disagreement between the Senate and the House, relative to the increased postage question, was not healed, and the Post-office Appropriation bill and the Post-roads bill, in consequence, failed to become laws. All the other general appropriation bills passed, and received the signature of the President. The Miscellaneous Appropriation bill, as it passed both Houses, contains a section providing for the extension of the Treasury Note law for two years, and authorizing the issue of twenty millions. The Ocean Mail Service bill was killed, but an amendment to another bill provides for an appropriation for carrying the mails to California via Panama and the Tehuantepec route. The close of the session was characterized by more dignity than has been usual on similar occasions.

The extra session of the Senate of the Thirty-sixth Congress, commenced immediately after the adjournment of the Thirty-fifth Congress, in accordance with the President's proclamation. The new Senators were sworn in, soon after which the Senate adjourned until the 5th, without doing any business.

Aaron V. Brown, of Tennessee, U. S. Postmaster General, died on the 8th March, after a few days illness, from pneumonia. His funeral took place on the 10th, and was attended by a very large concourse of mourning friends, including the President, the Senate in a body, the Diplomatic corps, and many private citizens. The death was announced in the Senate by a message from the President. Mr. Nicholson pronounced an eulogy upon the occasion and submitted appropriate resolutions, which were adopted, when the Senate adjourned, as a mark of respect to the memory of the deceased statesman.

Judge Joseph Holt, of Kentucky, late Commissioner of Patents, was nominated and confirmed to fill the vacancy occurring by the death of Mr. Brown. The appointment undoubtedly is a good one. Mr. Holt is a man of strong practical common sense, of moderate views, and one who will be apt to give close attention to the duties of his office.

President Buchanan has appointed, and the Senate confirmed, Robert Ould, Esq., of Georgetown, U. S. District Attorney to fill the position rendered vacant by the decease of Mr. Key. Mr. Ould was a candidate for this office at the time of the reappointment of Mr. Key by Mr. Buchanan.

Gen. J. W. Denver, of California, had resigned his position as Commissioner of Indian Affairs.

The appointment of J. Y. McDuffie, as Superintendent of Indian Affairs in California, is confirmed. The Senate has confirmed all the treaties recently negotiated with the Oregon and Washington Indians. Also confirmed, the appointments of M. Vanclaire as U. S. District Attorney for Washington Territory, and Andrew J. Thayer as U. S. District Attorney for Oregon.

Ben McCulloch has resigned his office as U. S. Marshal for Texas, and his brother Henry has been appointed and confirmed in his place.

Washington, March 11th.—The deficit in the finances of the Post-office Department to meet the contracts and necessary service, will amount to \$6,000,000, by the 30th June next. As an appropriation is absolutely necessary to carry on the operations of the Department, it is understood the President has decided on calling an extra session.

No change has been made in the California Overland Mail routes.

The extraordinary session of the Senate, concluded its labors on the 9th March.

The opening of the Boston Shoe and Leather Exchange, in Codman Building, Hanover street, attracted a large crowd to the spacious rooms. In the opening address of the Hon. Amasa Walker, he said the annual shoe trade in the State reached \$55,000. The Exchange is admirably arranged, containing a reading-room eighty feet square, with numerous other apartments, where it is proposed to exhibit samples of every description of boots and shoes made in New England, also, improved machines for their manufacture, etc.

A fine-looking gentleman marched up Broadway, New York, lately, lavishly scattering gold dollars along the street. It is hardly necessary to say that a large crowd followed him. An officer remonstrated and received a shower of gold in his face. Unlike Danes, the officer refused to accept the token of affection from the Broadway Jupiter, and put an end to the liberal gentleman's exploits by hand-cuffing him, and placing him in a cart and carrying him to the Tombs (station-house).

It will hardly be believed, but it is nevertheless stated to be true, that an elopement took place lately at Albany, New York, between a couple of children, aged respectively fourteen and fifteen years! The young Romeo actually provided himself with a package of arsenic, to commit suicide in case of discovery, but fortunately the father of the young gentleman overtook him at Ulster, got possession of the poison, had the girl locked up, and gave the boy a pretty fair cowhiding.

A mob at Quincy, Ill., sacked eight houses of ill-fame, situated on York and State streets, in retaliation for the murder of a man in one of them. The steamer Baltimore, of the new Havana line, came in collision with a propeller in Chesapeake Bay, and was sunk. The crew were saved.

The number of animals now in use in the Army, is stated as follows by the department: 6,000 cavalry and artillery horses; 2676 horses in the

Quartermaster's department, 13,830 mules; 45 camels, and 132 oxen.

Mr. Hale, an American well known in South America, has offered the Government of the United States to settle all the matters in dispute with Paraguay, for \$10,000. Perhaps it would have been better to have farmed out the settlement of the difficulty as a contract.

Michael Phelan, the billiard-player, is in training at Harlem, New York, for the great match with Seeritter, of Detroit, for \$6000. The friends of both parties are very confident. Seeritter is said to have made, at one time, a run of one hundred and forty; and at another, of one hundred and eighty points in a carom game.

## MORGAN BLACK HAWK COMET

WILL MAKE A SEASON AT

MAYHEW'S RANCH,

near CENTREVILLE, from March 30th, to August 1st—where good Pasture can be obtained for MARES.

## COMET

Was sired by YOUNG BLACK HAWK, sire Old Black Hawk of Vermont, gr. g. sire Sherman Morgan, gr. g. sire Justin Morgan; dam by Morgan Tally-Ho, dam by Andrew Jackson.

Mares sent to 99 Pine street, San Francisco, care of B. F. FISH, will be attended to. CHARLES COCKRIN, Agent.

## GOLDEN GATE CLOTHING WAREHOUSE,

Corner of Clay and Kearny Streets.

WE HAVE RE-OPENED THIS OLD ESTABLISHED

HOUSE, with a large and very select stock of

FASHIONABLE GOODS,

Embracing every article in the CLOTHING LINE. Our Goods are of the Latest Styles, and of superior quality.

We receive Goods by every steamer, direct FROM NEW YORK.

The price we ask is the price we intend to take—(but one price to all).

We sell our Goods exclusively for

## CASH

At Reduced Rates.

M. S. MARTIN, the former proprietor of the House from 1851 to 1857, will again be found at the "Old Corner." Measures taken and orders forwarded to New York, and Clothes returned in seventy days.

## ARMY, NAVY AND CUSTOM GARMENTS, MADE TO ORDER.

Particular attention paid to the Custom department.

Sole-leather Trunks, Valises, and Carpet Bags,

IN GREAT VARIETY.

We ask a call from our friends, the former patrons of the "old corner," and the public generally, feeling confident that we can please both in price and texture of Goods.

T. J. BAYLESS & CO.,

Corner of Clay and Kearny streets.

M. S. MARTIN, Salesman. 9-3m

J. Bryant Hill, Lewis Lillie.

J. BRYANT HILL & CO.,

COMMISSION DEALERS IN

FRUITS, BUTTER,

CHEESE,

POULTRY, EGGS, ETC., ETC.

63 Merchant Street,

(Opposite Washington Market),

SAN FRANCISCO.

## SUPERB CLOTHING

HEUSTON, HASTINGS & CO.,

SACRAMENTO.

CLOTHING WAREHOUSE,

Corner of J and Second streets, SACRAMENTO.

NEW GOODS,

MADE TO ORDER,

AND

LATEST STYLES.

The Undersigned

PLEDGE THEMSELVES, THAT BY THEIR LONG

experience, their "Skill in Making," and their facilities for

Purchasing, they can present one of the

BEST STOCKS OF CLOTHING

ON THE PACIFIC COAST.

Their aim has been and ever will be, to give their

patrons the Best MATERIALS, THE LATEST STYLES

and THE TRUEST NATURAL FIT OF THE

GARMENT.

EVERY ARTICLE FOR THE WARDROBE READY.

HEUSTON, HASTINGS & CO.,

9-3m Corner J and Second streets, Sacramento.

South-Downs.

A FINE LOT OF FIVE HALF-BLOOD

Southdowns, from the Webb Southdowns, of

superior cross, and very handsome animals—can

now be engaged, deliverable in September next,

by application to the Editor of the California Farmer. 9

Sheep Wanted.

ANY PERSON HAVING 1500 OR 2000

AMERICAN EWES, of good quality, with lambs

at side, or prospective, can find a ready purchaser

for them, by addressing Editor California Farmer—

stating the number for sale, age, condition and price; also

where the flock is situated. Letters addressed as above, will

receive immediate attention. 9

## SPECIAL NOTICES.

SLEEP! SLEEP! SLEEP!

"To each and all, a fair good night,

And rosy dreams and slumbers light."

Sleep! Sleep! Sleep!

Rest! Rest! Rest!

Who is the man who doth keep

A mattress the finest and best

Sleep! Sleep! Sleep!

Rest that refreshes most true!

The rest that, while sleeping, our health doth renew,

Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!

Rest! Rest! Rest!

Economy tells us to buy and to keep

The mattress that is cheapest and best.

Sleep! Sleep! Sleep!

On the mattress from JACOB SCHRIEBER!

If bachelors lie single, then life will not jingle

Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go where, where,

Those famous mattresses made out of PULU!

J. SCHRIEBER,

Jackson street, near Hotel International.

## THE HOME OF BEAUTY.

"Creative Genius! from thy hand

What shapes of order, beauty, rise,

When waves thy potent, mystic wand

To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and

worship at the shrine of Genius? Imagination can rear tem-

ples, and people them with gods; but Genius is required to

make them live—live to our vision, live before us models of

themselves.

Here is our castle,

And here our gods;

But they are mortal.

Around these fasten'd halls

The good, the great, the living and the dead;

And yet they speak—speak all:

"We cannot meet the speaking eye,

But we are known, and, knowing,

Fain would hold sweet converse."

But as we gaze upon their closed life,

We know that they are silent

While they speak, and gaze on us.

Creative Genius! raise thy wand!

And gather round us where we stand

Within these halls, a living throng:

That we may raise a glorious song

To all who set the noble part;

And tribute give to every art.

Creative Genius! here's thy home!

And here shall wondrous thousands come;

Here spend a season free from care,

To worship the beautiful, good, and fair,

For it is not a freeman's duty,

To worship at the shrine of Beauty!

Behold these flowers that gem the land,

These little children in groups they stand,

While here and there, like angels, see

They're smiling on their mother's knee.

Men, in their prime, each like a brother,

Joined hand in hand they're linked together;

Here, too, the aged, the noblest show,

They, hand in hand, together go.

Young men and maidens, free from care,

Single or plighted, like jewels rare,

Are gathered round this gorgeous Hall,

The Home of Beauty, in truth we call.

Creative Genius, raise thy wand!

We now would ask, O let him stand

Before us; him who all this beauty planned.

Behold, cries Genius, quickly glance!

Enough! the artist, R. H. VANCE!

Daguerrean Gallery,

Corner Sacramento and Montgomery streets.

## BOY FOR A FARMER.—A place is wanted

with some good Farmer, for an active and intelligent BOY,

about nine years of age. Any person that would like to adopt

such a Boy, can learn of an opportunity, by applying at the

Farmers Office. 6

We are ahead of the world in Ambrotypes;

we are ahead of the world in Photographs; we are ahead of

the world in Daguerrotypes. We have documents to prove

## Ladies' Department.

## A Mount Vernon Poem.

The following truly beautiful and most eloquent Poem has been called into being by the formation of the Ladies' Mount Vernon Association. If this holy work inspires the women of our land with such thoughts in valiant Kentucky, shall not the same fire be caught up on the golden shores of California, and a response come up that shall speak for our State. We look for it. Such offerings upon the tomb of Washington are a tribute, not only to the Father of his Country, but to the 1776 of Washington, Mrs. Custis—who was the first great advocate of woman's elevation. Let it be remembered that this distinguished lady was ever the great advocate and defender of the doctrine, that Woman is equal with Man. She was a wife worthy George Washington. We copy the remarks of the Journal whence this Poem originated, and also that of the Louisville Journal, from whence we copy:

We re-publish the subjoined eloquent poem from the Lexington Observer and Reporter. "Rosa" pleads the cause of Washington with the tongue of a seraph. What one other Vice-Regent in all the land has called to her aid such rapt and burning strains as these? If, under this melting appeal, Kentucky does not elect the most generous of her sister States, she will be cruelly unworthy of her peerless daughter.—(Louisville Journal.)

The reader will find in this paper a poem from the pen of Mrs. Rosa Verneer Johnson (Vice-Regent of the Ladies' Mount Vernon Association for the State of Kentucky), upon "Washington." This effusion is in the best style of the gifted writer, and will command, as it deserves, the attentive and sympathetic perusal of the people of Kentucky. Our contemporaries of the press in Kentucky cannot name successfully aid the cause to which the ladies of the Association are now devoting their efforts, than by republishing these lines of Mrs. Johnson, and we trust they will not hesitate to do so. Independent of their intrinsic merit, which will commend them to every reader, their extended circulation will serve to promote a cause to which every Kentucky heart should send forth a responsive throbbing.—(Lexington Observer and Reporter.)

WASHINGTON  
BY ROSA VERNEER JOHNSON.

When our battle-cry of "Freedom!"  
Pealed defiance o'er the sea,  
When the veteran hearts that raised it  
Swore to perish, or to free,  
When upon our country's altar  
Glared the blood-red torch of Mars,  
And our eagle-guarded banner  
Floated on its golden stars,  
Like a living thing of beauty,  
Which defiance seemed to fling  
On our foes, while waving o'er us  
As some guardian Angel's wing—  
Who led on our hosts to combat?  
Who conjured them ne'er to yield?  
Neath that radiant standard marching  
Onward to the battle-field,  
Who with calm and proud reliance  
Pointed where it waved on high,  
And bade those who marched beneath it,  
To protect their flag, or die?  
Who resigned home's sweet seclusion,  
And love's fond allurement there,  
For the clash and clang of battle,  
With its grim and ghastly glare?  
Who drove back our foes with slaughter,  
Where the hot lead fell like rain,  
Dashing off a tear of sorrow,  
As he looked upon the slain?  
(Friends and foes all heaped together).  
Whose brave heart was never steered  
'Gainst a touch of human pity  
Though triumphant on the field?  
Brave in combat, wise in council,  
Who by prudence and command  
Planted an untarnished banner  
Firm on our beloved land?  
Down the gory tide of battle  
When our foes were wrecked and lost,  
On Columbia's shield of Freedom,  
One bright name her love embossed.  
Name of him—who when victorious  
Of his ransomed country thought,  
And though hailed as Patriot, Hero!  
For himself, no honors sought.  
And, with honors heaped upon him,  
Crowned with Fame's undying crown,  
Turning fondly to Mount Vernon,  
Lo! he bade them meekly down,  
Glorying in his country's freedom,  
(Not that by himself 'twas won).  
History with her countless heroes  
Has no peer for Washington!  
From the lurid clouds of battle  
When our star of Peace arose,  
Won by long campaigns and marches,  
Perfect was the chief's repose;  
But, while yet his soul was basking  
In the light of home—the great  
And good, of his proud country called him  
To command her Ship of State.  
Then again, from fair Mount Vernon,  
With a saddened heart he turned,  
For whose calm and blessed seclusion,  
Like an exile he had yearned.  
Softly on our young Republic  
Fell the sunshine of his sway;  
Cloudless was the radiant dawn  
Of its full and perfect day.  
Never was a better pilot  
Called our Ship of State to steer,  
God's safe-guard and reliance,  
There was naught from man to fear.  
Would he could behold Columbia  
In the zenith of her power,  
For the freedom he bequeathed her  
Proved a rich and priceless dowry.  
Proud and glorious amid nations,  
On her shores two oceans beat,  
Scenes about her brow are wreathing,  
Roses blushing at her feet,  
Onward still her tide of glory  
From Maine's icy hills have rolled  
Westward where the blue Pacific  
Bathes her bosom veined with gold.  
Boundless wealth—uncounted millions,  
Flow from her abundant breast,  
Yet beneath a Lamb in raiment  
See—her Father's ashes rest.  
Children of our fair Republic,  
Vail the splendor of your fame,  
Fling to earth your starry banner.  
While endures this burning flame,  
Never should our guardian Eagle  
O'er the bright Potomac wave,  
While rank grass and weeds are springing—  
Dark mold gathering on his grave.  
Shall Mount Vernon fail to rain,  
Where he rests in deep repose,  
For whose loss a wall of sorrow  
From the startled world arose?

Proud those lands had been to claim him,  
Ye should black to feel that they  
Would not leave his hallowed homestead  
Thus neglected to decay.  
Neath those stately trees he rested,  
By that river loved to roam,  
Ever grieved to leave Mount Vernon,  
'Till the Angels called him home.  
Shall the land of Desolation  
Spoil that mansion, tomb, and grove?  
Never—for our love shall save them,  
Woman's deep, undying love.  
Lo! beside her country's altar,  
Woman kneels, and breathes a prayer.  
Good and brave men of our nation,  
Turn, and lay your offerings there.

LEXINGTON, January 29, 1858.

## The Love of Flowers.

[The following very beautiful thoughts upon the "Love of country life," will be perused with interest and pleasure, by our readers:]

"Edith loves flowers."

It would take their own language to tell how well I love them. It was little wild flowers that I first learned to love, and they still have the dearest charms for me, for, while those reared by the hand of man are far more gorgeous and beautiful to look upon, they seem to have lost that language of inspiration called "the poetry of heaven," and while the former spring spontaneously from the bosom of the earth, and are scattered promiscuously over hill and dale, the latter require careful cultivation, and are often secluded from the common hand and gaze.

I remember well the first flower-garden I ever entered, and not knowing but all flowers were free, I commenced filling my hands with roses, pinks and poppies, of which there was an abundance, when the proprietor coming by, gave me a scolding for taking them without leave. Trembling with fear, the flowers I had just gathered with so much delight, dropped from my hands, and I hurried from the garden; ever after all inclosed flowers had, to me, a forbidding look. But in the pleasant spring-time, then, it was that I revelled with unalloyed delight among the sweet wild flowers that, like the air they perfumed, were free to all.

Yes, Alice, when but a child I have looked down into the depths of the upturned faces of the little violets and "barefoot" blossoms, as they nodded their heads in the breeze, and felt their harmonious language breathing around me. And in after years when I have sat, worn and weary, by life's wayside, the sight of the little wild flowers, dependent alone upon God's care and protection, has hushed the murmurings of my spirit, and I remembered that He hath said, "are ye not of more worth than they?"

Here in the mountains, I see no flowers but such as are indigenous to the soil; few have the gentle tone and look of those of my native State, and are mostly devoid of fragrance; but my heart has often been made glad by a handful of these, presented by some of the hardy sons of toil, showing, by this regard for flowers, that even the trials and vicissitudes of the search for gold, had not closed their hearts to the love of the beautiful and true. Once only have I visited the flowery valleys of the Sacramento, and when at the floral residence of our mutual friend Bessie, I saw a sunflower, I felt like putting my arms around its broad leafy stem and kissing its sunny face; for, to me, it had a voice of other years and other lands.

These long, dreary winters, amid the deep snows of the Sierras, cause my spirit to long much for the return of Spring with its birds and flowers, which, though few, fill my heart with joy and thankfulness.

Alice, did you hear that strain, like the music of a Seraph's lyre? "Aye, it is come!" Are not "all things becoming new?" Yea, verily, the down-trodden millions of earth have caught the sound of Freedom's voice, proclaiming that "all are born free and equal;" and woman, too, has heard, and claims her birthright; and error and despotism, with all their train of evils, must flee away, as bats and owls, before the coming "light."

EDITH MONTAGNOR.

P. S. How delightful a place for spirit communion is, the Ladies' Department of the FARMER; it seems to me like a sanctuary of worship, and may God accept our offerings there as flowers culled from the gardens of the mind, and bless the "labor worship" of those who give them to the world.

E. M.

## Letter from "Alice" to the "Mountain Bird."

The partridge, whose deep rolling drum,  
Afar has sounded on my ear,  
Ceasing its beating as I come,  
Whirs to the sheltering branches near.

[Street's Poems.]

How importantly has the editor of the FARMER advised me to look up that telltale "goose quill," as the "Mountain Bird" has wedged a war of extermination on that class of scribblers that dare dabble in the worn-out subject of "old maids." Now little "Mountain Bird," of Bird's Nest Hill, I have taken a one-eyed squint through this clever pen, taken from the wing of defunct "goosequill" it is as white, clear, immaculate, and full of fun as ever. But, dear "Bird," will you bear in mind that I, myself, support a separate individuality; and this pert, little pen wishes you to distinctly understand it is wholly responsible for what it has said: can load and fire its own guns, without the mortal or spiritual aid of any dead or living being, and can travel "two-forty" over the purest sheet of writing paper, without any one behind her to bolster up her courage.

Miss "Mountain Bird," of Bird's Nest Hill, perhaps it might interest you somewhat to know why I am so "weighty" on this detestable subject: well, to stick a pin here and begin in the right place, like Handy Andy: once on a time, long ago, there was to be a meeting of old maids at Pumpkinville Center, two miles from Toad Hollow, and a maiden aunt of mine was to attend; and by some mysterious agency I ingratiated myself into her favor to such a remarkable degree, that, after deliberate consideration, she consented for me to accompany her. Besides being very young, she supposed I

had no idle curiosity to satisfy, and would take no note of passing events; but you see all the woman there was about me showed itself, and I was curious to know why this unfortunate sisterhood met once a week in an old dilapidated garret, where the bats hide away from the argus-eyed vigilance of the world. After arriving at the mansion where this secret society were wont to meet, my aunt was admitted by a skeleton key, one of which every member was fortunate enough to possess. We were late and last to enter, as my aunt had frequently stopped on the road to kill horse-flies on old Bob's back (as his spinal extremity proved to be a little too short to switch the bloody monsters off), and all the members of this mysterious society had preceded her at least half an hour; the meeting had been duly organized and business fairly under way. I slid in noiselessly behind my venerable relative, and took a secluded seat behind the faded window-curtain, that, unobserved, I might know and see all that was going on. My senses became quickened by casting my eyes about upon this motley throng. There were at least thirty old maids, who had come hither to tell one another how the world had used them, and the good-for-nothing men in particular. Most of them looked as withered and faded as a string of dried herring; and it was a singular fact, that nearly all of them wore brown stuff dresses; and goodness! such an incredible amount of pug noses, warts, sunken cheeks, rayless, "yaller"-looking eyes, toothless gums, and faded, false wigs, was never seen before in one room twenty-eight by thirty. Here they came together regularly once a week to do penance and tell their miserable grievances. Every time one got up to "expiate" on her life-long experience, her sepulchral voice was drowned by the continuous hawking and coughing from the forlorn sisterhood, for two-thirds of them had the old maid's disease—consumption. Here they emptied their hearts of their snake venom, and every good woman and coquette lass in their immediate neighborhood were raked over the coals and slandered, and little, dirty children were unanimously voted a bore; and the longer they talked and argued the more clamorous and vindictive they grew. One amazon specimen of femininity mounted the rostrum on all-fours, to tell how much more wormwood and gall there had been in her cup than the rest, and her harangue ran as follows: "My sisters in misfortune, you positively make much ado about nothing, and grow eloquent about the slights and wrongs that the wise Creator has heaped upon you; only think of my troubles with Josh Jennings; he used to be a good match, and after a little he got kinder familiar, sat up close to me on Sunday nights, and sometimes put his coat sleeve round my waist pretty tight I can tell you; so one day I was weeding onions in the garden, and Josh came out where I was sighing like an evening zephyr, and so down he fell among the pigweed, and told me on his prayer bones that if I did not marry him right away he would starve himself to death right there; and when I told him I would not wipe my old shoes on him, he went away as mad as a hornet, and went right off and married that fastidious Mary Stanley, with her doll-baby airs and handsome face. I thought all along he would come back and sue for peace; and when I saw them the next Sunday after the wedding, at church, my old love sort a got the upper hand of me, and my heart went pit-pat against my stays, and beat time to Yankee Doodle. You don't any of you, know how many sleepless nights and scalding tears I have wasted on Josh Jennings' account, and I have always hated his wife and young ones ever since, and if I could get one of them in my clutches I'd let them know that Sallie Singlebee had some grit, and could redress old wrongs. And girls, I mean sisters, don't you think, on the strength of this they began to call me an old maid because I got the mitten, and that presumptuous Bill Springer, the one-legged shoemaker who lives at the forks of the road, got a crotch into his head and put on his dickey and Sunday fixings and hobbled over on a crutch to make love to me, Sallie Singlebee; and what do you suppose I told him: why, I spoke right up and said no more Bill Springer, Sallie Singlebee could never think of the like. I opened my battery on him, and he was glad to get away with a whole limb. I didn't lose my dignity of person for a moment." Sallie, the heroine of the day, sat down amid vociferous applauding, and cries of "served him right," and earnest ejaculations of amen! She looked as proud as a peacock when she maliciously thumped her paper-mache snuffbox and passed it around from one to the other, who took a pinch between thumb and fingers sufficient for an elephant. Each one took a cup of tea, made in a caldron kettle, to wash down their indignation, and departed to their respective homes with the kind assurance of meeting soon. I was glad to escape with my life, and breathe God's air again, away from that stifled pandemonium; and ever since my narrow escape I have ever held this class of women in particular abhorrence; and, reader, who blames me?

Now, pretty "Mountain Bird," as I am no ornithologist, would you tell me what species of bird you belong to? Are you a lark that soars to meet the sun, a robin-red-breast, such as used to sit on an old dry tree in father's orchard at home; a bluebird songster; a chattering magpie, or mocking bird, that tries in vain to imitate a more intelligent kind, that trill their melting anthems in the oratoria of nature? Does your species of bird lay white, green, "yaller," or speckled eggs? where do you build your nest, and what time of the year do you hatch your young? Is your nest stuck like shin-plasters to the eaves of the barn, or built in tall hedge-grass? Do you ever take to wearing crinolines or expansion-skirts? Is your bustle made of chaff or wheat bran? How do you carry on flirtation and marriage? Do you choose a wren, raven, or blackbird on St. Valentine's day? Come, do tell us all about it, I am growing terribly anxious, and shall endure the agonies of suspense till I hear.

As you say Mother Goose's Melodies are going through a new edition, will you forward me a copy, as I must confess ignorance in having never read this elaborate work? I think you could improve me on the "goosine" question, as you seem to be a graduate from Gooseberry College, and I hardly know what might be passing on the world's wide stage. Then geese cackle do they? Well, I had never learned that before; what wonderful truths are dawning upon my misty mind every day. I had always supposed the cackling part fell to Mrs. Dorking, a barn-yard fowl, and that the "goosine" quack a prelude in the neighboring pond. As for your poem, why beat about the bush and walk clear around Robin Hood's barn, and get so tangled up in your subject that no mortal can tell what you are driving at. I have read it carefully, and for the life of me I can't possibly see the cream of the joke through the conglomeration of unfortunate circumstances. The rhyme is so jumbled up that the towering subject is altogether lost in an unmeaning conglomeration of Webster's best, and my weak cabeza cannot comprehend such a thundering avalanche of brilliant ideas. I have never as yet invoked the muses; but if I should become a poetess, I imagine I should tune my poetical lyre to more lofty strains than the "goosine" subject; poor prose is somewhat excusable, but bad poetry ought to have the black seal of condemnation placed upon it; and the style of "Mountain Bird" seems a labored poetical effusion. More readily to comprehend her meaning, I called in the other day an intelligent miner (Ned Prescott), who is a remarkable fine poet, to say the least of him. I wanted to see if he had *sabe* enough in his head to enable him to understand the harmony, rhyme, and melody of this wonderful milk-and-water effusion. He said he would bet a quart of turpentine or a pint of soft-soap, that "Mountain Bird" was a strong-minded spinster, a Lucy Stone, or a Lola Montez in embryo; a sort of a swamp-angel that would write nonsense all day, with her heels out and toes in the ashes; and would, without feeling, smash to atoms a cat's tail, and be taken in the middle of the night with a spasmodic poetical inspiration, and throw the bed clothes into the middle of next week, and tear a hole right through an eight inch plank; and one of these sort that would faint at the sight of a gentleman's pants, unmentionables, or neck-tie—would make a good free-love disciple, and hug some inoffensive chap behind the door till the jugular veins on his throat would swell to an incredible size, and he would hallow in the strength of his manhood, Ave Maria, enough, enough. Ned thinks "Mountain Bird" ought to perch her birdship on the topmost round on the ladder of fame, as Mrs. Barbood, L. E. L., and Mrs. Heman's are already eclipsed by such a literary star, which will out-dazzle all who dare to enter the arena of literature. He thinks she must have climbed with her talons Mount Parnassus, and drank from the fountain of knowledge. She has doubtless read Mother Goose's Melodies, Robinson Crusoe, Jack the Giant Killer, and the Pilgrim's Progress; a sort of literary mastodon, who, I suppose would be missed from the literary world as the sun from the firmament. Fearful this poem would beat with vitality, and take legs to walk away, I gave Ned two copies of the FARMER to take to his cabin. He intends one for general distribution among the illiterate class of miners, and the other to kindle the fire in case the snow drifts down the chimney and spoils his kindlings. I suppose Ned will have his way, he is a curious, clever fellow. More anon. ORDELL C. HOWE.

## NURSERY BUSINESS.

1858--1859.

## SAN JOSE NURSERY.

## FRUIT TREES,

ORNAMENTAL TREES,

SHRUBS, PLANTS, ETC.

18'000 ROSES,

GREENHOUSE PLANTS,

Grape-vines, Etc. Etc.

PALM OR DATE TREES

Perfectly hardy in California.

FOR SALE IN LOTS TO SUIT PURCHASERS,

Trade supplied at a Liberal Discount.

I OFFER THE LARGEST VARIETY OF

Fruit and Ornamental Trees,

SHRUBS, ROSES, ETC.,

That can be found in any one Nursery in California.

ALL ORDERS will be promptly attended to, and the TREES carefully packed up in bundles or boxes,

according to size and the distance they have to go, and delivered free on board the steamer at Alviso.

MY COLLECTION OF

ROSES

IS THE LARGEST IN THE STATE;

HAS RECEIVED THE

FIRST PREMIUM

At the STATE FAIR, held at San Jose.

MY CATALOGUE, giving the different varieties, I have for this season, and other information, will be sent to every applicant. It will also be found with my AGENTS, as follows:

CHANDLERS, PENDANTS, BRACKETS, Etc.,

and everything connected with the Gas business. For

sale, wholesale and retail.

All goods sold in the city, put up by experienced work-

men, and warranted.

THOMAS DAY,

188 Montgomery street (near Jackson street),

San Francisco.

## APPEAL OF THE

Ladies' Mount Vernon Association,

TO THE PEOPLE OF THE STATE OF CALIFORNIA.

A recent appointment by Miss Ann Pamela Cunningham,

Regent of the "Mount Vernon Ladies' Association of the

United States," has devolved on the undersigned, the duty and

privilege of placing before the people of this State, the pur-

poses of the Association.

An Act of Incorporation from the State of Virginia author-

izes the Association "to purchase, hold, and improve two hun-

dred acres of Mount Vernon, including the mansion as well

as the tomb of George Washington," and to receive a deed in

fee simple, and to exercise full power over the use and manage-

ment of the same.

Under this charter, a constitution has been adopted, which

vests the power of management in a Regent and Vice Regent,

selected one from each State of the Union.

In April, 1858, under the advice of legal gentlemen, a con-

tract was executed for the purchase of Mount Vernon for

\$200,000, of which \$18,000 was to be paid cash, \$57,000 on the

1st January, 1859, and the balance in three equal instalments

of \$41,566 66 each, with interest from the date of the contract,

payable on 23d February, 1860, 1861, 1862.

Until payment in full, the proprietor is to retain possession

but such payment may be made at any time.

The cash payment was made, and the gratifying intelligence

has lately reached us, that the instalment of \$57,000 was duly

met; thus securing the contract, which allows payments to be

made, in sums of not less than \$5000, as soon as collected,

thereby arresting the accrual of interest. All efforts, there-

fore, are now turned to the collection of funds for the pay-

ment of the deferred instalments at the earliest possible day,

thereby saving a large amount of interest, and realizing the

cherished hope of at once obtaining possession of Mount

Vernon.

To this noble cause, the Women of the Union, deserting for

a season the seclusion of domestic life, have brought their

talents and all their energies. Amidst the discord of sectional

strife, they bled as they gathered around the tomb of Washington

children of a common heritage, there recall his moderation of

spirit and pure patriotism, and lay to rest the solemn warn-

ings of his last public words. They know, that standing on

that hallowed spot, the pilgrims gathered from the wide ex-

panse of the Republic, can feel but one sentiment—reverence

for his teachings, and devotion to the Union he so loved.

Men of high station and intellect (among whom Everett

stands preëminent) are lending their influence and their elo-

quence to the cause. In twenty-one States of the Union, the

good work goes bravely on, and California is now invited to

do her part. Youngest of her sisters, she yields to none in

reverence for the name of Washington and devotion to the

Union. Animated then by these sentiments and by a just

State pride, let her people bring their offerings to this common

altar of patriotism. Shall the gold of her glittering soil be

poured alone into the lap of Commerce, and none be devoted

to preserve and guard with sacred care the Groves of Mount

Vernon? Let all then vie in generous rivalry, to show that

California lacks not the heart to sympathize, nor the hand to

help in this work of patriotism.

To the Women of California, this appeal is especially made.

Your Sisters of the East have assumed this honorable duty,

and claim your zealous cooperation. Our State will do her

part liberally, if you resolutely take the matter in hand. On

you, therefore, will it depend whether she shall respond to the

call.

Although contributions to any amount are solicited, yet the

price of membership is but One Dollar. Co-operate and sys-

tematic action, therefore, must be adopted to carry the state

from the Sierras to the Pacific. The duty of such organization

devolves on the Vice Regent, and she proposes the following

plan as simple and also effective, if seconded by your hearty

cooperation.

Ladies Managers will be selected, one or more, for each city,

town, village, and mining camp in the State, who will appoint

Ass

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 8, 1859.

NUMBER 10.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.

TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$5 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

[For the California Farmer.]

#### Agricultural Lectures.

EDITOR FARMER: I consider that we do not pay half the attention to the proper means of promoting Agriculture that we ought to do. With the State to support it, and having an existence of several years, the Agricultural Society seems to have allowed the Medical Profession to get the start of it, when it might have reasonably been expected to have taken the initiative. The objects to which the Society has hitherto confined itself, are so far praiseworthy. It has aimed at attracting towards its doings the public attention, by making a great State Fair; and has done so. It has produced a spirit of emulation among farmers, and shown to the world, that away on the Pacific Coast, the products of the earth excel in many instances those of every other portion of the globe. But when we coolly ask ourselves, "To what is this owing?" we feel constrained to acknowledge, that it is more in consequence of the productiveness of the soil, than of any particular skill manifested by its cultivators.

When we read of the Medical Profession establishing Regular Lectures, every friend of Agriculture must regret that the Agricultural Society has not before now done the same thing. Let us not, however, censure it unjustly. Without the public attention conspicuously directed to its proceedings, such an undertaking might have been premature. Now there seems to be less excuse, if so important an object be longer neglected.

The allusion made by St. Paul to what he calls the "foolishness of preaching," was doubtless meant to refer to some sarcastic objection to that mode of propagating gospel truth, which he was one of the first to adopt. But when the great apostle of the Gentiles appeared in person on Mars' Hill, the most learned philosophers of Greece became his proselytes—although "his bodily presence was weak, and his speech contemptible;" and from that day to this, Christianity has found in preaching her main support. We sneer, occasionally, on reading of two or three converts made in some remote island by enthusiastic missionaries, count the cost and make surmises as to their real improvement. Howitt's "Colonization and Priestcraft" shows, but too plainly, that in many cases the spread of Christianity has been attended in the first instance with immoral results. But, in the words of his Divine Author, "it is like a grain of mustard seed which a man took and cast in his golden." It needs but a commencement, and it never loses its hold, till civilization and all its concomitant virtues in time are carefully established. And so of truth of any kind, whether theological, moral, or scientific.

At no time have public lectures been more readily attended than at the present. It is but a short time since Thackeray, on whom seems to have descended the mantle of Douglas Jerrold, electrified crowded houses on the history of the four Georges of England. We want not the wit and genius of Punch, but the practical talent of the Scientific American; and if our agricultural orator of last year is right, and "the farmer is king," we have kings of our own, far more deserving of having their interests attended to, than those whom the greatest wit of the day could not restore to public notice, without devoting a great portion of his lectures to their faults. Grace Greenwood, of the Little Pilgrim, one of the most endearing of our writers, is gaining new friends, and gathering fresh laurels in Ohio, by lecturing. It is not now confined to the class-room of the University, but has become one of the most useful of our popular institutions.

I do not think, however, that lecturing on Agriculture should be undertaken as a private speculation. The most distinguished lecturers have frequently met at first with very poor success. It is mentioned of Dr. Hunter that, except the porter, not a solitary individual attended his first public address. He was as badly circumstanced as the famous Dean Swift, when he commenced Divine service, to the surprise of his clerk, with, "Dearly beloved Roger, the Scripture moveth thee and me!" Dr. Hunter, it is said, was equally witty; and quietly telling the porter to bring in a skeleton, that he might be enabled to address his audience as "gentlemen," proceeded to read his lecture as if to a crowded house. I am afraid we are too practical as a people for such jokes being related; and besides, the support of a Society must always add importance to the truths conveyed, and procure that public attention which no individual, however well qualified, has a right, on his own untried merits, to expect.

The chief objection which one frequently hears

M'CORMICK'S REAPER AND MOWER.

#### McCormick Reaper.

These Reapers now bear a world-wide reputation, and they have not only yielded a most princely fortune to the inventor, but they have given him a name and fame that few men have ever won. Even with the just fame which is due to all other inventors of like machines, the McCormick still holds its power and influence. From the vast increase of demand, even with the number of other inventions in competition, we may estimate its value. And while we earnestly and boldly advocate Progress, and would gladly herald to fame a California machine of equal or superior merit, we would not fail to acknowledge the merit and honor due to an early pioneer manufacturer. By reference to the number of these machines made, we find that in 1855, there were sold 2500; in 1856, 4000; in 1857, 4000; in 1858, 4500; or, fifteen thousand in the last four years! When we consider this vast number, and remember all the other kinds made, we see the worth and value, practically, of this machine; and we see another prominent truth—the increasing power of Agriculture and its influence over the world. McCormick's name and fame as an inventor will always live among the benefactors of his race; it will be placed among the host of other great inventors, who have done so much to relieve man, in his labors and duties, from the wear and tear, as human machines, by bringing to his aid a helper in mechanical power. The vast increase of the demand for Reapers, Thrashers, and Separators, shows conclusively the rapidly developing power of our noble State; and the above facts exhibit one source from whence a large amount of our aid in California harvesting comes. In another column will be found an article on *Harvesting Machines*, and our advertising columns will afford further particulars on this important subject.

MILLIKTON, March 26, 1859.

We most cordially approve the suggestions of our able and devoted friend and correspondent, in regard to a Course of Lectures during the season of the State Fair; and would hope the same plan would be adopted in every county. This is the course we pursued at the time we had the honor to make the Exhibition at Musical Hall, in 1853. At that time we received the cordial aid and generous services of several able friends, who volunteered their most valuable assistance. We engaged Musical Hall, paying from our own purse one hundred and fifty dollars per night and other expenses, and a Course of Lectures was had. They were free to the public. The following gentlemen lectured; and we venture the assertion, that more attentive or appreciative audiences were never gathered in that Hall. The following was the course:

Dr. Henry Gibbons, "The Age in which we live," delivered October 13, 1853; Rev. William Spear, "Chinese Agriculture," October 20, 1853; Dr. H. M. Gray, "Agriculture," November 5, 1853; J. B. Crockett, Esq., "Rural Life," January, 1854.

These Lectures were all published in the FARMER, and their glowing truths and eloquent appeals were some of the goodly foundation-stones upon which the present glorious Agricultural temple has been built. These were the men who voluntarily stepped forward, six years ago, to raise their voices in this glorious cause. We were grateful then for such aid—we are grateful now; and, although it required an expenditure of nearly seven hundred and fifty dollars from our private purse, we most cheerfully devoted it, though at that time feeling severely the smart of the calamitous fires of Sacramento. With these remembrances, we of course must, most truly, second the suggestions of "Agricola."

#### Fine Blood Stock.

There is much stock now shown that is far from being blood stock of true descent.

A. J. Easton, Esq., of this city, has recently received from Samuel Thorn, Esq., two calves, descendants from best blood stock known. These calves are Oregon and Utah, and nine months old. Capt. Mayo also, of Union City, has a fine blood bull calf from the Thorn stock. A gentleman, also, in San Jose another. These are real blood stock.

J. D. Patterson, of New York, has some fine stock on sale. Particulars can be learned from us.

MEXICAN HONEY.—The Orizaba brought up 70 jars of honey on speculation, and this is the herald of bees and honey which can be sent here at a low rate. We think, however, our own bees are best. If this speculation tells, more will come.

#### Letter From Calaveras County—Frost on Fruit-Trees, etc.

DOUGLASS FLAT, April 3, 1859.

EDITOR FARMER: This is to inform you not to send any more FARMERS up this way, as I have concluded to become a nearer neighbor to you, so that in case you should get into a fracas with that "new-doctrine" neighbor of yours, I will be near by to give you a "lift." From this day I shall cease to be an "honest miner." I have sunk shafts and drove tunnels, have worked on the surface and played the hydraulic, have pan-ed and have rocked, tom-ed and stoned; and although I have labored faithfully, and lived frugally, I have come out at the "little end of the horn," and I now lay down my tools and evacuate the diggings. I now wish to join the society of "happy farmers." If they will receive me back to their ranks after so long a desertion, I will promise to devote my best energies and talents(?) to the advancement of the farming interests.

The last days of March and first days of April, 1859, will long be remembered among the farmers and fruit-growers, especially of this section, as a very "cold snap." It snowed and blowed, froze and frosted, till everything green (your humble servant excepted) had to "will" unceremoniously. Many think their peaches, apricots, and almonds are killed. The latter, I think myself, have "gone in," but peaches were not, in my opinion, far enough advanced to sustain much injury, unless it be of seedling trees, the budded or grafted ones not being in full bloom like them. One or two gentlemen took the trouble to keep up fires in their orchards, during a few of the coldest nights, and 'tis to be hoped that their efforts will not go unrewarded.

In conclusion I will say, you may expect the old Grips and all the little young Grips in your

city about next Thursday, and if time is not precious will give the Colonel a call. For the present, Adieu, Gnr.

Grip! we greet you; give us your hand my friend; welcome, welcome; we shall be glad to see you. No loss without some gain—if the miners lose you the farmers gain you, and we will change your address as directed. We shall be glad to offer you bread and cheese and fixings—always have a lunch for friends and a home too, to welcome them. As to the "new-doctrine" neighbor, we remember the injunction of scripture, "beware of those who are carried about with every wind of new doctrine," &c. We prefer to prove all things, and hold fast unto that which is good. The top-root question is running down so low that fire wont save it; it looks frost-bitten like the peaches on the cold side of the hill. We shall be happy to see you again turn up the soil and hope the earth will give you an early crop of peace (peas) until your heart beats with content and joy in seeing your loved ones around you, their cheeks glowing with the radiance of health. Yes, call on the Colonel, give him a call, he'll give you a welcome, aye, welcome you all.

#### Letter from Suisun Valley.

SUISUN, March 8, 1859.

EDITOR FARMER: I recollect, once upon a time, of promising to write to you; but, not being used to the business, I have postponed writing until now, hoping for something of importance.

The subject of Smut came up, and was discussed in your paper, but not at all to my notion and belief. I believe Smut to be produced by a small insect, that lays its eggs in the fuzz, or the crease of the grain, which hatches in the ground and gnaws and poisons the roots, so as to produce Smut. Anything, therefore, that will kill the egg will kill Smut; if the seed is kept long enough to destroy the life of the egg, there will be no Smut.

I have found potatoes to be very poisonous and injurious to young apple trees.

One word in regard to T. O. Shaw's Deep Tillers; they are too narrow, not bluff enough to the furrow, and the moldboard is too low.

Your remarks upon this Valley, last season, seemed to cut the rust off from the old farmers; and I think they will do better, though they are very cross on that subject yet. I must say, Colonel, you were a little astray in your calculations. Will you please call again, and make some amendments in your "reckonings"? I would feel proud to show you my little farm, that is now in its second year. I will say, it can't be beat.

Now for the seeds offered to new subscribers. Send them along; and, when the old year is up, I will subscribe anew. That is fair.

And, if I am worthy (it appears I am not), please send me the Patent Office Reports; and oblige, Yours truly, N. W. R.

FRIEND WARREN, as I presume to call you; for you seem to like little girls, as well as big ones. I am eight years old, and, Papa says, large enough to weed flowers; and he said that I might ask you, if it would not be trespassing too much upon your generosity, to send me some flower seeds. ELIA.

Good, neighbor! We like your spirit. We thank you: first, for your views on Smut, and send them forth for others to think and act upon. Potatoes, nor any other vegetable, should be planted among fruit trees; they always prove an injury. Friend Shaw will read your opinion of his Deep Tiller; he will look to it. As to our remarks last season; they were intended as a faithful reproof for neglected means and opportunities, which we felt to be our duty to notice. It was kindly meant. We are

glad to learn of improvement—"we shall be there to see," and examine that little farm. Your seeds are sent; the Report will come soon.

Yes, Ella! You shall assuredly have a parcel of seeds; and ere this letter is in print the seeds, we trust, shall be sending up their pretty green leaves to gladden your eyes; and may their bright buds and fragrant blossoms send joy to your heart.

#### Agricultural Society Reports.

THE Assembly has indefinitely postponed the concurrent resolution for the printing of the Transactions of the State Agricultural Society. This is what we expected. The delay of furnishing the Report has given the enemies of the Society a pretext for crippling its energies and casting odium upon its management before the Legislature. While we do not excuse the tardiness of the officer who has had the business of preparing this document in his charge, the action of the House in refusing to print is quite unworthy a legislative body. It is an exhibition of jealousy and vindictiveness on the part of some of the mining members that is not much to their credit. Besides, in indulging their hostility they inflict a blow upon the whole State. It is obviously so much to the benefit of the whole State to foster and encourage the efforts which art is making to solve the agricultural problems of this new soil and climate, and to spread intelligence of her triumphs far and wide, that nothing but the most narrow sectional feeling can prompt such action as that taken in the Assembly yesterday. We understand the Report comprises a number of valuable treatises and statistics on agricultural matters.—[Sacramento Union, April 6th.]

The above, from the Union, we esteem to be an unjust censure upon those who voted against the bill. We have never yet found any enemies of the State Agricultural Society, but we have found those who opposed the continuance of a system of bad management. We believe the miners wish prosperity to Agriculture and to the Society, but they remember the great hurrah of the last year about their interest, which ended in smoke. We do not censure the Assembly for their course; for we believe there are many members who would gladly have voted for it; but to do so, they would first demand a thorough overhauling of the doings of the late Board, and have demanded a Committee of Investigation to show where that twenty-eight thousand dollars has gone to; but, as there was not time to do this, there was only one course left; and that was, to let the consequences of neglected duty and bad management fall where they belong—upon the Executive Committee themselves.

We trust that the New Board will, for their own sakes, demand in the name of the members of the Society, a full investigation, and lay the result before the public. If this is not done, the members will call a meeting and take the reins in their own hands. We speak advisedly, as the feeling abroad is, that the Agricultural Society shall be governed by the Agriculturists themselves, and not by those who do not understand their interests, nor are qualified to do their duty, as the results of last year prove conclusively was the case.

#### Agricultural Meeting in San Leandro.

On March 20th, pursuant to adjournment, and to the call as announced by printed posters circulated throughout the county, the Society met, and was called to order by the President, A. H. Myers, Esq. On motion, L. C. Goodrich was chosen as Secretary pro tem.

On motion, the Society decided by a unanimous vote to hold the first Floral Fair of the Alameda Agricultural Society, in the city of Oakland.

On motion the Society decided to open the said Floral Exhibition in the city of Oakland, on Tuesday, June 14th next.

Mr. Harry Linden submitted the following resolution, which was, on motion, adopted:

Resolved, That the Treasurer be required to enter into a good and sufficient bond in the sum of two thousand dollars to the President of the Alameda County Agricultural Society, and his successors in office, within twenty days from this date; and in default thereof, that the office of Treasurer be declared vacant; and it shall be the duty of the Board of Directors to fill such vacancy.

Mr. H. C. Smith introduced the following resolution, which was, on motion, adopted:

Resolved, That the Agricultural and daily newspapers of San Francisco are hereby asked to copy the proceedings of this meeting from the Alameda Gazette.

On motion, the meeting adjourned.

A. H. MYERS, President.

G. L. GOODRICH, Sec'y pro tem.

#### New Flouring Mill, Knight's Landing, Yolo Co.

A new mill has been completed at Knight's Landing, in Yolo county, that will prove of essential service at this period. The mill is thirty-six by twenty-four feet, three stories high (twelve, ten, and eight feet respectively), and contains four run of stones—two for wheat, one for corn and barley, and one for middlings. The mill is carried by a thirty-five horse power steam-engine, and grinds one hundred and twenty-five barrels per day of twelve hours. The mill uses French Burr stones, and bolting-cloths of extra quality, the best yet imported; also Smith's Smut Machine. The grain is close cleaned and fanned before it goes into the smut mill, which will clean sixty bushels the hour. This mill goes into operation in June next, and, being situated at a good point, will help the Farmers. It will be known as GARDNER'S MILL, KNIGHT'S LANDING, YOLO COUNTY. The proprietor will buy wheat at full market price, or grind for the people, and intends to make it emphatically the People's Mill.

## Prize Essay on Fairs.

BY ALLEN W. DODGE, OF HAMILTON, MASS.

(CONCLUDED.)

It may be, too, that among the benefits to be derived from establishing regular fairs throughout the State, would be the encouragement they would thus indirectly give to stock husbandry, a branch of husbandry of late sadly neglected by us. The farmer is now tempted, by the high prices offered, to sell his best calves at an early age to the butcher. And in fact, their slaughtered carcasses are brought by the cars and by steamboats from New Hampshire, Vermont and Maine, to supply the Boston market. Thus the number of neat animals raised to maturity has not kept up with the wants of the community, and, as a consequence, the price of beef animals, milch cows, and working cattle, has experienced a most unprecedented increase. If the farmer could find purchasers for two-year-old heifers and steers, as readily as for calves, and at corresponding prices, what should hinder his making the attempt to rear them? It will be said, perhaps, that he has not the fodder to keep them over winter in any numbers, without encroaching on the feed of his other stock. Now here is just where he should rouse himself to more enterprise to meet this want, especially by the cultivation of root crops. It is remarkable what immense burdens of carrots, ruta-bagas, mangel-wurzels and sugar-beets, can be raised on small plots of well-manured land, and with no more skill and labor than are required in the cultivation of a corn crop. The turnip-culture is often said to be the foundation of modern British husbandry. Why? Because it enables the farmers of Great Britain to raise and keep a much larger number of animals (both neat stock and sheep) than they would otherwise possibly be enabled to do, and by this means to increase the manure heaps by which to augment the capacity of the soil for future crops. We have talked a great deal about the benefits of the root culture; it forms one of the standing topics of cattle show addresses; but it has made but slow progress among us. If we would once set about it in good earnest and begin to rear young stock, we should know by actual experience the inestimable value of roots for winter feeding, and should help introduce into more general practice their culture. And the prospects of a home demand for young stock (such as would spring up from the establishing of market-days) would certainly tend to this desired result.

Again, there is a growing demand, and at high prices, for good milch cows, especially for those giving rich milk, well adapted for the table and for butter. Let a regular market-day be established in their neighborhood, and an additional inducement would be offered to farmers to raise their most promising heifer calves, by the certainty of finding purchasers for their cows, just as soon as they were ready for sale; and the competition of a full attendance of purchasers would most likely create brisker sales and higher prices than would otherwise be had for them. The great question, which is the best breed of cows for dairy purposes? (if indeed there be one) would after a time be in a fair way to be settled. If the Jersey or the Ayrshire breed be the best adapted to our pastures and our climate, and the most to be depended upon for the dairy, it would assuredly be found out; for at a fair, where dealers and farmers thus meet together, they would compare their experiences and make up a judgment accordingly. Or if a new breed of milch cows (pure natives, perchance) should be originated among us that should meet all our requirements, that would then be the one to receive the most attention to propagate it in its purity. Why? Because quick sales, large prices and a certain market at our very doors, would operate as a stimulus to such stock raising, and it would be seen that it would pay, when we returned from the market with the proceeds.

So too, we should raise our pigs, instead of being dependent, as for years we have been, on New York and Ohio for our supply, notwithstanding the disease which has proved of late so fatal to those brought from these States. The loss from this source to the farmers and drovers of Massachusetts has been immense. Can any one say, in view of such a loss, that its recurrence should not be guarded against by increasing the number of breeding sows, and making a home market for their litters by the establishing of regular markets for their sale? They can readily be taken to market in wagons fitted for the purpose, or they could be driven in droves, if grown to be shoats; and the supply, it is safe to predict, would not for a long time, if ever, exceed the demand. And here too, as in the case with milch cows, there would be greater inducements, by the establishing of such markets, to bestow more attention to breeding than has as yet been practiced among us.

Let us come now to farm products, other than live stock: how would they be affected by the establishment of these fairs? Some products, such as hay for example, would hardly be offered for sale, unless it should be pressed in bundles, so as to be made available for transportation. Whenever grains were grown in any considerable quantities, they would rarely find of finding purchasers at these fairs, for it is well known that the supply of these has not for a long time been at all adequate to the wants of the State. And it is equally well known, that the Indian corn and the rye raised in New England, is far superior in quality to that imported from the Middle and Southern States, for domestic consumption; indeed, no one having tasted of the former would use the latter, unless from sheer necessity. Butter, cheese and eggs, articles that are now frequently sold at the doors to travelling agents, or at country stores, and without any competition to enhance their price, would be brought to these fairs in sufficient quantities to attract purchasers for the larger markets, and sales would be made at their full value and for ready cash payment.

In regard to apples, large quantities of which are some years raised in the State, the advantage of regular market days or fairs, for their sale, would be very great. As they are a bulky article, their transportation to market is no trifling affair. Six or eight barrels are usually taken at a load in a one-horse wagon, requiring on an average thirty

trips to sell a crop of two hundred barrels, besides the time consumed in finding purchasers. Now if the farmer were sure that on a particular day in the fall, dealers would attend the fair in his neighborhood, and make large purchases of this fruit for shipping or for re-sale at the larger markets, he could take with him samples of his different varieties, and thus dispose of his entire crop, to be delivered at the cars or in the city, as might be agreed upon. By this comparatively small outlay of time and money, his net profit would be vastly greater than it now is. In the same manner, onions and other vegetable crops might be disposed of with advantage, both to the seller and the buyer.

And here we are reminded of an incidental advantage to be derived from these fairs, and one by no means to be overlooked in forming a correct estimate of them. Some crops, such as the apple, for example, are extremely variable, being one year abundant in some parts and scarce in others; and, another year, *vice versa*. Some crops too, such as the onion, are raised in large quantities, in some sections of the State, and not at all in other sections. Now, an abundant supply of any commodity glut the market, and often reduces prices to a ruinous extent. Hence, where there is an excess of these crops, beyond the demand for home consumption, it could readily be disposed of to purchasers from a distance, who would be drawn to the local fairs by the knowledge of this very contingency.

Besides the opportunity thus afforded for traffic at these fairs, they would be attended with peculiar convenience to the farmer in hiring laborers. He is now put to great trouble and uncertainty in obtaining such as are needed; doubtless owing, in part, to the fact that native labor has been of late largely superseded by foreign. But even this labor cannot always be commanded at the time it is most wanted by him. He cannot spend much time in the busy season in riding round for work-people, and unless they happen to offer themselves at his door, he must suffer for the want of them. Now at the opening of the spring work, at haying, and at harvesting, if the farmer could be sure of meeting, at the fair in his neighborhood, a large number of men in want of work, of whom he could take his pick, it would assuredly be no small convenience both to himself and to the persons hired. From this arrangement a scale of prices, which would be highly desirable, would soon be fixed for the different kinds of laborers, and, as a consequence, there would be more uniformity of wages paid by our farmers. And if it were deemed expedient, a registry might be opened for the names of the persons thus seeking employment, and of the place where they last worked.

But it would be difficult to specify, in detail, all the benefits, which might be expected to be derived from establishing regular fairs, or market-days, throughout the State. We have endeavored to enumerate but a few of them—sufficient, however, to give some definite, and it is to be hoped, favorable views in regard to them. Doubtless here, as in other new enterprises, many of the advantages would far exceed the most sanguine expectations, whilst others would, in time, spring up that were entirely unlooked for. Take for illustration our railroads: Many of us can remember with what distrust they were regarded by a large part of the community, when they were first proposed for consideration. The stage-coach companies thought that they should be ruined; and the farmers reasoned, very naturally, that the general introduction of the iron-horse, as a means of transportation, would diminish if not destroy the demand for hay and other provender. But how has it turned out? The stage companies have become the proprietors of the omnibuses, running from the various stopping-places of the rail cars. And for the use of those omnibuses, and for drays, coaches and private vehicles, and more recently for horse railroads, the number of horses in the State, and their price too, has probably doubled or trebled since the first rail was laid here; and the consumption of hay and oats has increased in a corresponding ratio. Other interesting particulars will readily suggest themselves, illustrative of the incidental benefits of railroads, equally unforeseen by their projectors and the community at large.

Let us now consider some of the objections that would be likely to be urged against the establishment of these fairs: It may be said, perhaps, that they propose too great an innovation on the present modes of disposing of agricultural products, to meet with much favor from the farming community. We all know with what reluctance farmers quit long established habits and practices, and how slow they are to make any change in them. Nor can it be denied that a most radical change is here proposed to them, and one which needs to have a fair start given to it, in order to overcome the standing objections to every new enterprise. To take again for illustration the case of railroads: when they were first talked of, the conservative men on all sides cried out against this change from the long-tried and well-approved modes of travel on the public highway. Those in any way interested in keeping things as they were, joined in the cry of "let well enough alone."

"But," says J. R. Williams, in an address before the Michigan State Agricultural Society, in 1850, when speaking of the old maxim that it is best to "let well enough alone," "it depends upon what 'well enough' means. As a maxim for a farmer it is pernicious. I hold in my hand two peaches. They grew upon trees which sprung from different pits of the same original tree. This large, blushing, richly-tinted, melting, thin-skinned and small-stoned peach, is cultivated fruit. The small, woolly, tough-skinned and large-stoned peach, is the natural fruit, the 'let well enough alone' kind. I hold in my hand two apples, plucked from the same tree, one from a grafted and one from a natural branch. One is the cultivated fruit, the other is the 'let well enough alone' kind. You perceive the distinction is as marked in the apple as in the peach. These are a type and fit illustration of progress and perfection in every branch of agriculture."

Notwithstanding the doubts of some, and the gloomy forebodings of others, the railroads were started; and they, who at first were most opposed to them, have been as ready as any to avail themselves of their benefits. So it would most probably be with these fairs: once started, under favorable circumstances, they would give the best proof, by actual experiment, of their superiority over the present modes of selling and buying agricultural products. It would doubtless take time to turn the current of trade into the new channels, but it would come; and, the wonder would then be, that the work had not been undertaken long ago.

It may be objected to these fairs, too, that they are not adapted to the habits of our people; that they partake too much of the character of holidays, to be favorably received by them. But, it may be asked, how can this be determined without making the trial? In fact, it is in our power to give to them just such a character as we please. And should they become the means of inducing our farmers to spend a few hours occasionally in innocent and rational recreation, it may well be questioned whether the effect on their minds or morals would be at all injurious. It is the bow that is always bent that loses its elasticity, so the mind that is constantly intent on business, and is never unstrung in social intercourse, loses its quickness of perception and its keenness of judgment; the heart that is never warmed into a genial glow of cheerfulness and pleasure, becomes cold and torpid. We should not be sorry to see, as an

effect of these fairs, more of the "good humor and all social affections and generous sentiments among the people," which the Constitution specially enjoins upon legislators and magistrates, in all future periods of the Commonwealth, to countenance and incite.

Other objections might be raised, to an enterprise so novel and untried, as this would be among us. It is not necessary, however, to go into the further consideration of them, for the reason that we cannot conceive of any sufficiently serious to require it. It should be borne in mind that the practical question is, not whether there are any evils to which these fairs might be liable, but whether they would be overbalanced by the positive benefits resulting from them. And this question could best, and perhaps only, be settled by an actual experiment of establishing them. And this brings us to the consideration of the best practical method of commencing and continuing these fairs throughout the State, so as to create new markets for the farmer.

And first, it would be highly desirable, if not essential, that the farmers of the Commonwealth should be more fully informed as to the working of these fairs and the advantages to be expected from them, in order to their coöperating with earnestness and energy in their establishment. If it be true (and of this it is too late to doubt) that "where there is a will there is a way," the first great object in starting this enterprise is to secure the hearty good-will—the intelligent and the united will—of the farming community in its favor. This we are persuaded, is vital to its success. With this view, meetings might be held in the winter months in the different counties, the question fully discussed, and a vote taken upon it. A series of such meetings might be held in different parts of the same county, until the subject was brought before its whole agricultural population, and their minds were known with some degree of certainty upon it. And, in addition to this, circulars might be issued by the State Society, to be distributed through the County Societies, setting forth the advantages of these fairs and requesting the opinions of those to whom they were addressed, as to the practicability of establishing such fairs in their neighborhoods, and the times and places at which they could best be held; also desiring each person to say what part, if any, he would take in giving them his support, by his attendance and otherwise. When all this had been done, we should be in a position to judge whether it were advisable to proceed in establishing the fairs, or not. If the whole popular current was decidedly against it, or such a degree of apathy or indifference was manifested in respect to it as to make its success highly doubtful, then we should say that it was best to wait for "the good time coming," rather than to attempt to force its advent. But if the public sentiment, as thus ascertained, were favorable to the undertaking, especially if a certain enthusiasm were excited in the subject, start it then by all means, and the sooner the better. There need be but little formality about it. Let individuals in the several neighborhoods near the fair, associate themselves together by agreeing to attend, either to buy or sell—one taking this, and another that article, and all determining to lend their aid and encouragement to it. One enthusiastic person in a neighborhood; an energetic, persistent man, not easily deterred by trifles; one that sees few or no obstacles in the way, when a good enterprise is started; or, seeing them, summons fresh pluck to surmount them, will certainly succeed in enlisting the hearty good-will and coöperation of nearly all with whom he comes in contact. With book and pencil in hand, let him call on his neighbors and talk over the matter freely with them; and then note down what this one, and that one, will do to help on the fair—specifying the articles they would severally agree to carry to it. The power of associated action and the force of example, would in this way operate quietly but effectually. A few such men (young men, if they can be enlisted) will act like leaven to leaven the whole mass.

There need be no regulations made and published as to the buying and selling, not even that the sales shall be for cash payments, which would certainly be the most desirable mode of trade. The fair would be the Farmers' Exchange, just as the merchants have their Exchange in the city, where they meet to transact business, and self-interest and mutual convenience make the bargains. Neither are there needed any public yards or buildings for the display of animals or other products of the farm; but they would be offered for sale at particular points, which would soon become well known to the public. On the 23d of June last, Sanford Howard, of the Boston Cultivator, attended a cattle fair at Kilmours, in Scotland. In a letter, published just afterwards in that paper, he says: "There were about four hundred head of cattle, mostly Ayrshire cows and heifers, the greater part of which changed hands, although the market was dull. They were collected in the principal street of the village, the lots of the different owners being kept separated by men and dogs. The purchasers looked over the animals, and having decided on the ones they wanted, and asked the price, made offers, at the same time extending their hands. If the offers were accepted, the parties shook hands, and that consummated the transaction." The whole is a very simple affair (as simple as Columbus making the egg stand on its end) if we would take hold in earnest and determine to have it succeed. Only make a beginning, by collecting together on a fixed day and at a fixed place, agricultural products and men in sufficient numbers, and the market is established. The success of one such day would be almost sure to command success on the next, and after a few such days the market-day would become a permanent and popular institution, and would be noted in the almanac, as the different terms of the Courts are noted.

Another important question, and one requiring much care and deliberation in deciding it, is, how often and where shall these fairs be held? It is clear that this must be left with some body of men, in whom the public have confidence. The different Agricultural Societies that receive the bounty of the Commonwealth, and are required to make an annual return to it of their transactions, might be requested to take upon themselves this duty. Composed as these Societies very generally are of farmers, they have the confidence of farmers, and they can best fix the times and places of the fairs, with the proper discretion. By their trustees, or by committees chosen for the purpose, they might exercise the necessary power with regard to the whole matter, with but little danger of its being abused. They should, in the first place, map out the county, and then select such points as would best accommodate the population, having reference to railroad and other facilities. The railroad companies could well afford to encourage the fairs, by charging but half-price to those who pass over their roads to the market. To make this matter more specific, let us take for example the County of Essex (that being the county with which the writer is most familiar), and let four towns be fixed upon as near as may be to its four corners, as the places where the monthly fairs, or market-days, shall be held throughout the year. Such four places might be Danvers (at the Plains), Ipswich, Newburyport, and North Andover (at Sutton's Mills). Three of these towns have at least two railroads running directly to or through them; and one, Ipswich, has the Eastern Railroad passing through its center. Having settled upon these towns and the points in them, at which the market could best be held, on the first Wednesday in January let a market be held at Danvers, due notice having been given to that effect. On the second Wednesday in January let a market come off at Ipswich; on the third Wednesday at Newburyport;

and on the fourth Wednesday at North Andover; and so go through each month in the year, observing the same order as to the days.

In this way, it would soon be known that the first Wednesday of every month was market-day at Danvers, and so of the other towns, they would always have the same Wednesday in the month for their market-day. At first these markets might not be so fully attended, but still they should be observed, rain or shine, brisk times or dull. As the fairs are started, in respect of place and day, so they should be continued, for the reason that a change would be difficult; but more especially that the habit of attending a particular market at a regularly recurring time, would thus become fixed in the life of the farmer. And in order to accommodate the whole county by a larger display of stock, let some central town, such as Topsfield or Georgetown, having good railroad facilities, be the place for holding a market-day for neat stock and horses in the spring and fall, the first Friday in May and October being suitable days for that purpose, and not interfering with the other markets.

And in order to encourage this whole enterprise in its infancy, it might be advisable for the Agricultural Societies or public spirited individuals to offer premiums for certain farm products, that cannot so well be presented at the regular cattle shows, and do not receive any encouragement from them. For example, the best poultry in all its varieties, dressed for the market, mutton, pork, veal and other meats, might thus be noticed. The best lot of honey and eggs, of butter and cheese, of cranberries, quinces and apples, and of fruits and vegetables generally, might also receive the fostering aid of the societies. The advantage of this mode of bestowing premiums is, that it would be the best lot of a given product, as prepared for market and exposed to sale, that would receive them, and not the best specimens, culled and fitted for parade, as is too often the case at our fairs.

## Profitable Poultry.

We find in the volume of the Essex Agricultural Reports many interesting facts. The very interesting Report on Poultry, made in the work, induces us to extract the following; we should be glad to find such reports in the doings of our Agricultural Societies, they are what is wanted:

We present the following as containing facts which may be of value to the community.

Of the Brahma-poultres exhibited by him, Mr. Barnaby writes: "These chickens (7 pullets) were hatched the 10th of April. I have fed them altogether on common Indian corn and meal, with the exception of cooked coarse meat once a week. They commenced laying the 1st of September, and have laid 106 eggs up to this date, Sept. 29th," when four months and twenty days old. Of a cross between the pure Bolton-gray and Brahma-poutre, Mr. Warren writes, "They were hatched the 20th of May, and the pullets commenced laying the 16th of December" when four months and fourteen days old. The Seabright bantams exhibited by Mr. Ives, were exceedingly beautiful. Mr. Ives presented the following statement: "The mother of the Golden Seabrights on exhibition (six in number) during the months of March, April, and May, laid 408 eggs, or 34 dozen in 92 days. I have kept at different times upwards of twelve different kinds of fowls, and as far as my experience goes, I pronounce the Seabrights the best laying fowls I have ever seen. Their eggs are larger in proportion to the size of the fowls than the eggs of larger breeds. The expense of keeping them is very small; I could not estimate the expense of keeping mine, having kept them mostly upon the swill and crumbs from the house; but I can safely say that the expense is not over one-half that of larger breeds."

From accurate experiments made a few years since we found the cost of food consumed by a variety of black bantam was exactly one-half that consumed by ordinary breeds. Mr. Ives exhibited eggs of his Seabrights, which are of about the average size of the eggs of the Bolton-gray fowl of the first year's laying.

John I. Ladd, of Groveland, exhibited a hen with 57 chickens, all hatched by her and a portion of them raised by her during the past season. Mr. Ladd presented the following statement: "The father of this hen was of the Cochon-China breed and her mother a Booby hen. The father of the chickens is a Brahma-poutre, the mother a China Booby. The hen was set March 11th on 19 eggs, and came off April 2d with 17 chickens; she was with these 22 days. From April 21st to May 15th she laid 24 eggs, and on the 16th of May she was set on these eggs and came off June 6th with 21 chickens. Her chickens were given to another hen to bring up. She commenced laying again on the 15th of June, and laid 18 eggs up to July 2d. She was set again July 3d on these 18 eggs, and came off July 25th with 15 chickens, which were given to another hen. She commenced laying again August 5th, and laid 15 eggs to August 21; she was set August 22d on the 11 eggs, and came off Sept. 14th with 11 chickens, and they are now with her." This statement indicates a fowl of a very hardy constitution and wonderfully prolific both as a layer and as a siter. Mr. Ladd terms the hen a "Booby" hen; the hen is a large-sized, deep-bodied, short-legged hen of the Eastern breeds which were so widely disseminated a few years since, and might probably be as correctly called by either of the half dozen names by which these breeds are known. It appears that this fowl layed every day throughout the season when not sitting or with her chickens, producing in the course of six months 57 eggs and 64 chickens!

We presume in these last figures of totals, there is an error; they should read 76 eggs and 64 chickens—unless the hens layed double-yelled eggs and brought forth *Siamite* chickens.

CORRALING RABBITS IN TERAMA.—The Indians at the Nôme Lackee Reservation, says the Gazette, have had a glorious rabbit hunt lately, having caught and killed, during a few hours, hundreds of these animals. The method adopted by the hunters, while it has the virtue of being very simple, is at the same time efficacious. A number of which are placed in the ground similar to fence posts. A space about equal to the length of the net is left between each one, which is guarded by parties placed there for that purpose. Another rabbit scours the bushes and brush, which frightens the first effort is to try and get through the space. It is not there by two much opposition. It then makes for the net, in which it gets entangled, and a club. Hunts of this kind take place very frequently during the Spring.

## Drainage of Swamp Lands.

The subject of Swamp Land being now before the Legislature of this State, we make the following valuable extracts from the excellent Address of John Jay, Esq., delivered before the American Geographical and Statistical Society, New York, recently:

In almost all the States extensive tracts of swamp lands are found, not only unfit for cultivation, but frequently indicative of that fearful scourge of health and happiness, fever and ague, that year after year prostrates the energies, and shortens the lives of tens of thousands of our countrymen.

Large grants of these swamp lands have been gratuitously made by the Federal Government to the States, in the hope of their reclamation through measures to be adopted by the State Governments. Since 1849 nearly sixty millions of acres have been thus granted.\* In the drainage of large tracts of land we have the benefit of the experience of Europe, especially of Holland, where the Harlem Lake, thirty-three miles in circumference, and thirteen feet deep below the tide, has, since 1839, been converted into a most fertile tract, occupied by some two thousand inhabitants, and exhibiting fields of verdure dotted with numerous cottages, and enlivened by cattle, horses and sheep, grazing on the fruitful meadows. The lands thus reclaimed from the ocean are of extraordinary fertility, and are estimated as capable of supporting seventy thousand persons.

Of the pecuniary results of drainage in this country, Gov. Wright of Indiana, quoted an example in a public address touching the marshy lands of that State embracing three thousand acres. He mentioned a farm of 160 acres which had been sold at five hundred dollars, and, after an expenditure of two hundred dollars in drainage, was worth upwards of three thousand dollars, or an advance of more than five hundred per cent.

But, apart from these large tracts of overflowed lands, scarcely a farm in the country but would be improved by thorough drainage, and it would not be difficult to ascertain the number of acres undrained in each year of the census, nor the estimated additional value which they thereby received. The committee on drainage, in their report to the State Agricultural Society of New York, in 1848, assert, that "there is not one farm out of every seventy five in this State, but needs draining—much draining—to bring it into high cultivation. May we venture to say that every wheat-field would produce a larger and finer crop if properly drained."

Looking at the acreage now devoted to Indian Corn, to say nothing of our other crops, it has been estimated that by the adoption of an improved system of Agriculture, embracing drainage, deep plowing and skillful manuring, the entire crop now yielding 400 millions of dollars, might, upon the same breadth of land, be trebled if not quadrupled. At present, with occasional exceptions, our crops per acre are even less in our most fertile and almost virgin States than in the soil of Europe, that has been cultivated for centuries.

Take Wheat, for instance. The average crop per acre in New York, Ohio and Indiana, is 12 bushels; in France it is 13; in England 21; in Flanders, 23; in Scotland, 30 (on the authority of Professor Johnson); and in New Brunswick, 19.

How the average might be increased throughout this country by careful culture, we may, in part, learn from the returns of occasional crops in England of seventy bushels, in New York of sixty, on the prairies of forty-four, and at San José in California, as is reported, of eighty-seven.

\* See an interesting paper on drainage, by H. F. French, of Exeter, N. H., in the Patent Office Reports for 1856, page 160.

## Decreasing Interest among Young Men for Agricultural Pursuits.

A DEEP interest is being felt by many minds by the fact, that of late years the young men of our nation seem more desirous of seeking wealth and fame in a mercantile or political life, rather than in agricultural or mechanical pursuits, which demand steady manual labor. This is a serious question, and worthy the consideration of wise men. The annexed facts tell:

Another topic closely connected with the interests of American Agriculture is the recent diminution of the proportion of the male population engaged in Agricultural pursuits, as compared with the number engaged in commercial and other pursuits. The precise ratio of that diminution cannot be ascertained from the census, for the reason that the tables of 1850, on the leading occupations of the people, were based upon the whole number of male inhabitants over fifteen years of age, including all the free males, and three-fifths of the male slaves; whereas the former tables of occupation, made in 1840 and 1830, were based upon the entire population. The census of 1840 made the portion engaged in agriculture 77.4 per cent for both sexes, that of 1840 only 44.69.

There is, therefore, reason for believing that the proportion of the population devoted to agricultural pursuits is decreasing; and it is important that the schedules of the next census should be drawn with reference to the determination of this point with entire accuracy, and should develop whatever facts may be essential, to enable us to discover, and if possible to correct, the causes that may be diverting an undue proportion of American industry from the culture of the soil.

The attractiveness of town and city life for the laboring classes may be lessened by a study of the tables of mortality, showing that the average duration of life is much larger in the rural districts. In England the average duration of life is forty-five years in Surrey, but only twenty-five in Manchester and Liverpool.

A paper, by Mr. Edward Jarvis, on vital statistics at Dorchester, in Massachusetts, read before the British Association, in January 1849, showed that, out of 1700 persons, the average life of farmers was 45 years, merchants 33, mechanics 29, and laborers 27.

WHITEWASH.—Take two quarts of skimmed milk, two ounces of fresh-slacked lime, two pounds of whiting, or the same proportions for any large quantity. Put the lime into a stone vessel, and pour upon it a sufficient quantity of milk to make a mixture resembling cream; then add the remainder of the material. When this is done, crumble in which it will gradually sink. It must then be well stirred, or ground, as any other paint. By its addition of any coloring matter, you may make brush, and when dry, a second coat should be given. The quantity named, is sufficient for twenty-five square yards.

SHOEING HORSES THAT OVER-REACH.—"Why not put the front shoes a little further forward, and the hind shoes a little further backward?" "Plainly, because that will not increase the speed of the fore-foot and retard that of the hinder, which is just what you want to accomplish. But to do this, make the toe-calks of the fore-foot very low, and set the shoe back as far as possible, with high heel-feet. Thus, the fore-foot will be enabled to get out of the way of the hind-foot and the clicking and loosening of shoes will cease. This will also help the speed of the horse."—[Am. Agriculturist.]

## Miscellany.

## THE FAMILY NEWSPAPER.

BY REV. F. ROBINSON.

[The following most admirable and highly honorable compliment bestowed upon the "Family Newspaper," we present to our readers, believing it will afford them pleasure in perusal.]

How welcome the moment that places beside me  
The Family Newspaper fresh from the press!  
Though blessed with all others, were this boon denied me,  
'Twere surely a grievance that naught could redress.

It soothes into quietude every emotion  
Of care or of grief, that annoyed me before,  
And gives me a respite like that of the ocean,  
When, wearied, its waves are asleep on the shore.

I tear off the wrapper, and seated at leisure,  
With nothing on earth to disturb or molest,  
With careful inspection examine my treasure,  
And call out its jewels with infinite zest.

My thoughts, my best feelings, my fond aspirations,  
I learn to extend till at length they embrace,  
Not merely my own, but the weal of all nations,  
However divergent in language or race.

Whatever relates to their shame or their glory,  
Their wrongs or their rights, their revenge or their love,  
With interest I read, and derive from the story,  
Some lesson benign which I fain would improve.

When Charity's record awakes my compassion  
For those in distress with pale want at their door,  
I help them if possible—not from mere fashion—  
And wish I could help them a thousand or more.

And when too I read of some brutalized being,  
The blood of whose wife cries aloud to the skies;  
From whom his own children in terror are fleeing,  
I look at my loved ones; and tears dim my eyes.

Why should not the joys and the sorrows of others  
Engage the best thoughts and desires of my soul!  
Both Reason and Charity call them my brothers,  
Wherever they dwell, from the line to the pole.

The same aure canopy daily bends o'er them,  
They enter the same rugged path from their birth,  
The same mortal struggle is ever before them,  
The same solemn sleep in the same silent earth.

What though, when I'm reading, my heart oft is leaping,  
As if at some joyful or tender refrain!  
To joy with the joyous, and weep with the weeping,  
Gives generous bosoms more pleasure than pain.

Though much meets my view, that looks dark and  
appalling,  
Too much that would melt rougher natures than mine,  
I see, o'er this darkness, a soft twilight falling,  
Which heralds a day that shall never decline.

And when, o'er the printed page rapidly glancing,  
I notice events that have just had their birth,  
Which show that the day, so desired, is advancing,  
I call them my gems and rejoice in their worth.

Then come, welcome messenger, come with thy treasure,  
Fresh from a thousand hearts, fresh from the press!  
I wait to receive from thee profit and pleasure,  
And warmer compassion for woe and distress.

## The Ruins of California.

"ASADON," has most graphically pictured the  
past, present, and future of California, in a brief  
but interesting sketch; we copy from the San An-  
dreas herald, his thoughts, as those from a mind  
of true identity:

Our recollections of California, except the bare  
knowledge of its existence, with the majority, do  
not extend further back than ten years; with  
many of us not so far, and yet we already have  
our ruins, if not for the antiquary or student, at  
least for the moralist. Look at the old mining  
town. Only ten years ago the virgin forest stood  
in its wild beauty where those deserted cabins are  
falling to decay, and already the names of the oc-  
cupants are forgotten or remembered only in his-  
tory. Where those red banks are glaring in the  
nocturnal sun, ten years ago the green sod was  
barely soiled by the trail of the wandering Indian,  
or the track of the but little wilder deer. Where  
are the builders and the workers now? How  
many realized the wealth they sought as they  
heaved those logs without a thought for the fair  
sky above them, or leveled those hills with not  
one glance at the beauty of nature around them?  
And they who did, are they content with what  
they acquired, or do they still pursue their favorite  
phantom? How many there imbibed the seeds of  
those vices which mark them to-day as the ruins  
of men? How many laden with the gold, often  
so hardy earned and sometimes not so honorably  
gained, sank beneath the deadly miasma of the  
tropics, or found a grave almost in sight of the  
long prayed for home, beneath the blue sea, a sac-  
rifice to the cupid of their fellow men? And  
they who sleep so quietly in the midst of this mad  
rush of California life, on that grassy knoll, in the  
graves to which they were hurried (so the tradi-  
tion runs) by the knife of the assassin, and for  
whom the soft wind, as it murmurs through the  
pines, seems to sing an eternal requiem—who  
were they?

"Their name, their years, spelt by the unlettered muse,  
The place of fame and elegy supply."

Do they still wait in some New England home  
with "the hope deferred that makes the heart sick,"  
the return of them who will never, never come.

I like to picture the future, when vine-  
yards will cover the sunny hillsides; when the  
fruits and flowers and seeds of every clime will fill  
these valleys, flourishing with a luxuriantness un-  
known in their natal soil. When the mountains  
will re-echo the snort of the iron horse as it rushes  
along, bearing the traffic of the earth; the pleas-  
ure seeker and the invalid seeking health in our  
genial climate, which the Italian, with all his pride  
of country, acknowledges to be superior to that of  
bella Italia, carrying away in return, our surplus  
of the luxuries and necessities of life.

If there is any earthly lot which I could envy,  
it is his, who, born here, now, or a quarter or a  
half century hence, will live in all the freshness  
of youth, and grow old and die amongst the Tassos  
and Raphaels who will draw their inspirations from  
these mountains, from our sunny skies, and from  
the bright eyes of the beautiful daughters of Cal-  
ifornia; when California, bound to the land of our  
fathers by a chain of sovereign States, will be  
more to the future than ever Greece or Italy were  
to the past, the emporium of the commerce and  
industry of the world, the land of industry and  
honor; par excellence, the cradle and the chosen  
home of art, science, and song.

The following cure for a cold has been on record  
since 1430, and no doubt of some service:

Put your feet in hot water,  
As high as your thighs;  
Wring your head up in flannel,  
At low as your eyes;  
Take a quart of warm grog,  
When in bed, as a dose;  
With a number four dippe  
Well follow your nose.

# SMITH'S POMOLOGICAL GARDEN AND NURSERY, SACRAMENTO.

On the American River, 24 miles from the City.

OFFICE AND DEPOT FOR TREES,  
44 J street, between Second and Third streets.

The Trees offered from the  
above establishments this sea-  
son are more than usually fine,  
and in the NUMBER OF VARIETIES, of each kind  
of fruit, we possess the

LARGEST COLLECTION IN THE STATE  
our catalogue embracingOver Nine Hundred Varieties,  
as follows:

APPLES, 245 varieties;  
PEARS, 276 varieties;  
PLUMS, 100 varieties;  
CHERRIES, 90 varieties;  
PEACHES, 75 varieties;  
NECTARINES, 20 varieties;  
APRICOTS, 12 varieties;  
GRAPES, 90 varieties.

We hesitate not in saying that our  
PEAR AND CHERRY TREES  
Are the Finest Ever Offered

for sale in this State, of all sizes, being from 5 feet to 12  
and 14 feet high. The greater portion being not  
only of very large size, but also handsomely  
shaped, are elegantly adapted to planting  
near residences, affording the double

ADVANTAGE OF SHADE AND FRUIT.

Of the above two fine Fruits we offer

25,000 TREES FOR SALE,

of different sizes and prices, and as low as good Trees  
can be bought at any first-class Nursery in the State.  
Many persons have had but poor success with Cherry Trees  
in this State. We state for their information that  
Our Cherry Trees are grown upon the true im-  
ported Mazzard stock, and not upon com-  
mon Native or Oregon stock of this Coast,  
the former being the only stock fit to grow them on.

We have also a very fine stock of the following, viz:

APPLE, PLUM, PEACH, NECTARINE,

Apricots, Grapes, Figs, Almonds.

Besides a Miscellaneous collec-  
tion of other and small fruits.

Particular regard has been paid to the growing of the

Trees in GOOD SHAPE, and purchasers of our

Two-years-old Trees will find that they have

been well "cut back," and are now

firm, symmetrically shaped Trees.

We guarantee no finer or healthier Trees will be found

in the market this season.

We also offer a superior assortment of

Shade and Ornamental Trees,  
Shrubs, Roses, and

Greenhouse Plants.

Embracing all the old and well known popular varieties,  
as well as a great many others both good and new.Also a very fine lot, of different sizes, of that very popu-  
lar shade tree, so full of reminiscences of home, the

GOOD OLD-FASHIONED ELM TREE

of many varieties, but most of the American and Scotch

Elms, which are of good size, and when well estab-  
lished in the soil, they are of very rapid growth.

ALSO...

LOCUST,  
LABURNUM, or GOLDEN CHAIN,  
MAPLE, in variety,  
LINDEN, European and American,  
CATALPA,  
CHINA, and other Trees.

We call particular attention to our collection of

THE CAMELLIA,

which has become so well acclimated that we have them  
growing freely in our open grounds, and blooming as  
elegantly out of doors here as they possibly could  
with the tenderest care in a conservatory.It is no longer a house plant, but one of  
The Gems of the Pleasure Grounds.WE GUARANTEE ALL TREES FROM OUR NURSERY  
TRUE TO THE NAME.For more minute particulars of Shrubs, Roses, &c.,  
see CATALOGUES, which will be sent by mail to all  
applicants.We invite attention to our very large and general  
assortment of

VEGETABLE SEED,

THE CROP OF THIS YEAR.

which is very fine and large, and we are now prepared  
to supply THE TRADE in quantities to suit, and at  
Lower Prices than can be found  
at any other establishment in the State.We have now been growing SEED for a number of  
years, and have given universal satisfaction. We are  
now prepared to supply large quantities of GOOD FRESH  
SEED at very low rates. These seeds will be done up  
handsomely in packages, for Wholesale or Retail Trade  
and will always be in readiness at our GARDEN, and at  
CITY OFFICE—44 J street—SACRAMENTO.Our Trees and Shrubs will be sold for CASH ONLY, and  
Orders must be accompanied with the Cash to insure attention

## The California Farmer.

SAN FRANCISCO:  
FRIDAY, APRIL 8, 1889.

## Our Traveling Agent.

We are pleased to announce the name of Dr. H. H. HERRICK as our Traveling Agent. Mr. H. will visit many of the upper Counties, and will present his claims to attention for his celebrated Seed-sower and Harrow, and will also present the CALIFORNIA FARMER to those who have not yet subscribed, and we hope to receive a large number of new subscribers through his efficient Agency. Persons who are now indebted to us can pay him, or any of our named Agents; or can remit by mail, as money will always come safely through the Post-office.

## A Special Agent in the Eastern States.

Mr. E. A. HAY, who left here in the steamer of the 5th inst. on a visit to his kindred, to tarry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc.

We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit.

We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our journal, as a medium for their advertisements by which they can be widely known.

## The Farmer—Our City Carrier.

HAVING employed Mr. J. F. LARRABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry;" it will be left wherever desired, at the low price of fifty cents a month. Persons desiring of having the paper left, will please send their address to our office, and they will be supplied.

## The Farmer at Sacramento.

We are much gratified in receiving many new and valuable subscribers at Sacramento, recently, for which we return thanks. As the State Fair is to take place at the "Lever City," the present year, it is important that those who desire all the information respecting the Fair should receive the FARMER, and by so doing be fully informed upon the plans of the enterprise. Mr. Coachman, at the Post-office, is authorized to act for us, receive money, etc. Bills due this Office for that county, can be paid to Mr. Coachman, our Agent.

H. J. Beideman, Bookseller, near the Post-office, and B. Davidson, Bookseller, near by, are also our Agents; and we commend our friends to them, where they can go and subscribe for the FARMER, and always find it for steamer days.

## Special Notice.

J. Q. A. Warren has no connection whatever with the CALIFORNIA FARMER. This notice becomes imperative now, as many persons have supposed that was the address of the Editor and Proprietor of this paper, and have so addressed letters intended for this journal, which have been misdirected.

Purchasers of stock, and all persons corresponding with the CALIFORNIA FARMER or the Editor and Proprietor, will please be particular and address as follows: Col. Warren, Editor California Farmer.

## Harvesting Machines.

"Watchman! What of the night?"  
If the night that shrouds the earth in darkness needs watchers, there are also great interests that meet our vision by day, that need guardians! "Send forth laborers into the harvest."

The great majority of our citizens, who are now busy with their wares and merchandise and speculating upon the wealth of the mines, rarely ever thinking of a greater source of wealth in this State, are sometimes attracted to some paragraph, which startles them from that lethargy and bids them think!

The Agriculture of California, that so recently has begun to attract the notice of the world, is scarce conceived of, even among our own citizens; and its power or influence is not properly appreciated by the merchant and business man. The following facts, however, show its magnitude; and these facts should cause them to think:

Five or six years since, and over this great State there was scarcely found half a dozen Grain Harvesters of the improved kind known; in 1853, attention was being called to them. Our grain-fields, then small, were harvested by the Cradle. Now look to this matter; the hundreds of bushels of grain, raised then, have become hundreds of thousands; and our crop this year, will count in millions. Instead of the Grain Cradle, the stately tread of the well-trained team carries onward the McCormick, the Manny, and other Harvesters, that sweep down acres per day; and the Great Western Harvester enters a field of twenty-five acres in the morning and at night the grain lies in neat bags—mowed, thrashed, cleaned and sacked; and, when the day's work is done, then we ask the Watchman, "What of the night?" He cries, "The harvest is over, the gleaners are at work, and the grain is all garnered?" and now the laborers are called in, for their work is "well done."

Who can estimate the great increase of our grain crop the present year? There are some signs to which we would call public attention, as most significant. From all the facts we can gather, the number of Harvesting Machines this year cannot be less than six hundred, and may reach eight hundred. This astounding fact speaks volumes. It is the trumpet-toned thunder that is heralding to the world the value of the Agriculture of California!

Six years since, it would have alarmed any one importer to have thought of importing twenty machines; and now, our importers think it but legitimate to order them by the hundred.

Besides those imported, we have our own manufactured ones; and, if report speaks truly (and the present season will prove), there are some makers that will strive for the palm of victory. Heaven knows, we shall always glory in the success of California—her harvest fields and her manufacturers. And the facts above, are some proof of what they are and will be.

To ISQUIRRELS—The History of the Orange, its culture and prospect for California, shall soon have our attention. Also, Wine and Wine-making; Wool, its value and the future prospect of the Wool Grower, shall have our attention. From upon the Blossom? These inquiries will be attended to.

## Gloves off—Ourselves.

We like to grasp firmly whatever we undertake to do, especially if it is important. It has always been our greatest pleasure, since the first publication of this journal, to do all we could to encourage, to cheer on, and to build up all that would tend to the best interests of our State. We have never permitted our journal to be used as the herald of any personality that would detract, nor have we joined any sect or party to divide or pull down; our greatest happiness has been derived from seeing our State progress, and all her industrial interests prosper.

Our work, particularly, has been in the agricultural field, and its kindred interests; and for many long years our journal has been known as the only agricultural journal in the State, and ought that appertains to this great interest has been, in a measure, heralded in the FARMER. How faithfully we have labored, and how earnestly, we leave it for the high-minded and honorable men of our State, of all parties and creeds, to decide. Whatever we may have done, we feel that, according to our means and power, "we have done what we could." From the earliest moment of our entering upon the work, "our eye has been single to the glory of California," save Him who "ruleth the nations." In our labors and duties we have never known what it was to envy our neighbor, but rather rejoiced in our brother's prosperity; for well we knew that

"Base envy withers at another's joy,  
And hates that excellence it cannot reach;"

and our aim was rather to learn from others, and strive to attain by imitating and then excelling if we could. In this our pursuit we hope we have been the gainer; and whenever it has been in our power, we have ever dispensed the kindly word and earnest wish for others' well, and have never permitted ourselves to notice, but in merriment, the envious or malicious attacks that are covertly made; as we rather prefer an open field and manly battle, to the assassin's warfare.

As a public journalist, and for the great cause of Agriculture, we have recently been called upon to appear in behalf of this interest, which thousands feel has been in jeopardy, by reason of the bad management of those who have had it under their charge; and though we have been compelled to use surgical instruments, and handle the dissecting knife, we have not cut without feeling; but as we were called on to wound, we knew it was to heal, provided we could cut out the gangrene. With this hope we were at work, when, lo and behold! another dark spot appeared, which, unless it can be cut out, we know death must be the result to the patient under charge. This dark spot we alluded to in the two last numbers of our journal. We mean a paper purporting to be the State Agricultural Society's Monthly, but which emanated from an individual bearing once a reverend title; and nothing but stern duty could possibly draw from us the remarks we have before made, or our present remarks, which, when given, we shall await the result, and if atonement is made, we smoke the calumet of peace; but if not, the dissecting knife must come out again, for it is not so much our personal self we care for as the cause we advocate, and those who are linked with us; and we will not permit that, or them, to be assailed, and remain silent.

That famous document, dated last March, bearing the name of a Society that should demand the homage of the world for its good influence, had nicely ensconced in its columns a flattering notice of an agricultural monthly—one that we had also often spoken of in praise, so we cannot be charged with envy in our remarks upon this point. But in that notice was written these words: "This journal [meaning the monthly], the only one in our State devoted exclusively to our agriculture and mechanism, has already attained a name and character abroad, far, very far, in advance of its age." This is one paragraph, and here is another: "Those who take it and read it carefully, will find a gratifying number of facts; an amount of information, based upon California experience, without being burdened with a mass of stale theories from foreign essayists, and sickly sentimentality from domestic inamoratas." Here is a fine article to secretly thrust into a Society's monthly! How splendidly it will read abroad!

Who, that has common sense, cannot understand the meaning of this assassin thrust? We will unmask it, and tell the writer, in the language of Pope,

"Every will merit, as its shade pursue,  
But, like the shadow, prove its substance true."

What an ebullition of envy and malice is here shown. Is that monthly the only agricultural journal in California? Is that monthly the only journal that has befriended the cause of the mechanic? If so, then let the farmers and mechanics of this golden State speak to us, and tell us we have accomplished nothing. But of that paragraph we need say no more; our works shall speak for themselves.

This unmanly attack upon those scientific men, who happen to be born in England, France, Scotland, or Germany, from whence have come the best scientific works known, is an outrage upon decency; yet doubly wrong when it would defame under the cover of a society, or dare bring that society into disgrace for its own acts. "Stale theories from foreign essayists!" Who that reveres the science of agriculture does not also reverence the names of London, Lindley, and Paxton. These three names, familiar at the present day, are sufficient; yet we could name a host whose essays, the simplest of them, are deep enough to confound the man who would slur them because they were foreign. It has been our pleasure to read their works and to profit by them; it has been our pleasure to know the men, to converse with them, to enjoy their intercourse while they were surrounded with all their honors, and yet they would have scorned to have sneered at a Yankee essay; so far from it, they have honored merit wherever found. Thus would we honor them by defending them and their memories from the base attack of one who cannot appreciate their worth.

We have, too, here in our midst, many excellent practical gardeners and florists, who often send us

brief essays on practical subjects; shall they be stigmatized by this Rev. gentleman, because they are of foreign birth? But we presume the blow was particularly aimed at our honored correspondent "Agricola," because he hails from the land of Burns; and yet this foreigner has borne off all the prizes for Essays before the State Agricultural Society. But "Agricola" is "of age," he can speak for himself, and we will leave him to deal with this Secretary, and we mistake our judgment if the libeler don't smart among the thistles from the highlander he may "essay" in vain, he will not escape. This we do know: we shall always feel honored in receiving the essays of "Agricola," or any high-minded man, come he from what nation he may; so long as their writings advance the honor and glory of the State, we shall publish them, "in spite of My lord the Cardinal."

But the last part of the second paragraph interests us more deeply, for it strikes a blow, not only to the farmer and mechanic, but to his mother, wife, and daughter, his home and all that is dear to him. That paragraph contains the insinuation that another agricultural journal does contain "sickly sentimentalities from domestic inamoratas." Now we understand this vile insinuation to be thrust against the "Ladies' Department" of this journal. We have all the proof we need.

Now we ask our readers if such a base insinuation can stand? Were that to have emanated from any place but a Society's journal, we should be silent, for it would have carried its own antidote; but coming under the cloak of a Society that we have labored for years to build up and make honorable to the world, we fling back the vile insinuation, and "off gloves" ready to do battle for truth. And who makes this charge? Who charges the writers in the columns of the FARMER with burdening it with sickly domestic matter? Who charges those writers on religious education, home blessings, education of women, &c., with weak sentimentality? Who but the once Rev. O. C. Wheeler? Yes, he is the writer who stigmatizes such writers as Bessie, Edith, Alice, N. B. H., Mabel, Ivy Dell, and scores of others of the wives and daughters of our farmers and mechanics; and abroad, such writers as Grace Greenwood, Mrs. Farnum, Florence Percy, Rena, Sallic, Leonore, Irene, and many others whose writings have been copied far and wide. But we forbear; we shall only say, that had we remained silent under so base a charge against woman—against those who have honored us, our journal, and the world—a charge, too, from a man that had pretended to be a preacher of the gospel (but who, we rejoice to say, did request us to leave off the Rev. when addressing him by letter or otherwise)—the spirits of a much loved mother, wife, and dear friends, would rise to rebuke us. Those who live will speak for themselves, and rebuke this libeler. We know what we say; we are answerable for all we say; and it is such conduct on the part of this Rev. Secretary of the State Agricultural Society that has brought upon it the reproach it bears; and if the whole truth were known, the evil suffered in the loss of the publication of the State Society's Report can be laid to the miserable, selfish policy pursued by the Secretaries, who have had sight of their own interest instead of that of the State, or the good of the people. If the Executive Committee act as they should, and burn the edition of this monthly, and save the credit of the State, the smoke of the burning pile may make some atonement; if not, other voices will speak that will be heard.

## Agricultural Pavilion at Sacramento.

Quite a discussion is being carried on by the Sacramento journals relative to the location of the new building recently ordered by a vote of the citizens of that county, and intended for Agricultural Fairs.

By the remarks of the Sacramento Union it is evident that there is a plan to have this building so located as to answer all purposes for a County Fair, State Fair, and Mechanics' Fair, and the same journal speaks of this building as the one that is to become the building for all future State Fairs, and urges the making Sacramento the place for the State Fair permanently hereafter, and, at the same time, urges the erection of the building in the centre of the city.

If the advocates of permanently locating the Fair would reflect, they would see the error of locating such a building in the city. No State Fair grounds could ever be maintained with any degree of success within the city, and if this building is erected anywhere in the centre of the city that very act will prevent the permanency of the State Fair.

A State Fair Ground requires 15 to 30 acres, and especially such a State as California. It is perfectly absurd to think of locating this building in any of the localities named, unless the object be temporary, or to have a building to rent for political meetings, assemblies, &c. But if the object is to promote the good cause of Agriculture, then let that interest alone be considered. And is it the denizens of the city only that are to be consulted? The entire county has a voice in this matter; it is not this or that man, this or that real estate holder, or a few landlords and business men, it is the great body of the farmers, gardeners, stock raisers, vine-growers, mechanics, &c.; it is the workingmen, and they do not all live in the city. The country has a voice in this matter, and they pay for it, and we hope it will not be hastily decided, but time taken to act wisely and well. We shall be glad to hear from the citizens of the county on the subject. All should speak, for the subject is an important one.

MASFIELD & WOOD.—This well-established clothing warehouse is now opening a new and splendid stock of goods, worthy the special attention of purchasers. It is well known that this House has extraordinary facilities for selecting their goods in New York, and elsewhere, and their present new stock cannot be excelled in this city.

Mrs. P. E. ROGERS.—This lady, as will be seen by her card, has taken rooms in the new establishment of Grover & Baker, on Montgomery street, where she will be happy to receive the patronage of her friends. Mrs. R. should be nobly sustained, as she is the pioneer worker upon the Sewing Machines on these shores.

## The Whale Fishery.

The whale fishery may be likened to a lottery—to some, it brings wealth; while to others, investments in this hazardous enterprise are but poorly rewarded. From information we have received from one of our most reliable merchants, it is estimated that the fleet of whale ships to arrive the present year, will result in a loss to their owners of a sum varying but little from one million of dollars. The enormous loss is attributed to various causes—the ill-success of the fleet, the fall in the price of oil, the extravagance of fitting, and the bad management of masters in the re-fitting of ships, principally at the Sandwich Islands. The merchants at these Islands are growing in wealth at the expense of New Bedford capitalists, and yet this evil continues, year after year, at a tremendous loss to our people. There should be some remedy introduced; something that will check the leakage, or further prosecution of the business might as well be discontinued. Many of our shipmasters appear to have no scruples in the amount of their drafts, and draw readily and with the potency of millionaires. We are glad that our merchants have discovered, in a measure at least, one of the causes of their ill-success, and it is to be hoped that a more rigid economy will hereafter be practiced, not only by themselves, but also by those in whose hands are largely entrusted the wealth and future progress of New Bedford.

The above important announcement is found in the New Bedford Whaler's List, of January 18, and from thence it is copied into the Commercial Advertiser, of Honolulu; and the editor of that excellent paper very earnestly and handsomely defends the cause of the merchants of the Islands, and manfully too; and endeavors to show that the great cause of non-success is not the heavy expenses at the Islands for their outfits, but arises from a first cause; and that is, in the extravagant outfits at the start, at home, and the bonuses paid to the shipmasters, and not in the prices of outfits at the Islands, which are only twenty-five per cent higher there than at New Bedford.

We would ask the serious attention of the owners of whaleships at New Bedford, New London, Nantucket, and all other places, to the fact that California can save them the greater part of this twenty-five per cent, if they will just send their ships to this port. We know there is no port in the world where a more glorious "least of fat things" can be found, the present year, than the port of San Francisco; and surely our harbor is admitted to be the finest and largest. The present prospects of the harvest are such as to warrant that all kinds of produce and provisions will be low—flour, beef, pork, hams, bacon, butter, vegetables and fruits of all kinds; and our farmers, one and all, most cordially invite the attention of the owners of whaleships everywhere, to look at these facts and save this twenty-five per cent loss, by coming to our port. The former difficulties are past, and the present prospects open to you better times.

The owners of whale ships may be assured that here in San Francisco we have plenty of purchasers for their oil and bone, or they can ship it home by our clippers; more conveniences for repairs; better means, and cheaper too, for outfits, and capitalists that will buy their drafts at near par, and manufacturers of oil that will greatly advance their interests. The large manufactory of oils of the Messrs. Stanford Brothers is an evidence of the value and interests of this great branch of trade.

GOLDEN-GATE CLOTHING WAREHOUSE.—Those who are going from city to city on the steamers, and those who may be traveling towards the mountains, or new comers, will feel the need of being warmly clothed. Our columns will show the best Clothing Stores in this city and in Sacramento, among those who advertise. The "Golden-Gate Clothing Warehouse" has prepared a stock most appropriate for all who are going out of the Golden Gate, or those who may come in at the Golden Gate; and it only requires a little of the "golden ore" to procure clothing at the above Warehouse to win "golden opinions" of all purchasers. Mr. Martin, the salesman (so well known in the Clothing business), will be happy to see his old friends, and try to please them.

FREEMAN & Co.'s EXPRESS.—This pioneer house is now increasing their business largely, by extending their places of business over the entire State. It will be seen by the list of their Agencies that they can now do all the public demands of them. They have in their employ young men of great activity and energy, as well as of business experience, which is an assurance of success. We are pleased to learn, that by their influence the facilities of Expressing Letters across the Bay, and on the Alameda and Contra Costa side, has been increased and the cost diminished; and Letters to Oakland, San Antonio, San Leandro, San Lorenzo, etc., etc., can now be transmitted for a Dime.

THE TRADE IN PULU.—"Tall oaks from little acorns grow." The immense increase in the trade with the Islands can hardly be conceived; a few years since, and scarcely a bale could be sold. Now, we notice Schriber has two fine clipper ships anchored near his warehouse, one a four-masted ship called the Pulu, the other a fine clipper called the Hawaii Pulu Packet. They are fine models for ships, and are worthy the increasing trade which this famous Pulu has brought about, and no one has done more for this than Schriber, "the Pulu man."

MESSRS. SOUTHWORTH & Co.—The large advertisement of this house is worthy the special notice of all purchasers of Harvesting Machines. Other goods, in immense quantities, have been selected with care by Mr. S. when at the East; and the house are enabled to sell these goods at low rates. Especial attention is called to the McCormick Reaper, which now appears on our first page, properly illustrated.

SPLENDID STOCK HORSE.—We would call attention to the advertisement of "Comet," one of the finest horses now in our country. This noble animal has attracted great attention for his symmetry of form and grace of action; his pedigree is of the highest character. Few horses only can be found to surpass Comet.

THE P. M. S. S. Golden Age, and the steamer Uncle Sam, left for Panama, on Tuesday, with many passengers. The treasure shipment by the mail steamer, amounted to \$2,081,765. The steamer Orizaba (opposition line), arrived here Tuesday night, from Panama, with passengers from New York, March 10th.

FINE PLATED WARE.—Some of the finest plated ware we have ever seen, has recently been imported by Thomas Day, Esq., of Montgomery street, near Jackson, Tea-set, salvers and goblets, equally as handsome as those of solid silver, and at much less cost—with other goods of rich quality. See his card.

## Look to your Wool.

Wool growers should come to market themselves, and learn the true value of their wool. Although a market report may be ever so correct, the wool of the grower may be so mixed, the bad manner in which it is packed and the want of having it well assorted before sale may make a difference to him of 10 to 25 per cent.

The grower should visit the city, and become acquainted with the purchasers. There should be a lively competition among growers, buyers and sellers; there should be no monopoly. We say to the growers of wool, come to market and bring your wool, and learn for yourselves, and have your wool examined, as there is often a difference on a bag of 2 to 10 per cent. See cards of purchasing wool.

## The Injury to the Fruit Crop.

Is far from being so severe as is supposed. Many persons who notice the drooping of the blossoms suppose this is caused by the frost, whereas it is only the false blossoms or the blossom leaves, or a portion of the bloom blown off by the strong wind. All this will aid the tree, and in fact if half the quantity of blossoms were removed the crop would still be sufficient for the tree to bear. We have every reason to believe we shall have plenty of fruit, although some localities may have really suffered a loss. If the blossoms have really been destroyed it will be seen easily by the heart of the blossom turning black.

## Yosemite.

The season for visiting this favorite valley will soon be with us, and those who love the beautiful in nature will have a rare chance presented to them. We shall very shortly publish for our readers the best routes, with matters of interest to the traveler, so as to prepare them for a trip to this wonderful valley the coming year.

Having made extended visits in 1857 and 1858 to Yosemite, and taken great pains to gather the history of the most interesting incidents, we hope to lay before our readers such facts as will induce many persons to undertake the journey the present year.

A company will be formed to visit the Yosemite, to start about the first of June. It is the desire of those now intending to make this trip to unite with a party who would wish those that join to have reference to an intellectual and highly social enjoyment, rather than a party for mere pleasure.

A register will be opened for names on the first of May. Those wishing to join will please hand their names to the editor of this paper.

FIRST LADY PASSENGER BY THE OVERLAND MAIL. The Overland Mail arrived this evening, in 22 days and 18½ hours, and the Eastern freight of treasure through was Mrs. Lovejoy. We think all danger of the war is now over, and passengers can come through with love and joy. All honor to the lady who has made the first trip from the East, and the second trip across the Continent by stage. The lady speaks of the trip as a great improver of health, benefiting her greatly.

CAPT. GEORGE R. BARCLAY, formerly the popular commander of the Queen City, has taken an interest in the Hotel International. Capt. B. will make a popular landlord, and with his aid this hotel will accomplish still more, and win still more the good opinion of the public.

FASHIONABLE DISEASES.—Hall's Journal of Health affirms that diseases come and go as do the fashions. Once, everybody had the dyspepsia; then the clergyman's sore throat was the rage; and now, don't every third person have some form of neuralgia? [They do in California.]

INCREASE OF POPULATION.—Did we want a proof of the increase of population, we have one in the immense sales of Furniture by J. G. Clark & Co., at their Warehouses in this City, Sacramento and Stockton. Their vast sales prove the growing prosperity of California; and also prove they are receiving the success they deserve as "Home Manufacturers;" their goods being always the very best of their kind.

## Explosion and Loss of Life.

On Sunday morning, at about 2 o'clock, the steam-ferretboat Contra Costa left her wharf for Oakland, followed by the new steamer Oakland. When the Contra Costa reached the bar, the boat being in shoal water, the engine was worked slow, and the rival boat rapidly coming near, fortunately attracted the passengers to the after part of the vessel. At this moment the starboard boiler exploded, making a complete wreck of the forward part of the boat and shattering her upper works throughout by the tremendous concussion, filling the boat with hot steam, and the air with fragments of the wreck, causing a disastrous loss of life and property. The Oakland immediately ran alongside and rendered all the assistance possible. In the panic several jumped overboard, but it is supposed were all picked up by the Oakland. As far as can be ascertained, the following is a list of the killed and those since dead: George McDowell, a native of New Jersey, son of Thos. McDowell, formerly of Sacramento. David W. Cady, of New York, 32 years old. Mitchell G. Smith, barkeeper; body not found, supposed to have been killed instantly. Albert Winslip, a hand belonging to the boat. Henry L. Osterlander, also a hand, a native of New York; was conveyed to the Marine Hospital, where he soon after died. Joseph Hester, annealer in the U. S. Branch Mint, 40 years of age, was taken to St. Mary's Hospital, and died at 10 o'clock, Monday morning; he leaves a family now in Philadelphia, his native city. Several persons were scalded and scratched with splinters. Two very fine horses were seriously injured—one, the celebrated stallion Commodore, owned by Mr. Agnew, has since died; and the other, a young horse, the property of Mr. Ludlum, was severely scalded. Some carriages were also more or less damaged. The condition of the boat indicates the direction the boiler took; it rose on an angle and went over forward almost entire, and was seen by a passenger on the Oakland to strike the water some thirty feet ahead of the boat. The deck was raised out of place, and the cabins shattered throughout. The Contra Costa was built in this city and registered in November, 1857. Her boilers were constructed in New York, by Cunningham, and sent here in 1853, but were not used until put in this boat, when they were pronounced sufficient. Captain Lewis and the Engineer, Wyatt Birdsell, were arrested and admitted to bail in the sum of \$2,000 each, to await the investigation by a Coroner's jury. As appears by the evidence before the Coroner, the cause of the explosion seems to have been the racing and the determination to beat the other boat. For this we hope the officers of the boat will be held to a strict account.

## DOMESTIC SUMMARY.

A letter from Smith's Garden, Sacramento says: We had a fine rain, and think our Peach crop not much hurt by the cold weather.

A bill has been introduced into the Legislature, to make dogs, named elk, antelope, and deer, property, as these animals are not recognized as property by law.

P. P. Tracy, Esq., is to deliver the Oration, and Wm. Bauman, Esq., the Poem, at the celebration by the Odd-Fellows in Sacramento, on the 26th inst.

The Horse Exhibition at Petaluma, came off according to announcement, on Saturday last, and was a fine affair. Some nineteen stallions were exhibited, of two years old and upwards. We shall next week give a more extensive report.

In Alameda, the Gazette thinks the frost has killed most of the peaches, which is a sad loss, because many in the county were calculating upon quite an income this year from their peach crops. We expect the damage will not prove so serious as anticipated.

The dwelling-house of S. P. Pomyes, at the "Farmer's Ranch," some five miles from Marysville, says the Democrat, was burned on Sunday night last. The family barely escaped with their lives, and nothing whatever of clothing, furniture, or provisions, was saved.

The Contra Costa Gazette says: A gentleman who ascended Mount Diablo last week, asserts that in some of the gulches and ravines, in those lofty regions, the snow lies in drifts, and in such quantities, that several days of warm weather will be required to melt it.

At Columbia, says the Courier of the 2d inst., a few of the early fruit trees are in blossom, but we think they have not been seriously injured; although, on one night water was frozen and ice made half an inch in thickness. In some orchards, the proprietors built fires, and some covered their favorite trees with cloths, for protection.

At San Jose the heavy frosts of the last two or three nights of March, says the Tribune, have effectively destroyed the prospects of the peach and apricot crop in that vicinity for the coming season. Many pear trees also are blighted, and not a few cherries. This visitation, it thinks, will fall heavily upon very many citizens.

A fire in Folsom a few days ago, destroyed the building known as Firemen's Hall (used by the Episcopal and Methodist Societies on Sundays, and by the Hook and Ladder Company), also a blacksmith-shop and stable adjoining. Loss \$1500 or \$2000. This is said to be the first serious fire that has occurred in Folsom since its settlement.

Four men who left Napa county about the first of February, to attend the land sales at Barksport, Humboldt Bay, have not since been heard from. Their names are Grigsby, Herndon, Ferrill, and Clark. As they took with them a large amount of money, it is feared they have been murdered and robbed in the mountains. A party was sent in search of them.

Panoramic, says the San Andreas Independent, is a small peach tree, not more than three-and-a-half feet high, filled with bloom, which is in the garden of Mr. Medina, at the Bay State Ranch. Last spring a sprig about a foot long was cut from another tree, and stuck into a wet spot; this is the tree which is now "spreading itself" so aspiringly in vegetable society.

The North Californian, alluding to Hoopa valley, says: severe as the winter has been, we learn that the farmers, by their perseverance, have succeeded in putting in their usual crop of wheat, and with an ordinary succeeding season, a good yield is certain. Quite a number of hale, able-bodied men, have passed through Union during the past week, on the way to the Klamath, and Salmon river mines. Plenty of good room left for more.

THE WEATHER, that never-failing subject for a newspaper paragraph, as noticed by the San Andreas Independent of the 2d inst is a fair specimen for the week of the same throughout the State: "True to the ancient character of March; rain, snow, wind, hail, sleet, and sunshine. On Sunday and on Monday mornings there were heavy frosts, which, it is feared, have in many localities seriously damaged the peach crop. The north-hill-side orchards have escaped, owing to the backwardness of the bloom.

A very singular and destructive land fall occurred on the 29th ult, between San Andreas and the Willow-creek sawmill, says the Independent. In an instant, without any premonition of what was about to transpire, a hill, rock, near a hundred feet in diameter, sank down, perpendicularly, from thirty to forty feet. A single sheep which had straggled away from a neighboring flock, and chanced to be grazing on the spot at the moment, went down in the general hubbub. No tunnel, shaft, or mining operation had ever been conducted at the place, and whatever was the cause, is as yet unexplained.

At Los Angeles, says the Vineyard of the 5th inst, the weather for the previous week had been unpropitious. For some days the wind blew violently from the interior, checking the growth of wheat and barley, and threatening serious injury. The mountains on the East were covered with snow, and on the 1st and 2d inst. they were visited with a severe frost, which it was thought damaged the wheat fields to some extent. In some localities ice formed of considerable thickness. A worm, similar in appearance to the cut-worm, had made its appearance in the vineyards, causing some alarm, as it eats out the heart of the bud in the night. The vine-dressers were devoting their time to its destruction.

POVERTY BAS, Calaveras county, has such an ugly, beggarly name that people abroad are apt to imagine it the abode of poverty, says "G." in the San Andreas Independent. He washed one pan of dirt and got ten dollars; but even ten dollars is nothing compared with some panfuls of dirt which have been recently taken from this extraordinary claim. The bread (it is worked by hydraulics) is 45 feet deep; breadth of front 500 feet; running back 300 feet. The pay-dirt is from two and a half to four and a half feet deep. All above this stratum, contained scarcely a color of gold. The company paid about \$2500 for water and labor to strip off the waste dirt, previous to realizing anything in the shape of pay. Beyond all question, "G." believes it to be the richest mining claim in the county. Mr. O'Neill owns two-thirds, and Messrs. Higby and Brock, one-sixth each. A lead of extraordinary richness was recently discovered, running diagonally across the claim. A portion of this lead, only two inches in breadth, paid one hundred dollars the foot!

READ!—The Letter of Mrs. Eliza W. Farnham; "The Mother," by Leonore; "Nature and her Lessons," and a "Sketch," by Edith. These are all worthy of special attention. The Family Department must not be forgotten.

ORNAMENT YOUR HOMESTEAD.—Plant flowers, they are cheap now, and always beautiful, and their fragrant blossoms will greet you as you return to your homes.

**VOLCANIC WONDERS!—VISIT THE SANDWICH ISLANDS.**—One of the most interesting scenes of the world is now presented to all in this vicinity, and an opportunity given at little expense, and in a brief space of time, to behold what few have ever seen—a BURNING VOLCANO. The magnitude and wonders of this eruption are presented in another column, and we feel it our duty to call attention to it and to refer our readers to the card of the *Honolulu packets*, by Messrs. McRuer & Merrill, in our outside columns. Every comfort and convenience on the passage is offered. A speedy trip can be made, and the opportunity should not be lost.

## REMOVAL.

**DR. D. BURBANK,**  
**DENTIST,**  
HAS REMOVED HIS OFFICE

No. 125 Montgomery Street,

(Over J. W. Tucker's Jewelry Store),

Where he will be glad to see his friends and former patrons, and all those who wish to have

THEIR WORK WELL DONE.

## PRINCE MORGAN

Is grandson of Green Mountain Morgan, and sired by the

celebrated Fleece Morgan. His dam is descendant of Prince

Majesty and Tiger Whip. He is four years old this spring;

fifteen and a half hands high, and weighs 1075 pounds.

For reference as to his qualities, and speed, inquire at Mr.

J. S. TAYLOR'S Stable, on Market street, opposite Second.

WM. MOORE.

San Francisco, April 5th, 1859.

To Ranchmen.

A YOUNG MAN AND WIFE WANT A HOME ON

some land in the County—want a secondary con-

sideration, the object being for the Man (who is in poor

health), to get a chance to live in the country. To any person

who has no family on his place, this is an excellent chance.

The Women is a good Housekeeper, and does all kinds of

Sewing. The Man will be able to milk cows, take care of

stock, or do any light jobbing about a Ranch. Address

MR. & MRS. L. HENRY, San Francisco, (Care of California Farmer).

**WHOLESALE GROCERS.**—The best evidence in the world of success in business is a constant and widely increasing range of customers. As we were passing by Fordham, Jennings & Co's, corner of Front and Jackson streets, we noticed a large number of parcels of goods, marked for many of the up-river counties, and also for many of our large ranches. We are pleased to know our readers are regarding our advertisements. We never advertise any but first-class houses, as we wish our readers to know of the best establishments; and the firm named above will always give satisfaction to those who may patronize them.

## 125

**McCormick's Chicago Reapers!**

Three Sizes—5, 6 and 7 feet Cut,

WITH EXTRAS FOR ALL THE DIFFERENT PAT-

TENTS, from 1852 to 1859. [Agent for the Manufactur-

ers for the Pacific Coast.]

2500 sold in 1855, 4000 sold in 1857,

4000 sold in 1856, 4500 sold in 1858.

15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim to have manufactured and sold anything like so large a number of Reaping and Mowing Machines during the same time, while my experience dates back to the origin of my machine, in 1834, having been actively and exclusively engaged in their manufacture for the last fifteen years. I am now more largely engaged in the manufacture of these machines than ever before, and with my improvements for 1859, do not hesitate to warrant my machine as a Reaper, Mower, and Reaper and Mower, superior to any other for simplicity, durability and perfect working; and further to say, that farmers who may desire it are at liberty to work my machine through the harvest with any other, any keep and pay for the one preferred. The position of the Reaper in my machine (as patented), upon the main frame, where there is great strength, and where the weight adds to the power of the machine, is the only right one. Other makers have had their Reapers on a platform, where the machine is not so firmly held, and the eyes by the operation of the reel, and to being jolted over the clods by the little platform-wheel over which he rides, necessarily rocking their machine to pieces. This accounts, in part, for the great durability of my Machines as compared with others, and which, with others, will be proved. (Great Council Medal awarded my machine in London, in 1851. Grand Gold Medal of Honor at Paris, in 1855. Highest Prize at the French Universal Exhibition, in 1856. Highest Prize of Royal Agricultural Society of England, in '57. Highest Prize of the U. S. Agricultural Society, in 1857.)

**As the best Reaper.**

Publications made by the manufacturers of the *Mowing machine*, claiming the highest honors, etc., at the French Universal Exposition, in 1855, are known by them to be false. The success of my machine is indicated by figures above, is the highest prize; while the awards of French ones, generally, are worthy of no confidence, although Reapers-makers make a business of laboring and scheming to secure the little Annual One-horse Premiums of the country. Although it may not be generally indicated, it is nevertheless true, that those machines have always been sold at comparatively low prices, and but for the boldness with which I introduced and sold them by thousands, for the ten years past, other smaller manufacturers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and others of the truthfulness of every statement I have made, and much more. I may further remark, that all of the Reaping Machines of any prominence in the country, are mere modifications of my machine; all other manufacturers having necessarily gained experience in comparison with my own.

A single year's severe service will satisfy the farmer, that in point of durability, my machine is far superior to all others; besides several important advantages, referred to in my regular Annual Circular, in pamphlet form, which will be furnished those who desire further information, by addressing me, or any one of my Agents.

P. S.—To correct a misapprehension from recent newspaper reports, I may say, that while the Commissioner refused to extend my PATENT of 1845, that of October, 1847, will still give for several years to come, and that this has been my most important Patent; and further, that Reaper manufacturers cannot copy more nearly my machine than they have done heretofore. They must still carry their Reapers on the back of the platform, and submit to other consequent imperfections.

CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators,

Manufactured by Nourse, Mason & Co.; 32 and 36 inch

cylinders, with trucks and full extras.

U. S. Patent Office, January 3, 1859.—Sir: J. A. & H. A.

Pitts' Patent, dated June 20, 1857 (machine for Thrashing and

Cleaning Grain), was extended for a term of seven years

from June 23, 1851. It has consequently expired. Respect-

fully, yours, J. HOLT, Commissioner.

ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and

## Ladies' Department.

(For the California Farmer.)  
MOTHER.

Mr Mother's sainted soul was long since borne  
From earth on angel's wings, to find repose  
In heaven, its nesting place. Oh, could I open  
The gleaming portals of her home and gaze  
Upon the ecstatic joys of Paradise; methinks  
Even now with food maternal care,  
She marks the vain desires of her first born,  
And points unto the regal star of faith.

Hark!

Hark! she gently whispers, loved one baste!  
Oh baste from earth away, and hither speed  
Thy fainting soul; nor heed the closing of  
Thy mortal days: 'twill be thy passport  
To eternal bliss.

Look not with somber mien  
Upon the forms so dear to thee, for lo  
Thy Mother with thy cherub babe shall wait,  
To bid thee welcome to the courts of love.  
Then calmly at Jehovah's bidding, mure  
Thy frail relative body in the dark  
And muffled tomb. Thy beauteous soul  
Shall then like nuptial stars a vigil keep.  
O'er loved ones in the murmurous world below.

LROXNRE.

## Letter From R. W. F.

School of Design for Women—Cooper Institute—Pro-  
gress of the Age—the Sickles Tragedy—Steamers—  
Weather, etc.

EDITOR FARMER: I have been visiting to-day the  
"New York School of Design for Women," and I  
am sure I cannot do the sensible women, old and  
young, who read your paper, a greater favor, than  
by giving them a brief statement of the oppor-  
tunities which this School furnishes to those of  
their sex who are able to avail themselves of its  
advantages.

The School has, within the last year, been perma-  
nently established in the Cooper Institute, an im-  
mense edifice of brown stone, which is just com-  
pleted, occupying the whole of the triangular block  
bounded by Third and Fourth Avenues at their  
point of junction, and by Eighth street on the  
north. It is the magnificent work of Mr. Peter  
Cooper, one of the millionaires of New York, a  
man who very wisely determined to direct with  
his own judgment, and witness with his own eyes,  
the expenditure of at least a portion of the money  
he designs to bestow for the furtherance of public  
good. The Cooper Institute is, I believe, designed  
for a self-supporting benefaction to the city, of  
which the chief purpose is the aid of instruction  
for the people. Some portions of the building are  
for rent for various uses, and from the income thus  
acquired, lectures, cabinets, classes, &c. are to be  
maintained and furnished, either free or at a merely  
nominal cost. And one of the pleasant things  
about the opening of it is, the taking the Woman's  
School of Design cordially by the hand, and setting  
apart for its use a suit of rooms across the entire  
east side of the building. The school is growing  
very rapidly. Last year its pupils did not exceed  
forty; they now number about seventy females, of  
ages from ten to forty. The expense of instruction  
to working pupils is merely nominal, being five  
dollars a term for designing and engraving, and  
for pencil and crayon, and ten for colors in oil.  
I saw no work in water-colors. There are young  
girls in the Designing Rooms from ten to fourteen,  
who are exceedingly clever in their work, and who  
bid fair to make themselves artists of no mean  
pretensions in this useful and lucrative business.  
There is a considerable number of wood engravers  
(none as yet on steel), many of whom are execut-  
ing work, upon orders from without, so satisfactorily  
to their employers that already they feel the  
strength of a self-supporting business in their  
hands; and I predict for women in certain depart-  
ments of art, a brilliant and ready success, as soon  
as the course is open to their feet. They have been  
long excluded, long denied all rational use of the  
fancy, and of the imaginative power, which, for  
lack of other employment, has spent itself upon  
gossamer and flummery. The dressing room or  
the milliner's shop has been woman's studio, and  
her creative power as an artist has gone out in the  
fashioning of material garments, the combining of  
colors and proportions in perishable fabrics, which  
must have, coming from her hands, the relation of  
use to life, not the majesty of lasting expression.  
Whatever a woman's perception or love of the  
beautiful, whatever her power to embody them in  
forms which might have become, like the produc-  
tions of man, the property of the ages, she has  
been hitherto doomed to work in ignoble and  
perishable material, and count it glory enough if  
a quilt, a gown, or a mantle, of her designing, were  
esteemed worthy to be kept from the moth and the  
elemental loom enough to reach her children's  
children. The canvas which a few colors can im-  
mortalize—the stone which a few strokes redeem  
from the quarry and transfer to places of honor  
and worship, have never been delivered to her but  
under protest, which has made the nervous hand  
tremble as it wielded the brush or drove the chisel,  
which should record the power of the conceiving  
soul.

You perhaps ask why, if woman has the power  
to take a part in the field of the immortal arts, she  
has not somewhere adequately proved her claim  
long ago? And I ask in turn, why did not steam  
expel muscle five thousand years ago, instead  
of fifty? Why was not printing discovered in the  
fifth instead of the fifteenth century? Why was  
lightning so long regarded as the unconquerable  
enemy and dread of man, to be, only in our own  
day, made his strongest friend and servant? The  
development of all powers above the lowest and  
primary, is the work of progress, and so there  
must be days in which it is unknown, and again  
days in which it surprises us by appearing before  
our eyes and commencing its work, which first  
judgment pronounces disorderly and subversive,  
and which no sooner begins to file into orderly  
march and relation, than another new develop-  
ment steps into its place and begins to demand its  
recognition. Also, facts of progress it will be  
seen go in classes. In other phrase, history has  
her periods like nature; is, in fact, in the last and

truest sense, but the exposition of nature, and of  
man stumbling and falling in his endeavors to find  
out her secret intuitions. There is a period of  
conquest, when all the active forces strike out in  
the struggle to overcome. There is a period of  
discovery, when the strong souls push inquiry be-  
yond the limits of the known, and are content to  
stop nowhere till the vague, outward bounds of  
the possible are reached. Then comes the inventive  
era, when thought and creative capacity kindle in  
the product of instrumentalities, rather than in  
other achievements; and so our progress is carried  
on by steps, which each age takes, for its suc-  
cessor's more than its own glory; and the charac-  
teristic of this age of ours is, that it devotes it-  
self widely, and in some measure, let us acknowl-  
edge, philosophically, to the emancipation and de-  
velopment of woman. As I stood in the school  
rooms this morning, and looked around upon those  
fair faces, diligent, earnest, and full of purpose,  
I thanked God that I had seen the day in which the  
burin and brush had passed into woman's hands,  
to be in future as legitimate instruments of ex-  
pression to her, as the broom and needle have  
been. And I saw frivolity, caprice, vanity, and  
nervousness vanish away in the distance, as I  
looked; for what place could they have in brains  
for which a career was provided, and in souls where  
aspiration was not doomed to wither in inaction!  
It is a day of hope for us indeed, when prejudice  
cannot longer doom us to the limits of drudgery,  
or the barrenness of idleness.

With this mail will go out to you the record of  
the last crime that has shocked the country and  
disgraced its capital. I am one of those people  
who believe that whatever happens has some-  
where, however hidden from our view, an adequate  
cause. There may be many causes combining to  
produce certain events; but amongst them all,  
there will be one which is like the seed to the tree;  
sun, air, water, soil, are each a cause of its growth,  
but there is one antecedent to them all, without  
which all of them that the universe contains could  
not produce the oak—the acorn must be first. And  
so I find a cause for such tragedies as we have seen  
in Washington; a first and primary cause in the  
truth that womanhood, most to be revered of  
all creations which God has placed upon this globe,  
is held in reverence neither by itself nor by man.  
We cannot conceive of any moral life so nearly  
purposeless as that of fashionably bred women,  
enjoying its own respect or that of others; and  
without these, depravity is frightfully easy to any  
soul. So long as woman holds herself to be the  
inferior of man, fitted to be made his teacher, com-  
panion, friend, guide, when he chooses, but only  
when he chooses, and because he does; and at other  
times, when he chooses differently, being immedi-  
ately converted into his drudge, the victim of his  
tyrannies or vices, the object of an unreasoning  
pride, or of brutal passion which acknowledges no  
limit but its own capacity of action, so long we  
may expect to have tragedies in which women will  
play the role of that unfortunate young creature in  
Washington. Who that has any reasonable  
thought upon life, its uses, opportunities and  
moving forces, can be surprised, or even indignant,  
when woman, bred as Mrs. Sickles has been, and  
as the thousands of daughters of wealth and  
fashion are being bred throughout the length and  
breadth of our land, takes, with apparent uncon-  
straint, her part in the life dramas enacted around  
them? What right have we to wonder that life is  
not purely and earnestly lived by souls who see in  
it only a career of self-gratification—to whom a  
sense of true responsibility and of obligation to  
enable the gift of existence in the using of it, is  
unknown? Pain and grief one must always feel  
at such proof of our mistakes, but astonishment  
at them ought to be unknown among sensible  
persons.

There is, of course, a world of talk of all sorts  
respecting all the parties in this dreadful affair.  
The newspapers have not been so eagerly sought  
in months as they are since the names of Sickles  
and Key became their staple. As you will have  
all the particulars many times repeated in them, I  
forbear the pain and weariness of a detailed state-  
ment.

Are we ever to hear anything further of the  
opposition steamers? Or is California resigned to  
sleep with the Mail Company as a nightmare upon  
her breast? For one of many thousands I hope  
not.

It has been snowing about six hours, and is now  
coming on to rain and blow from the northwest.  
Delicious climate! which makes us think almost  
with contempt of your green hills and flowering  
plains.  
Yours,  
E. W. F.  
New York, March 3, 1879.

(For the California Farmer.)  
Nature and her Lessons.

SUNSHINE and gladness! Singing birds, springing  
leaves, gushing melody, dry roads, and good-natured  
farmers! Surely this is happiness! Here we have  
been wading through mud and water for many dark  
days, to the infinite discomfort of people in general,  
and "crinolined pedestrians" in particular  
(and the excellent satisfaction of croaking frogs,  
who seemed to consider us poor bipeds completely  
humbled to their part, wondering if the bright sun  
was really in contempt of our paltry sphere, or  
that we might better appreciate his condescension,  
was withholding his favor for a time to overwhelm  
us suddenly with his effulgence. Even this sus-  
pense was preferable to the cold, raw winds which  
preceded, inviting vague presentiments of a dry  
winter and lack of crops. One would scarcely  
recognize the thin, frightened countenances of *then*  
in the sleek, round-faced ones of *now*. But in  
thais is not the only perceptible change; as with  
all who pass through trials which for a time seem  
grievous, and then leave us with increased ability  
for rejoicing, so Nature, having passed "under the  
cloud," is now laying aside the garb of mourning,  
and assuming her own fine, fresh, lovely Spring  
adornings. Dear Nature! who will ever appreciate  
it: in its heavenly beauty; its God-impressed per-  
fection; its changeless purity and variegated moods.  
Ever mysterious, ever new, divinity seems breathed  
through every lineament. Human comprehension  
retires abashed in the contemplation of its simplest

truths; and as one, whom Pollock would say, stood  
on the "loftiest tops of thought" and dived to  
learnings deepest depths, expressed himself, at the  
close of life, that with all his vast researches and  
extensive acquisitions, he had only arrived at a  
"humiliating conviction of his own weakness and  
simplicity," only learned to see how little he knew;  
so all, as they advance in understanding, are be-  
wildered, mystified. One obstacle surmounted,  
reveals vastly larger regions yet unexplored; and,  
while this, in no way diminishes the thirst for  
what is unknown, it teaches most emphatically the  
importance of grasping *practical* truths and waiting  
with patient trust for the clear light of Eternity to  
reveal what a lifetime would be too short to under-  
take. To believe and love, without comprehend-  
ing, may be a difficult task; it is yet one of the  
requirements of that divine law, which though  
inexplicable, is yet so plain, that "the way-faring  
man, though a fool, need not err;" and while above,  
around, and beneath, we see evidences of infinite  
wisdom and love in the creation and guidance of  
worlds, which through long years have kept in  
their unerring course, and still greater in the  
formation of human intelligences, which superior  
to every other creation, in the reflection of "God's  
image," are singularly adapted, one to the other,  
we have no capabilities for solving the first link  
in the chain of mysteries. Revealed truth is sim-  
ple and self-evident; we may learn a lesson from  
every change in Nature; each flitting cloud, sway-  
ing bough, bursting bud, and light-winged song-  
ster; soft-pattering rain-drops, vivid lightning, deep-  
thunder, and the enduring base of majestic  
ocean, bring a lesson to our hearts, a truth to our  
minds. The first great object of life with man is  
to express his manhood, develop his God-like prop-  
erties, and become fitted in *Time* for the work and  
enjoyments of *Eternity*. To do this, he can only  
live for self that he may live for others; and he  
will live for others in the same proportion that he  
lives for self. Show me the man most willing to  
improve everything good, noble and upright in his  
own mind and heart, and you will show one most  
useful to his fellow man; one who carries impres-  
sions with him, stamps his character where he  
moves, and becomes a "living epistle, known and  
read of all men." Hence then, our lives are what  
we make them; our characters shaped by ourselves;  
and to have them something besides a passive real-  
ity, our own moral improvement stands paramount.  
And where can this be more effectually accom-  
plished than among the simplicities of Nature?  
Are we cold and selfish? Here is *great love*. Our  
hearts can hardly fail to swell with gratitude, as  
we behold. Are we sinful, stained with the dregs  
of earth? Here is freshness and purity which does  
not spurn us, and we may "look through Nature  
up to Nature's God." Are we weary, disheartened?  
The "lilies of the valley" and the contented spar-  
row, speak soothingly. Are we in uncongenial  
places, loaded with sorrows, and oppressed with  
grief? Here is light, and joy, and peace, and har-  
mony—God's alphabet to man.

CASTLE RANCH, March 27, 1879.

(For the California Farmer.)  
False Modesty.

"Who told thee that thou wast naked?"  
(GENESIS—iii—11th.)

The origin of the sense of shame should make us  
distrust its too great influence upon us, notwith-  
standing that it has been said, "when shame is  
lost, all virtue is lost," for virtue that has not its  
foundation in principle, dependent only upon this  
safeguard, is merely negative, not deserving the  
name. That "modesty is a virtue," no one will  
deny, but that the very existence of virtue depends  
entirely upon this sense of shame, I do deny, and  
think knowledge a far better safeguard, since those  
that practice duplicity shut the eye and look of  
intelligence, which the simpering smile and blush  
of false modesty but invites. I was once in con-  
versation with a lady friend, when the subject  
turned upon the deficiency of woman's education,  
which, I remarked, "was particularly so in regard  
to a knowledge of her own physiology," and feel-  
ing deeply upon this subject my voice might have  
been a little earnest and elevated, so she cautioned  
me "not to speak so loud as there were men in the  
next room." "And," said I, "for ought you know,  
are now planning the seduction of some innocent  
girl, based upon this very ignorance. And as long  
as women are content to remain so, just so long  
will they be made the dupes of unprincipled and  
designing men, who do not scruple to drag woman  
down into the lowest depth of misery and degrada-  
tion by means of the gentlest and holiest emo-  
tions of her nature, which, if rightly cultivated,  
would make earth a Paradise."

The false delicacy in the manners of lovers, in  
trying to appear indifferent to each other in com-  
pany and displaying an air of insincerity in all  
they say or do, is unnatural and absurd. Love,  
more than any other passion of the soul, pleads for  
truthful expression, but were it not that it can  
speak from the "windows of the soul," its very  
existence might be doubted of, in the hearts of  
many, from the false notion that it must be con-  
cealed. One reason of this is, that love has been  
looked upon as a weakness and ridiculed by cynics,  
while its votaries have been subjected to the tor-  
tures of envy and malice, until this noblest attribute  
of God and of humanity, has been considered more  
as the source of evil than good. Love must have  
an atmosphere of freedom and truth, or the soul  
cannot expand by its genial influence; for it ren-  
ders the mind so sensitive that a breath of ridicule  
or slander blasts its delicate unfoldings, and woo  
be unto them whose poisonous breath shall wither  
this flower of the heart forever, since then are  
closed the sacred portals of the soul to the influ-  
ence of refinement and progression!

There will be unhappy marriages so long as  
each shall seek to hide their faults from the other,  
and to appear what they are not, for the truth,  
however disagreeable to confess or investigate,  
had much better be done before than after mar-  
riage, and those who will not make the investiga-  
tion and try to understand the nature of their  
attachment, and to ascertain if it has its foundation  
in the mental and moral, as well as their physical  
natures, must abide the consequences which will

prove the cause of unhappiness to themselves and  
the harmony of their offspring.

It is high time that the mythological god  
"Cupid" was discarded, with all the heathenish  
notions attached to his worship, and the divine  
angel of God-like Love enthroned in his stead, and  
let the offerings and devotions to its holy shrine  
be in truth and sincerity, and then no more would  
broken hearts be made to bleed upon the altar of  
unhallowed love. There is a false modesty in the  
minds of some mothers which is truly pernicious,  
as it engenders falsehood and inculcates false  
ideas; for how often are the very natural questions  
of children, respecting their origin, answered in so  
fabulous a manner that it only serves to excite  
their curiosity instead of satisfying the yearnings  
of their youthful minds for knowledge, which  
should not be withheld but dealt out to them in a  
manner suited to their age and capacities? But I  
have conversed with some women of families, who  
were nearly as ignorant of the organic laws of  
life as "Topsy," who said, "that she guessed she  
was not borned at all, but 'spect she growed;"  
and some are so sensitive that they have persuaded  
themselves that they, like Minerva, came into the  
world perfect as you then behold them, and refuse  
to converse upon what they term a vulgar subject,  
verifying the adage that "there are none so blind  
as those who won't see."

It is a singular fact that the laws of life and  
death, the most important theme that can engage  
the minds of mortals, are but little studied or even  
talked of, except by the medical fraternity, and  
these might do much more good than they do, if  
they would enlighten the minds of their patients  
by telling them the causes of diseases and how to  
prevent them; and, for this, the physician should  
have a regular salary, not less than those who  
have the "cure of souls," since they, if good men,  
might often do both—and they should take pleasure  
in doing good and striving to elevate man to that  
true dignity which a right knowledge of himself  
alone can give.

Whatever we say or do, let it be with candor  
and truth, and a countenance free from those  
blushes of false modesty which become no one,  
much less a mother, and are an offense to the sin-  
cere searcher after truth. EDITH MOSTRESSOR.  
FERRIS COUNTY, March 29th, 1879.

INTERESTING TO LADIES.—An old London paper,  
published in 1670, seriously recommended that an  
act should be passed by Parliament, "that all  
women of whatever age, rank, profession or degree,  
whether virgins, maids or widows, that shall, from  
and after such act, impose upon, seduce, and be-  
tray into matrimony any of His Majesty's male  
subjects, by accents, paints, cosmetic washes, arti-  
ficial teeth, false hair, Spanish wool, iron stays,  
hoops, high-heeled shoes, or bolstered hips, shall  
incur the penalty of the laws now in force against  
witchcraft, sorcery, and such like misdemeanors;  
and that the marriage, upon conviction, stands  
null and void."

WHEELER & WILSON  
MANUFACTURING COMPANY'S  
SEWING MACHINES.  
343 Broadway, New York.  
Agencies throughout the United States.

Highest Premium again awarded by the American  
Institute, at the Crystal Palace, Nov. 5, 1867.  
Also, highest Premium awarded at the Illinois State  
Fair, and Maryland Institute, Baltimore; and  
Maine State Fair.

SEE THE FIRST PREMIUM  
SEWING MACHINES.

WHEELER & WILSON'S SEWING MACHINES  
WON THE FIRST PREMIUM AT THE MA-  
CHINES' FAIR, Sept. 1863.

Wheeler & Wilson's Sewing Machines  
Were recommended the HIGHEST PREMIUM AT  
the State Fair, Maryville, August, 1858.

Wheeler & Wilson's Sewing Machines  
Were recommended as the BEST FOR FAMILY  
USE, at the San Jose Fair, Sept. 1853.

Wheeler & Wilson's Sewing Machines  
ARE SIMPLE, not liable to get out of order, make a  
stitch alike on both sides of the fabric sewed, turn the  
hem, use the cotton from an original spool, by use of a  
NEW TENSION, and are capable of sewing the  
FINEST AND COARSEST FABRICS, LEATHER IN-  
CLUDED.

Table and Pocket Cutlery.  
THOMAS DAY,  
No. 138 Montgomery Street, San Francisco.

HAS ON HAND, a large assortment of FINE IVORY  
TABLE CUTLERY; also common Table Cutlery,  
for the country trade. POCKET CUTLERY—Pruning  
Knives, and Grafting Knives; also Bowls Knives, etc.;  
and a large assortment of Western and Sons, Alex-  
ander's, and Edward Barnes & Sons, Sheffield.  
For sale, wholesale, 23-34

## POLAR OIL.

30,000 GALLONS

## REFINED POLAR OIL,

In Barrels and Cases.

## FOR SALE AT LOWER PRICES

Than ever before offered in California.

Purchasers of Oils would do well to visit our  
establishment, before laying in their winter stock.

We will guarantee to suit ALL as to quality and price.

LARD OIL. Is also offered at greatly reduced rates.

WINTER SPERM OIL. Warranted to stand the test of the coldest weather.

BINNACLE OIL. Warranted to burn a lamp dry without trimming.

CAMPBELL. Distilled from every day.

ALCOHOL. In Barrels and Cases, 95 per cent.

BURNING FLUID. Of superior quality.

STANFORD BROTHERS,  
PACIFIC OIL AND CAMPBELL WORKS,  
834 Front Street, near California.

## PAINTS, OILS, WINDOW GLASS,

do., do., do.

## OLIVER &amp; BUCKLEY,

HAVE NOW LANDING AND IN STORE, AND FOR  
sale at low rates:

3,000 kegs White Lead,  
2,000 kegs snow white Zinc,  
20,000 gallons Linseed Oil (boiled and raw),  
10,000 gallons Spirits Turpentine,  
2,500 gallons Alcohol (95 per cent) in tins,  
2,000 gallons Vaseline (English and American),  
5,000 boxes Window Glass (assorted sizes),  
700 dozen Paint and White Wash Brushes (ass'd do),  
6,700 pounds Gesso (assorted qualities).  
Together with a large stock of all articles in our line, which  
we are receiving regularly from the best Manufacturers.

WE ALSO HAVE ON HAND,  
Campbell, Sperm Oil, Polar Oil, Tanners' Oil,  
Lard Oil, and Solar Oil.

In lots to suit,  
At 86 and 88 Washington street,  
And 87 and 89 Oregon street. 13m

## APPEAL OF THE

Ladies' Mount Vernon Association,  
TO THE PEOPLE OF THE STATE OF CALIFORNIA.

A recent appointment by Miss Ann Pamela Cunningham,  
Regent of the "Mount Vernon Ladies' Association of the  
United States," has devolved on the undersigned, the duty and  
the privilege of placing before the people of this State, the pur-  
poses of the Association.

An Act of Incorporation from the State of Virginia author-  
izes the Association "to purchase, hold, and improve two hun-  
dred acres of Mount Vernon, including the mansion as well  
as the tomb of George Washington," and to receive a deed in  
fee simple, and to exercise full power over the use and manage-  
ment of the same.

Under this charter, a constitution has been adopted, which  
vests the power of management in a Regent and Vice Regent,  
selected one from each State of the Union.

In April, 1858, under the advice of legal gentlemen, a con-  
tract was executed for the purchase of Mount Vernon for  
\$200,000, of which \$18,000 was to be paid cash, \$57,000 on the  
1st January, 1859, and the balance in three equal instalments  
of \$1,566 66 each, with interest from the date of the contract,  
payable on 23d February, 1860, 1861, 1862.

Until payment in full, the proprietor is to retain possession  
but such payment may be made at any time.

The cash payment was made, and the gratifying intelligence  
has lately reached us, that the instalment of \$57,000 was duly  
met; thus securing the contract, which allows payments to be  
made, in sums of not less than \$5000, as soon as collected,  
thereby arresting the accrual of interest. All efforts, there-  
fore, are now turned to the collection of funds for the pay-  
ment of the deferred instalments at the earliest possible day,  
thereby saving a large amount of interest, and realizing the  
cherished hope of at once obtaining possession of Mount  
Vernon.

To this noble cause, the Women of the Union, desiring for  
a season the exclusion of domestic life, have brought their  
talents and all their energies. Amidst the discord of sectional  
strife, they bid us gather around the tomb of Washington as  
children of a common heritage, there recall his moderation of  
spirit and pure patriotism, and lay to heart the solemn warn-  
ings of his last public words. They know, that standing on  
that hallowed spot, the pilgrims gathered from the wide ex-  
panse of the Republic, can feel but one sentiment—reverence  
for his teachings, and devotion to the Union he so loved.

Men of high station and intellect (among whom Everett  
stands preeminent) are lending their influence and their elo-  
quence to the cause. In twenty-one States of the Union, the  
good work goes bravely on, and California is now invited to  
do her part. Youngest of her sisters, she yields to none in  
reverence for the name of Washington and devotion to the  
Union. Animated then by these sentiments and by a just  
pride, let her people bring their offerings to this common  
altar of patriotism. Shall the gold of her glittering soil be  
poured alone into the lap of Commerce, and none be devoted  
to preserve and guard with sacred care the Groves of Mount  
Vernon? Let all then rise in generous rivalry, to show that  
California lacks not the heart to sympathize, nor the hand to  
help in this work of patriotism.

To the Women of California, this appeal is especially made.  
Youngsters of the East have assumed this honorable duty,  
and claim your ready cooperation. Our State will do her  
part liberally, if you resolve to take the matter in hand. On  
you, therefore, will it depend whether she shall respond to the  
call.

Although contributions to any amount are solicited, yet the  
price of membership is but One Dollar. Concerted and sys-  
tematic action, therefore, must be adopted to canvass the State  
from the Sierras to the Pacific. The urgency of such organization  
devolves on the Vice Regent, and she proposes the following  
plan as simple and also effective, if seconded by your hearty  
cooperation.

Lady Managers will be selected, one or more, for each city,  
town, village, and mining camp, the State, who will appoint  
Assistant, leave to them Creditable authority, to receive and  
claim your ready cooperation. Our State will do her  
part liberally, if you resolve to take the matter in hand. On  
you, therefore, will it depend whether she shall respond to the  
call.

An Advisory Committee of Gentlemen has been selected,  
and their names are hereto appended.  
Louis McLane is the Treasurer of the Association for this  
State.

Communications will be addressed: Mrs. Magdalena G.  
Blanding, Vice Regent Mount Vernon Association, and for-  
warded through Wells, Fargo & Company's Express, which  
has generously offered to convey them free of charge.  
Office of the Association, No. 1, Lucas, Turner & Co.'s  
building, San Francisco.

MAGDALEN G. BLANDING,  
Vice Regent for California.

We, the undersigned, take great pleasure in uniting with  
Mrs. Blanding in commending to our fellow citizens the cause  
which has been committed to her charge, and will gladly  
cooperate with her in securing its success.  
Wm. Ingraham, Rip, M. H. Ackley, Harry J. Thornton,  
Oden Hoffman, Belle Peyton, Louis McLane, Edward Stanley,  
T. W. Freeman, E. D. Baker, Edward J. Fringie, F. P. Tracy,  
H. W. Hallock.

His Excellency John B. Weller, Sacramento; Hon. Joseph  
Walsh, do; Hon. W. O. Stratton, do; Hon. Stephen A. Field,  
do; Hon. M. H. McAllister, San Francisco; Hon. Oden Hoffman,  
do; Hon. S. J. S. K. Ogier, Los Angeles; Right Rev.  
Bishop Rip, San Francisco; Right Rev. Bishop Atterbury, do;  
Hon. John C. Fremont, do; Hon. Henry J. Thornton,  
Latham, Sacramento; Hon. E. D. Baker, San Francisco; Hon.  
Belle Peyton, do; Edward J. Fringie, Esq., do; Hon. Milton S.  
Hall, Esq., do; Wm. M. Lent, Esq., Santa Clara; Major E.  
D. Keyes, San Francisco; Hon. M. C. Blake, do; Hon. T. W.  
Freeman, do; F. P. Tracy, Esq., do; Hon. Ed. W. McKinstry,  
Napa; Hon. Benjamin Hayes, San Diego; Hon. Wm. McKinstry,  
do; Hon. Louis Ogier, do; Hon. Samuel Bell McKee, Oakland;  
Hon. John P. Freeman, Crescent City; Hon. P. D. Blanding,  
do; Hon. E. D. Baker, do; Hon. B. F. Myers, Alameda;  
Hon. Edward Norton, San Francisco; Hon. Charles M.  
Warren, T. Sexton, Oroville; Hon. Pablo de la Guerra, Santa  
Barbara.

## A Mountain Man on Mountains.

Ar a festival in St. Louis, Sierra county, D. T. Berry said:

The voice of the past tells us that frowning rocks and rugged mountains had often sheltered and protected the spirit of liberty after it had been driven out from verdant lawns and luxuriant vales. The pleasant valleys of Europe have, during the middle ages, been periodically overrun and ravaged by merciless foes, until, at times, it would seem that the last spark of liberty was about to be extinguished. France, Spain, Austria, and the lower countries, have shared this fate, and have been forced into many changes in their forms of government and habits of life. But where, all this while, was the Swiss Republic—the land of William Tell? There she stood, and there she now stands; perched upon the summit of her Alpine mountains and protected by their impenetrable barriers, she breathes the same spirit of liberty which she inhaled a thousand years ago. The lowlands of England and Scotland have been invaded and subjugated by the Romans, the Saxons, the Danes and the Normans, and have undergone many changes in their laws, language, manners and customs—while Grampian hills have shielded the Scottish Highlanders from the ravages of those invaders, preserved them in their ancient spirit of liberty, and the Gaelic language is still spoken on the heights of Ben Nevis. Wales, too, has suffered from England's many conquerors, and when driven to their last refuge, her people have shielded themselves within the bosom of the mountains of Snowdon; and should the despots of the old world combine against us, and gain a foothold on these shores, liberty will yet find a resting place amid the dark cañons and recesses of our lofty Sierras.

## "So Many Ways for His Money."

"TRAVELING one day in the country," says a writer, "we fell in company with a man whom we soon ascertained to be a well-to-do-in-the-world farmer. In the course of conversation upon various subjects, principally agricultural, we found that he was just returning from our town, where he had that day contracted for the sale of five hundred bushels of wheat at seventy-five cents per bushel. From this our conversation passed to that of newspapers; and upon ascertaining that he was not a subscriber to any paper, we offered him ours. But the man had 'so many ways for his money' he could not afford it. We then asked him if he would become a subscriber in case we would convince him that if he had taken the paper, he would have saved, in one bargain alone, five times the cost of it for a year. He agreed to this, and we took from our pocket one of our latest papers, in which was an advertisement, offering to contract for any quantity of wheat at eighty-one cents per bushel. This we illustrated to our farmer friend, telling him that he had been a reader of our paper, he might have saved six cents on each of his five hundred bushels of wheat; making a total of thirty dollars, sufficient to pay for the paper for fifteen years. He paid us two dollars, and left us, growling at himself for having been so negligent of his true interest."

SAVE YOUR PAPERS.—A contemporary wisely suggests that readers of newspapers are little aware what they lose by destroying the issues they are daily in the habit of reading. If preserved and bound (which could be done at a trifling expense), they would have a connected record of current events in the most convenient and comprehensive shape, which would be valuable at all times as a book of reference, besides affording great pleasure in reviving old recollections and associations in the mind of the reader. He would therein have a chain of history—essentially local, yet somewhat general in its character—growing link by link, yearly becoming of more interest and value. It would be an encyclopedia, a cabinet of literature, of information in the sciences and arts, history and biography; a volume embellished with an occasional gem of thought of the first writer, which if not thus preserved would be wholly lost. It would be a museum in which the most inveterate statistician could find deposits worthy of his attention, while at the same time it would afford a field of delights in which the most accomplished in intellectual attainments could revel for days and weeks.

In calling attention to the above, we would ask our readers, if they ever reflected upon the value of the bound volumes of the CALIFORNIA FARMER, ten years hence—and how would they like the entire Ten Volumes already completed? The only history of the Agriculture of California.

ORIGINS OF NEWSPAPERS.—Mankind are indebted to the wisdom of Queen Elizabeth, and the prudence of Burleigh, for the first printed newspaper. It was entitled the English Mercurie, and was, by authority, "imprinted at London by her highness printer, 1588." The earliest number is preserved in the British Museum Library, dated July 23, in that year, and contains the usual intelligence, given after the fashion of the London Gazette of the present day. In these Mercures we meet with advertisements of books, and they differ not very much from the announcements of our own time. During the civil wars, periodical papers, the champions of the two parties, became more generally circulated, and were edited by writers of ability. Among the principal we may notice Marchmont Nedham, Sir John Birkenhead, and Sir Robert L'Estrange. At the restoration, the proceedings of Parliament were interdicted to be published, unless by authority; and the first daily paper after the revolution took the popular title of the Orange Intelligencer. In the reign of Queen Anne, there was but one daily paper, the Daily Courant. The first Provincial Journal in England was the Orange Postman, started in 1706, at the price of a penny, "but a halpenny not refused." The earliest Scottish newspaper made its appearance under the auspices of Cromwell, in 1652.

It is said of one of the Earls of Roden, that there stood in his stately hall a strong box, on which were painted the words, "To be saved first in case of fire." After the Earl's death, it was opened in expectation of finding some rich treasure; but nothing was found save the toys of an only and departed child, whose memory by these simple relics he sought fondly to cherish.

THE TRAPPINGS OF THE DEFUNCT are but the outward dressings of the pride of the living; the undertaker in all his melancholy pomp, his dingy bravery, waits upon the quick, and not upon the dead.

OXFORDSHIRE BITTERS.—This is a remedy for Dyspepsia, Indigestion, and the numerous disorders of the stomach. It was discovered by a regular physician, after years of research. It is unlike all other medicines, and extracts the disease by the roots, leaving no vestige behind.

HOLLOWAY'S OINTMENT.—The fable that scrofula or king's evil could be cured by a monarch's touch, has long since exploded. But the great truth that not only scrofula and skin eruptions, but all maladies developed in the skin and flesh, can be removed by this preparation, is beyond cavil.

Sold at the manufactory, No. 85 Maiden Lane, New York, and by all druggists, at 25c., 63c., and \$1 per pot.

## MUSIC, INSTRUMENTS, ETC.

## Pianofortes, Melodeons.

MESSRS. MILLAR & COURTATZ, Manufacturers of PIANOFORTES and MELODEONS, Boston, have established an Agency for the Sale of their Instruments, AT MOORE'S PACIFIC FURNITURE WAREHOUSE, No. 183 Montgomery Street, San Francisco.

Mr. COURTATZ will superintend the fitting up and Tuning of the same. The above Instruments have been awarded the First Premium at the Fair of the Mechanics' Institute, held at Richmond, Va., 1877; and are not surpassed for tone or finish, by any Instruments of the kind in the United States; and will be offered at lower prices than ever before sold on the Pacific Coast.

All persons wishing to purchase Pianofortes or Melodeons, are particularly invited to examine those of Millar & Courtatz, which are already in store at the above place, and are being received by nearly every ship from Boston, during the coming year.

No one will go away dissatisfied with the Instruments or price.

CALL AND SEE THEM.

## PIANOS, MELODEONS, Alexandre Organs, and Music!

Prices Greatly Reduced!

HORACE WATERS,

No. 333 Broadway, New York.

AGENT FOR THE SALE of the best Boston and New York Pianos and Melodeons. The largest assortment of Music Merchandise in the United States. Pianos from five different manufacturers, of every variety of style—from those in plain rosewood cases, for \$200, to those of the most elegant mahogany for \$1000. No house in the Union can come in competition for the number, variety and celebrity of its instruments, nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with or without iron frames, have in their new scale an improved action, in power and compass of tone equaling the grandest and the beauty and durability of the square Pianos. The Press and First Musicmasters have justly pronounced them equal, if not superior, to any other make. They are guaranteed to stand the action of every climate.

Horace Waters' Melodeons (tune the equal temperament), superior in each desirable quality. Can also furnish Prince's, Currier's, and Smith's Melodeons. Prices from \$45 to \$125; for two sets of reeds, \$150; two banks of keys, \$200; organ pedal bass Melodeons, \$250, \$275 and \$300, less a liberal discount. Each instrument warranted to give perfect satisfaction, or purchase money refunded.

Alexandre Organs, five stops, \$160; eight stops, \$180; eight stops with percussion, \$225; twelve stops, \$250; twelve stops, etc., \$375.

Second-hand PIANOS at great bargains, constantly in store. Prices from \$30 to \$140.

Music.—One of the largest and best catalogues of Music now published; all Music and Musical Works published in the United States for sale by this House. Also, Martin's celebrated Guitars; all kinds of Musical Instruments and Musical merchandise, at the lowest prices. Music sent wherever ordered, post paid. Catalogues sent by mail. A liberal discount made to dealers, teachers, seminaries and clergymen.

## TESTIMONIALS OF THE

Horace Waters' Pianos and Melodeons.

"The Piano came to hand, and in first-rate order. It is a beautiful instrument and no mistake."—Lee & Walker, Phila. John Hewitt, of Canby, N. Y., who has had one of the Horace Waters' Pianos, writes as follows: "A friend of mine wishes me to purchase a Piano for her. She likes the one you sold me in December, 1856. My Piano is becoming popular in this place, and I think I can introduce one or two more; they will be more popular than any other make." "We have two of your Piano's in use in our Seminary, one of which has been severely tested for three years, and we can testify to their good quality and durability."—Wood & Gregory, Mt. Carroll, Ill.

"I, Waters, Esq.—Dear Sir: Having used one of your Pianofortes for two years past, I have found it a very superior instrument."—A. Gray, Principal Brooklyn Heights Seminary. Rev. Hiram Hayes, writes as follows: "Proctor Hollow, N. Y., July 22, '58. Mr. Waters—Dear Sir: I received the Melodeon safe and in good order; am well pleased with the external appearance, and the tone also. Hope I shall have occasion to order one or two more the present season."

"Tings, N. Y., Aug. 5, '58. Horace Waters, Esq.—Sir: The Melodeon you sent me was duly received in good order. I am now fully prepared to say that the instrument is highly satisfactory; and I beg you will accept my thanks for the very liberal terms on which you furnished it, and for the very honorable manner in which you have fulfilled, and more than fulfilled, all your promises. Very respectfully, J. L. Schuch." "The Piano I received from you continues to give satisfaction. I regard it as one of the best instruments in the place."—J. L. Clark, Charleston, Va.

"The Melodeon has safely arrived. I feel obliged to you for your liberal discount. Will do all I can for you in this part."

[Rev. J. M. McCormick, Parkersville, S. C.]

"The Piano was duly received. It came in excellent condition, and is very much admired by my numerous family. Accept my thanks for your promptness."—Robert Cooper, Warrenton, Bradford county, Pa.

"Your Piano pleases us well. It is the best one in our country."—Thomas A. Latham, Campbellton, Georgia.

"We are very much obliged to you for having sent us such a fine instrument for \$250, and we shall take pains to recommend it."—H. H. Clark, Buffalo, New York.

"The Horace Waters' Pianos are known as among the very best. We are enabled to speak of these instruments with confidence, from personal knowledge of their excellent tone and durable quality."—N. Y. Evangelist.

"We can speak of the merits of the Horace Waters' Pianos from personal knowledge, as being of the very best quality."—Christian Intelligencer.

"Nothing at the State Fair displayed greater excellence in any department than the Horace Waters' Pianos."—(Chicago Tribune.)

"The Horace Waters' Pianos are built of the best and most thoroughly seasoned material. We have no doubt that buyers can do as well, perhaps better, at this than at any other house in the Union."—Advocate and Journal.

"Water's Pianos and Melodeons challenge comparison with the finest made anywhere in the country."—Home Journal.

"Horace Waters' Pianofortes are of full rich and even tone, and powerful."—(N. Y. Musical Review.)

"We gladly will send you the store, the very best assortment of Music and of Pianos to be found in the United States, and we urge our southern and western friends to give him a call whenever they go to New York."—(Graham's Mag.)

Warehouses, 333 Broadway, N. Y.

The Anniversary and Sunday-School Music Book.

They are simple and carefully arranged for one, two, or four voices, and the Piano, or the Melodeon. The whole work published in Anniversary Books, Nos. 1 and 2, with several additional pieces. Price 6 cents, single; \$5 per hundred; postage 2 cents. [210]

## AGRICULTURAL STORE.

J. D. Arthur. W. N. Arthur. J. D. ARTHUR & SON,

IMPORTERS AND JOBBERS OF

## AGRICULTURAL IMPLEMENTS

Washington Street, near Davis,

HAVE JUST RECEIVED

by late arrivals from the East, and will continue to receive,

A LARGE AND VARIED ASSORTMENT OF

## AGRICULTURAL GOODS,

Among which are the following, which will be sold at the

LOWEST MARKET RATES.

## Reapers &amp; Combined Machines,

OF ALL THE VARIOUS STYLES:

The Celebrated New York Reaper, cutting from

6 1/2 to 7 1/2 feet swath.

Garrett's, Manny's, Beloit's, Atkins', and all the

various styles.

## Pitt's Thrashers,

Hall's Thrashers, etc., etc.

The subscribers having purchased and made arrangements

for a full supply of Agricultural Implements in New York and

Poston, they will be

In Constant Receipt of Fresh Goods, &

well adapted to this market, by clipper ships arriving during

the season, which we can afford and

WILL SELL ON AS FAVORABLE TERMS,

As any other similar establishment on the Pacific Coast.

Farmers and dealers will find it to their interest to call

and see the subscribers, at their Agricultural Warerooms.

JOHN D. ARTHUR & SON,

Nos. 3, 4 and 5 Washington street,

between Front and Davis, San Francisco.

## GREAT REDUCTION IN THE PRICE

OF

## DR. F. G. JOHNSON'S

PATENT SELF-REGULATING

WINDMILL.

MANUFACTURED BY

D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF

ALL; and being constructed all of iron, is without

doubt the most perfect and durable, as well as the most

economical Windmill in the world.

The undersigned having purchased the Exclusive

RIGHT FOR THE PACIFIC COAST OF THESE MILLS IN

THIS STATE, will manufacture and keep on hand the

following sizes, and at the following prices:

No. 1—Three-quarters to one Horse-power.....\$112 00

No. 2—One to one and a quarter Horse-power.....130 00

No. 3—One and a third to one and two-thirds Horse-power.....160 00

No. 4—Two to two and a half Horse-power.....200 00

No. 5—Two and two-thirds to three and a half Horse-power.....230 00

(This power is estimated for a fair, strong breeze.)

The above prices include everything ready to erect.

## DEPOT OF MANUFACTURE,

Nos. 90 and 92 Bush Street,

SAN FRANCISCO.

When any greater power is required, the prices will be

pro rata as the power is increased. They are susceptible of

being increased to 20 horse-power or more; and applied

for any purpose where stationary power is needed, and

as manageable as a Steam Engine, with no risk or

expense. These anticipating using this cheap power (the

Windmill), should not fail to examine THIS MILL,

such examination will satisfy them of its adaptation, and

ability to serve their purpose efficiently and fully. It is

unlike other Windmills that are called self-regulating;

they have stationary Fans and small reversing Fans,

which are depended upon to graduate the speed of the

mill; whereas, by Dr. F. G. Johnson's Patent Fans

revolve upon the arms and turn their edge to the wind

when a gale or sudden gust strikes it; and again, a child

can stop it at once by turning the fan's edge to the wind,

by the use of a lever pressed upon the stop-wheel, which

is upon the shaft. These Mills can be used for any

purpose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH

STREET, San Francisco, where the Manufacturer will

take pleasure in showing and explaining the mechanical

principles upon which reliance is had for their superiority

over all other Mills known, or of which we have knowl-

edge.

D. VAN PELT.

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 15, 1859.

NUMBER 11.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 170 Washington street (up stairs), San Francisco.  
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$4 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### A Chemical Laboratory for California.

A SHIPBOARD might as well undertake to build a ship without tools, or a brassfounder to get up his castings without his moulds, as a State to become possessed of the treasures hid within her boundaries without the great implements of her trade. The great first duty of a State, after the wheels of her official machinery are set in motion, is to look after her citizens, to make good and wise laws, and to watch over their welfare; to learn the capabilities and qualifications of her citizens, and guide, guard, and lead them on by proper modes of encouragement to acts of usefulness that shall repay the State for the protection which theegis of her laws gives to the citizens. One great duty of the State is to become familiar with the resources of that territory upon which her citizens reside, and to aid them by every act in her power to develop the wealth of the State in every department of labor. As from the earth springs all that is good—as from the earth and what is produced from it, the great wheels of industry are set in motion, so the State should see that the implements necessary to develop that earth and all its treasures should be ready for her citizens; and as the science of Chemistry is the Alpha among other sciences, as it tends to open up the great primal foundations of the earth, it becomes the duty of the State to see that her Public Institutions are supplied with all the needed implements in order to develop the treasures within her boundaries. If the citizens cannot supply them, the State should, for her own wealth and greatness is developed thereby.

We have been led to these remarks by knowing the wants of Agriculture. The Agriculture of California has been kept back for years by want of a proper laboratory by which the soil and various substances could be analyzed and understood. Other interests would also be vastly promoted by means of a well-devised laboratory, and we were highly gratified to know a proposition had been started to have such a valuable aid to science placed in the University of the Pacific, under the charge of suitable Professors, as the property of the State.

When at Sacramento lately, we heard many persons speak with interest of the lecture which was delivered by Dr. Rowell, upon the importance of such a laboratory; and calling upon him, we asked as a favor to look over his notes of the lecture. In them we found convincing proof of the position here taken, that it is the duty of the State to procure and own such an aid to science; and we trust the present Legislature will grant the aid asked for, and thus enable her citizens to reveal the wealth yet hidden from our vision.

The following important facts we extract from the address of Dr. R., which we learn was delivered at the request of the members of the Senate and Assembly:

"Chemistry is, above all others, an experimental science. Nothing is taken for granted. Nothing is admitted until it is proved by experiment; and an experiment cannot be performed without an apparatus. Russia is making chemists, France is making chemists, England is making chemists, both in the home dominions and in her distant dependencies, the Atlantic States of our Union are making chemists, and why should not California make chemists? Does she not need them more than the older States do? Their resources are developed. There is but little, that is new, to be found out there; but California is an undeveloped State. Every year, almost every month, is bringing forth something new to be analyzed. It must be sent to New York, to Philadelphia, or to France, and no return can be had for months. The great problem, now so much agitated, of separating gold from the sulphurets with which it is found in union, a chemical problem which would be worth millions to California, if it could be solved; that is being experimented upon in Germany, in France, in England, and in Boston, New York and Philadelphia, but not in California, because there is no laboratory here. There is no apparatus. If there were, we could at least try to solve the problem of California, in California. But as it is now, specimens are sent abroad.

"Is it not due to the miners of this State, that there should be within its borders one good chemical laboratory, well supplied with apparatus? What makes our wealth, our greatness, our cities? It is the toil of the patient miner. What builds our ships and freights them, and makes trade, and commerce, and the mechanic arts thrive in our midst? All this comes from the hard hands of men who are toiling in our mountains with the pick and the

pan. This and our agriculture are the foundation of everything here. The miner strikes a new substance, unobserved before, or a modification of some substance which has before been observed, but not in the same form or combination. He wants it analyzed. With a laboratory here, a week, or perhaps a day or an hour, would be sufficient to make the analysis. But now he must send to the Atlantic States, and wait for returns. A farmer, plowing in his field, turns up in the furrow a new substance. It may be a valuable one—valuable for manure, valuable in medicine, in the arts, in commerce—but there is no laboratory here to analyze it. The farmer may not be able to send it to Germany or Philadelphia, that takes time and money, but he could send it to San Francisco."

The above truths are worthy of all consideration, and we hope the petition of the University will be granted.

#### The Electro Magnetic Engine.

JAMES S. BRADY, the ingenious inventor of this unique and curious, as well as most important machine, has brought to our office a model of his engine, to which we invite the attention of all persons who are interested in motive power. The great point of this engine consists in the rapidity of applying power, or frequency of completing the circuit on the circumference of the wheel. This invention saves space in magnets, and works several times in one revolution of the wheel. As to its power, the inventor calculates that one machine with wheel eighteen inches in diameter, will drive three sewing machines at a cost of six bits a day. This invention is worthy of special notice; and as the inventor has not means sufficient to carry out his plans as he desires, any person of requisite qualifications and some capital can have an opportunity of making a snug little sum by joining the inventor and making this new motor widely and successfully known. The model can be seen at our office.

#### Neglected Gardens.

We often see a pleasant spot around the houses of the farmers where a garden has been laid out and well designed, but, after a little, it is abandoned, and for what? Because a large quantity of water was not convenient to drench it with; this is wrong. We have often said that this system of drowning the earth is wrong, and we can convince the most skeptical of this, it is not so much the want of water as it is cultivation, the water poured over the earth in dry weather tends to injurious results, while good cultivation, after a proper preparation of the soil and gentle showers of water to remove the dust, is far more desirable—in fact, all that is needed. If any person doubts such a plan being the true one, if they will call on us, at a little garden-spot we have in charge in the city, we will prove the truth of our theory by its practical results.

KISS-PHILIP CORN.—The King-Philip or Brown Corn is an eight-rowed variety, moderate sized grain, and very highly spoken of by Dr. C. T. Jackson, of Boston, who has prepared a chemical analysis of this corn. King-Philip corn is of a deep orange color, or rather brown orange, esteemed very highly on account of its keeping quality, and keeping sweet after being ground into meal. It is very prolific. A small quantity only was tried in California the last year, and one person from sixty-five pounds, raised four tons and nearly a half, being 8,887 pounds, and of a very perfect quality. We have received a small parcel of this corn, which we shall send out in envelopes, and hope much from it.

#### Grover & Baker Company's Sewing-Machine Manufactory.

We present a very fine cut of the immense manufactory of this celebrated Sewing-Machine Company. This factory is situated in Boston, Massachusetts, and is three hundred and thirty feet long, ninety-five feet wide and five stories high. From 430 to 460 men are continually employed therein, on the various branches appertaining to the manufacture of these machines, and about eighty men more in the direct employ of the company, outside of the factory, in making moulds for casting, making the castings, cases, tables, and other cabinet work. The average number of machines finished daily, for the past year, is fifty-three, and the demand has more than exceeded the supply.

Here we have a great fountain of human industry. These are the great hives where active life prevails. Here we see one company employing more than five hundred men constantly—and for what? All doing homage to woman; making machines for to lessen woman's labor! What a picture of woman's influence and woman's industry. But it stops not here. About fifteen hundred machines a month, or eighteen thousand Sewing-Machines a year, and this is but one of the great companies engaged in this work.

But, this is in Massachusetts; how will all this industry and power affect our State? How is California to be affected by this? A large branch of this company is now established here, at 118 Montgomery street, and these machines are offered to our people, to the industrious of all classes, especially to the women of California, and these celebrated machines are now being scattered all over our State, performing various kinds of work, from the finest and most delicate to the heaviest woolen and leather work, that till this invention, it was never supposed could be performed except by the wearing, tearing, labor of the body-and-soul-destroying stitch! stitch! stitch! by woman, with needle in hand, so glowingly described by "Hood" in his "Song of the Shirt." But better days now dawn on woman in her domestic duties and labors, and now with her little foot upon the keys of a pretty parlor ornament, she can imagine she is at a piano, and singing some sweet song. This accompaniment will, as described by "Semiquavers" (in another column), produce for the artist her dresses and fancy works, and all those domestic valuables of her household linen, and without much labor or fatigue.

But there is another great good for California in store, arising from this valuable aid to domestic labor; thousands of females who, by some sudden change of fortune, or bereavement of protectors by death, are suddenly called to earn a livelihood, but whom health or situation in life would prevent from going out to service, may now secure an honorable support by the use of these great helps of female labor.

Some time since we published some facts in relation to the success of wool growing in our State and the almost immediate prospect of converting this wool into flannels, for the use of the miners and others, and this would open a great demand for female labor in making up these flannels into shirts and drawers, of which an immense amount are annually imported into our State. The Grover & Baker machines have a stitch peculiarly adapted to the manufacture of woolen and knit goods, and this is of great importance at this time, in view of the prospect we have of these manufactures in a few months. To this fact we ask the attention of all who feel interested in female labor, and in offering to woman that aid, protection, and support which the peculiar and trying circumstances of a California life have brought

to view. These changes of the circumstances of all are well pictured in the sketch of M. A. S., under the title of "Semiquavers," and we now offer, in these facts, an opening where an accomplishment can be learned that will give freedom to woman from that keen suffering arising from dependence on others, which must always destroy the noblest feelings and aspirations of woman. We have taken pains to obtain a full description of the various stitches performed by these wonderful machines, which we shall publish next week, and hope our lady readers will examine well the opening now offered to them for an honorable position and a certain support. Mothers can give their daughters no better accomplishment than a thorough knowledge of the wonderful "needle-work" which these machines can do, and which will give them useful habits now, and aid them, in after life, to become true help-meets in the domestic circle.

#### Annual Meeting of the California Horticultural Society.

The Regular Annual Meeting of the California Horticultural Society, for the election of officers for the ensuing year, and other business, was held in this city on Wednesday, April 13th. At 10 o'clock, A. M., the Society met, and, on motion, adjourned to 1 P. M.; at which time the meeting was called to order by Vice President John Lewelling, the President, F. W. Macondray, being absent.

##### REPORTS FOR THE PAST YEAR.

The Executive Committee for the past year made a report of their doings, which was accepted. The Report represents the Society to be in a flourishing and satisfactory condition. It appearing that some business matters between the Society and the Mechanics' Institute had not been concluded, Messrs. Cohen, Gushee and Wilson were appointed a Committee to close up the unfinished business of last year, to report to Executive Committee at earliest convenience.

[Here a communication from the Corresponding Secretary of the State Agricultural Society was read, giving notice of the appointment of several Delegates from that Society to attend the Annual Meeting of the California Horticultural Society. On motion, the same was received and the Delegates invited to take seats in the meeting.]

On motion, the subject of the Reports of the last Annual Fair, etc., was referred to the old Executive Committee, with instructions to publish the same.

The Recording Secretary, W. Wadsworth, presented his Report for the past year, which was accepted; and, on motion, he was instructed to enter the record of his election (it appearing not to have been done) on the minutes, and that all minutes of previous doings be entered on the records.

The Treasurer, J. L. Sanford, presented his final Report, which having been approved by the Finance Committee, the same was accepted. It appeared that the premiums had not been all called for, and that there was a balance of the Premium Fund in the Treasury of \$155. All the premiums were paid in plate or money on application.

Secretary Wadsworth presented a bill of expenses for postage, express charges, etc., \$14, and services in preparing Annual Report, \$25—total, \$39; credit by money received, \$15—balance, \$24. On motion, the same was ordered paid.

On motion, the thanks of the Society were voted to the Secretary and other officers for their services the past year.

A motion was made that the Secretary and Treasurer be allowed \$30 each for services; but the Treasurer declining to receive any compensation, the same was withdrawn. It was then voted that

the Secretary be allowed \$36, as compensation for time devoted to the Society.

Mr. Bond moved that the thanks of the Society be presented to the Alta California for publishing in full reports of meetings and doings, in advance of Annual Report; carried. [A queer distinction, it seems to us, as, if we remember rightly, several other papers did the same thing in better shape, while but one publication had the names of fruit anywhere near correct, and it was not the one above named.—Rae.]

##### ELECTION OF OFFICERS.

On motion of Mr. Flint, the Society proceeded to the election of officers for the ensuing year.

F. W. Macondray, Esq., President of the Society since its organization, declined a reelection. The following officers were unanimously chosen, seventeen votes being cast:

President—J. W. Osborn, of "Oak Knoll," Napa.  
Vice Presidents—John Lewelling, San Lorenzo; H. Halle, Alameda; John Center, San Francisco; A. P. Smith, Sacramento.  
Secretary—W. Wadsworth, San Francisco.  
Treasurer—Charles R. Bond, San Francisco.  
Directors—Joseph Aram, San Jose; A. W. White, Oakland; H. Gushee, San Francisco.

##### GENERAL BUSINESS.

On motion, Voted, That the next Annual Fair of the Society be held in San Francisco, commencing on Tuesday, the 23d day of August, and continuing four days.

Mr. Humford offered an amendment to the Constitution, reducing the fee for Life Memberships from forty-five and fifty dollars, as now, to twenty and twenty-five; adopted, and laid over till next Annual Meeting for final action.

Mr. Myers, President of the Alameda Agricultural Society, as instructed by that Society, presented an invitation for the members of the California Horticultural Society to unite with them in the Floral Exhibition at Oakland, on the 14th of June next, and hoped to receive their cooperation. The invitation was accepted; and it was voted that the Society will cordially unite with the Alameda Society on the occasion named.

A letter was received from Mr. L. B. Lathrop, of San Jose, in reply to an invitation from the Secretary to attend the Annual Meeting, excusing his attendance, and objecting to giving balls in the name of the Society, in connection with the Annual Exhibitions, on account of conscientious scruples of exhibitors, etc.

On motion, Voted, That the appointment of Committees of Award be left to the Executive Committee.

President Osborn appointed the following

##### STANDING COMMITTEES.

Finance—A. A. Cohen, J. S. Silver, and D. E. Hough.  
Library—A. H. Myers, T. D. Woolsey, and H. F. Williams.  
Distribution of Seeds—D. L. Perkins, G. W. Fountain, and C. L. Kellogg.  
Publication—W. Wadsworth, I. B. Rumford, and J. S. Silver.  
Premiums—F. W. Macondray, G. H. Beach, and Wm. Daniels.  
Names and Synonyms—John Lewelling, Joseph Aram, Wilson Flint, A. P. Smith, and F. W. Macondray.

The Board of Managers appointed the following

##### EXECUTIVE COMMITTEE.

J. W. Osborn and W. Wadsworth, ex officio; A. W. White, H. Gushee, and J. Lewelling.  
The Treasurer elect presented his bond, which was approved, and the Society adjourned.

#### The Floral Fair at Oakland.

We learn that a very interesting meeting of the friends of this interesting festival was had at the Council Chamber at Oakland last evening. We met the President, Mr. Myers, at Oakland, who kindly invited us to attend, but pressing duties prevented our being at the meeting. We rejoice to know that there is a good feeling for this enterprise, and a determination to put it through in good style.

SALE OF MERINO SHEEP.—The Merino sheep which were advertised by Messrs. McRuer & Eldridge, were sold yesterday, and brought the following prices: One ram, \$50; one \$23; two at \$11 each; one, \$12; one, \$11; fifteen ewes at \$10 50 each. The sales amounted, in all, to two hundred and eighty-two and a half dollars, and the sheep were principally purchased by Dr. Toland of this city. These sheep were half-blood Merinos of a very good quality, and were sold low; the number of bidders was small. If those who have sheep to sell would give a more extended notice of the sale, or have the sheep advertised a reasonable time, so that purchasers in the country could have notice of the sale, a much better price would be obtained for them.

SHOWER YOUR PLANTS.—Now that the cold snap has passed away, sudden warm days may be expected; this will, of course, affect vegetation. These sudden changes should be guarded against, and the best way to sustain plants shrubs and trees, and all vegetation, under this sudden heat, is to shower them after the sun has passed away; this refreshes them and prepares them to sustain great heat the next day. The best thing to operate with that we have seen is the Garden Pump offered by J. S. Paxon, on California street, and also the Garden Engine, which works so finely. We have tried them and know their value.

### Diseases of Dairy Stock.

We copy from Flint's valuable work on "Milch Cows and Dairy Farming," the following extracts, and call the particular attention of dairymen to these important facts:

The Hoove or Hoven is brought on by a derangement of the digestive organs, occasioned by over-feeding on green and luxuriant clover, or other luxuriant food. It is simply the distension of the first stomach by carbonic acid gas. In later stages, after fermentation of the contents of the stomach has commenced, hydrogen gas is also found. The green food, being gathered very greedily after the animal has been kept on dry and perhaps unpalatable hay, is not sent forward so rapidly as it is received, and remains to overload and clog the stomach, till this organ ceases or loses the power to act upon it. Here it becomes moist and heated, begins to ferment, and produces a gas which distends the paunch of the animal, which often swells up enormously. The cow is in great pain, breathing with difficulty, as if nearly suffocating. Then the body grows cold, and, unless relief is at hand, the cow dies.

Prevention is both cheaper and safer than cure; but if by neglect, or want of proper precaution, the animal is found in this suffering condition, relief must be afforded as soon as possible, or the result will be fatal.

A hollow flexible tube, introduced into the gullet, will sometimes afford a temporary relief till other means can be had, by allowing a part of the gas to escape; but the cause is not removed, either by this means or by puncturing the paunch, which is often dangerous.

In the early stages of the disease the gas may be neutralized by ammonia, which is usually near at hand. Two ounces of liquid ammonia, in a quart of distilled or rain water, given every quarter of an hour, will prove beneficial. A little tincture of ginger, essence of aniseed, or some other cordial, may be added, without lessening the effect of the ammonia.

If the case has assumed an alarming character, the flexible tube, or probang, may be introduced, and afterwards take three drachms, either of the chloride of lime or the chloride of soda, dissolve in a pint of water, and pour it down the throat. Lime-water, potash and sulphuric ether are often used with effect.

In desperate cases, it may be found necessary to make an incision through the paunch; but the chloride of lime will, in most cases, give relief at once, by neutralizing the gas.

#### CHOKING.

Choking is often produced by feeding on roots, particularly round and uncut roots, like the potato. The animal slavers at the mouth, tries to raise the obstruction from the throat, often groans, and appears to be in great pain. Then the belly begins to swell, from the amount of gases in the paunch.

The obstruction, if not too large, can sometimes be thrust forward by introducing a flexible rod, or tube, into the throat. This method, if adopted, should be attended with great care and patience, or the tender parts will be injured. If the obstruction is low down, and a tube is to be inserted, a pint of olive or linseed oil, first turned down, will so lubricate the parts as to aid the operation, and the power applied must be steady. If the gullet is torn by the carelessness of the operator, or the roughness of the instrument, a rupture generally results in serious consequences. A hollow tube is the best, and if the object is passed on into the paunch, the tube should remain a short time, to permit the gas to escape. In case the animal is very badly swelled, the dose of chloride of lime, or ammonia, should be given, as for the hoove, after the obstruction is removed.

Care should be taken, after the obstruction is removed, to allow no solid food for some days.

#### FOUL IN THE FOOT.

Cows and other stock, when fed in low, wet pastures, will often suffer from ulcers or sores, generally appearing first between the claws. This is commonly called Foul in the Foot, and is analogous to foot-rot in sheep. It is often very painful, causing severe lameness and loss of flesh, and discharges a putrid matter, or pus. Sometimes it first appears in the form of a swelling near the top of the hoof, which breaks and discharges foul matter. The rough and common practice among farmers is to fasten the foot in the same manner as the foot of an ox is fastened in shoeing, and draw a rough rope back and forth over the ulcerated parts, so as to produce a clean, fresh wound, and then dress it with tar or other similar substance. This is often an unnecessarily cruel operation. The loose matter may easily be removed by a knife, and then carefully wiped off with a moist sponge. The animal should then be removed at once to a warm, dry pasture, or kept in the barn.

If the case has been neglected till the pasterns become swollen and tender, the sore may be thoroughly cleansed out, and dressed with an ointment of sulphate of iron one ounce, molasses four ounces, simmered over a slow fire till well mixed. Apply on a piece of cotton batting, and secure upon the parts. If any morbid growth or fungus appear, use equal parts of powdered blood-root and alum, sprinkled on the sore; this will usually effect a cure. Some also give a dose of flour of sulphur half an ounce, powdered assafras-bark one ounce, and burdock two ounces, the whole steeped in a quart of boiling water, and strained when cool; and, if the matter still continues to flow from the sore, wash it morning and night with chloride of soda, one ounce, or a table-spoonful of common salt, dissolved in a pint of water.

Foul in the Foot causes very serious trouble, if not taken in season. The health of cows is injured to a great extent. I have seen, during the present season, many instances of Foul in the Foot in dairy stock, arising from the wetness of the pastures. No lameness in cattle should be neglected.

**A Useful Hint.**—The difference between rising every morning at six and eight, in the course of forty years, amounts to twenty-nine thousand three hundred and ninety hours, or three years, one hundred and twenty-one days and sixteen hours, which are equal to eight hours a day for exactly ten years; so that rising at six will be the same as if ten years of life were added, wherein we may command eight hours every day for the cultivation of our minds and the dispatch of business.

"He who goes through a land and scatters blown roses, may be traced next day by their withered petals that strew the ground; but he who goes after leaves behind him a land full of fragrance and beauty, and as a heritage for his sons and daughters."

### Horse Exhibition.

The Exhibition of the Stallions of Sonoma county, which took place at the Frontier Hotel, Petaluma, on Saturday, the 2d inst., proved a very fine affair, says the Petaluma Journal, notwithstanding the attendance of stock owners was less extensive than could have been desired. Petaluma and Annapolis, in fact, furnished nearly all of the stock offered for exhibition; there being no horses on the ground owned above the lower edge of the Santa Rosa Valley, consequently, Santa Rosa, Healdsburg, Russian River, Sonoma Valley, and the Bodega coast, were entirely unrepresented. As it was, we greatly doubt whether any other section of the State, of the same extent of territory, could present so fine an exhibit of blood stallions.

Of old and young horses exhibited, there were nineteen, among which we noticed several particularly fine—more especially among the three and four-year-olds—a most encouraging fact, showing as it does that great pains are being taken by stock-raisers to improve the character and quality of their horse-flesh as rapidly as possible. Claiming no particular experience or soundness of judgment in discovering the fine points of a horse, it cannot be expected of us to say which one of the horses is really entitled to be considered the horse of the exhibition. We therefore close our report with the names, weight, pedigree, ownership, &c., of the various horses on the ground, commencing with the immense draft stallion,

**Young England's Glory**, imported from England about one year since by W. Hood, of Los Guilucos Valley. He is a beautiful dapple bay, seven years old, sixteen and a half hands high, with a clean pedigree, and is said to weigh 2,000 pounds. Like all English draft-horses, he is possessed of immense body and limbs, while his feet and legs are covered with a heavy coating of long shaggy hair.

**Young George**, owned by J. Q. Shirley, of Petaluma, is seven years old, chestnut color, sixteen hands one inch high; was sired by Savage's Old George, of Oregon; dam, a cross of Whip and Diana. Young George took the first premium at the late State Fair, for his class.

**Brigham Young**, owned by Isaac Baker, of Stony Point, is five years old, dark bay color, seventeen hands high, weight 1,500 pounds; was sired by Reindeer; dam, Bertrand.

**Young Kentucky**, owned by Charles Merritt, of Petaluma township, is four years old, jet black color, seventeen hands high, weight 1,400 pounds; was sired by Porter's Gilbert; dam, out of a Pack-ole mare.

**Old Medley**, owned by William Greening, of Stony Point, is thirteen years old, iron gray color, weight 1,250 pounds; of the Medley stock.

**Red Buck**, J. B. Hinkle, of Petaluma, agent, is five years old, sixteen hands high, beautiful sorrel color, weight about 1,150 pounds; was sired by Sumpter; dam, of the Fox Hunter stock.

**Young Richard**, owned by P. Nancart, Petaluma, is seven years old, sixteen hands high, a chestnut sorrel, weight 1,080 pounds; was sired by Kentucky Printer; dam, Morgan mare.

**Grey Mammoth**, owned by N. B. Wood, Petaluma, is three years old, dapple gray, seventeen hands high, weight 1,400 pounds (in this condition); was sired by Gilbert; dam, a Cleveland Bay.

**Bill Blossom**, owned by J. McNally, San Francisco, is nine years old, chestnut sorrel, weight 900 pounds; of Peacock stock.

**George**, owned by J. R. White, Big Valley, is a three-year old, roan color, weight 1,070 pounds; was sired by the Manning horse (Collier stock); dam, Canadian Stock.

**Bingo**, owned by Lamont Brothers, of Blucher Valley, is four years old, dapple chestnut color, sixteen hands high, weight 1,090 pounds; was sired by Grigby's Leviathan.

**Mike**, owned by J. Brownie, Two-Rock Valley, is four years old, light sorrel color, weight about 1,200 pounds; was sired by Morgan; dam, of Whip stock.

**The Green Valley Colt**, owned by L. Clyman, of Green Valley, four years old, black color, weight 1,100 pounds; was sired by George, of the Printer stock.

**Moss**, owned by W. H. White, of Big Valley, is two years old, blood bay, weight 700 pounds; was sired by the Manning horse; dam, Whip and Tiger stock.

**Grey Fox**, owned by Robert Crane, of Santa Rosa Valley, is three years old, dark iron gray, weight 1,000 pounds; sired by Old Red Fox.

**Young Red Fox**, owned by R. H. Crane, of Santa Rosa Valley, is four years old, dark bay, weight 1,050 pounds; was sired by American Fox.

**Morgan**, owned by A. Ward, of San Antonio, is four years old, dark bay color, weight 1,000 pounds; Morgan stock.

**John Hancock**, owned by A. W. Barnes, Petaluma, is five years old, dark brown color, of Whip and Printer stock.

**John-Go-Long**, owned by Morgan Bryant, of Blucher Valley, is two years old, brown color, weight about 800 pounds; of the Leviathan stock.

**A New Kind of Rollers for Sugar Mills.** A Mr. Dennis, of Richmond, Indiana, has recently obtained letters patent for what is considered, by different authorities, to be a most valuable improvement in sugar-mill rollers. The improvement purports to be a method of coating the rollers with a composition metal to prevent the action of the acid from the cane; it being maintained by some that the discoloration of the juice is caused to a great extent by its contact with the iron surfaces used in its manufacture. From the Richmond Broad Ax we learn that the inventor presented his improved roller, as bright as silver, to the consideration of the Indiana State Board of Agriculture, where it was critically examined and unanimously recommended. The Indiana State Journal of the 10th inst., also has the following upon the subject, which may be interesting to those experimenting with the Sorgho and Imphee canes:

"Dr. Warder, of Cincinnati, expressed his satisfaction with the improved roller. It showed that in the end every difficulty in the way of success with the Sorghum would be overcome. He entered into a chemical explanation of the cause which rendered the discoloration of the juice very certain when the iron roller was used, and he always had doubts of their suitability, but the roller exhibited by Mr. Dennis showed that this difficulty had been overcome."

Dr. Brown spoke at considerable length on the nature of the cause. In a green state it contained gum and acids which had been very troublesome to those who had been experimenting. He then adverted to the action of acids on iron rollers and iron rollers. The roller shown by Mr. Dennis would prevent discoloration, because these acids did not act on tin. By neutralizing these acids with lime or soda, before the juice was put into iron rollers, such rollers could be used as well as any other."

**MEASUREMENT OF HAY IN BULK.**—Multiply the length, breadth and height of hay into each other, and if the hay is somewhat settled, ten solid yards will weigh a ton. Clover will take eleven or twelve yards to a ton.

### A Calaveras Orchard and Ranch.

In the vicinity of Angel's, Calaveras county (this is as definite as we can state the location from the information given), Messrs. H. Garcelon and W. D. Allen have an extensive orchard of peach and other fruit-trees, which has already become celebrated. As a specimen of what is being done in the Mountains in the way of fruit raising, we copy the description of this Mountain Orchard, with observations, given by "G.," the able correspondent of the San Andreas Independent. The proprietors have three hundred acres of excellent land enclosed as an orchard, by a neat and durable fence. This orchard contains one hundred peach trees seven years old; fifteen hundred peach trees five years old; fifteen hundred trees, comprising a variety of one thousand apple, figs, almonds, apricots, nectarines, plums, cherry and pear, which vary in age from five to seven years. Also, five hundred grape-vines four years old; three thousand, three years old; ten thousand young trees in a portion of their ground, set apart as a nursery; and twenty thousand grape cuttings, making the total number of trees and grape-vines, including cuttings, thirty-seven thousand six hundred.

This extensive orchard is situated on the rising land, east side of the valley, and close to the foot of the mountain. Mr. Allen informed me that there were several springs higher up on the hill-side than any part of their cultivated land, which supply an ample amount of water for irrigation during the summer months.

I noticed that peaches are not quite so far advanced as they are in the lower lands. Spring frosts have never done any damage to early blooming fruit trees, on these premises; although at a distance of less than four miles, peaches have been destroyed. This is probably owing to the fact that the abrupt height of the mountain prevents the sun from shining on the trees at an early hour, never shining into the orchard until the air in the valley has been subjected to solar influence for hours. This may be the cause and it may not. [That is cause enough, Geddes, and has operated the same in other places; a fact that may be for the benefit of fruit growers to take notice of.]

As I intend, if alive and in the country, to visit this valley, lake and fruit country, when the forthcoming crop is eatable, I will give you then, perhaps, a more particular description.

### The Value of Agricultural Statistics.

The following important facts and suggestions on this subject are made by John Jay, Esq., in his admirable address, alluded to in another place:

What the country now most requires in reference to its agriculture, is, that its condition should be faithfully photographed in the returns to each Federal Census, and it will be for the agricultural section of the body I am now addressing to prepare well-considered suggestions for the new schedule and submit them to the Federal Government. Such suggestions will appropriately come from the American Geographical and Statistical Society, in view of its national character and the scope of its labors; and such suggestions, judging from the past, the Federal Government will cheerfully receive and carefully consider.

Among the additional items which might advantageously be included in the schedules, I would suggest the following:

**As regards persons employed in farming.**—The proportion of the population thus employed of both sexes. Their average life, as compared with that of persons living in towns, and of other trades.

**As regards capital employed in agriculture.**—Not only the proportion invested in land, stock, and implements, but the profit thereon received during the year immediately preceding the census.

**As regards the farms.**—Not only the improved and unimproved lands, and the proportion in meadow, pasture or tillage, but the number of acres of each farm that have been drained; the number requiring draining; the number drained during the last year; the cost of draining, and the value of the land before and after.

**In regard to the improvement or deterioration of the soil.**—The average of each crop and cost of each acre; the average of bushels or tons to the acre, and the cash value of each on the spot.

**In regard to manures.**—The amount, variety and cost per acre.

Other suggestions will, doubtless, be made, a collation of which, by the Bureau of the Census, may afford us in future years, the means of tracing the progress of American agriculture, and reading its actual condition at each decade, with the same facility with which a prudent merchant reads the past and present of his business in the carefully prepared balance sheet; and if the future of America shall continue to exhibit the same steadily progressive advance that we find in her past, the tabular results of each succeeding census, dry and uninteresting as they may seem to those who shall see in them but columns of figures, will in fact develop the fulfillment of some of those prophecies of the coming wealth and splendor of the Western Continent, that when occasionally uttered by our far-seeing economists, are apt to be regarded as the careless dreams of visionary enthusiasts.

### Interesting to Settlers on School Land Sections.

The following Act was passed by Congress, and approved February 27th, 1859. It will be interesting to a large class in this State who have settled upon the sixteenth and thirty-sixth sections (School Lands), before survey:

#### LAW OF THE UNITED STATES. PUBLIC 20.

AN ACT to authorize settlers upon sixteenth and thirty-sixth sections, who settled before the survey of the public lands, to pre-empt their settlements.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That, where settlements, with a view to pre-emption, have been made before the survey of the lands in the field, which shall be found to have been made on sections sixteen and thirty-six, said sections shall be subject to the pre-emption claim of such settlers; and if they, or either of them, shall have been or shall be reserved or pledged for the use of schools or colleges in the State or Territory in which the lands lie, other lands, of like quality, are hereby appropriated in lieu of such as may be patented by pre-emptors; and other lands are also hereby appropriated to compensate deficiencies for school purposes, where said sections sixteen and thirty-six are fractional in quantity, or where one or both are wanting by reason of the township being fractional, or from any natural cause whatever: Provided, That the lands by this section appropriated in accordance with the principles of adjustment and the provisions of the Act of Congress of May 20, 1826, entitled "An Act to appropriate lands for the support of schools in certain townships not before provided for."

Approved 28th February, 1859.

### New Forage Crops.

#### HUNGARIAN GRASS.

Very much has lately been said about the Hungarian Grass, which is in reality a species of millet. It is the *Panicum germanicum*, known as the Moha de Hongrie. It is grown in several parts of the country, and like the common millet, produces enormously, is very succulent, and is quite worthy of the attention of farmers. According to Mr. Dixon, of Muscatine, Iowa, where it has been grown considerably, it is luxuriant in its growth and produces hay of the finest quality. Horses and cattle eat it with avidity. Farmers in every part of the country should give it their attention, as it will make more and better feed than any other kind of grass now known in the United States. Our Western farmers, in particular, should learn its value; for its destiny is to change the agricultural products of this portion of the Union, and substitute cows, horses, mules and sheep, in place of hogs. We have raised hogs heretofore from necessity, simply because our only reliable crop was corn, and other domestic animals required hay, or its equivalent, which we could not produce with cheapness and certainty.

A good crop of Hungarian Grass is about three tons of hay and thirty bushels of seed to an acre, while it will often go beyond, and seldom fall below this. Such crops were grown last season, notwithstanding the drought.

The seed may be sown in this region from the 1st of May to the 15th of June, at the rate of a bushel to three acres. It should be put into the ground in the same manner as oats, harrowing before and after sowing. The time for cutting is when the seed is nearly ripe, and the whole plant of a fine yellow color. If cut too early, the seed will not be perfect; and, if too late, it will shell out in curing; the stalks will also be too woody. It may be cured in the same manner as other hay. As fodder, after thrashing, it is fully equal to timothy; and when fed out with the seeds in, as it generally should be, it is better than good sheaf-oats.

#### MESQUIT GRASS.

This is a Texas grass, and has been domesticated in Western Virginia. Mr. James, of Kanawha, says of it: "On comparing it with the Kentucky blue-grass, orchard-grass, clover and Timothy, as cultivated on the farm, I am inclined to rank it the most valuable of them all for this section of country. It seems to stand the climate well, completely covering the ground, and springs up soon after cutting, being less affected by drought than the other grasses. It also remains green during the fall and winter, when it is highly relished by stock. It makes a light hay, however, but is greedily devoured by cattle. Last fall, I sowed ten acres more of this grass. I consider it a most important acquisition."

#### RANDALL GRASS.

This is a species of grass discovered about thirty years ago on Doe Creek, a tributary of New River, in Virginia, by an old man named Randall Lucas. It is said to be as highly prized in that State as timothy. The Randall grass may be sown with wheat in the fall, or with oats in the spring, at the rate of a bushel to the acre. It will also do well on fresh, new land, which has never been plowed. As a forage plant, it is more valued for pasture than for hay, being one of the earliest grasses of the spring and the latest of the fall. The second summer after sowing, it may be mown and the seed saved, which matures early in July. It usually grows to eighteen or twenty inches in height.—[Springfield (O.) Ruralist.]

### A Large Reservoir.

The large reservoir at Salt-Spring Valley, built by Capt. Hanford, for supplying that section of country with water for mining purposes, we find some observations of in the Independent. It is stated, this large pond of water covers, at present, somewhere near 640 acres; a mile square. On first approaching this sheet of clear water, it may disappoint the expectation of the visitor; but coming close to its edge, the extent of the area of ground it covers becomes more apparent; yet at no single point on the land near the edge of the water can you see the whole. On account of irregularities and undulations in the ground, the water spreads out in the shape of a T. The best estimation of its extent can be formed by traversing its surface in a boat.

The length of the dam is about nine hundred feet, and twenty-five feet deep in the deepest part. There are two outlets; one in the lower part of the dam, within about three feet of the bottom, and the other near one end, which is ten feet higher than the first named. The dirt of the dam is seventy-two feet thick, fronted with a leaning wall of heavy rocks twenty-eight feet thick. Between the stone wall and the dirt there is a wall of inch plank two thick. The waste-gate is forty feet wide, besides four large outlets cut in the ground at one end of the dam, to guard against breakage being occasioned by heavy rains.

The calculation of the quantity of water contained in this reservoir, as made by Mr. Zivley, is, that it will supply twenty streams of water of twelve inches each, for two hundred and forty days. This is an estimate formed after making liberal deductions for absorption and evaporation. Sufficient water has already run to waste to have supplied an equal amount of water for the same length of time. The ditch is completed for a distance of four miles, and in the course of a week or so more, it will be completed two miles further, or to Fidler's Ranch. Capt. Hanford intends to raise the dam fifteen feet higher, which, full of water to that height (forty feet) will cover an extent of *seventeen hundred acres*. This is certainly a heavy undertaking, and when completed will, it is hoped, be instrumental in disclosing and bringing to light millions of the hidden treasures of the earth.

**WHEN TO WEAR INDIA RUBBERS.**—We have noticed that many persons wear India rubber overshoes in cold, dry weather, to keep their feet warm. This is an injudicious and evil practice. India rubber shoes are very comfortable and convenient for covering the feet during wet and sloppy weather, but they never should be worn on any other occasion—the sole use should always be simply to keep out the water. They should, therefore, be taken off whenever the wearer enters the house, and be worn as little as possible, because they are air tight, and restrain the perspiration of the feet. The air cannot be excluded from them, or any portion of them for any length of time, without sensibly affecting the health. It is our opinion, that no habit tends more to good health than clean feet, and clean dry stockings, so as to allow the free perspiration of the nether extremities.—[Scientific American.]

**WHAT A REPORT OF A BANK FAILURE WILL DO.**—A bet was made at Albany recently, that a large crowd of applicants for relief at the office of the Overseer of the Poor, at least half-a-dozen had money in the Savings Bank; and, to test the matter, a report was circulated that the Commercial Savings Bank had failed. In an instant thirteen of the beggars were rushing madly for the Bank, in order to save their money from the wreck.

### The School of Mines at St Petersburg.

Toward the western end of Vassili Ostroy stands another institution, which is unquestionably the most perfect of its kind in the world—the School of Mines. It was originally founded by Peter the Great, for the purpose of training a corps of mining engineers, and with the gradual development of the mineral resources of Russia, its importance and efficiency can now scarcely be over-estimated. Nearly the whole of the immense building is devoted to collections of minerals, models of all kinds of machinery used in mining, and the similes of all the principal mines, with their shafts, galleries and veins of ore, constructed with the most wonderful labor and skill. The minerals form a dazzling gallery of crude wealth. There is the famous nugget of the Ural—an eighty-pound lump of pure gold; a mass of malachite, weighing 4,000 pounds; a single perfect beryl, weighing six pounds, and valued at \$30,000; crushed sheets of deep violet amethysts; huge blocks of Jasper, of all imaginable hues; slabs of precious marble, and boulders of granite and porphyry, together with ores of platinum, silver, copper and iron—bright and beautiful spirits, waiting for the touch of fire to be released from their dusky prisons. The specimens are of the rarest and most costly character, filling several large halls.

After we had inspected the models of machines, buildings and mines, an old soldier conducted us into the cellar, gave us each a long wax candle, and unlocked a heavy iron door. We entered and the hinges closed behind us. As if by magic we stood in the bowels of a coal mine—in a winding, narrow shaft, traversed by a strata of clay, coal and crumbling slate rock. All the various dips, positions and characters of coal-beds are here displayed in turn. A labyrinth of mines succeeded—silver, lead, copper, gold and iron, imitated with astonishing fidelity to nature. The dampness of the soil, which filled the passages with a raw, chill air, completed the resemblance. At intervals, shafts from above (of very trifling depth) naturally penetrated this subterranean region, and illustrated the various means of communication with the surface. In fact, the School of Mines, from beginning to end, is one of the most thoroughly sensible and practical institutions I have ever seen.—[Bayard Taylor's Russian Correspondence.]

### SPECIAL NOTICES.

#### THE HOME OF BEAUTY.

"Creative Genius! from thy hand  
West shapes of order, beauty, rise,  
When waves thy potent, mystic wand  
To people ocean, earth, and skies!"

What heart does not bow before the altar of Beauty, and worship at the shrine of Genius? Imagination can rear temples, and people them with gods; but Genius is required to make them live—live to our vision, live before us models of themselves.

Here is our castle,  
And here our gods;  
But they are mortal.  
Around these fastidious halls  
The good, the great, the living and the dead;  
And yet they speak—speak all:  
"We cannot meet the speaking eye,  
But we are known, and, knowing,  
Fain would hold sweet converse."  
But as we gaze upon their closed life,  
We know that they are silent  
While they speak, and gaze on us.

Creative Genius! raise thy wand  
And gather round us where we stand  
Within these halls, a living throng;  
That we may raise a glorious song  
To all who act the noble part;  
And tribute give to every art.

Creative Genius! here's thy home!  
And here shall wondrous throngs come;  
Here spend a season free from care,  
To worship the beautiful, good, and fair,  
For it is not a freeman's duty  
To worship at the shrine of Beauty!

Behold these flowers that gem the land,  
These little children in groups they stand,  
While here and there, like angels, soar  
They're smiling on their mother's knee.  
Men, in their prime, each like a brother,  
Joined hand in hand they're linked together;  
Here, too, the aged, the noblest show,  
They, hand in hand, together go.  
Young men and maidens, free from care,  
Single or plighted, like jewels rare,  
Are gathered round this gorgeous Hall,  
This Home of Beauty, in truth we call.

Creative Genius, raise thy wand!  
We now would ask, O let him stand  
Before us; him who all this beauty planned.  
Behold, cries Genius, quickly glance!  
Enough! the artist, R. H. VANCE!

Daguerrean Gallery,  
Corner Sacramento and Montgomery streets.

#### SLEEP! SLEEP! SLEEP!

"To each and all, a fair good night,  
And rosy dreams and slumbers light."

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Who is the man who doth keep  
A mattress the finest and best  
Sleep! Sleep! Sleep!  
Rest that refreshes most true!  
The rest that, while sleeping, our health doth renew,  
Is found on a mattress that's made of PULU!

Sleep! Sleep! Sleep!  
Rest! Rest! Rest!  
Economy tells us to buy and to keep.  
The mattress that is cheapest and best.  
Sleep! Sleep! Sleep!  
On the mattress from JACOB SCHRIEBER!  
If bachelors lie single, then life will not jingle  
Till they're married and purchase one wider!

So come to J. SCHRIEBER'S, they go, when, when,  
Those famous mattresses made out of PULU!

J. SCHRIEBER,  
Jackson street, near Hotel International.

**The Oxygenated Bitters.**—For the cure of DYSPEPSIA or INDIGESTION, Liver Complaint, Asthma, Costive ness, loss of Appetite, Fever and Ague, Heart Burn, Water Braak, Acidity, Sea Sickness, Scoury, Nausea, Headache, Ennui, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers, and others, testify are the only safe, certain and superior remedy for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race.

These Bitters were discovered by Dr. George B. Green, and in their formula differ entirely from that of any other preparation of Medicine. Containing no alcohol—no mineral—no stimulating—retaining their virtue in any climate; they are a "combination and a form indeed" of Medicine which knows no rival in exterminating disease and restoring the system to its proper vigor and health. No matter of how long standing, or be, no matter that it has baffled the skill of the physician, may be cured by the use of Medicine, a single trial of these Bitters will satisfy the sufferer that his disease is amenable to the proper remedy.

In testimony of the many cures effected by this Remedy, reference is had to the written certificates from distinguished individuals known all over the land.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum Building), Boston, Mass.  
For sale by—JAMES MORRILL, HENRY JOHNSON & Co., and REDINGTON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good dealers in medicine everywhere. 23

## Miscellany.

## Education of Sons and Daughters.

We commend the following interesting sketch, from our accomplished friend at the Benicia Institute, and shall always argue that children be educated to some calling, sons most assuredly; but we would urge attention to a country life, or an industrial trade first, as the professions everywhere are more than full. A good trade, well learned, will not do any harm to be learned first, and a profession can be acquired with wealth afterwards. The trade will stand when all others fail.

As to daughters, all accomplishments add to the ornamental part of life; music (other than vocal, that all can have without price), drawing, painting, embroidery, are all acceptable, and are to the happiness of a family what the parlor ornaments are to a household; but, if the latter is empty, or the dinner ill-cooked, pictures or music will not satisfy an empty stomach. The first and greatest accomplishments for a lady are her household, or a thorough knowledge of her plain domestic duties, beginning with the kitchen and progressing over every room in her dwelling, and the girl or woman that has not been educated in these essentials of a good education can never make a good wife, nor find a happy home, and were we to array before us the ruined homes of California, nineteen out of every twenty would be found to have originated in a neglected domestic education. Something more is wanted, friend Sarah, than a semi-quaver. We must first find the key-note to human happiness, and that originates in the family circle. Well educated daughters, daughters fitted to adorn their stations as wives and mothers, educated in all the primary laws of their being, and educated in all the domestic duties of the household, will be found to be the key-note. When that is sounded then will peal forth such a choral sound of sweet semi-quavers and demi-semi-quavers as no music-master on earth ever taught; it will prove the great harmonic anthem of human hearts, and this can only be taught by mothers, and when this is taught, there will echo over earth such an oratorical earth never heard.

## Semi-quavers, No. 1.

BY M. A. SABLES, COLLEGIATE INSTITUTE, BENICIA.

The year 1856 witnessed, all over the civilized world, a brilliancy of society unparalleled. Those whose property supported them launched into the most expensive luxuries. Business men, glancing over their ledgers and journals and seeing the array of figures on the profit-side of "profit and loss," hastened to follow the examples set them, and, of course, through all the grades of "good society," down to the point of its admixture with the lowest elements, all emulated the prodigality of the fortunate elite. The good old maxims of economy were scoffed at, but the most unfortunate result was to be noticed in the bringing-up of children. "Once upon a time" the wealthiest families always educated their sons to some professions; Pater familias, in those days, calculated accurately the "ups and downs" of American life, and would always insist upon his "boys," at least, having a profession, in case his "riches" should "take wings." Thus it is that some of our most illustrious men have sprung from even eminent families, and the Adamsons, Livingstons, Jays and Hamiltons have, from father to son, kept up the name and standing so honorably won for them. But "flush times" seemed to craze all classes, and in the enjoyment of an unexampled prosperity, they forgot all the warnings of experience, and disregarded all the "good old maxims," or contemptuously called them "old fogies."

Suddenly the storm, so unexpected, burst, and it was like the fall of an avalanche. Where but a short time before was the glitter and glory of sunshine, the mirth and the gaiety of undimmed prosperity suddenly was changed into gloom, and the laugh subsided into the sigh, happiness changed places with sorrow, and adversity took the reins from the fickle hand of Fortune.

All listened dismayed to the crash of the avalanche, even if they escaped; but beneath its ruins lay crushed the pampered aristocrat, the fortunate capitalist, the wealthy merchant and the aspiring mechanic. They had not prepared for the storm, they had recklessly allowed the to-morrow to look out for itself, they had cried "old fogies" to the warnings of maxims written by the bitterest experience, and, without warning, they were overwhelmed.

Now, that the crash of the panic has subsided, we can look upon the ruins. The splendid mansion is deserted, its magnificence no longer dazzles the eyes of admiring guests; the "pomp and circumstance" of its owner's wealth have passed away. His prosperity was like the name of a child written on the sands of the sea-shore; his "friends" who have escaped do not know him on the street, and, when he goes home to his miserable wreck of a wife and to his still more miserable children, it is to some mean tenement in a back street, or worse, to some hut in an out-of-the-way alley, in the midst of want and sorrow—where the very poor eke out a lamentable life by desperate resources. The physical wretchedness is not over-painted, but it fails to convey any just idea of the utter despair which has enveloped the minds of those dwellers in the haunts of the poor. Who would believe that the brilliant rotaries of fashion could be so transformed, in such a short period of time? Without a Present or the hope of a Future, what a thing is humanity.

The poverty, which is the most distressing result of the panic which has so lately spread over the world, does not fall, with all its bitterness, so heavily upon men and women as upon the youth of both sexes, who have been brought up in idleness, and who have just entered society; unlike those who have quaffed the cup of pleasure until it has lost its novelty, they have only commenced to sip its intoxicating draughts and are utterly cast down by the misfortunes which have overtaken them, and are not possessed of a solitary grain of philosophy with which to fortify themselves in their sudden "start ahead" in life.

Young persons with some profession or calling learned as accomplishments in the heyday of pros-

perity, have the golden smiles of hope to cheer them onward, and we all know that determined perseverance, urged on by want, is sure to make a living, if it does not lay the foundation for a fortune.

Those without money, and without any resources within themselves, God help them! for if the gall and wormwood of life is not a familiar cup to them it is because they are more fortunate than the generality of the human family.

These remarks lead me to the fact, which is noticed in my "home" correspondence, that "old maxims" are again religiously believed in, now that necessity, once again, proves their value. Economy is a word decidedly understood, and the "old families" who have survived the panic are again bringing up their children with a prudent appreciation of the uncertainty of wealth and position in this country.

In every family of means I hold that the boys, not only, should be compelled to fit themselves for some profession, but that girls should be carefully taught and finished in either painting or music. Literature is almost an inseparable companion of Art, and a cultivation of either painting or music will lead to a fine taste for, if not a success in, the literary world. I do not think literary ability a sure means of livelihood, but I would have it cultivated equally with some useful art, and then the two would be a safe-guard against any change of circumstances. Panics could come and would not leave such destitute, miserable creatures as are at present known to exist in all the great cities. Why, I know one family in New York who are not half as unfortunate—for they have enough to keep them alive, as too many who have fallen have not—whose "young men" hang about lazily "down town," and who are fast becoming too intolerably "sloppy" for even their kind-hearted friends who recognize them now, and the "young ladies" cry from morning till night. Kind reader, do you not think it would be a noble sight to see those young men working hard to "get up again," and those girls cheerfully "making a living?"

Young ladies, nowadays, are brought up shamefully helpless. It is not their fault, but is directly chargeable to their parents, who, intent on the business of life themselves, and in the hope of providing for their future, fail to insure it by educating their offspring properly. A profession given to a child is a fortune within itself. Parents, think, for a moment, how your darling child—your beautiful daughter—will be situated if you should die suddenly without any provision having been made for her. Listen to me, and do not be impatient and say "fudge," while I take you about and show you the temptations which we know are set for the unfortunate. If she escape these snares, let me take you into the house of her who has sold herself in marriage for wealth and position, those will-o'-wispes, tempting so many maidens, born for better things, to destruction.

If she escape this, let me take you into houses where the orphan relative is the child of charity. Shall I paint her wretched dependence? Shall I tell you how utterly broken-hearted are her stifled sons, when she goes up into her miserable little dormitory and thinks of the cruel insults which have tortured her during the day? Ah! you shrink, and to recite such facts is a painful task. Poverty the most grinding, misery the most unfortunate, temptation the most irresistible, shame the most deplorable—these are the changes which can be rung upon such a theme. Parents, look upon these words, reflect upon them, and then, if you like, you can turn from me and impatiently say I have preached you a sermon where I ought to have entertained you.

HOLLOWAY'S PILLS AND OINTMENT.—A protection against counterfeits exists in the water-mark, "Holloway, New York and London," which appears in semi-transparent letters in every leaf of the book of directions. If this is not seen when the paper is held to the light, the same is spurious.

Sold at the manufactory, No. 80 Maiden Lane, New York, and by all druggists, at 25c., 63c., and \$1 per box or pot.

DR. WISTAR'S BALM OF WILD CHERRY is truly a balm. It contains the balsamic principle of the Wild Cherry, the balsamic properties of tar and of pine. Its ingredients are all balsamic. Coughs, colds, and consumption, disappear under its balsamic influence. Buy none unless it has the written signature of "L. Bolls" on the wrapper.

## 1859. FREEMAN &amp; CO.'S

NEW YORK AND CALIFORNIA EXPRESS.

ESTABLISHED 1833. REORGANIZED 1859.  
Capital Stock, \$500,000.

HAVING APPOINTED AGENTS AT ALL THE PRINCIPAL PORTS IN CALIFORNIA, OREGON, WASHINGTON TERRITORY, BRITISH COLUMBIA, AND ON THE NORTHERN AND SOUTH COAST OF CALIFORNIA, AND MEXICO, WEST COAST OF SOUTH AMERICA; also, at Honolulu, Sandwich Islands, are prepared to transport a

GENERAL EXPRESS, Forwarding and Commission Business.

With safety and dispatch, offering facilities unsurpassed by any Express Company for Transporting Freight, Packages, Parcels, Letters and Treasure.

NOTES, DRAFTS, BILLS, AND ACCOUNTS, Collected, and returns promptly made.

COMMISSIONS AND CONSIGNMENTS.

Orders for the purchase of Goods, and all matters pertaining to a Legitimate Express Business, promptly attended to. GOLD DUST forwarded and deposited for assay or storage, and proceeds promptly returned.

TREASURE AND JEWELRY forwarded and insured on our open Policies, held from the best London Insurance Companies. Also, FREIGHT, PACKAGES and LETTERS, by the Steamers sailing on the 3d and 29th of each month, to all parts of the Atlantic States, South America, Canada and Europe, connecting in New York with Messrs. H. S. LANSING & CO.'S American-European Express to Europe. Also, to all points on the Northern and Southern COAST, by each Steamer, in charge of faithful and experienced Messengers; also, to Guaymas, La Paz and Mazatlan, by every conveyance.

## NURSERY BUSINESS.

TREES! TREES!! TREES!!!

GRAVES & WILLIAMS,  
FRUIT  
AND  
GENERAL COMMISSION MERCHANTS,

Nos. 67, 69 and 71 Merchant street,

SAN FRANCISCO.

(Opposite Washington Market.)

WE, THE UNDERSIGNED, RESPECTFULLY inform our friends and the public, that we are the Agents of A. H. Myers' Pioneer Nursery, Alameda county; L. Prevost, San Jose Nursery, Santa Clara; E. W. Case's Nursery, Santa Clara; and are prepared to fill orders, large or small, for Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Plants, &c., of every variety and description, at the shortest notice and on the most favorable terms.

We are also the sole Agents of Rumford and Bro., Contra Costa county, for the sale of their large crop of Sweet Potatoes, raised from genuine Carolina Seed of the Red Variety. Messrs. Rumford & Bro. received the First Premium for their Potatoes at the late Mechanics' Fair held in this city, and at the Santa Clara County Fair, held in San Jose during the past autumn.

We are also the sole Agents of Daniel L. Perkins, of Alameda county, who is the Pioneer Seed Grower of California, and who is giving his undivided attention to the raising and preparing Garden Seeds for this market.

We are also Agents for the Nurseries of D. T. Adams and Joseph Lee, San Jose. Farmers and Gardeners desiring fresh and genuine Garden Seeds, which can be warranted true to label, will do well to examine our stock before buying elsewhere.

GRAVES & WILLIAMS,  
Nos. 67, 69, and 71, Merchant street,  
James Graves. (21) H. F. Williams.

## DOMESTIC SUMMARY.

One day lately, says the Shasta Courier, a Chinaman working on Flat Creek, five or six miles from Shasta, on the Sacramento trail, took out a lump of gold worth \$700.

On a trial of Matteson's Improved Reaper at Stockton, on Tuesday last, it was pronounced superior to any other implement of similar character.

The Nevada Democrat says that one pan of dirt, taken from the Nebraska claim on Monday last, yielded thirty-three ounces of gold.

The "Heroes and Martyrs of Science" was delivered by Andrew J. Moulder, Esq., before the Stockton Society of Natural History on Tuesday evening last.

A bill has passed the Legislature, and will doubtless become a law, for the suppression of Obscene Publications in this State.

A large fire occurred at San Jose, on Monday night last. The block of buildings next south of the Catholic Church was entirely destroyed.

The Hay season has commenced early in San Diego county. It is said a number of farmers are now engaged in cutting grass. Usually, mowing does not begin there before the 9th or 10th of April.

A surgical operation upon the body of a Chinaman, who has been for some time past afflicted with dropsy of the abdomen, was performed at Placerville, and two large pailful of water ran from the incision.

It is reported that a rich strata of coal has been discovered near Crescent City, and that a company has been organized for the purpose of working it, under the name of the McGruder Coal Company.

A Post Office has been established at San Antonio, Monterey county, and Mr. Francis Sylvester appointed Postmaster. Persons having correspondents in San Antonio, Alameda Co., must be especially careful in addressing their letters, giving the name of the county in full.

At the election in San Jose, under the new charter, the following were the successful candidates: Thomas Fallon, Mayor; J. D. Gonn, Marshal; W. R. Davis, Assessor; A. Pfister, C. W. Pomeroy, J. M. Williams, R. G. Moody, and James Morrison, Councilmen.

A KEEPER, indicted by the Grand Jury of Sacramento for an assault upon Samuel Norris, has been held to bail in the sum of \$3000. It will be remembered that Mr. Norris' injuries were so severe that for many days his life was despaired of.

A WEEK of the most delicious weather (says the San Juan Press of the 9th inst.) was succeeded on Thursday night and Friday by one of the heaviest rains which has fallen this season. It is still coming down, but is very warm, and full of encouragement to the agriculturist.

SEVERAL of the principal business men of North San Juan have entered into a written agreement to close their stores upon the Sabbath, on and after the 17th inst. The Press remarks: "That is the way to do it. If the people wish to observe the Sabbath they can easily do so without compulsory enactments; and, if they do not so desire, such enactments are tyrannical."

THE Act to grant the right to improve the Navigation of Petaluma Creek has become a law. The City of Petaluma is authorized and empowered to raise funds, build a lock, straighten and otherwise improve the navigation of Petaluma Creek, and collect nine cents toll per ton on all shipping passing through it, for a period of twenty years; at the expiration of which, the stream to be free.

THE Legislature has passed the bill granting to the counties of Sonoma, Mendocino, Napa, Trinity, Siskiyou and Humboldt, the State's portion of the Poll Tax, for the years 1859 and 1860, for the object of constructing a wagon Road from Cloverdale to Humboldt Bay. As this Road will be of great benefit, we hope it may soon be completed.

THE Celestials have hit upon an admirable method of liquidating the funeral expenses of their defunct countrymen. The Placerville Observer is informed, that whenever one of their number dies, they immediately send word to the Coroner that a suicide has been committed. The Coroner holds an inquest on the body, and no money being found upon the same, the official humbly furnishes the corpse with a coffin, and gives him a burial free of charge to his sharp friends.

NEW DISCOVERIES.—Rich placer diggings have been discovered between the Forks of the Stanislaus River, about eight miles from American Camp, and fifteen northeast from Columbia, says the News of the 7th, and there are from fifty to sixty miners working there, who are making good wages. There is an abundance of free water. It is thought that these diggings will prove of great extent and value. The "Philadelphia Diggings" is the name of the new locality....The claims around Columbia, now that the miners have plenty of water, are paying exceedingly well. We hear that many of the claims at American Camp are paying remarkably well; in fact, from all quarters the accounts are very encouraging. The bankers in Columbia have bought nearly \$50,000 worth of dust between the 1st and 7th of the present month. The Stanislaus River Flaming and Mining Company's works are making great progress, being constructed in a good and substantial manner.

ANTICIPATED ARRIVALS.—Quite a bevy of important personages are passengers on the Sonora, now due. Among them we could name our Honorable Senators, Messrs. Gwin and Broderick and Representative McKibben and Gen. Denver. As in duty bound, we should welcome back again those who have been laboring for the great interests of the State. But we would more particularly welcome one whose mission has been of particular interest to our State, and in whose efforts we have been more than usually interested. We mean Col. Turner, who went East to procure the machinery for the first woolen manufactory in California. That mission has been completely successful, and that machinery was shipped on the clipper Cyclone, on the 27th February, and we trust to see this manufactory under full power, the spindles buzzing, by October next. To an enterprise of this kind, every lover of California should bid God speed, for it is intimately connected with the prosperity and glory of our State.

THE ELEPHANTS ARE COMING.—These notables are looked for with much anxiety. Every day now may be the day when the first elephant will step upon our shores, although there are hundreds of our citizens who aver they have "seen the elephant."

SUBSCRIBE FOR THE FARMER.—We have a good carrier, who will leave it at your houses—only a bit a week, and full of matters of interest to all who love California.

LOW PRICE OF PASSAGE ON THE RIVER STEAMERS.—CROWDS OF PASSENGERS.—We were on board the steamer Queen City on her upward trip two weeks since, and should guess there were from 600 to 1,000 passengers. Price, \$1, cabin; 50 cents, deck—and such a crowd, and such an atmosphere as one was required to breathe, was more than one dollar's worth. We heard many persons say they had rather pay \$5 and go in less crowded boats—feel safe and comfortable, than go in such a jam; it shows, however, that people will travel when it costs but little. All was done that could be by officers in such a crowd—but we could not but reflect upon the risks in case of any damage to the steamer, as there were not boats enough to carry one-eighth of the passengers. We would suggest that the owner of the Queen City should cause the windows above the saloon to be opened for fresh air, as the ventilation is bad, and if this steamer is to go loaded with such numbers, to have more small boats. We would hope also, that the saloon be kept free, if possible, from the fumes of tobacco, as several ladies were made sick by persons who had not good manners enough to keep them from smoking, even directly at the entrance of the ladies' saloon. There is also a great want of good breeding manifested by many persons traveling on steamers; they seem to forget that it is ill manners to stand or promenade in a ladies' saloon, with hat on; they forget, also, that their courtesy and good manners to woman, and their respectful conduct to her sex is always a tribute to their own mother.

FROM SALT LAKE.—The mail arrived at Placerville on Sunday last, bringing dates to March 30th. Affairs are daily becoming more complicated at Provo City. Over one thousand soldiers are in attendance at that place to assist Judge Cradlebaugh in dispensing justice, and protect the Grand Jury. Five hundred of the citizens of Provo petitioned for the removal of the troops, and a long and spirited correspondence has passed between the Mormon authorities and Judge C. Several officials have been charged with crimes, and fled to the mountains. Judge C. refuses to naturalize any foreigners who have borne arms against the United States within three years. The male portion of the inhabitants of Springville have fled since the appearance of the troops in that vicinity. The usual course of threatening the lives of all witnesses is carried out. Their property in many cases, has been seized on trivial pretext. All parties are of the opinion that this state of affairs cannot long exist. All was discord when the mail left.

ARE THE STARS INHABITED.—If in the universe, there are worlds so vast in their dimensions, is it reasonable they would be uninhabited? Are they the regions of eternal silence? Does no eye behold their beauties; no heart breathe its adoration to the Giver of all good, in those distant worlds? If the earth, insignificant in comparison, is filled with created intelligences, and teeming with life in every form, from man that is "a little lower than the angels," to the worm that he treads beneath his feet, from the Leviathan and Behemoth, to the smallest variety of Animalcula; if every leaf is a "colony of insects," and every drop of water contains myriads of creatures, and every hollow in a grain of sand is inhabited; is it not altogether reasonable that those shining worlds that gem the brow of night are the abodes of innumerable beings? Not fallen ones as we are—heirs to pain and sorrow; but happy intelligences, who join in ceaseless praise to Him, "who telleth the number of the stars, and calleth them all by their names." [West Tenn. Argus.]

The entire cost of the Government buildings in Washington, including statutory and paintings, has been \$14,709,339 09.

## THE CALIFORNIA FARMER.

## PROSPECTUS FOR VOLUME ELEVEN.

THE CALIFORNIA FARMER has now entered upon the New Volume, numbering the Eleventh, and the highest attained by any weekly journal on the Pacific Coast, and while we do not arrogate to ourselves the honor of having been longer engaged in the publishing of a journal than any of our contemporaries, several having been longer before the public than our own—among which stands the venerable Alta California, the Golden Era, and the San Francisco Herald—we do claim to have been as long or longer steadily pursuing our calling, without change of the original founder; having now been five years pursuing, with an unflinching faith, the claims of an interest which we believe the greatest, noblest and best in our land.

As the founder and proprietor of the first Agricultural and Mechanical Journal on the Pacific, we believe we can claim with some degree of pride and satisfaction, a just share of support from the citizens of this State, for our steady advocacy and adherence to the great industrial interests of California. It is not necessary for us to enumerate all the good things we shall do in our New Volume, nor promise wonderful things, for we trust the character of the FARMER is too well known to require this at our hands. But this we do promise:

We mean the New Volume shall be superior to all its predecessors, and our aim shall be to make every Volume bear evidence of improvement. We mean the California Farmer shall be the true and fearless advocate of the great interests of the Agriculturists of California; it shall also be the bold and zealous advocate of our "home manufactures," and earnestly battle for Mechanics and Artisans, as the brethren of the FARMER. We shall ever advocate the cause of Agriculture, Mining, Manufactures, and the Mechanic Arts, as the basis of our wealth, prosperity and happiness. We shall advocate the cause of Education, as a means of perfecting our happiness. We shall, above all things, advocate the Blessedness of Home, Education for Home, Beautifying and Protecting Home and the Homestead. These are the principles that will guide us in our labors, and as the guiding star and great light of home is woman, so we shall ever plead for the education of woman as the sure way to elevate and purify the world.

These are the cardinal principles of our journal, and with these we desire to place it on every farm, in every workshop, manufactory, warehouse or place of business in our land; and we further desire, to have it in every family circle in our glorious State—it is there we would plead for the cause we advocate, there we hope to find our truest friends; to them we look, on them we rely for the continued success of the work in which we are engaged.

As we hope to have a large increase to our list with our New Volume, we may not appeal to all our friends for their generous co-operation in this work. As we wish to offer a just return for any exertion made in our behalf, we will offer the following:

BOUNTY TO NEW SUBSCRIBERS: Every single subscriber, with \$5, shall be entitled to seeds we shall distribute in February, consisting of several thousands of packages. Each new subscriber to receive five packages.

Clubs of three subscribers and \$15, will receive the splendid colored plate of California Fruits and a copy of the Little Pilgrim, for one year.

For five subscribers and \$25, we will send five copies of the FARMER, the Atlantic Monthly and Arthur's Home Magazine.

For ten subscribers and \$50, we will give ten copies of the FARMER, Atlantic Monthly, Arthur's Home Magazine, Harper's Monthly, the Little Pilgrim, and an extra copy of the FARMER mailed to any friend in the Eastern States.

Thus, by a little exertion, our friends may kindly favor us, and at the same time secure to themselves a valuable library of home literature, such as ten subscribers would secure to them.

We have made arrangements to receive the above publications for a Club that we hope to receive, and we now leave the work in the hands of our friends, with the grateful thanks for many favors in the past years of our FARMER. WARREN & CO.

TO CORRESPONDENTS.—We return our heart-felt thanks to those kind friends who have so quickly responded to those base innuendos against the FARMER and its correspondents, as alluded to in our editorial of last week, under the caption of "Gloves Off." These letters will have prompt attention and prominent place. The spirited response from our gifted correspondent, N. B. H. entitled "Domestic Innuendos," will have place in our next.

The communication from J. F. E., from the "Sunny South," has afforded us most sincere pleasure; the tone and spirit of that letter show the impress of a strong and vigorous mind, a lofty aspiration, high resolve and exalted virtue. We shall avail ourselves of the opportunity to extract portions of these "good thoughts" and present them with other gems that we find scattered over every page. For the tribute to our journal and its influence we are profoundly grateful.

## SPECIAL NOTICES.

MRS. P. E. ROGERS—Family Sewing. We are pleased to learn that Mrs. P. E. ROGERS, whose skillful operation upon the GROVER & BAKER SEWING MACHINE has elicited universal commendation throughout the State, and at all the Fairs been awarded the highest Premium, has again resumed her business at the NEW STORE of Grover & Baker's Sewing Machine Company, No. 118 Montgomery street, where a description of Plain and Ornamental FAMILY SEWING will be executed in the best style of the art.

BOLTING CLOTHS prepared for Flouring Mills, with neatness and dispatch.

The following Complimentary Notice from the Committee of Awards at the State Fair at Marysville, was sent to the Executive Committee, and thence to MRS. ROGERS. This will testify her ability to please those who may be disposed to offer their patronage:

"We unanimously request that the highest mark of distinction in your gift, be awarded to Mrs. ROGERS, as being the Best Operator on Sewing Machines."

We understand that with most commendable enterprise, she was the first Lady to introduce a Sewing Machine in operation into our State, and the beautiful specimens of her work exhibited to us, show with what perseverance and intelligent industry she has mastered perfect practice of these Machines.

Signed: P. Toogrey, Chairman.  
Mrs. S. H. Copeland, Messrs. Henry Willis, 10-3m  
Mrs. R. L. Stratton, James Devore, George B. Davis."

TO PURCHASERS OF FINE STOCK.—All persons who may desire to import the best kinds of Stock—either Horses, Horned Stock, Sheep or Swine, or Domestic Fowls—can do so during the present month, and have them come out in charge of the AGENT we have just dispatched for the purpose of bringing out some of the finest Stock that can be bought. This is a rare chance, as we can save to purchasers considerable expense, while we secure great care of the Stock and an assurance of safety.

WE ARE AGENTS OF THE BEST STOCK BREEDERS in the Eastern States, and can secure to purchasers rare bargains, as we have special advices by last mail, of the best Stock offered for sale. 10

## The Appropriate Sphere of Woman.

The dignity and virtue of the female character cannot be too highly estimated, nor too securely protected. It is often remarked, and we must acknowledge as justly so, that woman was first to transgress; but was she not first to obey. As she was first to introduce sin, so she is first to expel it. In view of these facts, every person must see the important position she occupies before the world. Her influence upon society is great, as peculiar and positively indispensable to its highest elevation. She is capable of exerting an unbounded and almost irresistible dominion over the affections and conduct of the other sex. That this is right, and as it should be, all will admit. It should be the ambition of every true, intelligent woman, to see that she is exerting the right kind of influence, always keeping in her appropriate sphere, never departing from her characteristic graces. Modesty is her greatest and brightest ornament. See the woman who may have a beautiful face, a form which might serve as a model for the sculptor, conversational powers without limit, everything, apparently, to make her attractive; but if she lack the requisite share of modesty, how unlovely she seems; and when woman loses her loveliness, her influence ceases over the other sex as well as with her own. But the woman with a plain face or even "ugly," a form perhaps really ungainly, if spoken to, blushes for a reply, driving her wits all away, never saying anything witty, wise, or smart, but if she acts the modest woman, it never remains unnoticed or unspoken of. She is often referred to as exemplary; in her deportment alone rests her charm, her loveliness.

An act that would be delicate and modest in a man would not become so in a woman; so, on the other hand, what would fall delicately and modestly on a woman, would be decidedly tame in a man. On this principle, if we see a man partake of the feminine character we call him effeminate; and also of the woman who partakes of the characteristics of man, we call her masculine. These terms, so applied, never express admiration but the reverse, something out of place, undesirable, unlovely.

It is easy to conceive of positions that woman may be placed in, where acts more suitable generally for man to perform, would rest as gracefully and with as much propriety upon herself. In the case of a widow, who has been left with a family of children, and only a small property to depend upon, perchance a little home, which, if judiciously managed, would give her a comfortable support, without means to employ talent, she feels the necessity of going before the bar, and modestly, shrinkingly pleading her own case. The wife of the soldier on the frontier, who has accidentally heard of a move or some stratagem about being taken by the enemy, that she knows would be to the advantage of her husband to be made acquainted with immediately, she reflects a moment, then mounts her charger, putting the whip on, gliding swiftly along over plains, fording streams, enduring the heat and cold with a look of triumph and satisfaction in knowing that she will be the means of great assistance, or perhaps will be instrumental in bringing about peace. In the battle-field, too, there is a place for woman: "Not where man strives fiercely with his brother man is he seen—not with clamor and noise, bearing fire and sword, does she come; but quietly bearing water, and oil, and lint, and soft-lined bandages, to soothe, heal, and bind the bleeding, festering wounds."

To define the position of man and that of woman, just where the masculine ends and where the feminine begins, would be as difficult as to point out the horizon of the setting sun just where the light of day ceases to exist and that of night takes its place; but that the result is equally plain, that there is a difference, as the light of the sun differs from that of the moon.

I would not assume any authority in giving instructions as to the appropriate sphere of woman, but rather prefer to be allowed to refer you to Divine wisdom in this delicate as well as important subject, so will proceed to give some extracts from the "law and testimony."

"Let your women keep silence in the churches, for it is not permitted unto them to speak, but they are commanded to be under obedience as also saith the law. And if they will learn anything, let them ask their husbands at home, for it is a shame for a woman so to speak in church."—1 Cor. xiv, 34, 35.

Here is a plain command and declaration that females should be silent in churches, and act in subordination to the authority of man. It is stated in unmistakable terms, that it is neither modest nor delicate for a woman to speak in the church; and if it is not safe and proper for her to hold forth before a congregation of church people, where can there be a place more proper? If, as we have shown, it is not proper for her to ask a question in public meetings, but ought to do it at home, much less ought she to advance her own views or interests, or assume dictation what others should do. "That the aged men be sober, grave, temperate, sound in faith, in charity, in patience. The aged women likewise, that they be in behaviour as becometh holiness; not false accusers, nor given to much wine, teachers of good things; that they may teach the young women to be sober, to love their husbands, to love their children, to be discreet, chaste, keepers at home, good, obedient to their own husbands, that the word of God be not blasphemed."—Titus ii, 2-5. The same Apostle sees it necessary to allude to those who are "wandering about from house to house; and not only idle, but tattlers also, and busy-bodies, speaking things which they ought not."—1 Timothy vi, 13. The following strong language to wives, showing the duty to be subject to their husbands; at the same time instructing husbands to love their wives as their own bodies, instead of treating them as heathen do: "Wives, submit yourselves unto your own husbands, as unto the Lord; for the husband is the head of the wife, even as Christ is the head of the church; and he is the Saviour of the body. Therefore as the church is subject unto Christ, so

let the wives be to their own husbands in everything. Let every one of you in particular so love his wife even as himself; and the wife see that she reverence her husband."—Ephesians v, 22-24, 33. "But I would have you know, that the head of every man is Christ; and the head of the woman is the man. Neither was the man created for the woman, but the woman for the man. For this cause ought the woman to have power on her head because of the angels."—1 Cor. xi, 3, 9, 10.

The foregoing and many others might be produced to show inspired views upon the delicacy and propriety respecting her reverence to the other sex, and her appropriate reverence and homage to her husband; and still further, she is represented as the glory of her husband, as he is the glory of God: "For as much as he is the image and the glory of God, but the woman is the glory of the man." After investigating the scriptures upon this subject, seriously, I do not see how one can come to the conclusion that a marked distinction is not made between the duties of the sexes. Yet I am aware that many look upon it as unchristian, artificial, prejudicial, something that ought to be broken up. With but a few exceptions, all readers of the Bible understand that its meaning is that the man shall sit at the helm, guide public sentiments, control public movements; while woman was to move in another, though no less important or honorable sphere. The physical constitution of the sexes clearly indicates a difference as to their proper calling. The more manual labors, business that would be out of doors, where they would come in contact with the world in various positions, as far as the labor is concerned might often be performed by a woman; yet the surrounding circumstances would render it improper and her finer feelings liable to be wounded: the toils of the field, the mechanic arts, the cares and anxieties of trade, the duties of the learned professions, all naturally devolve upon man; while the more delicate and retired labors rest upon the woman in her own household, about her own fireside. As clearly it is shown in the Bible that all affairs of State, both civil and political, all affairs of the church, of its government, of public teaching, every mode of evangelizing and reforming the world, all the more public literary and religious instruction, especially those embracing both sexes, should be headed and controlled by man. While doing this woman is not robbed of opportunities of influence. She has as many mediums through which to express her sentiments as man. In her circle of acquaintances and friends, among her neighbors, through the press; in all these ways the fruits of her intellect can be committed, and generally with much more force than they are aware of.

Then in the language of one author, "her first duty is to give herself up to God, then take care of her house." Let her well consider how much influence a well regulated household has in her circle; of the importance of a bright, neat fireside to greet her returning husband and family after their fatigues of the day; of the necessity (which is easier accomplished than many imagine) of wearing a smile and exercising patience to listen to the oft-told doubts and fears of different enterprises, the anticipated wreck of this scheme or that, to encourage the faint hope he may have of some desired object. In such hours a word from a wife has a magic effect. To look well after the household, watch all the little avenues of waste, to see to it that the table is well and comfortably spread, making everything furnished tell to the best advantage; this is not all, or the most important claim upon her: the care and nurture of her children should stand prominent; their young and plastic minds are to be moulded by somebody; if a mother does not do it, somebody else will do it for her; as likely as any, they will receive their early lasting impressions at the corner of the streets, if the mother does not do her duty.

Much has been said and written in regard to woman's rights and woman's wrongs; that they are not allowed to put their vote into the ballot box, etc. I would like to ask what better opportunities, more direct, need woman have upon things of this character than she now has, should she make all of the means within her reach. Her little children are ever around her, she hears them in their little conversations, little trades, schemes, disputes, must know their inmost nature, all their motives, their natural inclinations, and often times with one word can direct them from wrong to right. What "my mother" says, with the child is truth, and if truth can be added to it, it becomes doubly so in after years with the same child. Her everyday instructions should rest upon their minds like the dew upon the tender plant in the morning sun. In imparting her own intelligence upon her little son, is she not at the same time planting the same principles that are dear to her in him? If she pursues this course through life with delicacy and modesty, she will not fail to see her own sentiments and principles expressed in that son's vote, as he goes to deposit it in the ballot box, in all his walks of life, his religious views; in short, every act of life will show the character which she has helped to form. And the daughters too are to be reared to fill as important stations as the sons, to be so educated as to diffuse around her as she mingles in society, the pure and mighty influence of female piety, always savoring with modesty, delicacy, good sense, intelligence, and benevolence. The taste of music, among other accomplishments, should not be neglected. It is all this that makes woman a "help meet" for man. It is these virtues that make woman what she should be. The more cultivated, more refined, the better educated, in the broadest sense of the term, the better wife does she make, better mother, better neighbor, more capable of doing her duty, filling the position she may occupy in life.

But when woman steps aside from her own position, goes out into the world to form societies, get together gatherings, attempts to preside over meetings, making gross blunders that the dullest one among them discovers, raising her feeble voice to promote her own particular interest or notions,

making bombastic speeches, asserting once in every five lines that nothing can be right, unless "the women rule," "until woman takes the lead," what a sad wreck of woman's loveliness is she then!

It would be hard for her to conceive how she is looked upon by honest, intelligent, Christian men. To advise her, or to attempt to correct her, would but tend to inflame her; at once considering such gratuitous notice as persecution, such as the righteous must suffer. I would speak tenderly upon this subject, knowing that many, in embarking upon things of this character, are honest at heart, and their motives benevolent and pure; but they fell among bad teachers. Some flaming lecturer, or plausible magazine, or some diplomaless doctor, or an unfinished lawyer, thinking to manufacture popularity out of it, have started the project; and, as sober, decent people see the ridiculousness of their position, they expostulate with them; but all to no purpose. They pursue the onward course, supposing that everything said to the contrary, is "nothing but what they must expect," and that "they must certainly triumph in the end."

Far be it from me to impugn motives, so long as any favorable construction remains for them; and those persons, who are actuated by such views and motives as these, are surely rather to be pitied than reproached.

To visit the poor, never forgetting to take with you some article of clothing or some delicate food for the invalid, or some book that is not needed in your own family (in which perhaps you may have the satisfaction of knowing, in after years, the little student found the first round of the ladder to fame); to privately assist in benevolent and humane objects; to be employed as teachers, either secular or religious; these, and other kindred acts, can be performed by woman, and becomingly, modestly and delicately. A more heavenly influence is she exerting in this way than in any other, and "in her beautiful garments."

The magnitude of the subject, is my apology for encroaching so much upon your columns with this yet unfinished article. Volumes might be added to those that are now in the hands of the public, and the theme not exhausted. That the mantle of charity will be thrown over the readers and critics of the foregoing, is the hope of your new correspondent.

March, 1852.

[We shall always be most happy to hear from "Ivy Dell" upon the theme she has so well presented—"The Appropriate Sphere of Woman" is Home. To this point we have ever aimed; while we would urge the highest intellectual attainments for woman, so as to fit and prepare her to preside over that Home, and make it a little Heaven below.

"Ivy Dell" has brought strong arguments to support her position. And all that we have ever said or published in this journal, has tended to this most desirable end. The more woman is educated and fitted to preside over the household, to fulfill the duties of wife and mother, the more influential will she become; not only in her own household, but wherever her influence is felt; and the brighter she shines in the "Home circle," the more beautiful will her character appear everywhere. And when woman has been truly and properly fitted to be a wife and mother, then she will, in deed and truth, speak in our churches, speak in our councils, and control our ballot-boxes—for the Mother will speak and act through the Son.]

## Stories from Real Life.

[We mentioned in our eighth number the story from Mother Ruth. We now present this as one of a series. We have on hand several valuable Stories, which truthfully and vividly portray scenes from Real Life, as they have occurred and are occurring daily around us. These Stories emanate from one whose position in life, as a wife and mother, and her extended intercourse among the best of our land, enable her to give life-like pictures, which will not fail to interest our readers. The writer will bear the *nom de plume* of MOTHER RUTH.]

FRIEND FARMER! A leisure hour or two of time, furnishes me with the desire to write something for employment in mental exercise; but I am somewhat at a loss as to what shall be the subject on which to write. Never mind! I shall write, nevertheless, whatever happens to be reflected in the mental department of my being; and, if anything worth reading is produced, my time will not be lost.

The work of life! Is it pleasure or pain? or is it diversified—pleasurable at one time, under certain circumstances; painful at another, under different circumstances? Then, are we, to an extent, creatures moulded by circumstances? See a contented self-controlled, happy woman; perchance, the mother of happy, because healthy, children; the wife of a man self-ennobled, because self-controlled; a placid smile beams on her countenance; her words are tender, her accents mild and soft, and well attuned to grace her every movement; in her domestic sphere, all look up to her as a presiding spirit in the family, almost divine; she is blessed with affluence, with ease, with refined luxury, with beloved friends who wait with love-tokens—all is joy and peace with her; the work of life is all of a happy cast. Why? She is in the midst of happy circumstances; she is, I may say, compelled to be so; because, she cannot be otherwise, under the circumstances that operate upon her. But, change those circumstances, and I greatly fear the character of the individual would undergo a like change. How few, comparatively, can bear reverses; how few can bear the hard places in life's work, without exhibiting almost opposite phases of character; and how often has it been that I have heard the remark, that such a woman was always in trouble, always out of humor, or something of the kind, when all originated in a train of circumstances, operating directly upon her, calculated to disturb her equilibrium—all making the work of life hard to perform; and others, by a want of sympathy with, or for her (which some call charity), only add to her already perplexing circumstances by finding fault; when the only work we should do, ought to be, as far as possible, to aid her to overcome or remove that which makes the work of life painful and hard.

O, I deplore a want of this sympathy for the sufferings of others in our world! Are not all of our race susceptible of happiness? But all have not the power to be even comfortable, under cer-

tain circumstances; and, foremost among them, is limited means—small property, the money-want specter—haunting the imagination from morn till night; the money-lack influence thrust upon them daily, without the power of gold to ward it off, or protect them from the ten thousand unpleasant mockings or scourgings forced upon them by the thoughtless multitude. O, this has slain many, degraded many more! made them victims, because they were not so wealthy as some others, who felt themselves better than they were, by reason of wealth, and could not associate with them because they were poor. Yes, you little spring is diminutive, compared to the mighty river; but, thank heaven, its waters are as refreshing to the thirsty; as if drank from the mighty river! Behold, the little rose by the wayside can give forth its sweetness, though no culture is bestowed upon it; it is as good as the loftiest tree in the forest. All have their place: the pure lily will rear its head in a pond or slough; and some of the most delicately beautiful flowers we have, are only made less beautiful by a very highly stimulated soil—just as some people are spoiled by wealth; they overgrow themselves, and lose their natural loveliness, as flowers do when they become gorgeous. The charm of beauty is gone in both: that of a well defined character of its own.

Yes; and in your neat little dwelling, in cottage form, there dwells, perchance, one who is far more what God designed woman to be in our world, than the occupant of that spacious mansion; one perhaps who, had she been cradled in the lap of splendid luxury, would have been a benefactress to the country which gave her birth and the age in which she lived; with a large soul, she is rich in good works, but her means are scanty. Her rich neighbors may toss the head and call her a poor woman! Will she heed it? I hope not.

I would strive to infuse into the soul of woman a spirit to bear all such things. The grave is a leveler of all such distinctions between rich and poor, and we must all go there; worms wait for all alike; all the trappings of wealth, in the grave, are not respected by them.

See again, the sun-burned sons of daily toil passed by with a sneer, by one who happens to be able to live without work, or is a professional man, or has more wealth—no matter how he came in possession of it, he has it, and that is sufficient to give him importance.

Look once more, at the children of the two; even there you will find this corruption, in its baneful effects—one mocking at the other because not so well dressed, not so well off.

O, it works everywhere! In the hearts and acts of some; and it makes misery in our world among earth's sons and daughters—amongst the old and the young. I wish human beings could see how much misery; how much corruption and degradation, it has caused in our world.

No wonder Jesus, the Savior, called only the poor, the lowly ones, to follow him in the regeneration; and, to them he committed the divine principles of life to redeem the world; to them he declared mankind a brotherhood, and all the members valuable in themselves. Never once teaching that wealth gave preeminence, or made people worthy of exaltation. It is man who made distinctions, based upon false principles, which have produced a false state of society, reversing the order of nature. There should be no distinction, other than that of true worth; and it should be recognized in either the man or woman of wealth, and those without it. It is too much mixed up in all our institutions; too much considered in almost all of the marriages entered into, is this moneyed distinction. The wrong is not in the money or property, but the estimate we place upon it and its power. If in the hands of a selfish man or woman, it seldom brings happiness, but often makes misery, even for themselves, and becomes a source of misery to others, begetting a spirit of envy. And there is no way to overcome this blighting effect, but to go to work in right good earnest, and lessen the distance in this respect between those who are wealthy and those who are not. It is too much the case, if a man or woman has attained to a position of wealth, that they can accomplish almost what they undertake by the force of money; and all are ready to lend a hand, influencing favorably their every undertaking. But as to those of less means, who will uphold them by their influence to accomplish any object in business? Not many.

FRIEND FARMER, don't think I am writing about something of which I am ignorant. I wish I never had been in a situation where such knowledge could be obtained; but I have been. And I was there voluntarily, on purpose to know how persons in different circumstances were treated by those in opposite circumstances. I also know the deference paid to fine silks, paraded so as to betoken the wearer of silks, laces, and the various paraphernalia of wealth. And I write it with a pang, that I bear witness, that even here, in free California, there is too much importance attached to fine clothes, fine houses, fine everything, instead of that which makes rational human happiness; and it requires a considerable amount of moral courage, in women especially, to be plainly dressed.

It would cause less misery, if wealth did not make such a vast difference, such a vivid contrast, in point of apparel. Behold the rich in splendid apparel, splendid environments! Behold the poor neighbor, spend his life when, perhaps, more intelligent, more observant of the laws of life, fulfilling more faithfully the duties of their earthly relationships, doing the work of life with stricter fidelity than the more wealthy; but they are passed by. Do they feel this? Yes; many do. I wish none did feel it; that none had ever been influenced by it; none ever crushed; none ever driven to crime, to appear as others, to become rich in appearance.

O, how hard some mothers toil to keep their girls from the marks of small means, in their dress, while at school. Why, reader, that mother has seen and felt the difference in the treatment, between those who were able to be well dressed and those who were not. Is it the fine clothes which does the mischief? No; it is the spirit that finery and costly adornment begets in the wearer; the spirit that influences them in act, towards others,

more plainly or cheaply clothed. How much of this has come directly under my own observation! It is an evil. No wonder some are striving for reform in dress—FOR A NATIONAL COSTUME.

O, it means everything important to a thinking woman, in reflecting that it would be a grand step towards lessening the wide distance between what men call a superbly dressed woman and one more plain, and, of course, more modestly dressed.

But, I am writing too much; so good-by! I trust my sex will think on the subject.

MOTHER RUTH.

## WHEELER &amp; WILSON'S MANUFACTURING COMPANY'S SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857. Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

## SEE THE FIRST PREMIUM SEWING MACHINES.

WHEELER & WILSON'S SEWING MACHINES took the FIRST PREMIUM at the Mechanics' Fair, Sept. 1858.

Wheeler & Wilson's Sewing Machines were recommended the HIGHEST PREMIUM at the State Fair, Maryland, August, 1859.

Wheeler & Wilson's Sewing Machines were recommended as the BEST FOR FAMILY USE, at the San Jose Fair, Sept. 1859.

Wheeler & Wilson's Sewing Machines are simple, not liable to get out of order, make a stitch alike on both sides of the fabric sewed, turn the hem, use the cotton from an original spool, by use of a NEW TENSION, and are capable of sewing the FINEST AND COARSEST FABRICS, LEATHER INCLUDED.

H. C. HAYDEN, Agent, corner Montgomery and Sacramento streets, SAN FRANCISCO.

## MUSIC, INSTRUMENTS, ETC.

PIANOS, MELODEONS,  
Alexandre Organs, and Music!

Prices Greatly Reduced!

HORACE WATERS,  
No. 333 Broadway, New York.

AGENT FOR THE SALE OF THE best  
Boston and New York Pianos and Melodeons.  
The largest assortment of Music Merchandise  
in the United States. Pianos from \$100 to \$1000.  
In plain rosewood cases, for \$200, to those of the most elegant  
Gothic for \$1000. No house in the Union can come in competition  
for the number, variety and celebrity of its instruments,  
nor the extremely low prices at which they are sold.

Horace Waters' Modern Improved Pianos, with  
or without iron frames, have in their new scale an improved  
action, in power and compass of tone equaling the grand, with  
the beauty and durability of the square Piano. The Press and  
first Music-masters have justly pronounced them equal, if not  
superior, to any other make. They are guaranteed to stand  
the action of every climate.

Horace Waters' Melodeons (tune the equal temper-  
ment), superior in each desirable quality. Can also furnish  
Pianos, Cartrains, and Smith's Melodeons. Prices from \$45  
to \$125. For two sets of reeds, \$150; two banks of keys, \$200;  
organ pedals has Melodeons, \$250, \$275 and \$300, less a liberal  
discount. Each instrument warranted to give perfect satis-  
faction, or purchase money refunded.

Alexandre Organs, five stops, \$160; eight stops, \$180;  
eight stops with percussion, \$225; twelve stops, \$250; twelve  
stops, size larger, \$250; twelve stops with percussion, \$300; fifteen  
stops, etc., \$375.

See and hear PIANOS, at great bargains, constantly in  
store. Price from \$30 to \$140.

Music--One of the largest and best catalogues of Music  
now published; all Music and Musical Works published in the  
United States for sale by this House. Also, Martin's celebrated  
Guitars; all kinds of Musical Instruments, and Musical mer-  
chandise, at the lowest prices. Music sent wherever ordered,  
post paid. Catalogues sent by mail. A liberal discount  
made to dealers, teachers, seminaries and clergymen.

## TESTIMONIALS OF THE

Horace Waters' Pianos and Melodeons.

"The Piano came to hand, and in first-rate order. It is a  
beautiful instrument and no mistake."--L. S. Walker, Phila.  
John Smith, of Carriage, N. Y., who has had one of the New  
Horace Waters' Pianos, writes as follows: "A friend of mine  
wishes me to purchase a Piano for \$150. She likes the one you  
sold me in December, 1856. My Piano is becoming popular in  
this place, and I think I can introduce one or two more;  
they will be more popular than any other make."

"We have two of Waters' Pianos in use in our Seminary,  
one of which has been severely tested for three years, and we  
can testify to their good quality and durability."--(Wood &  
Gregory, Mt. Carroll, Ind.)

"H. Waters, Esq.--Dear Sir: Having used one of your  
Pianos for two years past, I have found it a very superior  
instrument. [A. Gray, Principal Brooklyn Heights Seminary.  
Rev. Hiram Haynes, writes as follows: "Preston Hollow, N.  
Y. July 1857. Mr. Waters: I received the Melodeon you  
sent me in good order; am well pleased with the external  
appearance, and the tone also. Hope I shall have occasion to  
order one or two more the present season."

Tops, N. Y., Aug. 5. Horace Waters, Esq.--Sir: The  
Melodeon you sent me was duly received in good order. I am  
now fully prepared to say that the instrument is highly satis-  
factory, and I beg you will accept my thanks for the very hon-  
orable manner in which you have fulfilled and more than ful-  
filled all your promises. Very respectfully, Geo. L. Smith.

"The Piano I received from you continues to give satisfac-  
tion. I regard it as one of the best instruments in the place."  
[J. L. Clark, Charleston, Va.]

"The Melodeon has been duly received. I feel obliged to you for  
your liberal discount. Will do all I can for you in these parts."  
[Rev. J. M. McCormick, Parkersville, S. C.]

"The Piano was duly received. It came in excellent con-  
dition, and is very much admired by my numerous family.  
Accept my thanks for your promptness."--(Robert Cooper,  
Wareham, Bradford county, Pa.)

"Your Piano pleases us well. It is the best one in our coun-  
ty."--(Thomas A. Latham, Campbellton, Georgia.)

"We are very much obliged to you for having sent us such a  
fine instrument for \$225, and we shall take pains to recommend  
it."--(Frank, Held & Co., Buffalo, Democrat.)

"The Horace Waters' Pianos are known as among the very  
best. We are enabled to speak of these instruments with con-  
fidence, from personal knowledge of their excellent tone and  
durable quality."--(N. P. Evans, Jr.)

"We can speak of the merits of the Horace Waters' Pianos  
from personal knowledge, as being of the very best quality."  
[Christian Intelligencer.]

"Nothing at the State Fair displayed greater excellence in  
any department than Horace Waters' Pianos."--[Churchman.]

"The Horace Waters' Pianos are built of the best and most  
thoroughly seasoned material. We have no doubt that buyers  
can do as well, perhaps better, at this than at any other house  
in the Union."--[A. J. F. Evans, Jr.]

"Waters' Pianos and Melodeons challenge comparison with  
the finest made anywhere in the country."--[Home Journal.]

"Horace Waters' Pianofortes are of full, rich and even tone,  
and powerful."--[N. Y. Musical Review.]

"Our friends called at Mr. Waters' store, the very best  
assortment of Music and of Pianos to be found in the United  
States, and we urge our southern and western friends to give  
him a call whenever they go to New York."--[Graham's Mag.]

Warerooms, 333 Broadway, N. Y. [2]

possible prices. Martin's Celebrated Guitars, and all  
kinds of Musical Instruments, and Music Merchandise, for sale  
at the lowest prices. The Horace Waters' Pianos and  
Melodeons, and other superior makes, new and second hand,  
at prices which defy competition. Monthly payments for  
Pianos and Melodeons. Pianos and Melodeons for rent, at 333  
Broadway.

Also very popular Music--"The Bells of the Garden," or  
Singing Bird Polka, 40¢; "The Swinging Schottische," 35¢.

NEW MUSIC--Picolomini Polka, with beautiful  
vignette of Mile. Piccolomini, price 35¢; plain 25¢. The  
last Variations, price 35¢, both by Augustus Call. The Em-  
pire or Rich's quadrille, a new dance, with figures attached,  
music by Herr Kichler, price 35¢, just published by HOR-  
ACE WATERS, agent, 333 Broadway.
THE ANNIVERSARY AND SUNDAY-SCHOOL MUSIC  
BOOK, No. 1, just published by Horace Waters, 333 Broad-  
way, contains 73 tunes and hymns, being the best selection ever  
published, many of them new and very beautiful. They are  
simply and carefully arranged for one, two, or four voices,  
and for Piano, Organ, or Melodeon. This book contains Ann-  
iversary Hymns, No. 1, and 2, and several additional pieces.  
Price 8 cents, single; 5¢ per hundred; postage, 2 cents. [210]

## Pianofortes, Melodeons.

Messrs. MILLAR & COURTAZ,  
Manufacturers of PIANOFORTES and ME-  
LODEONS, Boston, have established an  
Agency for the Sale of their Instruments,

AT  
MOORE'S PACIFIC FURNITURE WAREHOUSE,  
No. 180 Montgomery Street, San Francisco.

Mr. COURTAZ will superintend the Fitting up and Tuning of  
the same. The above Instruments have been awarded the  
First Premium at the Fair of the Mechanics' Institute, held at  
Richmond, Va., 1857; and are not surpassed for tone or finish,  
by any Instruments of the kind in the United States; and will  
be offered at lower prices than ever before sold on the Pacific  
Coast.

All persons wishing to purchase Pianofortes or Melodeons,  
are particularly invited to examine those of Millar & Courtaz,  
which are already in store at the above places, and are being  
received by nearly every ship from Boston, during the coming  
year.

No one will go away dissatisfied with the Instruments  
or price.

CALL AND SEE THEM.

ST. GEORGE  
HOTEL!

Corner of Fourth and J Streets,  
SACRAMENTO.

THIS HOTEL, HAVING BEEN THOROUGHLY  
RENOVATED,

RE-FITTED AND RE-FURNISHED,  
IS NOW OPEN

FOR THE RECEPTION OF THE PUBLIC.

C. I. HUTCHINSON,  
Proprietor.

## REMOVAL.

DR. D. BURBANK,  
DENTIST,

HAS REMOVED HIS OFFICE  
TO--

No. 125 Montgomery Street,  
(Over J. W. Tucker's Jewelry Store),

Where he will be glad to see his friends and former  
patrons, and all those who wish to have

THEIR WORK WELL DONE.

(10-3m)

## GREAT REDUCTION IN THE PRICE

OF--

## DR. F. G. JOHNSON'S

PATENT SELF-REGULATING  
WINDMILL.

MANUFACTURED BY  
D. VAN PELT.

THIS MILL IS NOW WITHIN THE REACH OF  
ALL; and being constructed all of Iron, is without  
doubt the most perfect and durable, as well as the most  
economical Windmill in the world.

The undersigned having purchased the EXCLUSIVE  
RIGHT FOR THE MANUFACTURE OF THESE MILLS IN  
THIS STATE, will manufacture and keep on hand the  
following sizes, and at the following prices:

No. 1--Three-quarters to one Horse-power.....\$112 00.  
No. 2--One to one and a quarter Horse-power.....130 00.  
No. 3--One and a third to one and two-thirds Horse-  
power.....162 00.  
No. 4--Two to two and a half Horse-power.....200 00.  
No. 5--Two and two-thirds to three and a half Horse-  
power.....230 00.

(This power is estimated for a fair, strong breeze.)  
The above prices include everything ready to erect.

DEPOT OF MANUFACTURE,  
Nos. 90 and 92 Bush Street,  
SAN FRANCISCO.

When any greater power is required, the prices will be  
pro rata as the power is increased. They are susceptible of  
being increased to 20 horse-power or more; and applied  
for any purpose where stationary power is needed, and  
as manageable as a Steam Engine, with no risk or ex-  
pense. Those anticipating using this cheap power (the  
Windmill), should not fail to examine THIS MILL;  
such examination will satisfy them of its adaptation and  
ability to serve their purpose efficiently and fully. It is  
unlike other Windmills that are called self-regulating;  
they have stationary Fans and small revolving Fans,  
which are depended upon to graduate the speed of the  
mill; whereas, by Dr. F. G. Johnson's Patent the Fans  
revolve upon the arms and turn their edge to the wind  
when a gale or sudden gust strikes it; and again, a child  
can stop it at once by turning the fan's edge to the wind,  
by the use of a lever pressed upon the stop-wheel, which  
is upon the shaft. These Mills can be used for any pur-  
pose where stationary power is wanted.

Please call at the DEPOT, Nos. 90 and 92 BUSH  
STREET, San Francisco; where the Manufacturer will  
take pleasure in showing and explaining the mechanical  
principle upon which reliance is had for their superiority  
over all other Mills known, or of which we have knowl-  
edge.

D. VAN PELT.

HUCKS  
&  
LAMBERT.

Patent Anti Friction  
AXLE GREASE.

FACTORY NATOMA ST  
DEPOT 101 JACKSON ST  
SAN FRANCISCO.

THE HIGHEST PRICE PAID IN CASH for Paper  
Rags at the Office of the Pioneer Paper-mill, No. 25  
California street. Our friends in the country are invited  
to send in their Rags, and send them to us. Printers,  
publishers, book-binders, etc., can be supplied with extra  
used Paper, at short notice.

PEACH PITS--Fifty barrels of Peach PITS, of very  
superior quality, for sale by the barrel, or bushel.  
Early purchasers will secure a bargain, at Farmer Office.

## AGRICULTURAL.

No. 125

## McCormick's Chicago Reapers!

Three Sizes--5, 6 and 7 feet Cut,  
WITH EXTRAS FOR ALL THE DIFFERENT PAT-  
TERNS, from 1853 to 1859. [Agent for the Manufac-  
ture for the Pacific Coast.]

2500 sold in 1857. | 4000 sold in 1857.  
4000 sold in 1858. | 4300 sold in 1859.  
15,000 Sold in the last Four Years.

No single Establishment in the world can truthfully claim  
to have manufactured and sold anything like so large a number  
of Reaping and Mowing Machines during the same  
time, while my experience dates back to the origin of my ma-  
chine in 1831, having been actively and exclusively engaged in  
their manufacture for the last fifteen years. I am now more  
largely engaged in the manufacture of these machines than  
ever before, and, with my improvements for 1859, do not  
hesitate to warrant my machine as Reaper, Mower, and  
Harrow, superior to any other for simplicity, dura-  
bility and perfect working; and further to say, that farmers  
who may desire it are at liberty to work my machine through-  
out the harvest with any other, and keep and pay for the one pre-  
ferred. The position of the Reaper in my machine (as pat-  
ented), upon the main frame, where there is great strength, and  
where the weight adds to the power of the machine, is the  
only right one. Other makes have to haul their Reapers on the  
platform, where he must submit to having the dirt thrown in  
his eyes by the operation of the reel, and to being jolted over  
the clods by the little platform-wheel over which he rides,  
necessarily recking the durability of his machine. This accounts,  
in part, for the great durability of my Machines  
as compared with others.

Great Council Medal awarded my machine in London, in 1851.  
Grand Gold Medal of Honor at Paris, in 1855.  
Highest Prize at the French Universal Exhibition, in 1856.  
Highest Prize of Royal Agricultural Society of England, in '57.  
Highest Prize of the U. S. Agricultural Society, in 1857.

## As the best Reaper.

Publications made by the manufacturers of the *Manny*  
machine, claiming the highest honors, etc., at the French Uni-  
versal Exposition, in 1855, are known by them to be FAKE.  
The success of my machine, as indicated by figures above, is  
its highest praise; while the awards of Premiums, generally,  
are worthy of no confidence, although Reapers-makers make a  
business of laboring and scheming to secure the little Annual  
One-horse Premiums of the country. Although it may not be  
generally understood, it is nevertheless true, that these ma-  
chines have always been sold at comparatively low prices, and  
but for the boldness with which I introduced and sold them by  
thousands, for the ten years past, other smaller manufac-  
turers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and  
others, of the truthfulness of every statement I have made, and  
much more. I may further remark, that all of the Reaping  
Machines of any prominence in the country, are more modifi-  
cations of my machine; all other manufacturers having neces-  
sarily limited experience in comparison with my own.

A single year's severe service will satisfy the farmer,  
that in point of durability, my machine is far superior to  
all others; besides several important advantages, referred to in  
my regular Annual Circular in pamphlet form, which will be  
furnished those who desire further information, by addressing  
me, or any one of my Agents.

P. S.--To correct a misapprehension from recent news-  
paper reports, I may say, that, while the Commissioner re-  
solved to extend my PATENT of 1845, that of October, 1847, will  
not expire for several years to come, and that this has been my  
most important Patent; and further, that Reapers-manufac-  
turers can not copy more nearly my machine than they have  
done heretofore. They must still carry their Reapers on the  
back of the platform, and submit to other consequent im-  
perfections.

CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators,  
Manufactured by Nourse, Mason & Co.; 32 and 36 inch  
cylinders, with trucks and full extra.

U. S. Patent Office, January 3, 1859--Sir: J. A. & H. A.  
Pitts' Patent, dated June 20, 1837 (machine for Thrashing and  
Cleaning Grain), was only extended for a term of seven years  
from June 20, 1851. It has consequently expired. Respect-  
fully, yours, J. HOLT, Commissioner.

Southworth & Co., San Francisco, California.

Pitts' Patent-Double Fluted 8 and 10 Horse-Powers.  
To whom it may concern--This may certify that we have  
a certificate of authority, of which the following is a true copy.

To whom it may concern--This may certify that A. Gordon  
& Co. are fully authorized by me to sell the "Pitts' Improved  
Pattern Double-Fluted Horse-Power," in any of the States or  
Territories secured to me by letters patent. (Signed)  
Buffalo, October 20, 1858. JOHN A. PITTS.

We are this month shipping Horse-Powers of the above  
patent to A. B. Southworth, of San Francisco, Cal., which he  
is hereby authorized to sell. A. GORDON & CO.  
Rochester, N. Y., October 28, 1858.

A. Gordon & Co.'s Iron Planet Powers,  
8 and 10 Horse.

NOURSE, MASON & CO'S  
IRON PLANET POWERS,  
8 and 10 Horse--with full Extra.

Forty Ketchum's Mowers--Iron Frame.  
Extra Extras for all of the above Machines.

TWENTY NOYES' MILL-STONES,  
Different Sizes.

One Hundred Revolving Horse-Rakes,  
Eight, Ten and Twelve Feet.

for a full supply of Agricultural Implements in New York and  
Boston, they will be

In Constant Receipt of Fresh Goods, &  
well adapted to this market, by clipper ships arriving during

## BY THE OVERLAND MAIL.

The Overland Mail arrived at San José at 8:45 this morning, bringing dates from St. Louis to March 24th.

A Washington correspondent, writing March 21st says the question of an extra session of Congress is at last decided. The President has authorized a telegraphic dispatch to be sent to Senator Gwin, stating that there will be no extra session.

A dispatch dated Washington March 21st, says: An official telegraphic dispatch to New York, this morning, to go out by the California steamer, announces that there will be no proclamation issued for an extra session of Congress. There is much speculation as to how the Post Office Department will be sustained. In quarters usually the best informed on such subjects, it is said that the law authorizing the issue of contracts will continue to be carried out, embracing the issue of treasury warrants as usual, but as there is no money with which to pay them, they will, in the hands of contractors, serve as the basis for loans. It is not known that any other evidences of indebtedness will be issued.

In reply to a note of George Wattingly, the Postmaster General informed him that Congress had, for the first time since the organization of the government, failed to make provision for the Department. Had all the members of the next Congress been elected, the President might, on the 4th of March have called an extra session, and the omission of the late Congress been supplied, but it was impossible to do so without disfranchising fifteen of the sovereign States. This was most unfortunate. There ought to be no time when a full Congress could not be convened, and it is hoped that such a state of affairs may never again occur. The unpaid balance accumulating on the 31st of December, and the 28th of February, will be paid by the Department within sixty days. The Postmaster General makes other statements to show that it would be impossible to convene Congress in time to meet the great bulk of the responsibilities without virtually excluding from Congress the representatives of several of the States. In the judgment of the President the lesser evil was to wait until the first Wednesday in December.

An accident happened on the Great Western Railway. The storm washed away the bank, and the engine ran into a chasm nearly twenty feet deep. The scene was a horrible one. The cars were completely wrecked. About eight or ten were wounded.

Eighty miles of the Cuban telegraph are completed.

There was a riot in the New York State Prison, in which Mr. Kirkpatrick, the warden, shot three men.

Arrangements are being made by Mr. Lamontaine of Troy, N. Y., for the manufacture of a balloon, with which he intends to cross the Atlantic. It is believed to be the most complete article of the kind ever made.

Major General Winfield Scott arrived in Louisiana on Sunday, March 20th.

The chess match is progressing at Paris—Morphy against Mongrellien, President of the London Club. Four games have been played, Morphy winning all. The winner of the first seven games is to be the victor of Spain.

It was expected on last Monday that the Grand Jury who made a presentment a week ago against Sickles for murder, would return a true bill; but so far nothing has been done.

The mail from St. Louis, March 21st, arrived in this city Tuesday afternoon. Ten treaties with the Indians of Oregon and Washington have been ratified. As this took place during the late extraordinary session of the Senate, after Congress adjourned, no appropriation could be made to carry them into immediate effect. By these treaties the title to fifty millions of acres of land will be extinguished, at a cost to this government of 84 cents per acre.

George P. Morris, editor of the Home Journal has been appointed Minister to Havre.

## Letter from Indiana.

MILAN, March 10, 1859.

EDITOR FARMER: Your paper came along the other day, looking like an old friend dressed up in a new suit. I looked, was pleased, and looked again; before I could tell why, I was pleased. Uncle Sam's boys kept it a moving too, for I received one the fourth of March, one short month from the day of its publication. I need hardly tell you that the "Ladies' Department" was the first sought for, and with what pleasure I communed with those old friends which I met there. I most cordially accept Alice's kind wishes. May a rich legacy of happy New-Year's days be in store for her, and on their annual return, may she resume her pen to wish, not only the correspondents of the CALIFORNIA FARMER a "Happy New-Year," but all its readers; but more especially those who are battling for the right—the elevation of woman to her true dignity.

Alice, in speaking of your marriage and departure for the land of gold ten years ago, you reviewed in my mind scenes upon the Plains, which, perhaps, we may have both looked upon; scenes incident to crossing the Plains in '49. What a panorama of nowadays life did we see then! Everybody struggling on, eager to grasp the golden "pile." How impatient of delay; all must be sacrificed to the "golden calf"—health, comfort, friendship, and even manly principle was too often piled upon the altar of mammon. I know there were noble exceptions, but I saw acts, and committed some myself, which now make me shudder. My first heartless act was leaving a loving wife and three interesting children, two sons and a daughter, to the tender(?) mercies of others. I was poor and in debt, and could see nothing but California's gold, night or day. But now, when Pike's Peak is turning the heads of thousands, there has not one solitary idea crossed my brain of going there. Gold does not tempt me now to separate from my family. On the plains I used to frequently see mothers and little children, which would remind me of dear ones at home. Then it was that I made the discovery, that my heartstrings would vibrate to a touch softer than gold, and my eyes would moisten, and I would feel to be in the neglect of duties I had promised to perform.

I never shall forget what I saw at the crossing of Kansas river: We had overtaken two or three families of Oregon emigrants, a few miles before reaching that crossing. We all ferried together. We had some difficulty in getting our stock over, in consequence of their having passed below the ford and getting into a pile of drift. It was dark long before we got ready to go to a convenient place to camp. While waiting, one of the children was taken sick; the others were tired and sleepy, and all cried together; and, I must confess, I felt

a good deal like crying too. But the mother (one of those take-the-world-easy sort of persons) seemed as composed as though at home and nothing the matter. How those people got along afterwards I never heard, but know they must have suffered a vast amount of hardship, as they were but poorly supplied with either provisions or help, a little boy just able to guide a horse, having to drive the loose stock.

I might relate many scenes of inhuman conduct which I witnessed on the way and after I got through, but time and space will not permit; but probably no one who traveled over the plains that season, escaped seeing by far too much crime and wickedness. Profanity was indulged in by almost everyone, especially the teamsters, who appended an oath to almost every word said to their teams. It is with shame that I say it, I was amongst the worst of this class.

There were but two deaths amongst my intimate acquaintances; one out of our mass, of cholera, on the Little Blue, the other, a very fine young man, was drowned in Carson river while bathing. I have often looked upon death in his remorseless work, and thought, as we have to become his victims sooner or later, it makes but little difference at what period of our lives he asserts his claim; but as often as I have looked back to this lamentable instance, I have felt as though he stole this victim.

At noon, on the eighth day of September, 1849, we reached Pleasant Valley—anything but a pleasant valley at that time, you may rest assured; not a vestige of grass to be seen, willows and every green thing browsed off; water was obtained in very small quantities, a short distance below where we camped. We were not yet in the gold mines, for none of the rich gulches, so far out as this, had been made to disgorge as yet. We pushed ahead, and some time after dark came to the dry bed of a fork of Weaver creek, about half a mile above the town of that name. Early in the morning I went forth to "prospect," and barely saw the precious stuff I had come so far to see, and was—no, not satisfied, but much disappointed. If ever I saw a picture of desolation, it was then. But, one sin I was not guilty of; I did not curse the country, while others vented their disappointment in imprecations loud and long. What a mighty change we saw before another year rolled round.

We built the first cabin in Ringgold, near where we spent the first night in the gold-diggings. In this cabin I saw some of life's checkered scenes; amongst the hills, the scurry.

New Alice, I should like to hear something of your Redwood home, if you are willing, and the Colonel is disposed. Good night. B. C. A.

P. S.—Spring is with us in a kind of incipient state; the weather very fine.

**SPEEDY CONVEYANCE.**—The Overland Mail which arrived here on the 12th, brought letters from Boston to our merchants, postmarked "March 18th." This is the most speedy mail overland conveyance we have yet had, being only twenty-five days on the journey.

## Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

## MORGAN BLACK HAWK COMET

WILL MAKE A SEASON AT  
**MAYHEW'S RANCH,**  
near CENTREVILLE, from March  
20th, to August 1st—where good Pasture can be obtained for MARES.

## COMET

Was sired by YOUNG BLACK HAWK, sire Old Black Hawk of Vermont, gr. g. sire Sherman Morgan, gr. g. sire Justin Morgan; dam by Morgan Tally-Ho, dam by Andrew Jackson.

Mares sent to 50 Pine street, San Francisco, care of B. F. FISKE, will be attended to.

CHARLES COCKRIN, Agent.

## French Merino Sheep

## AND

## DURHAM CATTLE.

## JOHN D. PATTERSON,

IMPORTER AND BREEDER OF

## French Merino Sheep and

## Thorough bred Durham Cattle.

Can supply the California market with Animals of SUPERIOR EXCELLENCE, and at prices as low as the SAME QUALITY can be obtained, either in America or Europe. All Stock sold by him will be delivered in New York Free of Charge.

COL. WARREN, Editor of the California Farmer, San Francisco, is authorized to act as Agent for the sale of my STOCK in California, of whom Circulars and further information can be obtained.

JOHN D. PATTERSON,

18 WESTFIELD, Chautauque county, New York.

## Splendid Durham BULL For Sale.

A SUPERB DURHAM BULL, OF VERY high character, and perfect pedigree, is now offered FOR SALE. This is a rare opportunity to those who wish to acquire a fine stock.

Letters addressed to COL. WARREN, will be responded to promptly.

## Southdown Sheep.

WE OFFER FOR SALE, splendid Southdown Sheep, of the noted Webb breed of England. These Sheep we now offer for sale from the collection of J. C. Taylor, Esq., from whom those splendid Bucks came that were exhibited at the State Fair, and Young York, the finest Southdown Sheep on the Pacific coast. The two Sheep are now owned by Messrs. J. H. CARROLL & CO., and are with their flocks at Colusa, N. D. Stanwood, Esq., is one of the principal owners.

Persons in want of splendid Sheep of this breed, are invited to call on us and examine our schedules, before making their purchases.

WARREN & CO.

## Sheep Wanted.

AMERICAN EWES, of the best quality, wanted immediately. One lot of 100 Ewes, of two and three years old, to suit lot of 700 Ewes, of same age. A small lot of Chinese, half breed.

Persons having Sheep, will do well to consult us, as we can always put them up in the stock for sale, and supply them with the best in the market.

WARREN & CO.,  
Farmer Office.

## Domestic Fowls.

PERSONS desirous of purchasing splendid GAME FOWLS, of good quality, for laying, can be supplied by calling at the Farmer Office. A few of extra kinds for sale. They are a cross of the BRAHMA POOTRA, and of very superior kind, valued at \$40 to \$50 per pair.

## South-Downs.

A FINE LOT OF FIVE HALF-BLOOD South-Downs, from the Webb South-Downs, of superior cross, and very handsome animals—can now be engaged, deliverable in September next, by application to the Editor of the California Farmer.

## Sheep Wanted.

ANY PERSON HAVING 1500 OR 2000 AMERICAN EWES, of good quality, with Lambs at side, or prospective, can find a ready purchaser for them, by addressing Editor California Farmer—stating the number, sale, age, condition and price; also, where the flock is situated. Letters addressed as above, will receive immediate attention.

## Table and Pocket Cutlery.

**THOMAS DAY,**  
No. 188 Montgomery Street, San Francisco,  
HAS ON HAND, a large assortment of FINE IVORY TABLE CUTLERY; also common Table Cutlery, with Coarse Rip, Bone and Stag Handles, etc., suitable for the country trade. POCKET CUTLERY—Pruning, Bunting, and Grafting Knives; also Bowls, Knives, etc.; received by every steamer, of Wootenholm & Sons, Alexander's, and Edward Barnes & Sons, Sheffield.

For sale, wholesale.

## Gas Fixtures.

**THOMAS DAY,** Importer, is constantly receiving GAS CHANDELIERS, PENDANTS, BRACKETS, Etc., and everything connected with the Gas business. For sale, wholesale and retail.

All goods sold in the city, put up by experienced workmen, and warranted.

**THOMAS DAY,**  
188 Montgomery street (near Jackson street),  
San Francisco.

## To Ranchmen.

A YOUNG MAN AND WIFE WANT A HOME ON a desirable tract in the Country—wages a secondary consideration, the object to live in the Country. To any person who has no family on his place, this is an excellent chance. The Woman is a good Housekeeper, and does all kinds of Sewing. The Man will be able to milk cows, take care of stock, or do any light jobbing about a Ranch. Address

MR. & MRS. J. F. ENLY,  
San Francisco,  
(Care of California Farmer).

## GROCERIES, DAIRY PRODUCE, ETC.

## JOURNAL OF USEFUL SCIENCES.

VOLUME XI.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 22, 1859.

NUMBER 12.

### The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 139 Washington street (up stairs), San Francisco.  
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$4 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

#### Tap-Root Revived.

We present our readers with No. 1 of a series of letters upon the "Tap-Root" question. This is a subject that we have given our own opinion upon some time since, and had supposed that all reasonable persons had concluded that *ridicule* was the best argument for it; but we learn from several sources, from several nurseries, that many amateurs and new beginners had been led astray, and that nurserymen themselves thought that it ought to be revived and then buried deeper; send it down so deep that it could be pulled through the "other side." The letters we now lay before our readers, have been prepared for the best interests of the cause of horticulture, unsolicited by us. These letters will be found of great value, based upon reason and common sense, and supported by the practice of every successful nurseryman, either in Europe or America. The response given to our view of the subject by the editor of the *Cultivator*, was so devoid of courtesy and fairness that our course was plain. "Against such a mind a thousand arguments were lost; 'twere labor lost when man convinced against his will, is of the same opinion still." But these letters, coming from a scientific and practical nurseryman, whose life from boyhood, has grown, like trees from seedlings, into full bearing manhood among trees, will, we are sure, carry with them conclusive evidence of the absurdity and folly of this "new doctrine" of the *Cultivator*.

That all may know whence these letters are derived, we give the author, J. B. SAUL, Esq., who for years has had the charge of the nurseries and orchards at Smith's Gardens, Sacramento. Mr. Saul is the brother of Mr. Saul the distinguished nurseryman at Washington, D. C., and also Mr. Saul of the Newburg Nursery at Newburg, N. Y., the grounds of the lamented Downing, and all the brothers are pupils and friends of Downing, whose name and authority would be added to the above doctrine, could he speak. But enough; we leave the subject in the hands of Saul, and are very much mistaken in our view if he don't prove among those who have advocated the absurd doctrine of "tap-root planting," as bold and fearless and convincing as did his namesake of old.

The editor of the *Cultivator*, in its November number, made the assertion that in our particular climate "in which little or no rains fall for several months in the summer, to secure the most perfect fruit, shade, or ornamental trees, it would be better, if equally convenient, to plant out the seeds of trees where they are to remain." The readers of horticultural, or other scientific magazines, are supposed to look upon the remarks or teachings of the editor with attention and respect. His opinion, with many, is an authority, and if an editor's opinion carries not with it a certain amount of authority and respect, his area of usefulness will be very circumscribed, and as the fact becomes to be generally known, it soon gets to be "smaller by degrees and beautifully less." The assertion of the editor of the *Cultivator* has provoked remarks, and authorities have been produced in support of the arguments on both sides. The editor has inserted a *proviso* in the words "if equally convenient," for it certainly would be very inconvenient "in our particular climate," "to plant out the seeds of trees in the places where they are to remain," supposing it to be a case where an orchard of many acres is desired.

To bring it up more in detail, and to show the points to be observed, I will divide the subject by separating my remarks upon the fruit trees from the shade or ornamental, and proceed first with the fruit trees. The practice of cultivating trees in nurseries is very ancient, and in modern times, to become an expert nurseryman, is the study of a lifetime. Of course I here allude to the nurseryman proper, for there is as much difference between the professional man, who from youth to manhood or middle life, has made the business his study, or the enthusiastic amateur, whose natural inclinations or tastes have led into the pursuit; between these men and that class of individuals who have stepped aside from other occupations, tempted by the opportunity of making a speculation; between these men there exists as wide a difference as between the eminent jurist and the common petty-fogger.

There must have existed a cause for the origin, the rise and progress, of the nursery business, which is now one of immense extent in Europe and the United States, absorbing many millions of dollars capital, and giving employment to thousands of persons, and requiring as much intelligence and ability in its conduct as almost any of

our most learned institutions. The business owes nothing, certainly, to such reasoning as that of the editor of the *Cultivator*, who asserts "that to secure the most perfect fruit, shade, or ornamental trees, it would be better, &c., &c., to plant out the seed of trees in the places where they are to remain." If such reasoning be correct, how absurd for any one to patronize the nurseryman, when seed can be obtained and planted at such an infinitely smaller cost.

This is not a "new doctrine," peculiar to the *Cultivator*, for upon its face it has a decidedly *primitive* cast, and the "opinion, based on both observation and experience," is not in my opinion "considerably in advance" of the crude and imperfect "modus operandi" of the most ancient record, to say nothing of its negative position toward the more advanced and enlightened views of modern cultivation. Intelligent horticulturists are supposed to be well acquainted with the functions of the roots of plants and trees. In the article of Prof. J. W. Darby, copied into the *Cultivator*, to support the views of the editor, the Professor says:

"Nature has made the roots of cultivated trees on two models or types, and to one or the other of these types they may all be referred. One of these is a main root running perpendicularly downwards, and sending off new branches from the top to the lowest extremities, the central axis being always the predominant one through which the nourishment passes. The other type is a more or less complete subdivision of the roots, immediately beneath the soil, there being no main axis penetrating downwards. The first kind is represented by the branching of any tree from the main trunk; the latter like that of some shrubs that send up numerous stems with no main axis. The first of these seeks its nourishment deep down in the soil; the latter near the surface. The first draws its nourishment from immediately beneath itself; the other literally from a distance. The first is not much injured by removing the surface roots; the latter wholly depends upon them, the upper being always the most vigorous. No matter how many varieties there may appear to be, nor how many different names the botanists may give to these varieties in describing plants, yet all fall within one or the other of these classes, or approach more or less clearly these types. The deep feeders called *tap-rooted*, the surface feeders called *fibriculated*. There is an evident design in these structures, relating most certainly to the conditions of growth and development of the plant."

Such is the language of Prof. Darby on roots, in the article quoted by the *Cultivator*, and which is quite correct. Most fruit trees, when grown from the seed, are tap-rooted; so also most large growing forest trees. Those trees if permitted to remain many years undisturbed in their original position, become exceedingly difficult to remove, by reason of their having rooted so deeply in the soil, the whole life of the tree being concentrated in the tap-root, as Prof. Darby justly says, "the central axis being always the predominant one through which the nourishment passes." Such being the case, and it being clearly impossible or impracticable for planters to adopt the "new doctrine" "based both upon (the) observation and experience" of the editor of the *Cultivator*; he next consideration is how shall we grow these "tap-rooted" trees, that they can with safety be transplanted to other and distant places from where they have been grown, with a certainty of their living and making flourishing and profitable orchards.

There is nothing like fact, in advocating and argument; and before proceeding any further, in order to give the reader an idea of the kind of tap-rooted trees will make in our deep, rich California soils, I will state that I have frequently had occasion to remove seedlings of one year's growth from the seed beds, and, in many instances, the tap-roots exceeded the length of the tree itself. Very recently, in removing seedlings, I selected a few that I have preserved for any of the curious who may desire to see them, and which were but an average of the whole lot. They are now before me; and, by exact measurement, a pear seedling of one year's growth, *twenty-eight inches in height*, has one single tap-root, which is *five feet in length*, and when cut off at the extremity, is a quarter of an inch thick—making it more than probable, that had it been got out entire, it would have been over seven feet in length, or, three times the length of growth above ground. This is not a single case, it is but a sample of several thousand.

In another instance, where some such had sprouted in an old seed-bed, where they had lain dormant the previous year, they having attained sufficient size, were "budded" the same year, in the bed where they had sprouted, with the intention of removing them into the nursery rows the following winter; but, having been neglected at the planting season, they stood over, and made a year's growth in their original position where they had sprouted; and, as may be supposed, they made a fine growth, ranging from five to ten feet in height, and, being in a moist place, they received no irrigation. In digging up those trees, it was quite impossible to get the whole root; but in very many instances, where very special pains had been taken, the roots were got out, when they exceeded by one, two, or more feet in length, the growth of the trees themselves; and, in no one case, did we get the entire root; they would break off when they came to the size of small twigs.

A specimen of the above trees I caused to be

MALE CASHMERE GOAT.  
Live weight, 155 pounds; weight of fleece, 7 pounds; property of Richard Peters, Esq., Atlanta, Ga.

sent to the Editor of the *FARMER*; and it was but one of a thousand; the only difference being, that a little more of the root had been got out of the ground. Your notice of those trees, the Editor of the *Cultivator* attempts to ridicule, in a very unfair manner, stigmatizing it as a "miserable subterfuge," etc. etc.; and denying, also, that such a tree as you (Editor of the *FARMER*) described, ever was grown at this establishment, "by planting the seed in the place where it was intended the tree should remain," etc. etc. That they did grow, with about one thousand others, in the manner I have already described, I can prove by scores of witnesses; but, that the seed was planted "in the place where it was intended the tree should remain, in open ground, at a distance from all other trees, sufficient for orchard culture," etc. etc., the Editor of the *Cultivator* is quite correct in saying "no one but him who chooses to swallow humbug and misrepresentation, will ever believe." Nor did you, Mr. Editor, try to make any one so believe—the Editor of the *Cultivator* being the only advocate of this "new doctrine."

I will give you one more instance of tap-roots, and then pass on. In removing a lot of young cedars, pines, and firs, that a year ago had been brought from the mountains, and had been planted out in nursery rows; and this spring, in giving them their usual annual transplanting (our usual practice, but of which more anon) we discovered to some of them tap-roots of an enormous length, in proportion to size of top. We succeeded in securing one of them unbroken, the ground being quite soft after the rains; by carefully digging deep around them, the root pulled out tolerably easy; but it was quite out of the question to get the whole length of the root, as the fine thread-like "continuation" would break off, in spite of all precaution. The dimension of the one I speak of is as follows: the top, or growth above ground, is just *eight inches*, and the length of the unbroken root *eight feet*. This, with some other specimens of tap-roots, on small trees, I have carefully preserved, and can be seen by the curious, or incredulous, who may take the pains to inquire for them, when they visit this establishment, where they will find them carefully hung up in a conspicuous position in the office, subject to any one's inspection. These are facts, which I wish to be remembered, as I wish to show how those trees can be grown without such roots, so as to make better trees, and trees that can be transplanted with safety and success.

According to Professor Darby, "the central axis being always the predominant one through which the nourishment passes," the question now is, how shall this class of trees be cultivated, without endangering their vitality, and at the same time produce a fine, healthy, and, in every particular, well developed tree.

In a previous article, in describing the process of cultivating trees in the Nursery, it will be recollected that the trees, before they are in a saleable condition, receive one or more transplantings. In removing seedlings from their beds to the nursery rows, the tap-root is shortened with the knife; the top being also shortened in, in proportion.

This very process has arrested the progress of the tap-root; and if, in a year thereafter, you dig up this young tree, you will find, instead of one long tap-root, it will have several roots; and that same tree, re-planted, if examined again, at the end of another year, it will be found to have increased the number of its roots more than ten-fold. At the end of the roots, where they had been cut, by the previous year's transplanting, it will be observed that a great many new roots have branched out, and spread in all directions; and, as Professor Darby says, "the tap-root is the predominant one, through which the nourishment passes." I ask how much worse off has the tree become, by having the number of its feeders, and its nourishment, increased?

Another writer says: "A growing plant gains a

new mouth and stomach with every additional root and new leaf. The moisture of the soil, which forms the sap of the plant, is taken into it by the extremities of the roots, or rather by the spongioles which terminate the ends of the fibrous roots."

Clearly, then, the tree is in a much better condition, having gone through a series of transplantings in the nursery, before finally planting out in the orchard; and it is not either *essential* or *desirable* that the tap-root shall be preserved.

"All the various phenomena of nature are the results of fixed laws; and no other reason can be assigned for their existence, than the will of the Creator—He hath so ordained it." If it is natural for some trees, when left to themselves, to grow downwards, with only one single root, drawing most of the nourishment through that one; if while the tree is still small, the tap-root is cut, causing several others to grow instead of one as before stated; those roots will all be still inclined to follow the downward tendency of the original tap-root. It will be readily seen that trees which have been once or more transplanted, for the purpose of increasing root and fiber, are not only easily removed with but slight loss of roots, but, if well taken care of while out of the ground, there is but little danger to be apprehended from the change. It is equally certain that trees with long tap-roots are not the kind either to be desired, or easy to be removed after they have attained size.

It is used as an argument in favor of tap-roots, that they are needed to establish the tree more firmly in the soil, as a protection against high winds. You will remember, Mr. Editor, I am still talking of fruit trees, not shade trees. Of the latter I will have my say *poco tiempo*. Now I would like to ask, how often do we see fruit trees blown down by the winds? Is it not a more common occurrence to see them break down under the weight of their luscious crop? If any one can recollect of seeing a large fruit tree having been felled by the winds, if he or she will think a moment, it will probably appear that such trees "originated from seedlings that mere chance had given locality in other positions than orchards, or cultivated grounds, and which never suffered removal or injury of the tap-root;" or else some large overgrown tree, such as are generally to be found in old places in the East, where they have probably grown for a half century or more, during which time they have had ample time to develop the tap-root. Go into the well-cultivated garden or orchard of the skillful culturist, and you will not be likely to find any of their well-cared-for trees blown out of the earth root and branch. It is a well-known fact, that if a tree, which from a seedling has been permitted to grow on in the same spot, roots undisturbed, and if the subsoil is favorable to the development of the tap-root, it is also the case that the tree itself will grow upwards in a similar manner to the tap-root downwards.

Only those who are acquainted with the almost fabulous growth of trees and roots in our rich soils, can appreciate fully the importance of counterbalancing the natural inclinations of some trees to grow in a manner and shape foreign to the purpose for which they were planted. I have seen trees, the stocks of which were planted four and five years ago, and which were budded or grafted where they still remain. The tap-roots, no doubt, have run down into the soil after the fashion of the trees of whose roots I have given the measurement, and the tops of the trees have grown precisely in the same manner; that is, the few side shoots have run up in the same lengthy form, and the few fruit buds that would "set" would be at the ends of the limbs, which, as they began to feel the weight of the fruit, would sway about in the most unaccountable and "unscientific" manner. Who has not observed this scores of times upon entering the gardens of individuals who have nursed and petted their fruit trees, would not permit a limb to

be touched by the pruning knife, and when at last their anxiety and their vanity at the same time, is gratified at the sight of a profuse bloom, they soon after find the tall, "shanky" limbs unable to bear up under the weight of fruit, and the whole tree either breaks down, or has to be propped up with a lot of unsightly lumber and cords to fasten the limbs, and the trees forever spoiled, so far as concerns their after appearance of beauty of shape.

JAS. B. SAUL.

SMITH'S POMOLOGICAL GARDENS, Sacramento.

#### Glory Flower.

That gorgeous and beautiful flower that is now scattered over our State, bearing its pendant branches, and graceful racemes of bright crimson flowers, is one of the most valuable as well as ornamental plants adapted to the climate of California. We allude to the *CLIANthus MAGNIFICA*. This plant was introduced into California by that early and devoted friend and patron of the Goddess Flora, Mrs. C. V. Gillespie. We saw it first in bloom at her former beautiful mansion on the Mission Road, as early as 1853. It was to the early zeal of this lady that California was indebted for the introduction of some of the brightest gems that now adorn the garden parterres of our best and richest homes.

We are glad to know that the Glory Flower is being quite extensively planted in our gardens here, and elsewhere. We would call particular attention to it, as it blooms nearly all the year round, and nothing can be more gorgeously beautiful. Walker, of the Golden Gate Nursery, has fine plants. We find this plant highly recommended by a writer in Hovey's Magazine, C. M. A., who says:

This magnificent ligneous evergreen shrub seems to be either little known or appreciated here. In Europe, especially in England, it is universally esteemed, and alike adorns the humble cot of the poor, the shrubbery, the wall and conservatory of the proudest gardens; it is also eminently beautiful in flower and graceful in foliage. It readily adapts itself to circumstances, and admits of a variety of styles of training. Being of a procumbent habit, it is really a charming object amongst rock-work, but, like all other plants, the charm is more heightened and the effect more beautiful in the hands of a person of true poetic taste. I once saw in an extensive and well arranged piece of rock-work, a plant placed on a jutting ledge at an elevation of eight feet; it was about eight feet wide, and its own weight drew it in a graceful curve over the ledge, and its tops swept the surface of the ground; it was a perfect gush of floral beauty, and had it been water, its outline could not have been more natural.

It belongs to the Leguminous order of plants, and is closely associated with the *Wistaria*, *Swainsonia*, *Caragana*, &c., &c. Its leaves are about four inches long and unequally pinnate, each consisting of eight or ten pairs of leaflets generally opposite. Its flowers spring from the axils, and are pendant racemes; each flower is from two to three inches long, and of a rosy crimson color. Its time of flowering depends on its situation; out of doors, against a wall, in the south of England, it is June and July.

As a pot plant, it should be trained as a standard, by selecting the most promising shoot, tying it to a stake, and judiciously cutting away all others until it reaches the desired height, say six or eight feet. With very little further assistance it will form a graceful, curved head; its pendant branches, several feet in length, will be literally loaded with its gorgeous racemes. As a wall plant it is rather expansive, for, with tolerable management, it will cover in a couple of years, from one hundred to one hundred and fifty superficial feet, producing thousands of flowers.

There are three species, *C. punicea*, *C. magnifica*, and *C. Dampieri*. The latter is of somewhat new or recent introduction, and is decidedly the best. It is either to Sir Joseph Banks or Dr. Solander, or both, that the English are indebted for it, who sent seeds from New Zealand. It thrives well in a compost of one half loam and the other half of equal parts leaf mould and peat. It seeds freely and is readily propagated from cuttings.

#### The Cashmere Goat.

We present our readers, this week, with a cut of the real Cashmere Goat—a *fac simile* of those now raised by R. Peters, Esq., of Atlanta, Georgia. We figured these Goats a considerable time since. We perceive that Mr. Peters has increased his flock, and is making sales for Texas. [See article headed "Cashmere Goats for Texas," in another column.] We hope some parties will feel sufficient interest to bring them into this State. We shall be glad to aid any person wishing to do so; and feel confident the importation would prove profitable. A few hundred of such Goats, giving fleeces of four to five pounds each, and worth eight dollars the pound, would prove a very pretty income. Who will own the first Cashmere Goat in California?

The London Chronicle announces that the secret of compressing and governing electricity is at length discovered, and that power may, therefore, now be considered as the sole motor henceforward to be used. A small mortar was fired by the inventor at the rate of one hundred shots per minute—without flashing, smoke, or noise. The same power can, it seems, be adapted to every system of mechanical invention, and is destined to supersede steam, requiring neither machinist nor combustion.

In selecting an agricultural paper, always inquire whether the editor is, or ever has been, a practical farmer, in order that you may know whether what he writes and selects are of knowledge, or of faith, for in agriculture the former only gives power.

## CALIFORNIA NOTES.

## About Locusts and Grasshoppers.

EDITOR FARMER: The following extracts and notes on the *Locusta* are highly interesting and well worth preserving. They are made in addition to the notes on the same subject, which appeared in the CALIFORNIA FARMER, from January to March, 1858.

ALEX. S. TAYLOR.

MONTEREY, April 12, 1859.

THE Southwestern newspapers of August, 1858, state that the Grasshoppers committed great damage to the grain and other crops in Louisiana and Mississippi during the summer, visiting those sections of the country in millions.

A curious matter about the *Gryllidae*, is that they are subject to the infest of minute *Acaride* (parasitic mites). On looking at some Grasshoppers jumping about, near Monterey, in August, 1858, they seemed to be a new species, from the high color of their lower parts and legs. But on examining, with a microscope, the legs and belly were found covered with minute vermilion-colored lice.

The following extracts from the Atlantic papers, of the summer and fall of 1858, are well worthy of being preserved for reference, as relating to the strange appearance of the Locusts in Texas and the Mississippi States, and even as far North as New York and Pennsylvania. From some remarks in the Ohio papers of March, 1859, it would seem that they threaten to make their appearance in the same States during the present year. The extract on California Crickets is a curious piece of our strange natural history:

**The Grasshoppers.**—The vast swarms of grasshoppers, which have been devastating the prairies of Texas, started a northeast course upon their departure thence, and as they rose to a great height from the ground, as though for a long journey, it is a melancholy conclusion that they are coming up this way. Myriads of them are now eating up vegetation in Ohio. It is therefore no very violent supposition, that Pennsylvania, with a rather milder climate than Iowa, is not unlikely to be visited by them. These insects are not like the common grasshopper, which are every summer found in our fields and roads, but are of the size of a locust, with the same gregarious habits. The ordinary grasshopper is weak of wing, and never rises to a great height, whereas the locusts which have so repeatedly devastated Utah and Texas rise far into the upper air, and move off together to great distances, like wild geese. They appear in innumerable hosts, and instead of scattering, alight in a body upon some devoted locality, which they attack and destroy with the systematic movement of an army. They will thus eat up a crop of corn or cotton in a very short time. In Utah, this plague visited the growing cereals with utter destruction as often as three times in one season, so that the afflicted Mormons were reduced to extremities for food. They seem now to have attacked our frontier States, and to be moving gradually into the body of the republic. The horrors of famine have never been felt in our country, and, accustomed to the most prolific abundance, it is a calamity to which no one has ever looked; yet these grasshoppers are a terrible visitation in a region.—[Philadelphia American, June, 1858.]

**Habit of Grasshoppers.**—A Goliath correspondent of the Colorado (Texas) Citizen gives some curious facts in relation to the grasshoppers which have recently swarmed in that region. He (in May, 1858) says: "They have an especial fondness for wheat and cotton, but don't take so kindly to corn. The only vegetable they spare is the pumpkin. The most deadly poisons have had no effect upon them; fumes of sulphur they rather like than otherwise; muskato-nets they devour greedily; clothes hung out to dry, they esteem a rarity; blankets and gunny bags, they don't appear to fancy. They swim the broadest creeks in safety, sun themselves awhile, and then go on. The whole mass appear to start and move at the same time, traveling for an hour or two, devouring everything in their way, and then suddenly cease, and not move perhaps for a week, during which time no feeding is noticed; and, finally, they carefully avoid the sea coast."

**Fight with Grasshoppers.**—The Gonzales (Texas) Inquirer has an amusing account of the invasion of that city by grasshoppers (in June, 1858), and the attempt of the citizens to repel the intruders: "Everybody turned out—men, women and children; white and black—everybody, with fire and sword, brushes and brooms, blankets and buckets, carried on the deadly conflict; but to no avail. The 'hoppers' hopped on, and the defending forces were obliged to beat an inglorious retreat, leaving the barbarians in possession of the conquered city."

**The Grasshoppers all drowned in the Red River of the North.**—The following grasshopper story we find in the St. Paul Minnesiotian, of September 14, 1858: "By the last train from Selkirk Settlement, we learn that the previous reports of the destruction of the crops and herbage by the grasshoppers are entirely unfounded. Judge Johnston, the Recorder of Rupert's Land, who came down by this arrival, states that the crops were most plentiful, and that, in respect to supplies of provisions, the colony was never better off. The reports of the destruction by grasshoppers originated in this wise: When the Red River train left Selkirk, about the 15th of June, the whole country was filled with young grasshoppers just hatched, and the fear and supposition was that another such devastation by them as formerly created a famine in the colony would be experienced again. Under this belief, pork, flour and other provisions were ordered from here both by the Hudson Bay Company and by private traders, and the returning cars were loaded with provisions. It seems, however, that about the 20th of June the grasshoppers rose in the air and in a body attempted to emigrate east of Red River; but to no avail! Their ambition exceeded their ability, and down they all fell and were drowned in the Red River, whose surface they covered to the depth of three or four inches! This has improved the fisheries on Red River, and the fish now caught, it is said, are gloriously fat. The drowning of the grasshoppers, therefore, not only rejoiced the hearts of all the people of Red River, but even the fish thereof must have shined with gladness at the plentiful feast spread before them. 'Tis an ill wind that blows nobody any good."

**The Grasshopper Plague in Ohio.**—Mr. Schenck, of Franklin, Warren county, Ohio, writes to the Ohio Farmer, that the grasshoppers are making their appearance there in vast numbers. He says: "Last year we had millions of them; this year we have hundreds of millions." For five years, he says, they have been increasing on his farm, and he fears that, unless some means are discovered for their destruction, they will totally ruin his own and his neighbor's clover fields.

The speed of the Central Railroad locomotives is considerably decreased by the immense swarms of grasshoppers between Lancaster and Philadelphia. One engineer stated that his train was forty minutes behind, owing to the number of grasshoppers on the track, and that he used twenty buckets of sand, which was thrown on the rails in front of the driving-wheels, to enable him to get along at all. Improbable as this story may appear

its truth is vouched for by the engineers above alluded to.—[Pennsylvania paper of September, 1858.]

**A Plague of Crickets in the North.**—Crickets are making their appearance in countless numbers in the vicinity of Yuba, and throughout Shasta Valley. The Yreka (California) Chronicle remarks that they are far more destructive to the crops than grasshoppers, and though the latter insect has frequently made its appearance in that vicinity, this is the first advent of the huge crickets which now literally cover the ground for miles in the level country east of the town, devouring everything which comes in their way that is not large enough to resist their attack, frequently even eating other insects. They are of the same species as those in the Snake River country, which are used as food by the Diggers. The Indians about Yreka have recently gathered many bushels of them to Shasta Valley for the same purpose. A person from Table Rock says that the crickets have attacked his barley fields, and that he fears his own crops, and all in the vicinity will be entirely destroyed.—[June 12th, 1858.]

**California Crickets.**—A friend says positively that the lower end of Shasta Valley is overrun with crickets as large as mice, and that the Indians on Shasta river have collected a pile as large as any hay-stack in this vicinity.—[Yreka Union, July 20, 1858.]

In speaking of the pampas between Mendoza and Buenos Ayres, and their Indian inhabitants, Padre Ovalle says (about 1640), in his 7th Chapter of 3d Book, "They make bread of the cods of a tree, which we call, in Spain, *Algazobah* (Mesquite), and, because that does not last long, they have invented a strange sort of bread, made of locusts; for the locusts used to be in such vast quantities in those great plains called the *pampas*, that, as I traveled over them, I often saw the sun intercepted and the air darkened with flights of them. The Indians observe where they alight to rest, and those plains being here and there full of thickets, they rest in them and choose the highest for shelter. This the Indians know, and approaching softly in the night they set fire to the thicket, which, with the high winds that reign in those plains, is soon reduced to ashes, and the locusts killed; of these they make great heaps, and, as they are ready roasted, they have nothing more to do but to grind them to powder, of the flour of which they make a sort of bread which maintains them." Ovalle was a Jesuit Missionary, a native of Chili, who had resided in these countries for many years, and published his history of Chili at Rome in 1846, an abstract of which appeared in English in Churchill's Collection of Voyages, published in London in 1745.

The London Illustrated News of October 13th, 1858, contains the following curious note on a visitation of the Locusts to the Philippine Islands in 1858:

"Swarms of locusts have appeared in several of the Philippine Islands, and have caused immense damage in the plantations. Public prayers are being offered up and the common people are employed in the fields in collecting and destroying them, the authorities paying so much for every basketful presented to the Alcaldes. It does not appear that the natives of the Philippine Islands eat the Locusts, as the Riff Arabs do. The latter, when they see a cloud of Locusts hovering in the air and clouding the sky, watch them anxiously, and if they descend near their *adairs*, receive them with shouts of gratitude to God and Mahomet, throw themselves on the ground and collect them as fast as possible. Previously deprived of their heads, legs and wings the Locusts, well boiled in butter and served up with *aleuzca*, are considered by the Riff Arabs a delicious food. Their camels eat them greedily."

## The Filling-up of Harbors.

It is customary for geologists, in estimating the age of this globe, says the Scientific American, to base their calculations on the formations of deltas, the deposits of rivers, such as the Nile and the Mississippi. They take the thickness of the deposit made yearly as the radical of their estimates, and from this assume that it required myriads of years for all the principal deltas in the world to be formed. If the deposits of rivers were uniform, such conclusions would be inevitably correct, but the fact is, that in some seasons, as much sediment will be carried down in a few months as in others during centuries. A circumstance of this character has just taken place in the harbor of Greytown, the port so celebrated for its filibustering notoriety. The San Juan river flows out to the Atlantic in this harbor, and was formerly of a depth suitable for the largest men-of-war and steamships. Two months ago, the entrance to it was thirty-six feet deep, now it is only eighteen. The whole harbor is rapidly shoaling up, and where American steamers anchored in five fathoms of water four years ago, row-boats now get aground, owing to the vast deposits of weeds and mud. Vessels which formerly found an easy entrance are now compelled to anchor outside, and there is every prospect of this once excellent harbor becoming a lagoon in the course of a very limited number of months.

## Instruction and Science for the People.

The government of Great Britain has a department of science and art which takes charge of a school of art, where the best masters teach at a trifling cost to the student, and where all the facilities of a picture gallery and models are afforded; and it also cares for a museum of geology and mining school, a college of chemistry and a technical museum.

During the winter months, the professors give courses of six lectures to the workmen, on their special branches of knowledge, and the charge of admission is but twelve cents, to each course, thus placing information of the truest kind within the reach of all. By them, the brilliancy of an experiment or illustration is never thought of, its aptness being their only care, and as the audience go to the lecture room to learn, and the professors to teach, such secondary considerations are dispensed with, and yet the lectures are by no means dry, on the contrary they are very pleasant, for each lecturer being fully imbued with the spirit of his subject, he cannot fail to be always interesting and entertaining. Will not some of our well-known philanthropists endeavor to arrange for courses like this by the next season? Cheap and good, it would be a novelty for which they would receive the gratitude of thousands. Prof. Wagner of Philadelphia gives free science to the people; why cannot our other cities have it at least accessible to all? We give them some to read, who will give them some to hear?—[Scientific American.]

## Value of our Mountain Timber.

Whoever has lived in the mining districts of California from the years of 1850, or '61, or '62, to the present time (says the San Andreas Independent), cannot but have noticed the rapid disappearance of the oak and pine timber which once covered our hills and flats. Where Placerville now stands, deprived entirely of forest shade, in 1849 and '50 the lofty pines waved their branches, and the grand old oaks interlocked their boughs, almost as densely as they do now eight or ten miles to the eastward of that place. The necessities of the miner, and the increasing demands of a thriving town, have swept them all away. The hills around are bare and desolate. So it was, at a still later date, with this place; with Mokelumne Hill; with Nevada; and, in fine, with all the middle range of mining towns, from Shasta to Mariposa. We have only the decaying stump to remind us of our ancient forest grandeur. In those districts where much tunneling and drifting are conducted, the scarcity of that kind of timber which is demanded for the purposes of the miner, is beginning to be felt as a serious and growing inconvenience; it has often to be hauled for miles. Even fire-wood is becoming difficult of access, and the price, in the last three years (if we count the difference in the price of labor) has risen seventy-five per cent. In the neighborhood of San Andreas and Mokelumne Hill, we do not believe that the amount of available fire-wood, within three miles of either place, will serve the wants of the citizens over five years; for it must be remembered that very much of our natural supply of this kind of wood is located in deep gorges and rough, inaccessible cañons, where it is useless for these purposes.

But, it is of the timber that we wish especially to speak. This has all disappeared up to the region of the sugar-pine, which is not abundant west of Nevada, Placerville, Volcano, Mountain Ranch, or Sonora. Henceforward, all our fencing and building lumber must be brought from that region where the sugar-pine grows.

It is somewhat astonishing, that the many excellent sites for farms and timber claims are so long neglected by our people. Every acre of this timber-land, which lies anywhere along the lines of canals that tap the sources of our rivers, will, in a very year, become of the greatest value; because, if we wish to build barn, house, fence, or flume, we shall have to appeal to our upland neighbors for the lumber and timber necessary to the work. Thousands of princely fortunes are lying dormant in those mountain regions, inviting the hardy and enterprising to rescue them from the wilderness.

Every county in the mines has been provided by nature with all the building timber which the necessities of society, under almost any form of civilization, will demand. This timber, fortunately, is so located that, in hauling it, the teams are constantly going down an inclined plane, and can carry large loads with an inconsiderable motive power. Whatever facilities our valley and lowland neighbors may possess, through the aid of river navigation and prospective railroads, for securing an abundance of cheap lumber, is nothing to us. For a quarter of a century, perhaps, we shall have no railroads in these mountains, and must, therefore, be dependent upon the local provisions which nature has made for our wants in this respect.

There are numbers of healthy, vigorous young men in the State, constantly deploring the evil fortune which has cast them in a land where there is no employment for willing muscle; they imagine that all the roads to wealth or competence are blocked up; that the springs have been exhausted by the early pioneers, etc. If such will only turn their faces towards the snowy regions, and settling down permanently, upon a hundred and sixty acres of this splendid timber land, go earnestly to work to make farms and homes, after years will convince them that all the chances for fortune are not yet exhausted.

## Peculiar Bricks.

Bricks which are glazed on the outside are unfit for building purposes, because they cannot be cemented by common mortar, and therefore require to be porous. But this porous quality involves another evil, namely, that of absorbing moisture, hence brick walls in wet situations or when exposed to severe rain storms, become very damp. Could bricks be so made that their inside would become glazed or vitrified, they would prevent the absorption of moisture, while at the same time they would be perfectly adhesive. The London Builder states, that such bricks have recently been made in that city by Wm. C. Forster, and that he has taken out a patent for them. It is not stated how they are made, but we can easily divine a method for accomplishing this, namely, by placing some flux, like borax or soda, in the heart of each brick, whereby the interior will become vitrified, with a heat much lower than that of the outside. Such bricks cannot be made so cheaply as the common kind, but for some purposes it may be well to manufacture them even at considerable extra cost.

**To Prevent Potatoes Sprouting.**—If your readers are aware of the following process, which, as I am informed by Dr. J. M. Wilson, is practised in Scotland, I presume they will have no objection to giving it a second perusal, and to make the experiment at least on a small scale: "Diluted ammoniacal water in the proportion of an ounce of the liquor of ammonia of the druggist to a pint of river or rain water, has of late years been successfully employed for checking the vegetative power of potatoes, and prolonging their suitability for food. Potatoes immersed four or five days in this liquid, retain all their edible properties unimpaired for a twelvemonth, improved in flavor and mealiness. The effect of the liquid is to consolidate their substance and extract their moisture. After immersion the potatoes should be spread so as to dry, and will then keep good for ten months; contributing in this way not only to the comfort of families, but also to the health of mariners exposed to long voyages at sea."—[Forest Shepherd.]

**USE OF THE AXE.**—There is a species of savage little insect quite abundant in the pine woods of California, called the lion ant, the bite of which is almost as poisonous as that of the rattlesnake, says the Placerville Observer. These little monsters are of a dirty red color, about three-eighths of an inch in length, are covered with a coat of tiny bristles, and resemble more the fly spider than the common ant. These insects are the mortal foes of the tarantula, and invariably come out inordinately large in proportion to their bodies. Their jaws are armed with formidable fangs, and as they are altogether ugly little varmints, people who have business in the bushes had better look out for them.

BY MRS. M. A. DENISON.

[A glorious song on a glorious theme. Let us no longer slander the Golden Pippin and Bellflower as apples of discord, but hereafter look on them as forerunners of peace, as the "Early Harvest" of good things.]

## The Apples of New England!

How hang their loaded boughs,  
Over the gray stone fence;  
In reach of the dappled cows;  
O! every red cheeked Baldwin,  
Hath a merry song to sing  
Of some old moss-roofed cottage,  
Where the farmer is a king.

Yes, whose grain takes a thousand hues  
Whose grain takes a thousand hues  
In the wonder-tinting sunshine;  
Yes, king in his cobbled-shoes;  
King of the sturdy plowshare;  
King of the sickle keen;  
King over God's full meadows;  
Budding in white and green.

The rascals of New England!  
What ruddy fires they see,  
Where the crack of the viney walnut  
And the crack of the pine agree;  
Where the herbs hang high in the chimney,  
And the cat purrs on the hearth,  
And the rollicking boys guess riddles,  
With many a shout of mirth.

And they hear the fearful stories  
That trouble the children's sleep,  
Of ghosts seen in the valleys,  
And speeters on the deep;  
And they burst their sides with laughing,  
And fling their rich wines round,  
Or dance to a cunning piping,  
As the corn pops white at a bound.

Oh! the sweetings of New England!  
Of the old Rhode Island stock—  
Brought from the English gardens  
To grace the land of rock;  
As fair as Briton's daughters,  
As hardy as her men,  
But fairer lads and lassies  
Have plucked their fruit, since then.

O! the Pearmain of New England,  
With its blended milk and rose,  
There's a smell of Albion's orchards  
Wherever the good tree grows;  
A stout old pilgrim brought it,  
And to cradle its seed he broke  
The sacred soil of Hartford,  
By the roots of the Charter Oak.

O! the pippins of New England!  
What lover's smiles they see,  
When their yellow coats in letters  
Tell tales at the apple tree;  
What rosy cheeks at the gallings!  
What kisses in busking time!  
That soon lead off to the parson,  
Or end in a wedding chime.

O! the apples of New England!  
They are famous in every land;  
And they sleep in silver baskets,  
Or blush in a jeweled band;  
They swell in delicious dreaming  
On a beautiful, crimson lip,  
And taste of the nectared blisses  
No lover has dared to sip.

They go to the southern islands,  
They go to the western wild,  
And they tell of their glorious birth-place,  
To every frolicking child;  
Of the home where men are noble,  
And women as good as fair—  
O! the apples of New England,  
They are welcome, everywhere!

## The Frost and Fruit in the Mountains.

Our cotemporary in Calaveras county, the Independent, on the 9th inst. gives a summing up of the effects of the rather severe frosts on the fruit. The writer is, we think, one competent to judge, and his observations are of value. We are also gratified to find the opinions we have heretofore advanced, sustained by such good authority. The writer says:

The late unwelcome visits of Jack Frost came very near playing the deuce with the fruit crop in the mountains. However, after a close and pretty general inspection of the bloom and partially unfolded buds upon the peach, apricot, almond, apple, pear and cherry trees in this vicinity, we are satisfied that the apple and pear are nearly all right; whilst the peach, apricot, almond and cherry, on the south hill-sides, where the bloom was very far advanced, nearly one-half of the fruit has been destroyed. On the north hill-sides, where but few of the trees had yet blossomed, the loss will (so far as anything yet has transpired), not exceed one-fourth of the bloom. So far, the injury sustained is not worth complaint, as all manner of trees in this climate usually produce more fruit-bearing buds than the tree can nourish and ripen into good fruit. Most orchardists are in the habit of knocking off at least one-third, and often more, of the young fruit, for the improvement of the quality of that which is left to ripen. We are glad the injury sustained is no greater, for the products of our orchards, aside from the convenient luxuries they furnish us, will this year yield somewhat to the wealth of the mining counties. An unlucky frost just now, would operate as a serious setback to our horticultural industry.

**GARDEN WORK.**—Strawberries should be weeded out thoroughly, and a chance given for runners to strike root, if more plants are needed—and more always are, for a new bed should be laid every year; and besides, if you have valuable kinds you should either sell or give away roots. Remember, the plant nearest to the parent plant, is the only one that should be used; all others should be prevented from growing. The watering of everything which can be conveniently showered, should be kept up diligently, and the ground stirred in time of drought as often as possible.

[Plants can be set at all times of the year.]

**WORKING UP SAWDUST.**—The ingenuity of Parisian cabinet-makers, in the Faubourg St. Antoine, has found use for common sawdust, which raises the value of that commodity far above the worth of solid timber. By a new process, combining the hydraulic press and the application of intense heat, these wooden particles are made to reform themselves into a solid mass capable of being molded into any shape, and presenting a brilliant surface, a durability and beauty of appearance not found in ebony, rosewood or mahogany.

## AGRICULTURAL STORE.

J. D. Arthur. W. N. Arthur.

J. D. ARTHUR & SON,

IMPORTERS AND JOBBERS OF

AGRICULTURAL IMPLEMENTS

Washington Street, near Davis,

HAVE JUST RECEIVED

by late arrivals from the East,

and will continue to receive

A LARGE AND VARIED ASSORTMENT OF

AGRICULTURAL GOODS,

Among which are the following, which will be sold at the

LOWEST MARKET RATES.

Reapers & Combined Machines,

OF ALL THE VARIOUS STYLES:

The Celebrated New York Reaper, cutting from

6 1/2 to 7 1/2 feet swath.

Unrivalled, Manny's, Beloit's, Atkins', and all the

various styles.

Pitt's Thrashers,

Hall's Thrashers, etc., etc.

The subscribers having purchased and made arrangements

for a full supply of Agricultural Implements to New York and

Eastern, they will be

In Constant Receipt of Fresh Goods,

well adapted to this market, by clipper ships arriving during

the season, which we can afford, and

WILL SELL ON AS FAVORABLE TERMS,

As any other similar establishment on the Pacific Coast.

Farmers and dealers will find it to their interest to call

and see the subscribers, at their Agricultural Warerooms.

JOHN D. ARTHUR & SON,

Nos. 3, 4 and 6 Washington street,

between Front and Davis, San Francisco.

73m

125

McCormick's Chicago Reapers!

Three Sizes—5 1/2, 6 and 7 feet Cut,

WITH EXTRAS FOR ALL THE DIFFERENT PAT-

TERNS, from 1852 to 1859. [Agents for the Manufact-

urers for the Pacific Coast.]

2500 sold in 1857, 4000 sold in 1858,

2500 sold in 1855, 4500 sold in 1856,

4000 sold in 1853, 4500 sold in 1854.

15,000 Sold in the last Four Years.

No single establishment in the world can truthfully claim to have manufactured and sold anything like so large a number of Reaping and Mowing Machines during the same time, while my experience dates back to the origin of my machine, in 1834, having been actively and exclusively engaged in their manufacture for the last fifteen years. I can quote more largely engaged in the manufacture of these machines than ever before, and, with my improvements for 1850, do not hesitate to warrant my machine as a Reaper, Mower, and Reaper and Mower, superior to any other for simplicity, durability and perfect working; and further to say, that farmers who may desire it are at liberty to work my machine through the harvest with any other, and keep and pay for the one preferred. The position of the Reaper in my machine (as patented), upon the main frame, where there is great strength, and where the weight adds to the power of the machine, is the only right one. Other makers have to haul their Reapers on the platform, where he must submit to having the dust thrown in his eyes by the operation of the reel, and to being jolted over the clods by the little platform-wheel over which he rides, necessarily racking their machine to pieces. This accounts in part, for the great durability of my Machines as compared with others.

Great Council Medal awarded my machine in London, in 1851.

Grand Gold Medal of Honor at Paris, in 1855, at the French Universal Exposition, in 1855, are known by them to be F.A.I.E.

Highest Prize at the French Agricultural Society of England, in '57.

Highest Prize of the U. S. Agricultural Society, in 1857.

As the best Reaper.

Publications made by the manufacturers of the Menck machine, claiming that they were the best, at the French Universal Exposition, in 1855, are known by them to be F.A.I.E. The success of my machine, as indicated by figures above, is its highest praise; while the awards of Premiums, generally, are worthy of no confidence, although Reapers-makers make a business of laboring and scheming to secure the little Annual Odesseum Premiums of the country. Although it may not be generally understood, it is nevertheless true, that these machines have always been sold at comparatively low prices, and but for the boldness with which I introduced and sold them by thousands, for the ten years past, other smaller manufacturers would doubtless have put the price much higher.

I could furnish thousands of testimonials from Farmers and others, of the truthfulness of every statement I have made, and much more. I may further remark, that all of the Reaping Machines of my prominence in the country, are mere modifications of my machine; all other manufacturers having necessarily limited experience in comparison with my own. A single year's severe service will satisfy the farmer, that in point of durability, my machine is far superior to all others; besides several important advantages, referred to in my regular Annual Circular in pamphlet form, which will be furnished, with checks and full instructions, by addressing me, or any one of my Agents.

P. S.—To correct a misapprehension from recent newspaper reports, I may say, that while the Commissioner refused to extend my PATENT of 1845, that of October, 1847, will not expire for several years to come, and that this has been my most important Patent; and further, that Reapers-manufacturers cannot copy more nearly my machine than they have done heretofore. They must still carry their Reapers on the back of the platform, and submit to other consequent imperfections.

CYRUS H. MCCORMICK.

20 Pitts' Pattern Thrashers and Separators,

Manufactured by Nourse, Mason & Co.; 22 and 36 inch

cylinders, with full extras.

U. S. Patent Office, January 3, 1859.—Sir: J. A. & H. A.

Pitts' Patent, dated June 23, 1857, (machine for Thrashing and

Cleaning Grain), was only extended for a term of seven years

from June 23, 1851. It has consequently expired. Respect-

fully, yours,

J. HOLT, Commissioner.

Sotriworth & Co., San Francisco, California.

Pitts' Patent-Double Flinn 8 and 10 Horse-Powers.

To whom it may concern.—This may certify that A. Gordon

& Co. are fully authorized by me to sell the "Pitts' Patent-Double

Flinn Horse-Power," in any of the States or Territories

secured to me by letters patent. (Signed,

Buffalo, October 20, 1858.

JOHN A. PITTS.

We are this month shipping Horse-Powers of the above

patent to A. B. Southworth, of San Francisco, Cal., which he

is hereby authorized to sell.

A. GORDON & CO.

Rochester, N. Y., October 23, 1858.

## Stories from Real Life.

BERTHA AND PHEBE:  
OR  
THE INFLUENCE OF WEALTH.  
BY MOTHER RUTH.

FRIEND FARMER: Are you fond of scenes in real life? Do you like a narration of facts occurring every day around us somewhere? It need make no difference where, or with whom, is it not better than fiction? or is it too full of real human life to suit the refinement of the age in which we live? Well, I take it for granted you are willing to hear, in order to judge whether you are pleased or not; and also your readers. But, friends, I am not only anxious that you should be interested, but I desire most sincerely that all may be benefited by after reflection and observation.

In a neighborhood, no matter where, so it happened to be in our own loved land, and amongst just such people as are to be found in every city and village, there lived a family, in moderate circumstances, not considered wealthy, for they had none of the outer insignia of wealth about their quiet home, or in their appearance. The mother was a woman of matured judgment; one who had seen much of the world; one who had learned lessons of wisdom, enabling her to choose the good and refuse evil; one who was correct in her manner of living; one who possessed a heart to live for others as well as self. To enable others to be happy was her great object in life. She was all content; no proud distinction of the world which gold could procure would have been sufficient to make her a votary at the shrine of wealth or fashion; only so far as wealth had a tendency to develop virtue and intelligence, it was of importance in her esteem. There was enough she knew for comfort, but none for extravagance. The father was a plain, calculating, business man, industrious and energetic. There were three daughters. During their childhood all were happy. The parents were in possession of a peaceful home. They were prospered, if good health, happy hearts, and time well employed in domestic affairs, with time and opportunities for education and discipline of the mind, is prosperity. All these that family enjoyed. They were all, to appearance, happy. By and by there were changes in the neighborhood; more wealthy persons located there for home residences. Some large and really elegant buildings were seen rearing their heads above the neat little cottage of the happy family. The mother was the first to speak of it: "Well," said she, "I am glad to see such substantial dwellings going on around us."

"Yes," said the husband, "this one near us is the property of a very wealthy man, and one who rather keeps himself above all except those who are in as good position in money matters as himself. His wife and family are living in the best style wealth can purchase in America."

"Very well," said the wife, "if they are only happy in a life of splendor, it is all right; and if they are sensible people, they have it in their power, from their position of wealth, to do a great deal of good in life."

"Do good," said the husband, "in what way, I wonder, do you suppose such people do good? in getting all they can by grinding the poor? or giving entertainments to those of their own set, as they are termed?"

"Neither," said the good wife, "did I mean. It seems to me that people can be rich, and not grind the poor as you call it, or oppress them."

"Yes, they could, but few do. They almost always cause more or less of unhappiness by their exercise of the power which wealth gives."

Each passed on, pursuing their regular contented course at the cottage. After a brief space of time, the individuals composing the family at the wealthy settler's, in the newly erected dwellings, were brought, with considerable display, to their new home. All the preparation (at one of the dwellings) for their reception, could be seen for a number of days going on; and when the splendid carriage drew up in front of the house, it was imposing, such a parade as was made. There were three children—one boy and two girls. Some time after, one of the girls of our happy family at the cottage was in the garden among the flowers; she observed one of the little girls looking at her from the veranda of her house. Presently she came down the steps, and motioned to her to come to her. The inmate of the cottage, whom I shall call Bertha, passed across the garden to the child, who immediately exclaimed:

"Will you sell me some flowers?"

"O, no," said Bertha, "I will give you some!"

"No, no," said the child, "I don't want you to give them to me; we buy what we want. I love flowers. We shall have a garden soon, and O! such grand flowers. Mother don't care about these kind of flowers that poor people have, but I love them all!"

"What kind of flowers are they that poor people have?" said Bertha.

"O, those that are in the garden where you are. But you don't look like a poor girl; are you poor?" said the little one, all innocent as she was of the confusion of her listener.

"I don't know," said Bertha, "what if I should be? I suppose you are not poor, of course?"

"No, indeed," said little innocence, "don't you see how well I dress? Don't you see everything we have is of the best? We are rich."

Bertha offered her some flowers.

"No," said she, "let me smell of them, that will do; my mamma won't let me take them if you don't sell them. Do you make bouquets to sell?"

"Mamma thought you did."

"No," said Bertha, "we give them away." And thus they parted. The little one had been thus innocently planting a thorn in the mind of Bertha that was eventually to pierce her soul with many sorrows, and also those of her friends who tenderly loved her. She was easily excited, of an impulsive character, and possessed many amiable qualities; but the mother often saw exhibited a something in the countenance, a haughty, restless expression; and in her converse with her sisters there was more or less sad expressive of a mind not at rest in the sunshine of happiness; still there was nothing very definite.

After a brief space of time, her mother often found Bertha in some spot in the garden, observing closely whatever happened to be passing at the residence of Mr. M.; such as visitors calling and departing. Mrs. M. was often seen near the window of her back parlor, which overlooked the garden surrounding the cottage. Bertha seemed to take a strange pleasure in looking directly toward the window, where she could see Mrs. M. In vain her mother's affectionate chiding not to allow herself to do so; sometimes the curtain would be put down while she was in the garden, and raised when she went in. Her mother charged her not to be guilty of such a breach of good manners, as to be seen looking in at a window; that it was right enough for the curtain to be dropped, to give her a hint that it was considered idle, or impertinent. Who can portray the astonishment of the mother when her daughter, who, until that moment, was to her a little girl, turned toward her with a countenance almost fiercely irradiated with passion (the flashing of the eye, the scornful curl of the lips, compressed tightly, as a woman fully developed in the strong passions of the mind), saying: "Ma! if they are rich and we are poor, I am determined that they shall know and feel that Bertha does not fear to look at their splendid house, or at them either, or at any who come to their house, as much as she chooses and, Mamma need not blame me if I do; for it is all the pleasure I now have. Their coming to live there has roused me to think; and little Ella's questions about being poor, and her mother's remarks about poor people's flowers, which she repeated to me, has stung me deeply; and now I only want to be rich. Nothing but magnificent clothing, plenty of money and jewelry, with servants to wait upon me; and a more splendid house and more costly furniture than they have, can ever satisfy me, poor as I am, now; though I never knew we were poor, until they flung it in my face. Poor; yes, poor! but no longer am I to be contented with poverty!"

The good mother laid by her work; Bertha glided out of the room—the mother followed her child. What passed between them, in that interview, is too sacred to narrate. All the deep feelings of a mother's soul were gushing up within, for the child of her deep affection had been strangely transformed before her; and she now knew the danger; and how her heart was made to ache with fear for the future of one she so much loved. No longer could the mind free itself from the conviction, that Bertha was in possession of a strong will, and of passion deep and abiding, to urge her onward in her future destiny. She was no longer a child; she was for the future to be reasoned with as a woman, young as she was (fifteen years and a few months told the brief period of her life); and now she was beginning the work of life—whether on correct principles, or those infused into her by the force of circumstances, the sequel will show.

She allowed the innocent prattle of a little child to make such an impress, through the intellect, as to suspend the natural action of the moral attributes of the soul; and, in the fierce manifestation of purely selfish propensities, she had deeply wounded a tender mother; strangely forgotten all her previous impressively pious lessons of humility and love—love to all mankind.

Reader, cast about your mind a constant and eternal watchfulness, that you err not as young Bertha did. Why need she be so sensitive on this subject? Why could she not have pursued her own tranquil course, without being turned aside by such trifles? Instead of doing so, she seemed rather to invite further encroachments upon her already inflamed passions. We will leave her for a short time, while we look at the course of a younger sister, little Phebe; her age was twelve—a mild, sweet-tempered child.

Directly in front of the garden, on the opposite side of the street, another wealthy man had settled himself with his family, in as good style as Mr. M., in a few months afterwards. Somehow the little girls had made some advances toward Phebe; but how, exactly, was not known. After having spoken to them a number of times, rather distant, she was beckoned to come across the street to them. She hesitated; but at last said: "I will ask mamma;" running into the house, she at last, after passing through her mother's room, found her with Bertha, in very earnest conversation, which ceased as she approached. Her mother requested to know what she wished. She made her request; and, with some reluctance, succeeded in obtaining permission to cross over and see what they wished; but to come back immediately. She passed out, wondering why she was required to return immediately. As she crossed over, the two little ones at the door clapped their hands, saying: "Mamma, mamma! the little lady is coming! Come, mamma, see here she is!" Each taking her by a hand, urging her onward to the door; just inside of which they were met by their mother; who said: "Children, dear, don't be rude, in your haste to get the little lady into the house."

Poor Phebe was somewhat surprised, and said to the mother (whom I shall introduce to the reader as Mrs. Stirling): "I have to go back immediately; mamma told me to do so. The little girls beckoned for me; I came to see what they wish."

"I will tell you, for them, what they wish: It is to make your acquaintance. They are lonely; they wish you to come, as often as your mamma will spare you, to visit them; and to know, if it would annoy your mamma for them to come sometimes to see you. If your mamma gives them leave, they will come. And now, my dear, as your mamma told you to return so quickly, it is best to go. We hope to see you again very soon!"

Did Phebe feel that she was honored, because they were rich? No; she felt happy; for she had come within the atmospheric influence of a noble-minded woman, who loved children; indeed, one whose large soul loved all; when she returned to her home, it was with happiness beaming in her countenance; and yet, there was a shadow on the mother's, as she drew her towards her, saying:

"My dear, have you been to take lessons, which will cost you sorrow and pain to forget? or, are you more fortunate than your sister? She is becoming very determined that nothing can make her happy but to be rich; and I fear, with her

ungoverned passions, she would make a sad use of so dangerous a responsibility as wealth gives to its possessor."

"Mamma," said Phebe, "you always taught us that true riches was joy, and love, and peace, with a good heart to do right. This is all I understand about riches; I ask no other. We are very happy in our home. We have enough; and I am sure you always find to spare to aid the poor and needy."

"My darling," said the mother, "may you always feel as you now do on this subject. But now tell me what those little girls wished of you."

Phebe told her all that had passed; and exclaimed: "Dear mamma, do say to me now, will it annoy you for them to come, and may I go to see them?"

"Certainly," said her mother, "you may, occasionally; and you may go now and tell the lady, that it will be no annoyance to me, but a gratification, to see your little visitors at our house."

Off went Phebe, and all was perfectly well with all concerned. This group were happy.

Phebe was naturally of a more loving and lovable disposition than her sister Bertha; and yet, Bertha had many sterling, prominent features of character, more marked than the younger one; which is generally the case with one so willful as she was; she had been more an object of idolatry in the family than Phebe ever had been; but had always been under the control of her excellent mother, until in the present unfortunate occurrence, when no argument, no persuasive reasoning, availed to direct her mind to a less disastrous course of reasoning, than the one roused into existence by pride and hatred of her previous humble, but very happy, manner of life.

O, could she have known, in her young and yet inexperienced mind, the misery and gilded, moneyed wretchedness of heart, among the rich, she would perhaps have felt otherwise than she did. Wealth often, and isolated as an object in life always, brings misery; it becomes a master, when it should be a servant.

After the painful scene that occurred between the mother and daughter, there appeared a sad change in the inmates of the cottage-home; there was a sort of reserve visible between the mother and her wayward child, most apparent in the young Bertha. The quick perception of the father soon made the discovery that there was something unusual, casting a gloomy reserve over his little family group, heretofore so cheerful in their evenings. He was wise enough to refrain from any allusion to it, until the girls had bid them "good night," after the old-fashioned family prayer (the thanksgiving, the invocation for protection from evil, for support in trial, and for peace with and love for God and all mankind), which always closed the evening intercourse of the family.

After the girls retired, there was a free, confidential disclosure to the father of all that had passed, as far as known to the mother. He listened patiently, then rose to his feet, exclaiming:

"And this is the work of the wealthy too often. They sow the seed that produces a crop of misery in the lives of others. The young are thus often forced to crime, goaded by the contrast between the more wealthy around, in their splendid appearance, and the more humble and conscientious, who live in plainer style—subjected, though they ever are, to less of the drudgery of being as hypocrites. We must do all we can to instruct and properly direct the minds of our children; to place a correct estimate upon these things, or they are ruined."

One less interested than the devoted mother and wife, could not have failed to discover, in much that was said by the father at this time, that was indicative of the fact that the young Bertha partook largely of her father's spirit, in her organization of mind. He showed, by much of his conversation, that he had suffered at some period of his life far more in mind than he chose to disclose in words, from oppression from others more wealthy, and consequently more influential. As society is even yet existing around us, it existed then; it was, and is yet, too much the case, that wealth is the lever of power; and thus, too often might makes right in our world. It is oppressive often to the man of less means, who is often far more the man of intelligence and moral worth.

There was little sleep for the elder members of the cottage that night. Before morn was ushered in by the king of day, the father had determined, to remove his child from the place where she had been, for the first time, led into a perception of the contrast between themselves and others living more ostentatiously; for the family were not so poor as might be supposed by many. They had always been very comfortable. They were poor only, when contrasted with those who make a display in the appliances of wealth; but, contrasted with the other extreme, poverty itself, where want makes wretchedness, they were far removed—I would call it midway between the two extremes of rich and poor. No wonder they were happy in their condition; for it is one of blessed Wisdom's places on our earth; yet, not many of earth's children are content to stop in this condition, but grasp on, and on, till they have too much by far for happiness.

The next morning Bertha was told by her father to prepare her wardrobe to go with him on a short journey, in which he thought she would take much pleasure. Anxious was she to know where she was going to. She was told, to visit a relative of her mother.

And now I will tell the reader what Bertha knew not at all the time. It was to see a rich aunt, who loved the world and its fashions extremely well, and pursued the pleasure bought with gold; and knew little else. How wisely the father acted in her case, or how far he erred, will be very apparent in the conclusion, which I shall give in the next number if possible, to finish the story.

MOTHER RUTH.

CURIOUS INCIDENT.—The court house at Summit Level, Ravenna, Portage County, Ohio, is so peculiarly placed that the rain falling on the roof, will run off one side into Turkey Creek that leads to Cuyahoga river, ten miles from Brady's Leap, and thence into Lake Erie; while from the other side of the roof the water will run off into tributaries of the Ohio river.

## SEED, PLANTS, &amp;c.

SEEDS! SEEDS!!  
Crop of 1858.

Just Received by Express, on the steamer  
John L. Stephens,

A FULL ASSORTMENT OF SEEDS,  
Selected by Hon. Marshall P. Wilder, President  
of the Massachusetts State Horticultural Society,  
from responsible Growers, and warranted to be the  
CROP OF 1858.

## TAKE NOTICE,

The undersigned being desirous of establishing a reputation,  
and being aware of the imposition that has been practiced on  
Farmers, thinks proper to state, that he has not an OLD Seed  
in the Store. All Seeds sold guaranteed true to name.

Planters and Traders will find it to their interest to secure  
GOOD, RELIABLE SEEDS, at as low a price as they  
would have to pay for worthless trash.

Have also on hand and for sale, a very desirable  
assortment of

Foreign and Fancy Grape Roots,  
Peach and Cherry Trees,

Together with a full and complete assortment of

AGRICULTURAL IMPLEMENTS.

For sale by  
J. L. PANGBURN,  
85 Washington street,  
1-2m Between Front and Battery streets, San Francisco.

## SEEDS! SEEDS!!

Fresh Arrivals  
AT THE

Agricultural and Horticultural  
SEED STORE,  
NO. 108 CALIFORNIA STREET.

JACOB SCHRIEBER.

## The California Farmer.

SAN FRANCISCO: FRIDAY, APRIL 22, 1859.

## Our Traveling Agent.

We are pleased to announce the name of Dr. H. Hewitt as our Traveling Agent. Mr. H. will visit many of the upper Counties, and will present his claims to attention for his celebrated Seed-sower and Harrow, and will also present CALIFORNIA FARMER to those who have not yet subscribed, and we hope to receive a large number of new subscribers through his efficient Agency. Persons who are now indebted to us can pay him, or any of our named Agents, or can remit by mail, as money will always come safely through the Post-office.

## A Special Agent in the Eastern States.

Mr. E. A. HAW, who left here in the steamer of the 5th inst., on a visit to his kindred, to tarry a few months, in various places, will act as our Special Agent, to visit Nurseries, Farms, Gardens, Stock-Farms, etc. We commend our young friend to the kind courtesy of our friends there, and hope they will send us a goodly lot of subscribers and a host of new advertisements, and they will give us a pleasure and themselves a profit. We invite the special attention of Manufacturers, Stock Raisers, Inventors and Book Publishers, to our Journal, as a medium for their advertisements by which they can be widely known.

## The Farmer—Our City Carrier.

Having employed Mr. J. F. LARRABEE as a Carrier for this city, we shall hereafter send our paper to the places of business, or residences of our subscribers, as they may desire. We now cordially invite our friends and fellow citizens to receive the FARMER into the family as a friend to all "home industry." It will be left wherever desired, at the low price of fifty cents a month. Persons desirous of having the paper left, will please send their address to our office, and they will be supplied.

## Special Notice.

J. Q. A. WARREN has no connection whatever with the CALIFORNIA FARMER. This notice becomes imperative now, as many persons have supposed that was the address of the Editor and Proprietor of this paper, and have so addressed letters intended for this journal, which have been misdirected.

Purchasers of stock, and all persons corresponding with the CALIFORNIA FARMER or the Editor and Proprietor, will please be particular and address as follows: Col. Warren, Editor California Farmer.

## The Wool Crop in California.

That the wool clip of the present year will be large, very large, there can be no doubt; that it will prove valuable in gold there is no doubt, for one thing is certain, it will always bring the gold. We cannot overlook the market of the United States for the next fifty years. The last year there were imported into the United States 150,000,000 pounds. Look at this fact and then ask how will ten or twenty thousand bales effect such a market? Last year the wool clip of California was about 6,000 bales; the present year, we had supposed it would be doubled and more. From recent facts we have every reason to believe it will reach to 20,000 bales, or equal to 4,000,000 pounds. Well done, California! Our merchants and business men have but a faint idea of the world of wealth that is growing up around them in the country to sustain them. Our merchants, ship-owners and tradesmen should study these things. They are the life-blood of their business. The Prices Current most truly says:

The importance of the wool culture in California can scarcely be over-rated. Climate and pasturage are admirably adapted to this branch of industry, and moreover, we have a large area of country from which no other crop can be so profitably produced. We know a gentleman who five years ago bought 800 ewes for \$7,500. From this investment he has since raised and sold sheep and wool to the amount of over \$70,000, and now has a flock of sheep and lambs that \$40,000 could not purchase.

The same excellent journal speaks of the Pioneer Sheep Ranch of Flint, Bixby Co., in Monterey county. We were favored with a call from Mr. Flint, and gathered from him personally the following facts: Mr. Flint came over the plains in 1854, and brought over 1,400 sheep and some horned stock. From this beginning, and from some imported Merino breeders, he has now a flock of about 26,000 sheep; over 2,000 are now pure Merino of three different breeds, all of the highest character. This firm has some of the product of the original George III. Spanish Cross Merinos, and for mutton sheep unequaled. These sheep will weigh, on foot, at a year old, 125 pounds, and will clip from 5 to 10 pounds wool the season, worth in New York 35 cents a pound, and washed 45 cents. This wool brought last year 35 cents, and it is much higher this season and in greater demand. The product of lambs the last season was from one flock of a little short of 2,000 ewes, 2,300 lambs—a second flock of between 1,100 and 1,200 ewes about 1,400 lambs. Messrs. F. B. & Co. shipped to Boston the last year 70,000 pounds of wool, which brought them as named, 35 cents a pound. It will be recollected that we published the clip of this firm the last year, having received from them samples of the wools at the time, and their schedule giving the following from four bucks and two ewes, severally 11, 12, 20 and 23 pounds for bucks, and 12 pounds each for ewes, and all of nine months growth, and also from the great buck Grizzly, of 32 pounds. Thus it will be seen that California is fast taking away the laurels that have long been on the brows of our Green Mountain Boy for sheep raising and wool growing. Messrs. Flint, Bixby & Co., as well as many other wool growers, have done nobly for our State, and we rejoice to know they are on the high road to success and prosperity. None are more deserving. We call attention to the advertisement of these fine sheep in our columns.

DO YOU SEND A PAPER HOME?—We would ask each and all our readers who have kindred and friends in the old States or Europe, who feel anxious to know all matters of interest in California, if they send to such persons a newspaper? We wish to call the attention of all our patrons to the good they can do their kindred and friends and our State, by sending home such a journal as the CALIFORNIA FARMER; for we know it is hailed with a pleasurable interest in every State in the Union, and welcomed into the home-circle everywhere.

## Plan to Advance the Cause of Horticulture.

We are always happy to find the friends of Agriculture awakening to the great importance of the vast interests connected with this subject. We herewith lay before our readers the following plan of Col. Harasethy, of Sonoma, for the formation of a Society, upon an excellent plan—one that will commend itself to every thinking mind. By the plan of Col. H. the Society can be self-sustaining; and, at the same time, it can cooperate with the State Agricultural Society, and also be entitled to the aid and patronage of the State, as an institution worthy of its notice.

We cannot but approve the plan, for it is the same, in its main features, with the project we proposed for the State in 1854, and urged at that time. This is a grand movement; and we trust Sonoma County will go forward and carry out this design. It will be a noble example, and one that every County can follow, with honor to themselves; and a plan which will result in the increase of the knowledge, power, and wealth, of all who shall engage in it.

There is one grand feature, that must be held up before all the members, and that is: *Merit alone wins the prize!* The chief source of all failures in these enterprises, is the miserable selfish feeling (sectional, national, political, or sectarian) which a few men will ever strive to fan into a flame, that proves the bane of all such enterprises.

If an Agricultural or Horticultural Society is formed, for the promotion of such a cause, what has party, sect, creed, or nationality to do with the merit of the man who excels in the knowledge of this science? California is peculiarly situated in this respect; and we cannot better illustrate our views on this point, than by giving the sentiments we uttered in 1854 on this very subject. In our memorial to Congress for an Agricultural College for our State, based on the very plan now suggested for Sonoma County, we said:

"No other State in the Union has ever had drawn to it, in so short a period of time, such vast numbers of all nations, and none, therefore, has ever been placed in a position to exert so wide an influence. California is the great mission ground whereon to preach the value of our free institutions in their practical bearings, and the benighted of other nations are coming to us to receive those lessons that shall be borne back to those they have left behind them, for good or evil, for freedom or servitude, as this great country shall, by her people and her institutions, instruct them."

"That these institutions may be beneficial and lasting, we must educate the young. We must present to them convincing proof on our part, as a people, that we desire their permanent good; and, to do this, we would open institutions of education, as free from all political and sectarian bias as possible in the nature of circumstances or society; and in no way can this be better effected, than by a College liberally endowed, where the youth of all nations shall find the doors open wide to receive them, and where they could be instructed in the natural sciences, and particularly the many youth who must eventually become cultivators of the soil."

Now every County can have a Society; can have a College; and, in the grounds attached to these institutions, can the young be educated practically by apprenticeships; and thus increase the value and income of the stock of such associations.

We like the plan of Col. Harasethy, and hope it will be carried out; and we cannot but repeat our words, uttered in 1854, to urge upon the people of our State to carry out such a plan in every County. We will aid all in our power, and we can do much, to aid every County. We can aid them to books and seeds, and valuable information; and, if Congress will not give us a State College and State Grounds, and our own State will not do it, then let every County have a Society, College and Grounds of their own; and, by and by, we will have one by the united voice of the whole people.

The following sentiments we uttered in 1854, in the document alluded to. We feel these truths still:

"We see in this State a promise of future greatness in this ennobling science; we see that this State is destined to be the great granary of our nation. It may be destined of God, if rightly understood and appreciated, to be the source of supply when other portions of our beloved country may be in want."

"We see, too, an opportunity of new sources of wealth and knowledge, to be derived from encouraging people of all nations to become citizens, giving their allegiance to our laws and institutions, and yielding the knowledge they too possess, in advancing this great science in their adopted State and country."

"We believe there never has been a period in the history of any nation, when so glorious an opportunity has been given to bestow so great a boon, and to throw so humanizing and christianizing an influence over so many people, and of so many different nations, as is now offered to the people of these United States, and by the means which we would most respectfully suggest to your honorable bodies."

We present the plan for an Agricultural College for California, with Grounds, etc. The plan of Col. H. fully meets our approval; and we hope great good may result from the meeting at Sonoma on the 14th of May, and that the people will respond to the measure most heartily. We shall keep the matter before them, and be there to see and cooperate.

TO OUR CORRESPONDENTS.—"Travels in Mexico," by Wanderer, have come to hand, and will appear next week. No. 2 of "Bertha and Phebe, or the influence of wealth," by Mother Ruth, received and on file for next number. A deeply interesting letter from J. F. E., upon the "Dignity of Female Labor," in response to our correspondent N. B. H., has been received, and will appear next week. A valuable and interesting letter from Mrs. E. W. Farham happily received and on file for appearance. A new correspondent from the great State of Alabama, comes to us with high compliments of our journal. Its dignified style, and the very able criticism on the Press of the present day, is of so high and just a style we mark it for appearance very soon, with our grateful acknowledgments, and hope to hear from the same source often. "Taproot," number two, is received, and marked to appear next week. We have the promise of a series of valuable sketches of the American Convey, whose pen is A. S. Taylor, Esq., of Montevideo, whose prolific mind is ever at work to awaken interest in natural history. Our State is largely indebted to this gentleman for his great and promised sketches will be valuable.

## Proposition to Form a Horticultural Association.

The natural consequences of education, are a refinement and cultivation of the mind; and while a cultivated mind requires a larger field of operation, to gratify its desire for comfort and more delicate taste in food, it stimulates our people to the laudable ambition of improving the vegetable kingdom. Nations, communities, and single individuals, are judged in point of civilization by their agricultural and horticultural progress. This main wheel of advancement brings naturally along with itself the arts, sciences, and internal improvements (as railroads, steamboats, machinery, improvements of products, etc.), which go hand in hand, and are inseparable from each other.

A proper pride instigates nations not to be behind their neighbors; and I may here state, with truth and heartfelt satisfaction, that none of them on the face of the globe have outdone our glorious and free nation, considering the short period it has been in existence, having besides a wilderness to subdue. But, as nations try to excel their neighbors, so communities in a nation, and single individuals in communities; this being undeniable, it proves clearly to my mind that we, of Sonoma and Napa counties, should not remain behind; nay, we ought to advance far ahead of all others; not that we are more enlightened, industrious, or ambitious, than our neighbors; but, that we possess a climate and soil, for the production of wine and fruits, not equaled in California.

Two years in succession, almost throughout the State, the frost has greatly injured the fruit trees and grape vines; while Sonoma, and a part of Napa, last year and this, furnish a full crop, unmolested by the frost.

When nature, then, has favored us so much above others, we should with grateful hearts use and promote those blessings, and I hope we will, this being a most laudable ambition. But I hear some of my neighbors say we are progressing with the others. We have just organized an agricultural society, and Napa had one some time since. This is very well; it creates a rivalry in our counties between producers, and an ambition to win honorable premiums. These County Fairs we may call the primary school examinations; the State Agricultural Fair the high school examination.

They remunerate the completed scholar, but afford no means for his education to make him so. How can a student learn and progress if he has but few old books to study from? But give the student facilities to get the best modern books as he progresses, and he will not remain behind his fellow students. What the books are in school, the plants and the knowledge of their proper cultivation are in natural history. But I am told we have such an establishment where these books are manufactured for us all, viz: the Patent Office in Washington, which collects seeds and roots from all parts of the globe; this is very well, and excellent in some respects, but it must be aided in its operation, and it will benefit a thousand fold the nation. But let us see what is the present operation of this really excellent institution. The Commissioner, with great trouble and laudable energy, collects annually a large amount of exotics, plants, roots, and seeds, at a large expense to the national treasury. These are with care, either planted for multiplying them, or put forth into packages for distribution, which is done in three ways. First, the members of Congress get a proportionate share. Second, the Commissioner sends to such individuals as are known to him either by reputation or by personal acquaintance; and third, the remainder is sent to postmasters for distribution. Now what becomes of the first given to the sundry representatives? Of course they are packed up with other documents and taken by them with the end of the session home, and if ever distributed, too late to thrive, as they ought to be planted months sooner. The distribution by the Commissioner is yet the best, as it is sent directly to the individuals, and generally to men who are known to have an interest in rural life. But even this mode is not perfect; many individuals are careless in attending properly to these plants, or often lose them without their fault by destructive hands, cattle, &c. With the postmasters the same delays, distribution to incompetent persons, &c., will occur, and in this way thousands of plants, roots and seeds are lost for the want of proper attention. But there is no alternative left at present, to further this really excellent institution in promoting the rural interests but by the above described modes. Therefore every community ought to form associations to aid this institution, and by promoting its interests they will preeminently promote their own. To effect this and add largely to said end by private enterprise and energy, I propose to organize a Horticultural Society on the following plan, which plan, nevertheless, when the society is once constituted, may be altered or amended by the united wisdom of the members:

1. The Horticultural Society shall be composed of share-holders.

2. The amount of shares shall be five hundred; each share \$10, and each person may take as many shares as he chooses.

3. When a sufficient number of shares are taken, according to the incorporation act, the share-holders shall elect their officers, President, Vice President, Treasurer, Secretaries, and five Directors.

4. The share-holders shall have a quarterly meeting to hear the report of the officers, &c.

5. The association shall either lease or purchase a piece of land suitable for said purpose, but if the former, for at least five years.

6. The Board of Directors shall employ a head gardener and assistant, and as many hands as the business requires; but all extra expenses and labor to be decided at the quarterly sessions of the share-holders.

7. The President shall send the Constitution and By-laws with a map and description of the grounds belonging to the association, to the Commissioner of Patents with a request to furnish the institution from time to time with such plants, roots and seeds, as he receives in the Patent Office for this purpose.

8. From the capital of \$5,000 received for shares, \$3,000 shall be applied in the first year for procuring plants, roots, fruit-trees, grape-vines, &c., in fact, all such species that we do not possess. The remaining \$2,000 to be applied for buying and preparing the ground, fencing, etc.
